Although Mayume is from mixing ancestry, her mother is non-Japanese Brazilian and her father is Japanese-Brazilian, her Japaneseance is similar to a girl from a small town in Japan. At the time of the interview she was eighteen years old. When she was at four years of age, and her brother one year, her mother decided to join her father who was already working in Japan. She attended kindergarten, although she didn’t understand what they were talking. However, she adjusted very well to the Japanese school and life style. But, six years ago her mother decided to return to Bastos, Brazil, to see her parents. That’s when Mayume faced a difficult adjustment: “I wanted to come here to see the town. I didn’t want to remain. I wanted to go back, I wanted until today... because there is enjoyable at least for myself.” She compares the Japanese town where she lived to Bastos: “Ja-pan is a dictatorship society, it looks like Sao Paulo, and I thought that here it would be the same. When I arrived here, I said: that’s too much land?” Mayume faced a lot of problems at the Brazilian school. She compares the organization and the cleanliness of the Japanese public school, the respect from her classmates toward their teacher, and among themselves to the Brazilian public school and its poor building, lack of respect toward the teacher, lack of discipline. Mayume’s dream is to return to Japan and attend college there.

Mayume and other children face ruptures in their socialization process due to their parents’ labor migration. However, children as social agents can struggle to change their lives and make the decisions that sound better to them.

**Pension System Based on Sharecropping and Economic Security of Families**

Decisions about giving birth and upbringing of children imply consent to finance the public good. These decisions are generally individually adverse from the point of view of both short- and long-term economic security of families. The way to change this appraisal is to modify the structure of the pension system. The idea of the new solution is based on the sharecropping – one of schemes of incentive systems under uncertainty and information asymmetry. The concept underlying this approach assumes that parents and the state, involved in upbring-ing the children, share both costs and benefits, what results in sharing the risk.

The aim of this panel session is to share with the audience the outline of chang-ing Japanese employment practice. Japanese employment system has been classified as one of the “organization-oriented,” and it implies that it ensures long-term employment within the same firm. Japanese industrial relations system, the main feature of which is the enterprise union, appears to have reinforced the employment security. Japanese practice of transition from school to work has been regarded as enabling even graduates to immediately begin their occupa-tional lives as regular employees.

As with the employment systems of other countries, Japanese employment practice is confronted with the pressure from globalization, and it is becoming dif-ficult for it to maintain as high a level and as wide a range of job security as it used to be. In this presentation, I will focus on prevailing insecure job market especially in younger generations in Japan.

**Towards Usages of Europe By Patient Representatives at National Level?**

Following a series of landmark rulings of the European Court of Justice (ECJ) on cross-border healthcare, the access to healthcare is only limited for European patients. After ten years of negotiations these rulings have been codified in the EU’s Directive on the application of patients’ rights. Europe thus now offers national actors various resources to pursue their interests beyond the opportunities of their national healthcare system including challenges and resources for patient representatives at member state level. How do these actors use those European resources inside their national healthcare system? Based on semi-directive interviews, this paper thus investigates if and how patient ombudsmen in the Austrian healthcare system include usages of Eu-rope into their institutionalised routines and which are the national institutional limits to those usages. The paper argues that while Europe has rendered the na-tional institutional boundaries of healthcare systems porous, control over patient flows is kept intact and that there is only limited room for manoeuvre for patient ombudsmen to use Europe at national level.

**Ideas in Conflict: The Campus Protest Culture in the 20th Century Japan**

In the late 1960s, from North America to Europe and from Latin America to Asia, many countries witnessed a wave of student protests. Since those move-ments showed distinct features from place to place and shared similar back-grounds such as the Cold War politics and common issues such as antiwar and academic freedom, they provide a good field to examine the critical question haunting recent social movement studies: whether and how culture matters in the emergence and process of social movements (See Johnston et al., 2009; Pol-lerhagen, 2008).

Against this background, this presentation examines a campus protest at the University of Tokyo, Japan, from 1968 to 1969, using data from in-depth interviews with the participants to show how the students’ ideas shaped their perception and interpretation of the situations in the course of the struggle and influenced their choice of strategy and tactics.

This presentation focuses on a group of students called “NON SEKUTO RAJKRA- RU” (non-sect radicals). The protestors were not monolithic but divided into three groups in conflict: Democratic Youth League of Japan (DYLJ) under the guidance of the Japanese Communist Party (JCP), the New Left sects which were seeking a new form of Marxism as an Alternative to JCP, and the non-sect radicals without any affiliation to DYLJ or the New Left. On one hand, the non-sect radicals and the DYL and New Left students were equally marked by Japan’s campus culture dating back to the 1910s; the strong tradition of Marxism as a guiding ideology of social movements and self-cultivation. On the other hand, the non-sect radicals developed principles against the basic lines of DYLJ and the New Left factions, in-cluding centralized and hierarchical organizations and strict Marxism orthodoxy. Thus, they created decentralized and horizontal organizations and based their choice on their firsthand observations instead of ideology.

Risking It? Upper Social Class and School Choice in Finland

The uncertainties and risks families are facing concerning educational choice have both local and global influences. The neo-liberal market mechanisms promoting educational choice in educational systems move the responsibility of successful choice increasingly on individuals. The individualized responsibility is partly replacing the ‘collective assurance against risk’, and as it increases individual risk, it might lead to social closure and enable the strengthening of the ‘lines of social divisiveness’. In the context of educational choice this touches upon the discourse around choice and distinction between social classes. Despite the privileged educational trajectories can still be obtained by context-relevant use of economic, social and cultural capital, the changes in the educational pro-vision and basis of selection to prestigious institutions produce new arenas for competition. This challenges the privileged position of upper-class children in the competition of the best education available, and makes examining their educational choices relevant.

The aim was to examine the educational discourse of the upper-class parents of children entering the primary school, and investigate how hopes, fears and fears regarding their children’s education intertwine both with the considered risks and their trust in the Finnish education system. The data consist of semi-structured interviews conducted in Finland and France (Vantaa, Espoo, Paris) with parents (n=19) who have experience on educational policies and practices in Finland and abroad, and contrasting data, interviews with parents with no such international experience (n=78). The interviews were analysed by using qualitative content analyses. Preliminary results show that parents trust and value Finnish education and especially the value-base behind it. Still, their conceptions regarding competition, uncertainties, risk and the definitive nature of educational choices seem to have absorbed some ‘international fears’. This contributes to the construction of the social reality and subtle social distinctions in the Finnish school choice space.

Why Is It That I Think I Am Better Than You? Antecedents and Consequences of Hospital Employees’ Assessment of Their Own Skills Relative to Those of Their Colleagues

Work in health care organizations requires employees to permanently improve their skills, and taking part in continuing education is a prerequisite for keeping a position or for being promoted. Comparing the resulting skills and abilities with those of colleagues and co-workers is a mechanism of status evaluation and, in turn, may produce perceptions of superiority. In a survey of 1050 employees (physicians, nurses, social workers, etc.) from 49 hospitals we asked respondents whether they were worse, equally, or better skilled than the colleagues with whom they work together on a day-to-day basis. 46% reported to be better skilled (equally: 50 %; worse: 4 %). This finding is not due to a higher representation of better skilled respondents in the sample and is found in both formally high (e.g. physicians) and low (e.g. nursing assistants) skilled employees, so apparently many respondents overestimate their skills or relate the assumptions of a. To better understand these results, we identified antecedents and clustering of employees perceiving to be worse, equally, or better skilled than the colleagues. Linking the proportion of these employees in a hospital to its quality of care we attempt to gain insight into the consequences of this phenomenon: Do hospitals do better or worse with higher proportions of employees that rate their skills better than those of their colleagues? We finally discuss whether the high opinion employees have of their own skills may be a result of the permanent self- and third-party evaluation at the workplace and in contemporary societies as a whole.

Functional Differentiation and the Public Sphere: An Attempt in Theoretical Formalization for Historical and Comparative Research

This study elaborates on the concept of functional differentiation as a structural feature of modern society. Methodological criteria to judge whether society is differentiated functionally remain elusive, although these must be presupposed when discussing the concept of functional differentiation as an approximation of society. Certainly, a society is not functionally differentiated if judicial decision, for example, is always dependent on external conditions, whether power or wealth of parties, and hence, the legal system cannot operate according to its own logistics. However, the autonomy and independence of a functional system never imply the functional differentiation of society as a whole because the case where other functional logics can be violated directly by political or monetary power is not completely excluded. The existence of some functional institutions, for example, the parliament, bureaucracy, courthouse, market, and educational system, does not guarantee a functionally differentiated structure. To exploit

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
this concept for a comparative survey, the inquiry must focus not only on differ-
entiation itself but also on preconditions leading to such a structural change
and the formalization of this relationship in general terms. This study underlines
one of the formal features of functional differentiation, namely, the idea of hor-
izontal heterogeneity, the emergence of which assumes the societal spread of
the tolerance for diversity and rejection of the omnipotent instance that orders
the world hierarchically. In addition, the public sphere in Western modernization
is highlighted as one of the significant places where these collective mentalities
and expectations were cultivated. On the basis of this theoretical consideration,
previous historical and sociological studies on East Asian civilization processes,
especially the Japanese case, are revisited.

Research on Aged Prisoners in Japan

1 Situation of the research

In accordance with aged society in Japan, the population of people whose age is
more than 65 years has been increasing twofold during in the last two decades. In
this context, the number of arrested people aged over 65 years has been increas-
ing by 3.8 times and the population of aged prisoners is also increasing rapidly.

2 Purpose and sample size of the research

The purpose of this research is to clarify the actual situation of aged prison-
ers. Almost 450 male and 150 female aged prisoners are investigated focusing
on their life style in society, motivation and situation of the current crime, specific
feature of criminal life curve, philosophy of life, future plan after release, etc.

3 Outline of the research

The details will be presented at the session.

Most dominant type of crime is larceny, and then stimulant drug control law
violation, and fraud. Half of them were unemployed. 65 % married but co-hab-
tioned on 60 % did not have any persons who support prisoners when they
committed a crime. 53 % have disease. 45 % do not have any place where they
can live after they release form prison. Most of them do not have any job after
release. Total of 53 % have disease and receive many kinds of medicine.

Newly Started Activities of 80-Year-Old Japanese Seniors

Eighty-year-old Japanese seniors were asked if they had started new activities
after their age of 70. All seniors aged 80 years living in Suginami City, Metropolitan
Tokyo, were invited to participate to a research program organized by the city as
her 80-year anniversary. Among the seniors listed, 2,476 persons responded to
a mailed questionnaire (response rate was 66.0%). Over 70% of the respondents
(72.1% of men and 72.5% of women) reported their health condition was excellent
or fair.

Thirty-nine percent of the respondents (38.7% of men and 39.3% of women) an-
swered that they had started some new activities after age 70. Various activities
were reported. The most frequently mentioned new activity was hobby (46.8% of
seniors who had started new activities; 37.4% in men and 53.3% in women),
followed by athletic activities (35.0%; 33.3% in men and 36.1% in women) and per-
sonal computer and/or mobile phone (21.0%; 25.6% in men and 17.7% in women).
Not only sedentary activities such as reading and playing games, but also kinetic
activities, including walking, swimming, and gymnastics, were indicated. Seniors
who were healthy at age 80 were more likely to have such activities than those
who were not healthy.

In Japan, where population aging has been rapidly progressing and life expec-
tancy at birth has been rapidly increasing, seniors have become younger and
younger than their age-peers in older cohorts, physically as well as socio-psycho-
logically. The results of this first-wave survey of 80-year-old seniors living in a rel-
atively affluent urban area seem to show slypness and “youthfulness” of today's
Japanese seniors.

KOZLAREK, OLIVER* (Universidad Michoacana de San Nicolás, okozlarek@yahoo.com)

Experiences of Modernity and the Modernity of Experience

It has often been argued that a certain loss of experience, even of the ability
to have experiences is apparent under the modern condition (Adorno, Benjamin).
Yet, at the same time it seems to be true that modernity is quite obsessed with
experience (see: Jay 2005). Certainly, there are different understandings of what
experience actually means, and it is probably true what Michael Oakshott has
to say about this topic: "Experience, of all the words in the philosophic vocabulary,
is the most difficult to manage, and it must be the ambition of any writer reckless
enough to use the word to escape the ambiguities it contains" (quoted in: Jay 2005:
9). Although this paper sees itself in the tradition of this 'recklessness', it does not
aim to escape the ambiguities of 'experiences'. On the contrary, ambitious is
not only the word, but also what it stands for. But it is precisely this ambiguity
of experience, and the acknowledgement of it, that contributes to an often claimed
characteristic of modernity: its contingency (Rorty) or its ambivalence (Bauman).
In this paper I will argue that the ambiguity of modern experiences has to do with
a new kind of world-consciousness that emerges in modernity. I will draw on au-
thors like the recently deceased Marshall Berman, the already mentioned Walter
Benjamin, and Theodor W. Adorno, but also more recent authors like Boaventura
de Sousa Santos and Peter Wagner. And I will include in my discussion voices
from Latin America like Octavio Paz and the philosopher Bolívar Echeverría. They
all shall help to outline a theory of modernity for which the experiences that real
human beings are making when confronted with the challenges of modernity.

Civilizational Distinction: Figurative Changes of Contemporary
Societies

A common civilizational core binds all contemporary societies. It provides in-
teraction, trust and solidarity. It is a civilizational unity is a basis for the emergence
and existence of multiple modernities with their endless social and cultural diver-
sity (S. Eisenstadt, J. Aronson, P. Wagner). The development of the western and
eastern societies in the civilization relation should be comparative study based on
the figurative Sociology of Norbert Elias. Figuration is an entwining of rela-
tionships people, intended and unintended social and cultural processes. In the
center of the figurative process is fluctuating voltage equilibrium, a balance of
power, which belong to the structural characteristics of configurational currents.
Civilizational distinction show a full range of colorful entwinement intentional
and unintentional links, networks , activities, structures, states. Sociogenesis symbols
of culture and civilization shows how they precede unplanned actions and rela-
tionships between individual and group. However, they require an understanding
and designing models or strategies of economy, government and culture, both
at the individual and collective levels. In every contemporary society develops a
flexible balance of power between individuals and groups, a specific configura-
tion of social inequality, resources, and efforts. Civilizational order as well as at
global and local levels is a set of flexible forms of social mobilization, effective institu-
tions, technology management, cultural controls and patterns. Figurative modi-
fications, meaning moving modernities of contemporary societies, speak about
degree of their civilizational variability while maintaining a fundamental proper-
ties in common. Figuration as interdependence of people is primarily mediated by
factors like social communication. The main mechanism of interaction within and
between national societies (states, communities) are historically formed socio-cul-
tural practices and a variety of social communication (transit, exchange, and use
of experience, knowledge and information). Civilizational configuration is a variety
of modernities, coexisting and interacting actively in the changing political and
socio-cultural space.

Socio-Cultural Resources Development of Russian Province
("backs") in Context of Globalization

The situation of contemporary rural province ("backs") in most Russian regions
shows a doldrum of social, economic, and cultural life. The demographic situa-
tion has stabilized, yet the population in general and of an economically

active labor force and in particular is reduced. Employment in the industry falls especially in the small cities and provincial locality. The main issue for the farmers is an access of its products to local market and a large labor costs. Therefore it is developing the traditional type of economy, which is dominated by monocultural economy of the farm (horticulture, animal husbandry, small-scale construction, transport services, temporary employment) and commercial businesses. Modernization potential of the rural “backs” in particular in South region of Russia is diverse. The rural population is aging and decreasing. However, there is a surplus of labor force against the backdrop of falling employment. This dissatisfaction is typical for the Black Eastern region. Lack of investment, jobs, degradation of industrial and agricultural spheres pushes people to the development of the service industry and trade, to labor migration to the big cities, and social mobility. It is sufficient to note the high level of social and economic infrastructure: electricity, gas, roads, fiber optic lines, public transport, landscaping. There is a stable mobile communication, satellite TV, Internet access. However, rural inhabitants are experiencing social fatigue. They complain constantly about the lack of funds, the futility of life in rural areas. Many inhabitants are focused on internal migration, employment, education, and career in the middle and big cities. Key resources are upgrading a new economic policy of the local authorities, effective budget and private investments, solidarity of local communities, and of course, the willingness of local people to the medium-and long-term investment in yourself and in the development of their area.

KOZREV, GENNADY* (D. Mendelelev Univ. of Chemical Technology, genkozyr@mail.ru)
Creating an image of «Victim» As a Way of Creating Controlled Conflict Situation

For creating controlled conflict situation and for finding (appointing) an “enemy” often an image of “victim” is being created, meeting goals and tasks of its creators.

An image of “victim” may be classified on the follow types: “victim-hero”, “victim-loss”, “victim as belonging”, “victim-tragedy”, “victim-country”, “victim-nation”, “multi-functioning victim” and other.

Constructed “victim” has to meet such characteristics of real victim as innocence and defenselessness. Therefore innocent children, old people, and women are appointed to the role of “victim”. Violence towards them provokes the tension of passions and promotes desired public opinion.

Process of construction an image of “victim” includes the following steps: actualization, privatization, heroization, humanization, institutionalization, historicization (mythologisation), objectivization, legitimation, sacralization, realization of “victim’s” image in the social and political practices.

Generated image of “victim” presuppose execution following functions in the real and potential conflicts:
- identification of people on the base of their attitude to the “victim”;
- creation of enemy image who is guilty attacking “victim”;
- consolidation of people to fight identified “enemy”;
- upbring of “new heroes”;
- determination of people behavior in critical situation;
- image of “victim” is becoming the elements of culture.

Deliberately thrusting of “victim” problem generates disadvantageous situation for alleged “enemy”. Direct of potential oppressor’s image constructed, with necessity to oppose or annihilate it. The most important “enemy” characteristic is its mortal threat for person, group and society. Next distinguisher of “enemy” is dehumanization.

Special role in the process of both “victim” and “enemy” image construction belongs to mass media and first of all a television.

Generated image of “victim” may be used as motive for intervention of “third party”, for deliver a “retribution blow” on a real or an appointed enemy.

Towards Emancipatory Ecological Cosmiclommonism Via Positive Ecology in Tasmania, Australia

Adopting earth stewardship appears to be the fate of the human species; it is how we adapt to this challenge that will determine our survival and level of thriving. This paper will outline four areas of an approach to the challenge of earth stewardship. The first is to identify the emergence of a capacity for intentional stewardship. The second is to sketch a theory of negative ecology, based on the process of dominance that has evolved over history, resulting in the failure of successive systems to equitably meet basic human and environmental needs. This has led to ever increasing social and environmental costs, and indicates the need for radical degrowth. The third is to outline a theory of positive ecology to guide progress towards what is tentatively called “emanicipatory ecological cosmomonism (EECC)”, aimed at ending repressive domination. The equitable meeting of needs is given priority, based on “synergistic satisfiers”, with global cooperation the ultimate goal. The fourth area discusses community-based exchange initiatives (CBEI’s) as bottom-up initiatives towards advancing positive ecology in the here and now. Analysis of the potential of some CBEI’s currently underway in Tasmania, Australia to progress towards positive ecology and EEC will comprise the final part of this paper.

KRACKE, NANCY* (Institute for Employment Research, Nancy.Kracke@iab.de)
Women’s Overqualification: Why It Is Necessary to Account for Additional Individual Characteristics

Women’s labor market participation has been rising in the last years, the proportion of female university graduates increases constantly and ever more women are in executive positions. However, there is also evidence that women are more likely to be overqualified than men.

If a person is overqualified, in the sense that an employee’s level of training exceeds the job requirements, parts of the human capital lie idle. This could not only have negative consequences on the individual level, but also be costly on the social level. Current research on overeducation focuses mainly on its magnitude and structure; often the discussions on explanatory factors are limited to only one determinant - such as gender or migration status. But in light of economical, political and cultural globalization that increases societal heterogeneity, it is obvious that the emergence and reproduction of social inequalities cannot be reduced to only one dimension. In the study of social inequalities it is important to consider that people are always part of several social groups at the same time. Therefore, it can be supposed that for instance female immigrants face different risks of being overqualified than male immigrants.

In the presentation I will focus on this research gap. Based on the concept of intersectionality I will discuss the mechanisms of interaction of gender, migration status and social background in the context of overqualification theoretically. Using data from the German Socio Economic Panel, a nationally representative household panel study, I show the effect of gender on the risk of being overqualified as itself and in interaction with the other individual characteristics. I will respond to the question how gender inequality on overqualification varies with other social categories.

Construction of Knowledge Around Risk and Regulatory Practices Among Pipeline Industries in Australia

This research assesses the gas pipeline industry in Australia in relation to risk, regulatory practices and its comparatively strong safety record. It may be held as an exemplar to examine: how is knowledge of industrial risk in the Australian pipeline industry constructed and performed by regulators? In tackling the question, this research takes discourse analysis combined with a semiotics of materiality Actor-Network Theory approach; giving new emphasis to non-human entities in generating knowledge-power and actions around the regulatory process of governing industrial risks from hazardous industries. The entry point is technical- and structure; often the discussions on explanatory factors are limited to only one determinant - such as gender or migration status. But in light of economical, political and cultural globalization that increases societal heterogeneity, it is obvious that the emergence and reproduction of social inequalities cannot be reduced to only one dimension. In the study of social inequalities it is important to consider that people are always part of several social groups at the same time. Therefore, it can be supposed that for instance female immigrants face different risks of being overqualified than male immigrants.

In the presentation I will focus on this research gap. Based on the concept of intersectionality I will discuss the mechanisms of interaction of gender, migration status and social background in the context of overqualification theoretically. Using data from the German Socio Economic Panel, a nationally representative household panel study, I show the effect of gender on the risk of being overqualified as itself and in interaction with the other individual characteristics. I will respond to the question how gender inequality on overqualification varies with other social categories.

This research assesses the gas pipeline industry in Australia in relation to risk, regulatory practices and its comparatively strong safety record. It may be held as an exemplar to examine: how is knowledge of industrial risk in the Australian pipeline industry constructed and performed by regulators? In tackling the question, this research takes discourse analysis combined with a semiotics of materiality Actor-Network Theory approach; giving new emphasis to non-human entities interacting with actors (e.g. regulators, company safety officers, workers and communities) in generating knowledge-power and actions around the regulatory process of governing industrial risks from hazardous industries. The entry point is technical-infomformed regulators, assumed to have good risk-management knowledge. The research explores three relationships among these entities. First, relationships between regulators and non-human entities: e.g. how regulators develop their knowledge-power and take their actions influenced by a legal concept (as low as reasonably practicable – ALARP); and how regulators interpret their responsibility in the process of hazard identification and assessment? Second, relationships among regulators, companies and non-human entities (e.g. a concept of responsive regulation) are considered: how do regulators exercise their discretion either to support or command the companies? Third, relationships among regulators, companies, workers, the public and non-human entities are assessed; e.g. how do regulators perceive the roles and participatory actions of workers and the public in breaking regulatory capture, balancing power, and managing industrial risks? The findings may reveal inconsistencies hidden in processes, leading to a better understanding of how to manage, govern and mitigate risks and improve regulatory practices and effectiveness.

Organization, Identity, and Transnational Citizenship: Mexican Indigenous Migrants in the United States

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Transnational migration challenges the congruency of identity, citizenship, and state territory, because transmigrants identify with their communities in countries of destination as well as origin, and practice citizenship across national borders. The question of transnational identity and citizenship is all the more important when migration involves members of indigenous groups who are ethnically discriminated against politically and economically marginalized in countries of origin and in their adopted countries. How do indigenous migrants negotiate transnational citizenship? Based on the data collected from my ethnographic research in Los Angeles, I argue that indigenous migrants from Mexico's Southern state of Oaxaca negotiate citizenship through a diverse network of migrant organizations which open wide transnational social spaces to reconstruct the boundaries of ethnic and local membership and belonging. In contrast to Mexican mestizos, they established issue-based migrant organizations in Los Angeles – such as business, religious, or educational organizations – above the level of hometown associations and state-based federations to claim precise rights for indigenous people as workers, believers, or students. In doing so, they collaborate with various political institutions, businesses, churches, and other organizations on different levels – local, state as well as national – in the United States and in Mexico. In other words, pan-indigenous identity and transnational citizenship emerge not only in political response to ethnic discrimination and social hostility, but also cooperation and support in transnational spaces.

Challenges for Teachers and Pupils on a Vocational Program

Challenges for teachers and pupils on a vocational program

This paper aims to analyze teachers' views on how a good mechanic should be, and how the teachers are mobilizing students to become mechanics through instruction and practice.

In another social landscape – before marketization, post-industrial transformation and neo-liberal forms of governance has become a part of the public educational system – a common practice were that students established a kind of counter-culture in schools; Why should I study while I am going to be an auto mechanic? Today, teachers in the vehicle and transport program partly face a new school logic where they have to deal with pupils that have another approach to education. - Why should I study, I'll still don't want to be an auto mechanic? Previously the students were to a high extent culturally self-motivated, but nowadays the students seem to have lost their enthusiasm to become a car mechanic or seem to have changed their minds. My PhD project is linked to a larger research project that deals with issues of multicultural incorporation and school achievement. My contribution to the project concerns an ethnographic study in a vocational high school on a vehicle program, where there are mainly boys with immigrant backgrounds from heavily segregated areas, present in the classroom.

The paper contains an analysis of the symbolic boundaries that structure the auto mechanic profession and how these boundaries are expressed by teachers and industry representatives. It also describes how teachers in the vehicle and transport program mobilize students to the mechanic profession both by their teaching/pedagogy and use of social networks within the car industry.

Social Transformation and the Memory in a Postwar Society: the Case of Kosovo

This paper is based on two qualitative research projects conducted ten years after Kosovo exodus, and the dramatic changes related to the war, social organization, environment, daily life, and value system. The first one is “Memory vs. Forgetting” (2009), and the second one is “Socio-cultural Changes in Postwar Kosovo” (2010). Both conducted by the Department of Sociology in the University of Pristina. The data show very interesting aspects of collective memory and human experiences during the dramatic events and the general social transformations. The way how people remember the past, how do they perceive the present, and what they are expecting from the future is important not only for Kosovo society, but for the entire humanity.

The focus of our research is the period after 1999. This period is important in two senses. First, in terms of social change, this period is important because three international missions were deployed in Kosovo and the country has declared its independence since. Second, from the aspect of social organization, it is the period of transformation of the self-administered institutions, and the development of the overall transition. The structural changes affected the culture, and the system of values in Kosovo society to a great extent. This period is of a particular importance, because it signifies great changes in lifestyle, the transformation of values and membership patterns and practices.

Research in the field of collective memory and social transformations requires very precise methodological approach. Each of the research projects has included 50 in-depth-interviews, and visual elements collected in the field, such as pictures and video materials. The data show that people's relationship are very strong not only to the family and the homeland, but also to physical objects, tools, pictures, books, souvenirs, symbolic values, plants, animals and the environment.

Explaining Differences in Fertility and Marriage Expectations of Adolescents of Native and Immigrant Origin in Spain. The Role of Socioeconomic Status and Ethnicity

This paper aims to examine aspirations and expectations of adolescents in Spain with regard to family formation patterns, using survey data collected in secondary schools in Madrid. We are interested in the variability of these preferences across generations and between children of immigrants and their native peers. We look at fertility and marriage expectations to account for varying cultural backgrounds and for acculturation and/or integration processes. Furthermore, differentiated expectations of fertility and marriage tempo and quantum among children of immigrants and natives might be an indicator for segmented assimilation with regard to their or their parents' socio-economic status.

For the empirical analysis of this paper we use survey data of some 2,600 adolescent pupils and 1,150 parents. About half of the students and parents are of immigrant origin. Besides aspirations and expectations linked to family formation processes, the survey provides information about parents' labor situation and their educational levels, variables that are used as a proxy for their socio-economic status. To complement the survey, contextual data will be included, adding information on origin countries' actual fertility and marriage behaviors and the ethnic composition of the neighborhoods in Madrid where the youths live.

Most theoretical approaches and empirical studies in this field concentrate on the U.S. Focusing on Spain as a relatively new immigration country can give important new insights into another migratory setting, which may be valid also for other (European) immigrant-receiving countries.

Producing the Collective Subject: Anarchist Practices at the People's High School in Buenos Aires

This paper analyzes the experience of a “people's high school” in Buenos Aires, Argentina, and the ways that it engages with anarchist-inspired practices and ideas. In 2001, Argentina experienced a political and economic crisis that gave rise to hundreds of social movements opposing the neoliberal status quo, including “movements of unemployed workers” (MTDs) and factory takeovers. These 2001 movements encompassed much experimentation with the idea of social movement itself, as they abandoned the old political party structures and incorporated social relationships into their political agendas. While many such movements have since dropped their autonomist orientations in favor of aligning themselves with Kirchnerism and the presidential administrations since 2003, other movements remain staunchly independent and committed to alternative models of social change (referring to themselves as part of the “Independent Left”).

One such organization, the people's high school (bachillerato popular) of the MTD Barracas, uses a non-hierarchical structure and consensus-based decision-making as one of the primary vehicles for organizing grassroots social change within the movement and the neighborhood. Based on a year of participant observation, I examine how the movement enacts these anarchist organizational forms. I argue that the successful outcome of such organizational practices is the creation of a collective subject, which is only produced at the school when these structures are combined with meaningful emotional interactions among activists. Thus this paper explores light on how and why some uses of consensus seem to fail flat or collapse into frustrating bureaucratic formulae, while other movements succeed in using such anarchist principles to meaningfully integrate participants into decision-making processes. Within a context of marginalization and oppression in Argentina's shantytown, the people's high school is using anarchist practices to create alternatives to neoliberal capitalism.
Human Rights and Humanitarian Relief: The Organizational Mediation Of Ideas In The Global Arena

In talk of the “international community”, many commentators assume that human rights work and humanitarian relief are pulling in the same direction. Others see human rights and humanitarian relief as two fundamentally different modes of engagement. What both of these approaches share is a focus on the content of ideas. This paper examines the relationship between human rights and humanitarian relief in the international arena from the perspective of the sociology of practice and the sociology of organizational fields. Since the 1970s two separate trajectories of practice have emerged – one centred around human rights and one centred around humanitarian relief. Based on interview research and document analysis, I examine how professionals in humanitarian relief organizations use the concept of human rights. In the past 15 years, they have used the language of human rights more and more, but the impact this language has had in humanitarian work has been mediated by the practical constraints and incentives of the humanitarian field.

KRAVCHENO, SERGEY* (Moscow State University of International Relations, sociol7@yandex.ru)
Rethinking the Theory of Social Becoming: For a Humanistic Turn

According to P. Sztompka (Society in Action: A Theory of Social Becoming. Cambridge, 1991), the modern world is in a state of becoming that occurs in the context of unfinished structural and functional development. As a result social and cultural changes take different ambivalences, clashes within a culture. He worked out a new type of sociological imagination the essence of which is reflexive thinking about social becoming.

Since that time the socium has become even hypercomplex: there appeared “normal accidents” (Ch. Perrow), climate change as well as new risks, vulnerabilities and social turbulences produced by human agency (J. Ury, L. Beck). Taking into consideration these realities of new catastrophism I argue for a “humanistic turn” in sociology, whereby societies should be examined through the patterns and character of their complexity-dependence and human agency-consequences. This implies still a newer type of sociological imagination based on the synthesis of social, hard and humane sciences. The methodological instruments of this type of sociological imagination include both non-linear and humanistic aspects. Thus, I propose a non-linear and humanistic sociological imagination that deals with the acceleration of socio-cultural dynamics and globalization (R. Robertson), synergetically takes into consideration paradoxes, risks, and dispersions of socion, searching for new forms of humanism, based on men's existential needs. The notion ‘praxis’ should be rediscovered: it should mean humane praxis - humanistic creative agency, the main aim of which is to preserve the human capital of all the generations and to maintain the balance between scientific, technological innovations and key environmental processes.

WG01-895.1
KRAVCHENO, SERGEY* (Moscow State University of International Relations, sociol7@yandex.ru)
Vulnerabilities to the Human Capital

The content and, therefore, the conceptual interpretation of the human capital is multifaceted and many-sided, depends on the historical time, cultural space, nowadays mainly - on the conditions of becoming complex socium, its “normal accidents” (Ch. Perrow), social and climate turbulences produced by human agency. Taking into consideration these realities we have proposed a network model of the human capital that is adequate to the urgent need of a humanistic component in the human capital. There appeared new vulnerabilities to the network human capital. Until recently in the history of mankind in the implementation of modernization the question about the humanistic ways and means to achieve the goals was not even discussed. Any pragmatic and rational intentions by themselves do not lead to prosperity, harmony, peace, if they do not provide the production of humanism, its penetration into social institutions. The network human capital should be managed on the basis of some fundamental requirements: management should suit the form of a civilized and humane way of the interactions people; it should take into account the non-linearity of the human capital formation, dynamically complex causal relationships, the factor of social and climate turbulences; we should mind the latency of the formation of the human capital, that is - unforeseen and untried outcomes lead to different ambivalences in the human agency. It is necessary to consider the delayed hazard as derived from the scientific research and innovation: the effect of “normal accidents” should be extended not only on scientific and technological innovations but also on economic and political spheres, as well as on the processes of medicalization, urban design, new information technologies, tourism, fashion, diet etc.

KREISSIG, VOLKMAR* (Taita Taveta University, vkreissig@gmx.net)
Participation, New Forms of Corporate Governance and Social Responsibility – History, Discussions and Realities – Industrialised Countries, Central and Eastern Europe and Developing Countries

Discussions to “participation” started in Germany within labour movement & works councils in 19th/20th century. Main questions were how workers & representatives can participate in the production process, in works force organisation, decision making etc. The promotors were socialist parties & left wing circles, trade unions & works councils.

In France in the 80-s the “participation” was that base-democratic right which should stamp the “socialism in the colours of France”. Participation was declared as the democratic alternative concept to the French state centralism and to the Soviet model of the state socialism.

The debate in the 90-s went around Japanese participation offers in production processes. Predominantly was - ‘Japanisation’. The following “Flexurity debate”, had the idea to exchange “flexibility of working regime” into the preservation of employment.

Discussions on corporate governance & corporate social responsibility started in the 70ies in US, later on in Germany & Europe. Promoters were stakeholders & shareholders. Bearers of debate were less in trade unions or left political circles. Targets were common responsibilities of stake- and shareholders for environment, life on the earth, quality of productions, employment law, work-conditions like child work, dangerous work, over-exploitation of the natural resources etc. in production & sourcing modification of high technology productions.

Today unions in supervisory boards and works committee member’s support this course; however, they were not any more the sole or key players of debate.

The discourse wins in social and changes away only from conditions of employment to the responsibilities and the consequences of the application of products. ISO 26000 is asked from the supervisory boards, the shareholders’ meetings linked with the influence of works committees.

These ideas were more developed in industrialised countries of Europe and Northern America than in developing countries as well as Eastern European countries.

KRELL, KRISTINA* (Leibniz Institute for Social Sciences, kristina.krell@gesis.org)
Reference Income and Pay Satisfaction: How Do People Choose Their Reference Group?

When exploring individual well-being, not only satisfaction with life as a whole is suitable basis for analyses – also information on satisfaction with certain domains can provide valuable insight into how people are affected by the circumstances of their lives. Satisfaction with the personal income reflects not only whether people assess their pay as high enough to deal with every day’s expenses but also people’s perception of how their effort and performance is valued by others (the employer), which can be a considerable aspect of mental well-being.

In this context, the comparison with other working people is always an important benchmark when evaluating the own income situation.

As is known, reference groups for income comparisons can be people of same profession, with same education or colleagues, etc. This paper provides further insight into the field of study of whether different groups of people apply different reference groups when evaluating their income and – if applicable – which aspects motivate the choice of reference group (e.g. information disparities).

Data base is the German Socio-Economic Panel Study (SOEP) of 2010. Several types of reference groups are defined and the impact of their income on the personal income satisfaction of different population groups is analyzed, applying an ordered logit model.

Towards the Construction of a Composite Indicator of Objective Individual Living Conditions for Europe

This paper provides an approach for constructing an index of objective individual living conditions which is based on micro data and comparable between countries and over time. It summarizes on the individual level how people’s lives are from diverse perspectives, which together form their “objective living conditions”. As the name already indicates, the index particularly focuses on objective indicators, not taking into account subjective (cognitive or affective) perceptions of one’s own life, such as life satisfaction or happiness. The life domains that are included in the index are:
- income / standard of living

KREUTZFELDT, DOROTHEE* (University of Witwatersrand, daniel.kreutzf@dxy.me)

Bargaining the „Human Rights” of „Human Resources” – Unions and NGO-Networks Advocating Precarious Migrant Workers’ Interests in Japan

Taking the debate concerning recent immigration policy changes, focusing on the so-called Technical Intern Training Program (TITP), as case study, this paper challenges traditions about legal frameworks and the labor movement in Japan. While civil society in Japan has often been portrayed as apolitical and service oriented, being strong in producing local “social capital” but weak in generating “advocacy” on the national level, the labor movement has been described as politically domesticated and oriented towards balancing interests of big companies and their core staff, organized in enterprise unions. As these generalizations are grounded for a great part of the scene, they still ask for qualification, because they obscure a relatively small but growing and significant portion of organization of and bargaining for workers interests in Japan. Irregular employment and migrant labor is especially prominent in Japan’s many small and medium sized enterprises (SME). The unionization of employees in SME through individual membership unions, that has been fostered in the 1970 by the former national union center Sôhyô, has since the 1990s formed the basis for migrant and irregular workers organization in unions in Japan, and as further become the core of new constellations and alliances in civil society, which played an active role in discussions leading to immigration policy reforms. Thus it was not the Japanese civil code or the so-called NPO-law, but the Labor Standards Act (LSA) and the Labor Union Act (LUA), which formed the legal framework for a vibrant civil society in Japan, by providing rights of organization and collective bargaining for precarious migrant workers, and thus enabled political advocacy.

Confronting Vs. Transforming Consumerism on the Path Towards Sustainable Development

The high level of consumerist tendencies particularly in emerging markets pose a question whether environmentally conscious consumerism is an oxymoron. The presentation is based on a series of surveys fielded in 2012-2013 to general populations in 22 countries. The survey results enabled the mapping of consumerism in the two-dimensional space defined by “Environmentalist” and “Materialist” attitudes. A large proportion of customers in each of the surveyed markets exhibits a combination of high level of environmental concerns with the passion to consume. In other words, this group is trying to reconcile their desire to shop with a sense of care for the environment and society.

This segment is identified as Aspirationals. It may serve as a factor bridging the gap between societal and environmental needs and the business interests of the corporate world. Unlike Eco-Enthusiasts with their ascetic environmentalism and reduced consumption, Aspirationals may gain gratification from sustainable purchasing and sustainable consumption. Aspirationals represent hundreds of millions of consumers globally. They are most prominent in countries with a tradition of face consumption such as China, India and Brazil. Due to not sharing the Post-Materialist values, this segment is unlikely to become Eco-Enthusiasts in the Western sense of the word. However, sustainable purchasing might be introduced to Aspirationals as something stylish and fashionable which would add to their social status and further differentiate them from the majority.

This presentation comments on segments distribution across global regions and markets as well as on the members’ demo- and psychographics. The segments' attitudes will be causally linked to a broad range of socially and environmentally responsible behaviours, and communication patterns.

**Resistance to Mining in the Current and Past World-Historical Conjunctions: A Comparison of Mobilization Against Globalizing Capitalism Across Place and Time**

This is an incorporated comparison of resistance to destructive resource extraction by mining in the current and past world-historical conjunctions. The analysis is based on long-term participant observation and field research in the most important mining investment areas in Brazil, India and Finland. The empirical quality of the analysis of the current conjunction allows to test world-system theories often based not so much upon large-N comparative ethnography. The findings are related to historical ruptures and continuities in resistance, seeking causal explanations and reasons to why mobilization against globalizing capitalization has occurred in some places and times and not others. The mining industry’s global and regional trajectories will be historitized and tied into the current events by historical institutional analysis.

**Korean Environmental Sociology: History and Characteristics**

This article aims to analyze the history and characteristics of Korean environmental sociology since the 1990s. Korean environmental sociology has been developed since the 1990s when environmental movements and environmental awareness started to proliferate nationwide. The Korean Association for Environmental Sociology which was founded in 2000 has organized theoretical and empirical research and has published Academic Journal ECO since 2001. Seeye Lee summarized that Korean environmental sociology is participation, problem solving, and field research oriented. Sun-jin Yun analyzed that sustainable development, ecological democracy, oil-spill disaster, nuclear waste dump site, environmental justice, and so on are key issues in Korean environmental Sociology.

Korean environmental sociology has the following theoretical and empirical achievements. Firstly, it introduced ecological paradigm and tackled the limitations of anthropocentric sociology. Secondly, environmental sociologists raised environmental justice and inequality issues and accumulated research of environmental and ecological movements. Thirdly, they tried to develop theory and policies of ecological democracy beyond anthropocentric democracy. Fourthly, they tackled the limitation of nation state and economic growth model and tried to develop alternative state, local community, global governance and development models. Korean environmental sociologists have focused on not only analyzing environmental problems, awareness, movements, and policies status quo but also suggesting new theoretical framework and alternative society model.

**An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative Dis/Advantages Evolve Across Cohorts?**

The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis/advantage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple inter-individual divergence and path-dependent post individual divergences. Simple inter-individual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent inter-individual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of
wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

*The Joint Impact of Paternal and Maternal Parenting Styles on Children’s High-School Academic Achievement in Taiwan*

The present research used data gathered by Taiwan Education Panel Survey (TEPS) in 2001 and 2003 to explore how fathers’ and mothers’ parenting styles jointly influenced their children’s academic achievement in junior high. Using latent class analysis (LCA), the research uncovered the same four parenting styles for both Taiwanese fathers and mothers. These four parenting styles are consistent with parenting typology often discussed in the literature and can be labeled as authoritarian, authoritative, permissive, and neglectful. Since the majority of Taiwanese children lived with both biological parents and not much research has been done to understand how both father’s and mother’s parenting styles jointly influenced their children’s development, the research further used LCA to construct 16 joint parenting styles to investigate how these styles were related to children’s academic achievement. The research found that children with both parent adopting the permissive style would have the best academic performance in junior high. Past studies have indicated that authoritative parenting would be conducive to good academic achievement. The present research showed that when one of the parents was authoritative, for their children to perform well in junior high, the other parent should be more permissive. In other words, in the traditional Chinese view of parenting, there should be a combination of being “yyan” (strict) and being “tsi” (kind). The research further found that if paternal parenting was authoritative and maternal parenting was neglectful, this type of joint parenting style would have the most negative impact on their academic achievement. In short, the findings of present research clearly demonstrate the importance of understanding the joint impact of paternal and maternal parenting on their adolescent children’s development in Taiwan.

*Renaisance of Ethnicity? Self-Identifications of the Second and Third Generation of Algerian Immigrants in France*

The paper presents the results of an empirical research on the self-identifications of people belonging to the second and third generation of Algerian immigrants in France. The aim of the research was to investigate in which situations the Frenchmen of Algerian origin (FAO) feel included and in which excluded from the various collectivities, e.g., collectivity of the Frenchmen, of the Algerians or of the people belonging to the other important social (not only ethnic or national) categories. The choice of FAO stemmed from the fact of their strong, connected with numerous contradictions, attachment both to the country they live in and its culture (France) and to the country and culture of their origin (Algeria), also from their ambivalent attitude towards the suburbs of the French cities which they are very often identified with in the context of riots erupting there every few years. The project answers to the questions concerning the variables that differentiate the identifications of FAO with various social categories and give the classification of situations which occurrence is conducive to the appearance of self-identification of a particular kind. The results are based on a content analysis of 25 autobiographical novels written by FAO authors and published in France between 2000 and 2012 and the biographical method by F. Znaniecki and his principle of “humanistic coefficient” was used in the project. Indicating the situations in which FAO still feel different than other citizens of their own country can show the areas of social life that require reconsideration in the terms of the state’s integrating policy.

*Takao Tanase and Talcott Parsons: The Possibility Of Functional Analysis*

Takao Tanase makes a unique contribution to sociology of law because he uniquely applied the sociological framework of Talcott Parsons who elaborated a general theory.

When Tanase studied abroad in 1970’s, he majored in sociology and was mentored by Parsons. So Tanase was clearly influenced by Parsons in his early works and tried to develop or modify Parsons’s theory. But after that he rarely mentioned Parsons and repeatedly referred to normative theories such as critical legal studies. So lately Tanase has been considered a postmodernist theorist in Japan.

But if we read intensively his works, we can notice that he was influenced by Parsons all the time although he never clearly mentioned Parsons.

Tanase frequently used Parsons’ functional analysis uniquely to study law and society in Japan. He decomposed research objects (fort law in Japan, for example) into ideal elements (logic of liberalism, for example) and observed the functions of those modern ideal elements in real social conditions. Then based on the observations and new normative theories such as postmodernism transcending the limits of modern ideas, he proposed what is necessary for modern law imported from the West to function more properly in society. In this way Tanase applied Parsons’ general theory standing on the convergence between idealism (normative theories) and positivism (observations), and his application gives a hint when someone applies Parsons’ general theory to researching the functions of law in other countries.

Though Parsons was attacked severely and his influence declined once, he has been reevaluated since 1980s. But this is not true for sociology of law. So Tanase’s application becomes a nice model of using Parsons’ general theory in sociology of law and it suggests the possibility of researching and comparing the functions of law globally.

*Tokyo as No. 4: A perspective from World City Ranking*

Since the 1960s, a shortage of lodging in city centers has led to high prices and the development of suburban housing estates. The problems of aging suburban populations are attracting considerable attention in Japan, a society of great longevity. The decline in mobility among elderly homeowners is a main problem in aging suburbs because an aging population and the accompanying social problems have been perceived as a threat to the environmental sustainability. The increase in housing vacancies, which is closely connected to a lack of security, sustainability, and human bonds among residents in a community, is one example.

This study aims to examine local responses to the increasing number of vacant houses in suburbs. We pay attention to the influence of local regulations on vacant housing; several local governments, including that of Ushiku City, have enacted regulations to promote appropriate maintenance of vacant houses since the late 2000s. Then, we discuss institutional structures that have caused the problem. We also identify the generative process of housing vacancies in the Tokyo suburb and we examine the results of field surveys of several old housing estates in Ushiku City, Ibaraki Prefecture. Based on interview surveys of residents, we clarify the mechanism that produces housing vacancies there. We conclude by examining the attitudes of local communities toward vacancy problems.

*Questioning the Promise of English: Language Choice of Japanese Transnational Workers in Asia*

English has increasingly been positioned as a global lingua franca in public and academic discourses especially in non-English-dominant countries like Japan. To grasp several ideological and capitalist circulation of language skills with individual and national economic advancement, ideas about English in globalized world have formed a particular language ideology, influencing education policies and raising demands for English teaching and testing. While the prevalence of English is indeed observed in globalized marketplaces and transnational communities, language choice and use should be conceptualized as a local practice (Pennycook, 2010) that reflects, reinforces, or disrupts social, historical, material, and ideological conditions at a certain locality.

This paper reports a qualitative study that investigated the language choice as well as views and experiences of transnational communication among 20 current and former Japanese transnational workers of five Japanese manufacturing companies who were assigned to work in China, Korea, or Thailand. Semi-structured interviews revealed that for workplace communication, Japanese was predominantly used in China and exclusively in Korea, whereas English was exclusively used in Thailand. Almost all interviewees developed a tactful repertoire of the local language in order to fulfill daily survival needs (Blimmaert, 2010), whereas a couple of workers developed a professional level of Mandarin and used it extensively for work.
These findings demonstrate historical and linguistic relations of power that intersect with practical considerations. Specifically, the language choice seems to be implicated in a colonial legacy reflected in the linguistic hierarchy (e.g., Japanese vs. Korean or Chinese) and the commodity value attached to Japanese as well as pragmatic factors related to linguistic and orthographical proximity. Moreover, the fact that the interviewees were selected by each company reveals a particular entrepreneurial habitus or lingua-cultural dispositions expected for transnational workers. The study problematizes the neoliberal ideology of the promise of English and provides educational implications.

Conflict Management in Prostitution (性活=s"Seikatsu") — the Structure and Meaning of Pluralistic Justice

“Conflict management in prostitution” have some meanings especially from the perspective of law. They are also concerned with their own viewing. In Kenya, there are also different ideas depending on the situations. The meaning for female who are working as a prostitute (I call them normally as “性活者=s"Seikatsu-syya", sex-practical use person) is protection or any system which will help them. This presentation will try to make clear the real situation of conflict management in prostitution (I call it normally as “性活=s"Seikatsu", sex-practical use) for it, I had researched for 101 prostitutes by interview directly in 2010 to 2013 in Nairobi, Mombasa, Malindi, Nakuru, Kisumu and Meru. The average time of interview is 1 hour 30 min. And I did the research more than 500 for non-regular women and men as customer by questionnaire. The research for prostitute have more than 100 questions divided into 5 sections, Experiences, Ideas, Ways, STI, and Personal Matters. I will describe here how prostitutes think about and get on with “law” even “living law” in prostitution. And more, I will try to find what is the way and meaning of conflict management for them through my research in Kenya. We can find the idea of original conflict management in prostitution through confrontation against “law” finally. Actually, justice, even law is pluralistic in the field of prostitution. When we think the structure of prostitution from the perspective of conflict management, we feel something poor or strange to the normal-idea in prostitution field like that is legal or illegal. Because the “law” must be different for each in multiter prostitution structure. We need to understand the situation without any bias in first and discuss to pure structure of prostitution later. The idea of strategy of conflict management in prostitution will help it.

Sexuality and Refugee Status: Narrative Construction of Sexual Minority Asylum Seekers in the United States

Since the 1990s, sexual minority status has been recognized as a basis for refugee/asylum claims in certain countries. In the United States, as seen from the recent governmental guidelines for those specific cases, the so-called LGBT asylum is now drawing attention. This study attempts to analyze the issues of gays, lesbians, and transgenders who are seeking asylum in the U.S. from the perspective of narrative construction regarding to the dominant notion of sexuality in the host society appearing in legal procedures. Previous studies have shown that since the credibility and objectivity of those claims are legitimized within a US-centered notion of homosexuality, it marginalizes those individuals who fall outside of this paradigm. However, studies based mainly on legal documents have yet to develop an understanding of sexual minority asylum seekers’ experiences and of the degree to which they follow the dominant picture of sexuality.

To further understand this phenomenon, interview research was conducted in New York City and the San Francisco Bay Area. In order to define asylum seeking process as a system which connects the concept of sexuality to past events in the narrative construction, this study explores the experiences and perspectives of the asylum seekers themselves. Although, in most cases applying for asylum is taken as an option they find as a choice to legalize their status, a comparison of two different areas tells us that the strategies and discourse of their advocates and case-workers, diverse ethnic communities, and practices of border crossing have impacts on how they form the narratives. For example, the asylum seekers in New York City tend to use human rights discourse while those in the San Francisco Bay Area do not. Instead, a common practice of multiple border crossing characterizes the latter as an actor within the asylum-migration nexus.

Mapping The Governance Of Care and Professional Development: A European Comparative Study

This article investigates the care sector through the lens of the sociology of professions. We introduce a dynamic approach that systematically links changes in the nursing professions and society at large with new modes of governance in healthcare. The aim is to explore institutional conditions that contribute to the development of an integrated professionalism and efficient health human resource management in the care sector. A novel contribution is the cross-sector and profession-specific approach that connects professional developments in nursing in hospital, primary and long-term care with governance arrangements. A comparative case study design is applied that focuses on Western European countries using England, Finland, and Germany for an in-depth analysis. In terms of methods, we draw on public statistics, document analysis and other secondary sources. Three emergent patterns can be identified: (1) ‘constrained professional development’ was observed in the German corporatist and federalist/fragmented system

The Sociology of Death: The Case of the Armed Forces

The paper addresses death in the military and looks at the various ways in which death is addressed in the military. The analysis of the politics of death requires the identification of the functions such death politics should serve and focusses, inter alia, on rituals that are used to implement such death politics.

KUHLMANN, ELLEN* (Goethe-University Frankfurt, e.kuhlmann@em.uni-frankfurt.de)

Mapping The Governance Of Care and Professional Development: A European Comparative Study

This article investigates the care sector through the lens of the sociology of professions. We introduce a dynamic approach that systematically links changes in the nursing professions and society at large with new modes of governance in healthcare. The aim is to explore institutional conditions that contribute to the development of an integrated professionalism and efficient health human resource management in the care sector. A novel contribution is the cross-sector and profession-specific approach that connects professional developments in nursing in hospital, primary and long-term care with governance arrangements. A comparative case study design is applied that focuses on Western European countries using England, Finland, and Germany for an in-depth analysis. In terms of methods, we draw on public statistics, document analysis and other secondary sources. Three emergent patterns can be identified: (1) ‘constrained professional development’ was observed in the German corporatist and federalist/fragmented system
with overall high density and quality of healthcare services and concentration in the middle-range professions with a lack of upward institutional pathways; (2) ‘elitist professional development’ was found in the more centralised governance in England and characterised by a growing expansion in the high-status segments, but overall weak development in the middle-level and lower segments; and (3) ‘integrated professional development’ emerges in the context of decentralist and universal governance arrangements in Finland, that foster expansions in both high-status segments and low and unqualified segments of nursing. In summary, the findings highlight connections between professional development and governance. This stage (post-democratic and neo-liberal) level of professions, in order to achieve transformative potential, must be connected and backed-up by (macro-level) health and social policy interventions.

Before we can even discuss democratic consolidation, at least three minimal conditions must be fulfilled, according to Linz and Stepan (1996). Beside those consolidated democracies should also fulfill several other conditions that have in scientific analyses not attracted such high attention than three minimal conditions. Among other conditions Linz and Stepan specifically stress the importance of economic consolidation. The proposed paper is going to analyze the challenges of democratic consolidation in the Central and Eastern Europe from the beginning of 1990s, when democratic transition began to take place, to most recent period, when consequences of global economic crisis hit the region. It is clearly evident from economic consolidation measurements that most former socialist countries have reached level of consolidated democracies; authors are testing the thesis that one of the reasons for that was also successful economic consolidation, which in is recent period suffering under heavy pressure of global economic crisis. The consequences of that can already be seen in various democratic consolidation measurements, like Nations in Transit or Human Development Index (HDI), where most CEE countries are regressing in last few years.

KUHONTA, ERIK* (McGill University, erik.kuhonta@mcgill.ca)

Is The Middle Class a Harbinger Of Democracy? Evidence From Southeast Asia

A vast body of literature claims that the middle class is a critical force for democratic transitions, democratic consolidation, and political stability. Yet, recent events in Thailand and in other Southeast Asian newly-industrializing countries (NICs), indicate that the middle class often challenges democratic regimes or supports authoritarian juntas. How should we reconcile these divergent views of the middle class? This article argues that an explanation for the behavior of the middle class in relation to regime-type must begin by looking at the state’s role in addressing the interests of the middle class. Where a state addresses the key concerns of the middle class – rule of law, economic development, and political stability – this class is unlikely to rebel against the state. Institutionalized states are most likely to satisfy middle-class interests, while patronal or clientelistic states are particularly vulnerable to middle-class rebellion precisely because they are unable to satisfy middle-class interests and values. A comparison of four Southeast Asian NICs will thus show that middle-class support for democracy is highly contingent on the structural conditions in which they find themselves embedded.

Judging Bodies in Europe: Examining the Variety of Repertoires for Evaluating the Beauty of Male and Female Bodies in Six European Countries Using Visual Q-Methodology

Being perceived as beautiful is associated with many social and economic benefits, including advantages in dating and labour markets. In post-industrial European societies, “physical capital” is increasingly becoming a valuable asset, for men as well as women. Yet little systematic and inductive cross-national comparative research has been done on what is perceived as physical capital by people of different social backgrounds, genders and age groups. As a result, most existing studies on beauty ideals emphasize universal criteria of beauty evaluation inherent in human evolutionary psychology, or the homogenizing effects of beauty standards propagated by transnational media imagery and a transnational beauty industry. In our study, using a structured sampling method, a total of 180 respondents in six European countries are asked to sort picture sets of a wide variety of both male and female bodies according to their own tastes. This is done in the context of semi-structured interviews in which respondents are asked about their ideas on beauty and the role it plays in their lives and social interactions. Through factor analysis, separate “taste groups” are identified on the basis of their sorting patterns, and their particular criteria for evaluating beauty interpreted with the help of their own comments.

The effects of gender, education, age and nationality on ideals of bodily beauty, are ascertained through regression analyses with factor scores, and systematic coding of the interview material. Furthermore, we investigate to what extent bodily beauty ideals are informed by moral or symbolic, rather than purely aesthetic, considerations. We predict, on the basis of the theories of Elias and Bourdieu among others, that social norms relating to specific gender roles, self-control, race and other status and identity markers play a marked role in the repertoire Europeans use for assessing the bodies of both men and women.

Processes of Economic Consolidation in Central and Eastern Europe

State Family Planning Policies in the Islamic and Arab Demographic Giants: Does Indonesia Offer a Path for Egypt to Achieve below-Replacement-Level Fertility to the Benefit or Detriment of Women?

Indonesia is the world’s most populous Muslim-majority nation and Egypt has its largest Arab population. Both countries have similar overall and any modern-method contraceptive prevalence rates (61% and 58%) and levels of unmet need (12-13%). Fertility decline recently stalled in both countries, but at a lower level in Indonesia than in Egypt (2.6 and 3.0 births/woman, respectively). In the mid-1960s, both countries established clinic-oriented national family planning programs with strong bureaucratic and financial support. However, state policies led to skewed method choice with each country relying heavily on a single reversibly reversible interventions that accounts for 50% of contraceptive use, reducing choice of contraceptive use, reducing choices for women. Also, each program each has recently hit trouble. Indonesian politicians have shifted their attention and resources away from family planning. Injections are increasingly offered by local midwives with strong incentives and by more private providers. Indonesia now has the world’s highest injectable use rate (32%), but reliance on long-acting contraception is weak. The Egyptian program has poorer informed choice, higher discontinuation rates, and heavier reliance on public sector sources now undermined by ongoing political turmoil. The IUD remains the most widely used method (36%), but 7% of women now use injectables, more than in other Arab states and possibly soon usurping pills as the second

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.

528
most common method. We use survey data, documentary evidence, and key informant interviews to examine these developments further. With certain caveats, the Indonesian experience offers lessons for instituting more solidly founded contraceptive and population policies and for accelerating the path toward replacement-level fertility in Egypt, notwithstanding its major societal turmoil. Increasing injectable use can help meet demands on the fragile state health system, make use of Egypt’s underdeveloped community-based channels, and may serve as a catalyst for other Arab states to help them reach more sustainable population and development trajectories.

**Depression, Suicidal Ideation and High-Risk Behaviors Among Underserved Youths in Central Mexico**

Background: The staggering cost of depressive disorders and suicide on the quality of life of patients and families, the increased mortality risk, and the high economic burden demand our attention. There is evidence suggesting that engagement in risky behaviors, development of negative habits such as using alcohol, tobacco, and drugs, and depressive disorders all begin during adolescence. Further, substance use, in particular smoking and drinking, has been linked to depression and suicide risk. The study aim was to evaluate the prevalence of depression and suicidal ideation and identify predictors that could inform a prevention program.

Method: Using a cross-sectional study design with a probability sample, 702 adolescents (ages 14-24) from two low-income, rural high school students in the central Mexican state of Guanajuato were surveyed.

Results: Almost half (49.2%) of participants showed some level of depression (CES-D >16), with 23.6% identified as suffering severe depression (CES-D >25). Logistic regression analyses indicated that controlling for financial status, symptoms of depression were predicted by female sex, low self-esteem, risky behaviors, confictive parent-teen relationships, and binge alcohol drinking. The same variables with the exception of binge drinking predicted severe depression. In turn, suicidal ideation was associated with depression, low self-esteem, high-risk behaviors, and conflictive relationships with parents. A similar pattern of clustered behaviors among teenagers has been reported.

Conclusions: Predicting and ultimately preventing depression is of enormous public health significance. The findings can inform the design of interventions to prevent this early pattern of depressive disorders and associated risk factors among low-income, rural youth in Mexico and possibly in other contexts.

**Urban American Indian Youth Religion, Native Spirituality, and Well-Being: A Latent Class Analysis**

Most American Indians (AI) in the United States now live in urban rather than tribal areas yet little is known about their interconnected spiritual, religious and cultural worlds. This presentation documents ways that urban AI middle school students were involved with religious institutions and Native spiritual and cultural practices. Data come from AI youth (n=205, mean age 12) in five urban middle schools in a southwestern USA metropolis. Latent class analysis identified distinctive groups of youth according to religious affiliations, attendance at religious services, adherence to Christian and traditional spiritual beliefs, sense of Native spirituality, and involvement with spiritually significant Native cultural practices. Five classes emerged. There were two Christian groups, one attending Christian churches and following Christian beliefs, but uninvolved with Native beliefs, spirituality, or cultural practices, and a nominal Christian group affiliated with but not attending church, and relatively unattached to belief systems. Two groups followed Native beliefs and spiritual practices, one affiliated with the Native American Church (NAC) and another unaffiliated with any church. The fifth, non-religious group, was unaffiliated, followed neither Christian nor traditional beliefs, and was uninvolved in Native spirituality and cultural practices. ANOVA indicated that the two Christian groups were higher in SES, had lived longer in the urban area, and reported more pro-social behaviors and better decision-making. The findings are based on in-depth interviews with 237 women physicians in the City of Bangalore in India. The findings reveal that women doctors tend to opt for the soft specializations industry less sought after females counterparts and hence are less expensive in terms of course fees and capitation, and also are relatively less paid on the one hand and provide less intrinsic satisfaction and recognition in medical circles and society on the other. The experiences and dispositions of women doctors appear to indicate that their decisions on specialization tend to be culturally conditioned and are outcome of their tendency to avoid areas of medicine over which their male counterparts are assumed exercise a cultural and professional prerogative and unjustified monopoly.

**Technology Induced Inequalities at Workplace – an Indian Experience**

Inter-industry variations in compensation packages has since long been a normal phenomenon in industrial circles as it comes to be determined by the functional importance of respective industry and the levels of skills and expertise required. The paper deals with recent trends toward increasing inequalities in earnings in Indian work organizations. It is assumed that growing complexity of knowledge and skills required, length and cost of training requisite for operations, increase in capital expenditure requirements and growing sophistication and specializations in industrial sphere have been the driving innovations and their dispersion through forces of globalization and these developments have implications for compensation packages across the industries resulting in increasing inequalities in wages within and across industries. The analysis of data pertaining to variations in pay and allowances in 16 labour-intensive and 14 technology intensive manufacturing establishments in India over a period of 20 years indicate that differential emphasis on technology and innovations in different industries has brought about unprecedented inequities in the levels of income between the industries and even within the industries across the cadres. Such inequalities are further accentuated by elimination of moderately skilled workers on grounds of obsolescence and redundancy. The findings further indicate that the technology induced variations in income in Indian Industries vary significantly with sector of industrial operations and its functional importance for economy on the one hand and its potential for creation of wealth on the other.

**Marginalized or Empowered? Conflict Induced Internally Displaced Kurdish Women's Experiences in Turkey**

This study is focusing on the conflict-induced internally displaced Kurdish women's experiences. There has been an ongoing internal armed conflict in Turkey since 1984 and one of the consequences of this conflict is the internal displacement that occurred in 1990s. In the displacement process, women and other family members were victimized. They did not only lose their homelands, but they also had to struggle in the city centers with poverty and discrimination.

After they started to live in the city centers, women may become both marginalized and empowered. The aim of the study is to understand the situations that lead Kurdish women to be marginalized and/or empowered in the cities to which they have been forced to migrate. After the displacement process, which is one of the major victimization processes for these women, some of them may become trapped in ethnic and gender-based discrimination and may become more marginalized in the city centers. But marginalization and empowerment are not fixed categories and there is always a possibility for these women to transform their marginalized position into empowerment. By political engagement, working outside home and/or being head of the household, these women may break the cycle of their marginalization and becomes empowered in the city centers.

**Nations and Expectations of Democracy Among the Participants of the OccupyGezi Movement in Turkey**

The aim of this paper is to explore the notions of democracy and the expectations among the participants of the OccupyGezi movement started in Turkey in May 2013. The protests, which began on 28 May over the plans to demolish one of Istanbul's rare central parks, developed to nationwide rallies against the government. Although the protests have been acknowledged to be a civil unrest participated by people from different political backgrounds, the demographic features of the protestors and their demands remained under-researched and this caused speculations from both the government and the opposition sides about the reasons and impacts of the protests. A group of voluntary independent researchers have conducted a survey with 1060 protestors, during the actual demonstrations on the streets in Ankara. Data were collected in three days (8th, 9th, 10th June) in two different centers of the protests in Ankara. Participants were people attending the protests at the time of the interviews, in varying forms and degrees (example: just standing to actually fighting with the police). Participatory observation and results of other surveys conducted in the same cities were used as secondary data. The questionnaires consisted of questions concerning the demands, political backgrounds, reasons and types of participation to demonstrations and expectations of the protestors, along with their demographic characteristics. This paper is based on the analysis of the participants' notions, expectations and demands around democratization in Turkey. Results suggested that the demands of democratization have varied according to a series of factors, including the political background of the participant, gender, the place of demonstration attended and the different understandings about the government's policies restricting individual freedoms. The results have also documented the intense police violence experienced by the participants, which is expressed as one of the major reasons for the growing unrest.

**Population Change, Demographic Dividend and Health Care in Aging Population of ASEAN**

The purpose of this study was to investigate the change of population from 1967 to 2060 and to study the demographic dividend among ASEAN countries and to health care among aging using qualitative methods from secondary level of population data. It was determined that the population of ASEAN is approximately 600.8 million people or 8.6% of the world population and this amount has tended to continuously increase for 40 years. Nowadays, the population structure consists of 48.3% of laborers, 39.8% with child dependency, and 8.5% of aging dependency. Consequently, great many Japanese men and women remain single lifetime (20:20% for both men and women; 2010: 20% for men and 11% for women). Extremely high rates for life-time singlehood of Japanese men and women today are one of the major reasons for the fertility decline.

The rate for progress in Japan, however, has been much faster and unprecedented than other western nations. Nevertheless, today and the prospects on these dimensions in other Asian nations are more striking than their Japanese counterparts. Fertility decline and population aging started relatively late in these three Asian societies. The prospects reveal, however, that they will be in the critical situation, i.e., the zero/minus population growth in the foreseeable future, in which Japan has currently being undergone. Asian elders must learn to adapt to the independent living lifestyles quite different from those of the traditional ones. Making the best use of the modern ICT devices, various programs developed for the care of senior citizens would have significant implications for Asian societies that will soon follow the Japanese footsteps. Japan, especially for the care and health management of the elderly, may hopefully give a good guideline for other Asian families in the years to come.

**RC06-118.15**

KUMAGAI, FUMIE* (Kyorin University, fkumagai@com.home.ne.jp)

**History of Courtship and Dating in Japan**

The marriage pattern in Japan developed from the group/horde marriage in the Primitive Times to the tsumedai-kan (the groom commuted to the bride residence), to the muko-in (the groom lived with the bride family) during the aristocracy, and to the yome-in (women marrying into men's families) under the Bushi ruling. It was only after the Meiji era that Japanese marriage changed to the Yoriai pattern based on the mutual consent of the marriage partners.

Then, two types of mate selection pattern emerged: the arranged (miao), and the romantic marriage (ren'ai). In the arranged marriage the go-between (nakoudo) arranges formal interviews providing the young with opportunities for meeting possible marriage partners. During the early stage of Japanese modernization, miao was the predominant pattern, however the complete reversal has emerged today, and ren'ai has become the dominant pattern instead.

Recently, young Japanese have difficulties in finding ideal marriage partners. Consequently, great many Japanese men and women remain single lifetime (1920: about 2% for both men and women; 2010: 20% for men and 11% for women). Extremely high rates for life-time singlehood of Japanese men and women today are one of the major reasons for the fertility decline.

Attempting to provide young people with mate selection opportunities various “kon-katsu” services (marriage mate seeking activities) have been established by local municipal offices, commercial matchmaking agencies, and Mochi-Kon (Township Companion where both young men couples and women couples meet in group). Furthermore, the current government will extend monetary support to marriage services organized by municipal offices effective 2014 fiscal year.

Marriage, however, is an individual and private matter. And, therefore, if one decides to lead a lifetime singleness, it matters only to him/herself. Nevertheless, it is hoped that these new styles of courtship and dating will encourage Japanese youth to go forward for marriage.

KUMAR, AJAY* (Kumaun University, ajay.mana@gmail.com)

**Car Festivals (Religious Yatras) in India: A Dimension of Leisure Tourism (A Case Of 'Nanda Devi Raj-Jat Yatra' In Uttarakhand, India)**

This paper is about the car festivals (Religious Yatras) organized in different parts of India and their impact on the quality of life of its participants. This paper is analyzing how these car festivals provide leisure to its participants which further improve quality of their life through mental well-being, jagannath Puri Rath Yatra (Orissa, India), Mysore Rath Mahotsav Yatra, Mysuru (Karnataka, India), and Nanda Devi Raj-Jat Yatra (Uttarakhand, India) etc. Are some of the famous religious car festivals in India. Thousands of people participate in these religious festivals to get relaxed from day to day stress. Nanda Devi Raj-Jat Yatra is one of the most celebrated car festivals of Uttarakhand in India, taking place once in every 12 years during August-September for 19 days. A trek of 280 km remains jam-packed with the experience of nature, flora and fauna, fabulous culture and let one have a glimpse of the Uttrakhand Himalayas. Last car festival was taken place in the year 2000 and more than 50,000 people had been found taking this car festival.

Well established indicators of quality of life are used to explain the results in this study. Simple statistical and participatory tools are used to analyze the information and data gathered from different primary and secondary sources. Case studies are also used to explain the experiences of the participants of the car festivals.
Findings of the study reveal that leisure tourism enhances quality of life by increasing feelings of competency and relaxation, distracting from difficulties, as well as enhancing social inclusiveness and support. Leisure tourism also results in improved mental wellbeing through associated meaningful engagement, self-expression and creativity. Participation in it is considered as a life time experience. This experience not only provides leisure during the event but also provide happiness in memories.

RC07-140.5

The protests against the politics of crisis in both the US and Germany are structured along similar patterns: The Tea Party Movement in the US and the right-wing Euro-critical in Germany stand in opposition to the Occupy Movement on both sides of the Atlantic. These polarized spectra not only deploy parallels in their political messaging, but also in their socio-demographic composition. Beyond this opposition, all four poles seem to be united by a deep mistrust towards their national governments with a focus on domestic socio-economic issues.

Conflict In Ethiopia

Colonialism is a practice of domination, which involves the subjugation of one people to another. The etymology of the term from Latin word colonus, meaning farmer. This root reminds us that the practice of colonialism usually involves the transfer of population to new territory, where the arrivals lived as permanent settlers while maintaining political allegiance to the country of origin. Colonialism is a characteristic of all known civilizations. Books on African history teach us that Ethiopia and Liberia are the only countries, which were not colonized by West European states, but the paper argues that Ethiopia was created by Abyssinian state colonizing their neighboring nations during the scramble for Africa. Using comparative colonial history of Africa, the paper tries to show that Abyssinian colonialism is the worst of conquest and colonial rule of all territories in Africa, according to the number of people killed during the conquest war, brutal colonial rule, political oppression, poverty, lack of education, diseases, and contemporary land grabbing only in the colonial territories. In its arguments, the paper discusses why the Oromo were defeated at the end of 19th century whereas we do have full historical documents starting from 13th century in which the Oromo defended their own territory against Abyssinian expansion. Finally the paper will elucidate the development of Oromo national struggle for regaining their lost independence.

KUMSA, ALEMYEHU* (Charles University, alemyehu.kumsa@ff.cuni.cz)

The Roots of Horn of African Conflicts

The Roots of Horn of African Conflicts

Majority of societies passed through various conflicts in their history. Horn of African societies entered new types of violent conflicts starting at the end of 19th century, which is continuing until today under different forms. Exceptionality of Horn of African states is that Abyssinia (Ethiopia) was the only African Empire state, which participated in the colonization of Africa with Western European states at the end of 19th century. Compared to all participants of colonial powers of this part of Africa, Abyssinian conquest war was the longest and the bloodiest violent conflict according to historical empirical data. The territories of many nations were divided and became part of different colonial territories and different nations were forced to be part of the same colonial territory. The paper will discuss conflicts at different levels in the Horn of Africa: the conflict between state and ethno-national identity in the Sudan and Ethiopia. The Ethiopian empire colonial character from the view of non-Abyssinia peoples, the problem of interference of the state in religion affairs of some groups in Ethiopia (e.g., Islam and Waaqefana (Oromo indigenous religion), geopolitical interests of foreign powers in the region will be the main points of the discussion. The role of Ethiopian state interest in Somali conflict will be one of the points of discussion of the paper.

Sociocultural Shocks In Cross-Border Marriages: A Comparison Between Chinese and Southeast Asian Wives In Taiwan

Along with the expansion of international trade between Taiwan and Southeast Asia, inter-ethnic marriages between Taiwanese men and Southeast Asian women have started from the late 1970s. Cross-border marriages between Taiwanese men and Chinese women have dramatically increased starting from the late 1980s after the Taiwanese government has changed the national policy. These new developments make cross-border marriages a significant phenomenon in Taiwan.

Based on the in-depth interviews with marriage immigrants from China and Southeast Asia, the author delineates their daily lives in Taiwanese families after they married. It is clearly that all these marriage immigrants experience sociocultural shocks when they have started their lives in Taiwan.

The author notices that both Chinese and Southeast Asian wives wish to work on the job market and be economically independent but are restrained by the government policy. Both of them feel strange about the common arrangement in Taiwan to live with in-laws. They also experience the unreasonable underestimation of their natal family's SES by their in-laws.

Only Chinese wives complain that their husbands never helped with household chores, and their mothers-in-law seldom helped either, and so they have to work like a household servant. Moreover, they are often in conflict with their mothers-in-law or husbands on the issue of child rearing. They are also fussy about Taiwan's limited living space.

Most Southeast Asian wives, on the other hand, emphasize personal privacy and sanitation of living environment, but the real situations often contrast with what they expect. They also frown at the special diet their mothers-in-law prepared for them after they have delivered babies. They are especially angry about their natal mothers being looked down upon by their in-laws.

All the above mentioned sociocultural shocks in turn affect whether or not these foreign wives identify with their families in Taiwan.

The Movement of People's Politics in Democratisation Process in Thailand

This paper aims to explore the concept of people's politics and its application to the Thai democratic movement. Although Thailand became a democratic country more than 80 years ago (1932), the problems of inactive participation, political conflicts and political unconsciousness are still clearly seen today. The attempts to bring top down into bottom up democracy became a new approach in the new Thai Constitution (2007). Both the political development council and local organization council Acts have been established to support people's active involvement. People's participation has also been launched throughout the country.

People's participation has also been launched throughout the country. Both the local and the national people's politics in the political movement towards democracy will be examined in the paper. The grassroots' movement for human security, equity and opportunity will be studied as an example of the strengthening of peoples politics in terms of deliberative democracy, civic education and democracy. The roles of the people's movement through the works of Center for People's Political Development Center supported by King Prjadhipok's Institute in 48 centers/provinces during the last decade will be re-

The Intellectual Advantages and Dangers of Borrowing, the Complex Relation Between Literature and Sociology

All the above mentioned sociocultural shocks in turn affect whether or not these foreign wives identify with their families in Taiwan.

Due to the increased magnitude and frequency of extreme climate events, increased population density and land-use intensity, disaster impact that humans need to face in the future can be foreseen as more severe and complicated. Disaster risk is typically conceptualized as a composite function influenced by numerous natural and socio-economic factors. Coping capability is a key factor that influences not only the society's acceptance to disaster risk but also its potential to take related measures. It is important for a society (especially those vulnerable communities at local levels) to prepare itself so it is capable of responding to these natural, technological, and emergent threats more effectively. While there have been numerous studies and practices on assessing social vulnerability, few studies are emphasized on assessing a system's ability to manage disastrous incidents. Hence, one worthwhile inquiry is to explore the characterization and measurement of disaster management capability at local levels.

Nor should sociologists ignore how literary theorists analyze the works of fiction writers. Reading such work helps us better to understand both what is specific for the literary text but also how the techniques, imagination and language of fiction writers illuminate important aspects of issues that sociologists have tended to leave out in their interpretative work such as the importance of events, time, place, artifacts, representations, bodies, problemsolving etc.

SHLYAKHOVAYA, ELENA (Institute of psychology of Russian Academy of Sciences)

Structure and Specificity TRUST of E-Zines

Nowadays the Internet has globally changed mass communication. As a result, ‘civl journalism’ has emerged. The urgent problem is networking has become more actual. Media-trust defines relations in mass media communication with the using of material objects including electronic media and devices. Media-trust is a multilateral phenomenon. Its components: trust of the audience to mass media, trust of the mass media (team of journalists or one journalist) to his audience, or to a concrete reader (a viewer, a listener, a user). The users' status (regular, random, prospective and etc.) is an important factor of Media-trust. Media-trust is a function of the characteristics of mass media audience, characteristics of the audience and the characteristics of the communication process. The peculiarities social media is the social context (“the ideology of the time”), the form and type of information. In particular, the Media-trust importance as a whole and its components depends of the usefulness or uselessness of the information, of connection information to one or another area of subject’s life and etc. Users' trust in e-zines is one of particular cases of media-trust, which is a result of three basic components integration: trust to information, trust to journalist. The integration of the referred components is constant and absolute, as trust in social information is impossible without trust in its source. The triad of these types of the interrelated trust has three aspects: information, perceptive and interactive. The validity of the conceptual model and the relationship of many media-trust characteristics have been confirmed in empirical studies of Russian youth. The relationship trust to e-zines and intellectual, emotional and communicative respondent's characteristics has identified.

Trust, Loyalty, and Culture in Organizations

The trend in business is based on the idea that an employee is the primary resource of any organization, that sincerity, benevolence, trust and loyalty of employees is a major competitive advantage. The purpose of the study was to examine relationship between different psychological organizational phenomenons, such as trust, loyalty, and organizational culture in organizations with different spheres of activity. Hypotheses were tested using survey data different organizations: publishing, nanotechnology, banking, PR, marketing. The results of comparative and cross of trust, loyalty, and culture of organizational culture and have given evidence of all hypotheses. The results suggested that separate components of trust, loyalty and culture are related between each other. Organizational culture is related to organizational trust and employees' loyalty, i.e. different types of culture require particular combination of trust and loyalty indicators. Organizational trust is related to employees' loyalty, i.e. each component of organizational culture will be determined by the specific rate of each type of loyalty (organizational, professional, labor). Moreover differences of preferred and actual culture indexes are inversely related to overall level of trust and loyalty. The study carried out in a unique context of poor explored Russian market could provide further practical and theoretical insights and contributed to the understanding of the nature, development, and maintenance of trust, loyalty and culture in organizations. Yet, this understanding has not been fully translated to the business community in a way that encouraged the actions necessary to reduce the growing trust deficit. EDS components integrated to build better practices for communication and employee involvement, along with strategies for reducing employee vulnerability and dependence. These efforts should be integrated into the cultural norms of the organization, where trust is a part of every interaction between employees.

The Sportification of Tai Chi and the Hegemony of Vision

The purpose of this paper is to enable a deeper understanding of modern sport through an examination of the sportification of tai chi (taijiquan) – its transformation from a folk tradition specific to local communities into a modern sport with global competition. While there is considerable literature on the sportification of tai chi (Li, 2008; Ryan, 2008; Zhang, 2010), this paper proposes to understand sportification as hegemony of vision (Levin, 1993) – the prioritization of the visible as the most important source of socially relevant meaning over what is perceived by other bodily senses. This was first made possible by the creation of the Simplified 24 Form in 1956 under the initiative of the New Chinese Government. Whereas traditional tai chi was, and still is, a martial art combined with internal “chi” cultivation techniques impregnated with Daoist philosophy, the Simplified 24 Form is sterilized of the martial, internal and philosophical aspects; it was rendered a standardized, easy-to-learn health exercise for the masses, demanding only the correctness of visible movements. This prioritization of vision enabled objective rules for competition, which systematically allocated social meaning to the visible body. While competition has contributed to the global popularity of tai chi, it has inadvertently led to the neglect of aspects that were not subject to visual appreciation, such as the internal cultivation of “chi” and its philosophical implications. By drawing on data gathered by fieldwork in a tai chi class in Xinxian City, China, light will be shed on the rich sensory experience that traditional tai chi affords. This relativizes not only sportified tai chi, but also modern sport itself, as an activity obsessed with the externally visible out of the whole of human sensory experience.

The Relations Between National and Global in Ukrainian University Rankings

In my presentation I want to analyze how national and global components are presented in the leading Ukrainian university rankings TOP 200 and COMPASS and, in manifest or latent ways, influence the contemporary vision of university mission. Being initially national educational institutions (with a certain specific interpretation of “national” during times of Russian Empire and Soviet time), after 1991 Ukrainian universities faced a kind of “double pressure” from the ideology of nationalism and influences of globalization. How intersection between “national” and “international” is presented in the main criteria and indicators of these university rankings? Do rankings help to create new academic hierarchy in Ukrainian university education? How effective are university rankings as a tool for internationalization of our system of education? These are the main questions for my future presentation.

Emotional Infrastructure of Reconciliation

Analysis of several institutionalized reconciliatory actions in relation between Central and Eastern European nations - German, Polish, Ukrainian, Jewish, Lithuanian, Czech and Russian - is made aiming at excavating the basic emotional components underlying the success of reconciliation. This involves the discussion of emotions like guilt, hatred, forgiveness, penitence and love. The tolerance is usually assumed as minimal precondition for reconciliation but the ideal reconciliatory is linked with the proactive approach, that involves the love of the neighbor. The failed attempts at reconciliation provide the cues for the answer as what is the role of emotion and of the emotional dynamics of the hatred complex. This is done with the analysis of the rituals of reconciliation where the emotions are publicly communicated and displayed in the public spectacles. The basic contradiction is pointed as the ritualized reconciliation demands display of love emotion, the working infrastructure of tolerance is not emotional neither ritualized.

Contextualizing “Individuality”: Searching for More Flexible Definition

This presentation focuses on a concept of Kanjin (the contextual) coined by a Japanese sociologist Eshun Hamaguchi. Hamaguchi introduced this concept of Kanjin to overcome a commonly accepted view that Japanese are collectivists. In such view, Japanese are described as self-sacrificing and a Japanese sociologist Eshun Hamaguchi. Hamaguchi introduced this concept of Kanjin to overcome a commonly accepted view that Japanese are collectivists. Hamaguchi introduced this concept of Kanjin to overcome a commonly accepted view that Japanese are collectivists. This is done with the analysis of the rituals of reconciliation where the emotions are publicly communicated and displayed in the public spectacles. The basic contradiction is pointed as the ritualized reconciliation demands display of love emotion, the working infrastructure of tolerance is not emotional neither ritualized.
The Central and Eastern European (CEE) countries have often been treated as a monolith in comparative social policy analyses. While there are moderate differences in gender employment gaps of childless men and women in these countries, the picture of employment among parents of young children is completely different. The employment rates of fathers of preschool children are very high in CEE countries, ranging between 84% and 94%, but the employment of mothers diverges from 36% in Czech Republic to 81% in Slovenia. Previous research has shown that there are different cultural, structural and economic factors influencing the variance in students' expectations.

The study focuses on California's efforts to improve college readiness through the Early Assessment Program (EAP). The EAP is an intervention designed to increase the quality of information about academic preparedness available to high school students. We aim to understand how an increase in information about college readiness affects students' readiness for remediation once enrolled, and whether the effect of this information varies for different types of students (by gender, race/ethnicity, and academic background). Although several studies have demonstrated that many students are relatively uninformed about what it takes to succeed in college, the question of how we might effectively enrich the information on which students base their postsecondary decisions remains largely unexplored.
Role of Local Governments in Immigrant Integration: Cases from Thailand and Japan

There are much discussion on immigration at the national state level, focusing on their immigration and citizenship status. However, it is at the same time recognized that there are many migrants who do not go through the official procedure of immigration and come to live in the country illegally. Local governments need to face these migrants on a day-to-day basis, since these migrants live there as residents. We focus on this vacuum of migration policy at the local level. How are the local governments coping with migrants and how are they balancing their accountability to local residents and their accountability to national state regarding migration policies? We will take cases from Thailand (Tab and Samut Prakan) and Japan (Yokohama city) to explore the struggles of local governments and communities.

Vulnerabilities to Cyclonic Disasters in Bangladesh

This paper aims at exploring the vulnerability factors affecting cyclone impacts in the southern coastal regions of Bangladesh based on empirical investigations. The primary data for the present analysis has been collected from over hundred respondents, who sustained repeated cyclonic disasters, based on semi-structured interviews conducted during last several years in the study areas. The findings suggest that the prevailing socio-cultural conditions significantly underpin the low peoples’ evacuation behavior and rapid response during crises and emergencies. Moreover, a comparative analysis of 1991, 2001 and 2007 cyclones, marked as the most severe in recent history, reveals a significant decline in life casualties of 0.5 million, 0.14 million and 4 thousand respectively. The paper identifies three major reasons behind this damage reduction. First, disaster preparedness measures have gradually become effective and the information dissemination technology and early warning systems got improved over the years. The widespread of cell phone technologies in rural areas of Bangladesh played key role in effective early warning dissemination and reducing life casualties between 1991 and 2007 cyclones. The second reason is the unequal population density of the landfall areas of these three cyclones. The 1991 cyclone made landfall near Chittagong city, the second largest city in Bangladesh, causing maximum damage to lives and livelihoods. The third reason suggests that the 1991 cyclone had attacked during high tide, causing high storm surge accompanied with severe inundation and enormous destructions. The paper, however, makes substantial analysis for informed decision-making and policy considerations for cyclonic disaster reduction in southern Bangladesh.

KUSAYANAGI, CHIHAYA* (Waseda University, kusayanyagi@waseda.jp)

“Individuality” As a Moral Expression in Japan

Sociology has long been interested in individualization or individuality as social phenomena. Classical sociologists found individualization among social changes in modernization. It is said that there has been this process in Japanese society, too.

This paper examines how “individualization” and “individualism” has been talked about, not among sociologists, but among lay people in Japan and explores how people conceive of “individualization” and “individualism” and how they make use of those concepts to understand their everyday life. Those words are not only theoretical terms but also everyday words. This way of approach is based on the idea Ibarra & Kitsuse (1993) proposed as an ethnography of moral discourse; a constructionist approach to social problems that focuses on social processes in which a social problem is defined and discussed.

The words “Individualization” and “Individualism” in Japan are vocabularies often used to problematize social phenomena, people, or events. For example, a movement to change the civil law to allow women to keep their name after their marriage used to be criticized as excessive “individualism.” Eating a meal alone, especially in the case of children or young members of a family, drew attention in early 2000’s as “ko-shoku (individual or solitary on their own),” and is thought to be a problem of individualization that has weakened family bonds. These vocabularies convey moral meaning and they are “vernacular constituents of moral discourse” (Ibarra & Kitsuse 1993).

By examining how those words are used in moral discourse, I would like to argue how they work for people to approve or disapprove of social conditions, behaviors, and social changes. Talking about “individualization” or “individualism” is a speech act that participates in constructing social realities.

Identity Problems in Global-Local Relations

The categories of identity, identification, state, civil, national, and ethnic iden-
tity are being widely used in sociology and other disciplines. These concepts are
rather new to Kyrgyzstan's public domain and scientific rhetoric where the inter-
pretation of a nation as citizens of the state started entering political and academ-
ic discourse. According to Habermas, post-traditional, post-national identity is "a
more sober political identity" that separates itself from the background of the
past centred around ethnic history. Modern civil nation is not made spontaneously
and at once step. It evolves as a result of efforts aimed at consolidation of civil
society and its institutes in their interaction with the state.

Modernization of post-Soviet Kyrgyzstan in the context of local-global relations
of post-traditional world will be successful only when traditionalism is overcome
based on the choice of creative Domination. Dominant cultural and religious
identities is a feature of traditional societies in which ideology, ethnicity, and
religious traditions are main social values. In post-traditional world
the values of civil nations are asserted that integrate multi-ethnic communities
and ascertain cultural pluralism as a main vector of collective identifications. A
"civil nation" is not developed by chance, but emerges as a result of the efforts
to strengthen civil society and its institutes and their interaction with the state.

The overall problem of the Kyrgyzstan's identity is a mismatch between its basic
elements such as national, ethnic, religious, cultural and political ones. There is
a trend for new interpretation of these elements' composition. While the Soviet
identity was only a "mobile home" conceivably on the Gulf Coast of Florida, between
2008 and 2009, where more mobile home parks are more numerous than anywhere
else in the US. Just over half of the interview participants were 55 years or older;
roughly one fourth resided in so-called senior parks which restrict residency to
persons over the age of 55, while the other half lived in communities that also
accommodate middle aged residents and children.

Even though it is not an entirely urban phenomenon, the senior mobile home
lifestyle is influenced by urban experiences and cultural imagery, such as fear of
crime or racial/ethnic conflict, often creating a longing for simpler, more neighbor-
hooded, less hectic lifestyles which can, however, turn out to be unaffordable,
affordable, and personally fulfilling for older people than originally anticipated.

The Business Case For Labour Broking In South Africa

Globalisation has brought about changes in the world in particular
the restructuring of the workplace in order to promote labour market flexibility.
Labour broking systems can be seen as a response to the growth of waged occupations created in temporary jobs and casual positions.

This research provides a platform for the labour brokers to be able to defend the role
they play in what has been labelled as an inhumane, insensitive, detached system
and strategy.

The idea of 'l'intervention sociologique' (sociological intervention), introduced by
respected French sociologist, Alain Touraine, has been considered as one of the
most innovative approaches to social movements. However, in the different social
culture context out of European society, sociological intervention faced various challeng-
es. My experience in doing sociological intervention to a group of young actors of
'multicultural movement' in Indonesia has allowed me to identify the limitation
of sociological intervention and furthermore, to build alternative adaptation and
innovation that is more suitable with Indonesian society. As a consequence of
theoretical and methodological reconstruction that I have made, I therefore in-
roduce the concept of ‘Pendampingan Sosiologis’ or could be translated in French
as 'l'accompagnement sociologique' and in English as 'Sociological Accompaniment'.

Although pendampingan sosiologis found its origin and inspired principally from
larger networks in local and national levels. The movements also have become
the source of ideas and inspiration for wider discourses on diversity in a global
upward mobility, and personal identity. Whites, on the other hand, had less posi-
tive feelings regarding their homes and community overall, and at times struggled
with negative public perceptions of "trainer" residents, as well as a sense of eco-
nomic decline or failure.

In sum, the paper shows how residents of the same neighborhood in similar
housing can, figuratively, live in very different places, based on culturally framed
social locations and contextualized within the larger stories immigrants and na-
tives tell about our lives.

Russian Youth: Mobilities, Inequalities and Life Chances

Due to the influence of the global social transformations of XXI century there have appeared new forms of inequality (access to mobilities, networks, education, spare time and information, guarantees of security) as well as the "old" inequalities concerning income, wealth, prestige are being changed in the direction of increasing. Russian youth has been particularly affected by the rapid social, political, economic and cultural changes and discrepancies. Furthermore, the breakdown of the USSR has led to the drastic social conversion. These multiple structural factors not only determine but shape the life of youth in Russia. Faced with these uncertainties and turbulences the young people have to make their own decisions and to pattern their behavior on the current "liquid modernity" (Z. Bauman) which possess a lot of seeming life chances and choices.

Our paper addresses the growing phenomenon of social mobility which has become a core motif of the modern society and numerous "new" and "old" inequalities forming the social structure of the Russian society. The theoretical grounds of the research are the classical and the modern social theories concerning social inequality and mobility. We elaborate the "integral" approach to the social inequality which appeals simultaneously the objective characteristics and to the person's perception of his social position and the inequality phenomenon. The paper is based on the desk study of the Russian youth, its problems, choices, social identification, ways of life and on the data of the author's sociological on-line survey of 400 young people at the age of 18-35 years old. I'll present the results of the research showing the influence of the becoming of non-linear inequality on the social mobility and life chances of youth in Russia.

KÜNEMUND, HARALD* (University of Vechta, harald.kuenemund@uni-vechta.de)

Life Expectancy and Retirement Age: Policy Options and Practice

The trend to early retirement that has been observed in many industrialized countries (e.g., Kohl et al. 1991) seems to have come to an end. The steady increase in life expectancy has led to changes in retirement age regulations, what in turn accelerates the aging of the workforces. For example, the Czech Republic and Poland increase their retirement age by the amount of the projected increase in life expectancy, what statistically keeps the mean duration of the retirement phase in the life course constant, while the mean working phase in the life course extends. Others countries like Germany rise the retirement age in a way that both the retirement and the working phase increase. Regardless of the amount, these changes affect inequality and redistribution by the social security systems as life expectancy is distributed unequally in these societies: For example, better education and higher income result in higher life expectancy. The paper discusses opportunities to change the current three-parted (and dominantly male-oriented) life course regime in a way that both increased mean productivity of the aging workforces and inequalities can be reached at the same time by reorganizing the life course, namely by redistributing education, work, and retirement phases in the life course. By improving productivity, the problems of ageing societies can be tackled at societal level (e.g., increasing contributions for social security) as well as both the level of employers (e.g., improved skills of the aging workforce) and employees (e.g., improved health). Discussing such opportunities, other than simply rising retirement age, widens the scope for designing growth friendly social security that help to reduce existing social inequalities.

KÜNZLER, DANIEL* (University of Fribourg, daniel.kuenzler@unifr.ch)

The Politics of Social Policy in Kenya

Since the introduction of the multi-party system in 1992, Kenyan political parties generally had a low programmatic profile and were clearly personalized. Voting was rooted on paternalism and party identification alone. Since the 2007 elections, the Kenyan political parties have become more programmatic, and parties seek to define their identity in terms of a specific program. The capacity of parties to transform into programmatic political organizations is constrained by the political context in which they operate. The multiparty system in Kenya has been characterized by high levels of poverty, unemployment, and social inequality, which have made it difficult for parties to develop a programmatic agenda. The political context has a significant impact on the political parties' ability to develop a programmatic agenda. The multiparty system in Kenya has a significant impact on the political parties' ability to develop a programmatic agenda.

However, merely three months after the election, President Kenyatta declared free public maternity services, a first step towards free primary healthcare as designated by the Jubilee coalition manifesto. Considering the human and financial resources, there is still ample ground for scepticism concerning the long-term viability of this policy. Nevertheless, this is a significant development in a rather sclerotic social welfare system.

What are the determinants of this social policy change? Functionalist, institutionalist, economic determinist, modernisation or power resources theories have limitations in explaining policy changes. Preliminary evidence from interviews with stakeholders in Kenya and other sources point towards the importance of politics. The recent post-election violence questioned both domestic and international legitimacy. Including free maternity care in the manifesto and implementing it quickly is on one side an attempt to restore international legitimacy, as maternal health is an important issue on the international agenda (MDGs). Given the neck-and-neck electoral race of the two big coalitions, it on the other hand also attempted winning the support of smaller electoral groups and thus domestic legitimacy. Hence, catalysed by a serious electoral crisis, politics finally resulted in policies.

KÖNIG, ALEXANDRA* (University of Wuppertal, akoenig@uni-wuppertal.de)

Faces of Uncertain Transitions to Adulthood – in Different Fields of Education

The faces of uncertain transitions to adulthood vary between different countries. But they also differ within countries. Germany and its’ manifold fields of education are ideal cases for studying the phenomena in question.

Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will carve out different patterns of uncertain transitions to adulthood.

In our presentation we will (a) show how the transition to adulthood is structured in different fields of education (e.g., in a paternalistic apprenticeship based on an old master-pupil model; in an art academy which offers independence but uncertain job chances); (b) differentiate between forms of uncertainty (e.g., to secure the livelihoods in the long term, to find the scope for self-realisations, to live alone); (c) discuss how the adolescents cope with uncertainty, how they design their future and their self.

The sample of our study contains trainees in vocational training (hairdressers, painters) and university students (art, teaching/engineering). The sample composition allows a comparison of adolescents in different fields of education in Germany.

There are different theoretical options and viewpoints to get a perspective on transitions to adulthood. In forms of our research project, we link theories of interacionism (e.g., Meads processual concept of “self”; Strauss’ concept of “status passage”) with Bourdieu’s theory of social inequality (and his concept of “field”) to understand the strategies and orientations of adolescents at the threshold to adulthood.

RC04-80.9

KÖNIG, ALEXANDRA* (University of Wuppertal, akoenig@uni-wuppertal.de)

Orientations and Strategies of Less Privileged Students

In Germany, like in many other countries, the proportion of adolescents with low academic success and little experience of job opportunities comprises an increasing share of the population. The younger generation, particularly those from less privileged social backgrounds, is faced with considerable challenges in finding work, while at the same time the number of university places is limited. The strategies of these young people differ from those who are more economically successful.

Therefore, the provision of adequate vocational training and education opportunities is essential. However, the sample of our study contains three subsamples: students of art, of teaching, and of engineering. We want to discuss the following points: a) The structuredness of choices: Choices are structured because requirements and expectations differ depending on the social position. For instance, the less privileged adolescents choose more often university programs offering good job chances (like teaching or engineering). b) The access to different fields of education: While the criteria for access to university are universal and transparent (school grades), access to an academy of arts is unpredictable. A committee of the academy identifies a specific “artistic”, incorporated capital. Mass participation to education at an academy does not exist. c) The relevance of significant others: The qualitative interviews show that students from lower classes more often feel parental misgivings concerning their personal ability. The qualitative interviews allow to deepen the analysis about the role of significant others.
Educational Inequality and Welfare State Patterns

Previous research on social stratification reveals that social inequalities in educational and thus occupational opportunities are still very relevant features of modern societies. Against this background the study focuses on the intergenerational reproduction of educational inequalities and how this reproduction is affected by specific welfare state patterns in 13 European countries (Austria, Belgium, Denmark, France, Germany, Greece, Ireland, Italy, the Netherlands, Portugal, Spain, Sweden and Switzerland). For the analyses micro-data from the Survey of Health, Ageing and Retirement in Europe (SHARE) and macro-data from several sources (e.g. Eurostat, OECD and UNESCO) are used. With this approach it is possible to combine a multi-level perspective in a two-level model. A broad comparative perspective allows the identification of different institutional influences, namely direct or indirect governmental investments in education, national specific shifts in the labour market as well as demographic changes. In general, multi-level estimates on 33,346 individuals – born between 1950 and 1984 – show how the legacy of the family of origin and the reproduction of educational inequalities over generations. Furthermore, the overall hypothesis that both welfare state arrangements and labour market indicators have an influence on the educational attainment is confirmed. In addition, contextual characteristics can partly counter the influence of social origin and therefore reduce the intergenerational transmission of educational opportunities.

The influence of generational support on housing pathways: Evidence from the British Household Panel Study (BHPS)

The family home is the single most valuable asset for most individuals and households. In addition, people have strong emotional attachments to their family home, when it is passed down generations. In recent years this idealised housing pathway has become more and more complex. Young people are increasingly depending on their parents, both financially (deposit) and in-kind (guarantor, living rent free at parental home), to acquire their first home. Qualitative evidence shows that middle aged children support their less well-off parents to purchase their own flats. This paper contribute to this debate by investigating the influence of bequests and in-kind generational transfers on homeownership. Based on the British Household Panel Study (BHPS) we investigate how housing pathways are influenced by receiving an inheritance and in-kind support by offering rent-free accommodation. Estimates suggest that inheritance seems irrelevant compared to other socio-demographic control variables. Based on the results the timing of such windfalls seems to be crucial. Most individuals receive an inheritance at the end of their work-life and often share the amount of the windfall with their siblings. Hence, at this stage in life few people move into their family home as owners or use the windfall to purchase their own home. However, rent free accommodation seems to have an effect on housing pathways. Young people who are living with their parents are benefiting from this in-kind support and are able to purchase their first home earlier than independent mortgagees who are saving up for a deposit while renting. These results are discussed in the wider context of housing policy, welfare and generational support.

LABUCAY, IREMAE* (Social Weather Stations, mae.labucay@gmail.com)
SANDOVAL, GERARDO (Social Weather Stations)
Gender, Work and Family: The Situation in the Philippines

Using three waves of data from the International Social Survey Programme (ISSP) survey modules on Work Orientations, and on Family, Work and Gender Roles, the paper will explore the current situation and the changing trends on how the work-family nexus is structured by gender in the Philippines. At the macro-level, Filipino women have gained greater equality with Filipino men than its Southeast Asian neighbors. The Philippines was one of the first countries in Asia to have recognized the important role of women as an essential component in nation-building. There are laws enacted laws and policies instituted to ensure the empowerment of women. The Philippines has had two women Presidents, a woman Chief Justice of the Supreme Court, and women in high-level elected positions. Women have much access as men to establish their own businesses. But what happens when men and women go home from work? Despite the increasing the role of women in the public sphere, the Philippines remains a conservative, largely Catholic society that puts importance on the family. The paper will first examine the gender differences in the domestic division of labor, traditionally the women's domain as “homemakers”. Then the paper will examine the possible impacts of gendered domestic division of labor on the work sphere, as measured by potential work-family conflict, and attitudes/behavior on female employment over the life-cycle. Finally, the paper will examine the possible linkages of domestic division of labor and well-being of couples, including satisfaction with family life, happiness and satisfaction with life. Using the data from ISSP surveys conducted in 1994, 2002 and 2012 will allow the paper to examine the trends in gender, work and family in the Philippines within the context of the changes in the Philippine economic conditions across three decades and the accompanying socio-cultural changes it brought.

Ambivalent Transnationalism. Understanding the Long Distance Engagements of Hometown Organisations

Collective remittances undertaken by hometown organisations for the benefit of their origin area is a well-known illustration of migrant transnationalism. This paper unravels the rationale for these hometown organizations to engage (or dis-engage) into long distance development practices. The latest evolutions of transnational theory focuses on the spatial extensions of transnationalism embedded into neo-liberal globalization but fails to address the micro level drivers of transnational engagement. It is contended that a revised conception of structure and...
agency approach to transnational phenomena is likely to shed a new light on actors’ transnational engagements and on the role of transnational social institutions such as hometown organisations. This S/A approach presented in this paper draws on ambivalence theory as well as Habermas communicative action theory. The paper also argues that such an approach would open the possibility to open a cross fertilizing dialogue between transnational theory, migration theory and general social theory.

The different steps of the demonstration will be illustrated by personal research on hometown organisations in France and the UK. Arguably, integration adds layers migrants’ identity. Their identification with the place of settlement and their new associated obligations undermine their “raison d’être” as a villager. The life experience and socialisation of migrants in alternative social fields enriches their lifeworld with new references and fosters ambivalent perceptions of the world. But, in turn, this multi-polarisation questions people sense of belonging, in this context it needs to be constantly reassessed. The reorientation of engagement into long distance development initiatives observed among hometown organisations is the result of this necessity to reassert “villagelessness”.

Transnational Volunteering and Immigrant Incorporation: The Case of Moroccans in France

This paper analyses the recent evolution of Moroccan organisations in France. The analysis of the Journal official, a registry of all associations created in France, shows a rapid decline of hostland oriented organizations such as civic or socio-cultural associations and whose aim is traditionally dedicated to insertion of immigrant communities in France. In parallel, the number of creation of homeland oriented organizations is on the rise and surpassed hostland oriented organizations in 2002. These transnational associations are mostly NGO’s engaged into development and humanitarian activities.

What are the relationships between this reorientation of Moroccan volunteering and integration? Is the growing importance of the transnational referent synonymous with a weakening of the integration dynamics in the host society? The analysis of the INED survey “Trajectoires et Origines” including a sample of 10,000 people and focusing on both immigrant integration and transnational practice shows that it is far from being the case. This reorientation parallels the emergence of a Moroccan middle class in France. This data survey analysis is complemented by a field study that informs the dual embedding “here and there” of immigrant transnational organizations.

Nationalism and Attitudes Towards Immigrants: Canada and Taiwan Compared

Canada and Taiwan are both developed societies with a full range of class cleavages and “homeland societies” that grew out of waves of settlement from elsewhere. Both have a complex internal ethnic structure, with two large majorities, aboriginal minorities, and waves of more recent immigrants. In recent decades, both societies have experienced important re-definitions of the relationship between the aboriginal and the larger society. In Taiwan, the cleavage between the long-established Taiwanese and Mainlanders is an overarching one that has ramifications in many areas of political life. This parallels Canada’s linguistic dualism. In Canada the history of dual European settlement has led to a bilingual society with a full range of separate French-language institutions centred in Quebec, and the language cleavage is an overarching one. Both societies are also immigrant societies with ongoing debates on various aspects of immigrant integration. National identities are complex and evolving in both societies, and relations with a larger neighbor (USA, PRC) play an important role in each setting. This paper will summarize and juxtapose some findings from Canada and Taiwan from the International Social Survey Programme (ISSP) data set on national identities in 34 countries. In both societies, civic and ethnic definitions of nationhood co-exist in tension, and attitudes towards immigration are mixed and contradictory.

Changing Care and Migrations Regimes : New Contrasting Regulations and Their Impacts on Employment and Working Conditions of Care Workers. an Intersectional Perspective

Since the beginning of the 2000, the French care/domestic service sector, like other countries in Europe, has been undergoing considerable reorganisation. These changes in terms of commodification have had consequences on the motivations, the working conditions, the provision of care but also on formal/informal care, paid/unaunpaid, public/private care. These transformations have had a strong influence on the employment/working conditions and training of women care/domestic workers. Thus, despite professionalism policies and the implementation of new rights, precariousness is still a typical feature of this sector.

However “local indicators” as well as considerations on “who cares ?” have to be taken into account. Indeed, this sector constitutes a working universe that is extremely complex to grasp, due to the multiple actors involved, the levels of intervention (local and national)… For example, when the sector comes to professionals, the progress of training and certification has not taken place evenly or at the same time across all segments of the sector.

At the same time, these new regulations have taken place against a background of changes in migration policies and the dynamics of migration. In this context, this paper aims at analysing the effects of these trends and contrasts on employment and working conditions of care/domestic workers (elderly and child care), in an intersectional perspective. We will discuss in which ways these consequences are similar or not for migrant and not migrant domestic/care workers and if not, why and how. A European research project coordinated by the ILO has been instrumental in foregrounding issues relating to the role and working conditions of migrants as caregivers. This paper will present results from the French case as an example of mixed care regimes. Data sources include LFS data, policy reports, interviews with union representatives, government departments, NGOs (16) and migrants working in the sector (50).

The Egypt Sufism Movements in the Aftermath of 2011 Revolution. Critical Study

Abstract:

Experts on Sufi movements often assume a potentially significant position for Sufism in framing the political map for change in Arab countries following the Arab Spring. This is particularly true for one of the most vibrant Sufi capitals of the Muslim world; Egypt, holding a record of more than ten million Sufi members. In spite of this, one year after the Egyptian Revolution, political developments began to exhibit the failure of Sufism to gain political ground in the post-Mubarak political scene. This paper discusses the problematic issues of Sufism with respect to politics in Egypt, with particular focus on the political experience of the Sufis in...
Egypt. It seeks to examine the Sufi experience in the process of political struggle, in addition to their contributions in the election held in November 2011 in an attempt to understand the factors which culminated in their gaining remarkably insignificant political support in spite of their massive membership base; and officially favored state support, both internally and externally. This study concludes that the nature of the Sufis practice itself has played a key role in restraining their political presence, in addition to their lack of political awareness as well as poor organization and populism; all of which have had a significant impact on the failure of the political experience of Sufi orders in Egypt.

How Well Do Municipalities Cope with Immigration – System Capacity Versus Cultural Reclusiveness

Switzerland is a country with a relatively high rate of immigration. This puts the municipalities under considerable pressure when it comes to measures to integrate the non-Swiss residents. About 40 per cent of the municipalities top level officials claim that their municipality encounters difficulties to cope with integration problems, on the grounds of our regular surveys among all Swiss municipalities - we are not only able to show, which types of municipalities are more successful in integrating residents from other countries, whether this depends, for example, on the size and on the financial situation of the municipality (system capacity, Dahl and Tufte 1973), and to what extent this depends on cultural and political differences between the municipalities. We can also show how the perceived difficulties to integrate foreigners developed in the last years, and to what extent the countries that immigrants come from render integration more difficult. We expect problems to integrate foreigners to be higher in larger municipalities especially if they are short of financial resources, we believe that municipalities with a more liberal and more left wing oriented voting behavior encounter less problems, and finally it is the percentage of immigrants and their cultural distance which also play an important role.

Exploring the Role of Listening in Participation. -- CANCELLED

This paper will review the work on listening as a democratic skill in participation, particularly online participation. Crawford, writing in the context of the applying listening in the context of online activity, draws on the work of Jonathan Cray who observes there is in our times 'an ongoing crisis of attentiveness.' Crawford proposes that emphasizing listening as an approach offers a counterpoint to this. So too listening theorist Beard has written that there may well be "an ethical listening subject." He argues this subject will make "the choice to listen selectively." This does not mean Beard explains to only those points at which we feel "safe" but rather to think about why and how we listen and to seek out listening points rather than being passive receivers of endless information. Having explored elements of listening theory drawing on Kennedy and Beard this is then applied in the context of environmental issues. The recent work of Holfield will also be reviewed; this work argues that listening and ecology have a relationship. Drawing on quite different theoretical foundations nevertheless Beard and Holfield argue this listening then in turn creates the self. The listening approach to online participation therefore has value in contributing to cosmopolitan ideas. While it does not create a theory of cosmopolitanism it does deal with common themes from cosmopolitan thinkers who grapple with the universal, the voices of all, and the self. Listening writers therefore offer an important perspective to the project of enhancing democracy.

Social Disorganization and Terrorist Attacks in the United States before and after 9/11

Despite much rhetoric regarding terrorism in recent years, little empirical research has examined patterns and predictors of terrorist attacks in the United States. We use newly available data on terrorist attacks in U.S. counties from 1990 to 2010 to test a set of hypotheses informed by a social disorganization framework. Given the historic impact of the coordinated attacks of September 11, 2001, we also examine whether the determinants of terrorism changed after this iconic event. In particular, we hypothesize that the unprecedented increase in anti-terrorism policing following 9/11 not only reduced terrorist attacks but also produced the greatest reductions in terrorism in communities where policing is traditionally most successful—those with low population heterogeneity. Across the two decades spanned by the data, results show that terrorist attacks were more common in counties characterized by greater language diversity, a higher proportion of foreign born residents and greater residential instability. Moreover, while total attacks declined significantly after the 9/11 attacks, results show that the decline was less dramatic in areas characterized by high levels of population heterogeneity. We discuss the implications of the results for theory, future research and policy.

3D printing or ‘personal fabrication’, as a newly emergent technology, has now been widely considered as the most significant technological breakthrough of the twenty-first century. Drawing upon complexity theory, actor-network theory and field theory, this paper considers 3D printing as a newly emergent technology and examine its translation into one specific culture field—museum field. Museum field, the guardian of authentic material cultures, instead of worrying the wide-spread of hyper-real reproduction culture caused by 3D printing, showing enthusiastic embracement of this new technology that brings back materiality to the society. This paper thus discusses how 3D printing associates into the museum assembly and creates the new heterogeneity and novel competition transforming the museum field. It not only emphasizes on the museum’s aftermath of digitalization and its new hybrid material turns by 3D printing whirls, but also examines new dynamics engaging into the competition in the global museum field.

Based on 3D printing’s current engagements and appropriation in the museum field shown in news and exhibitions as well as scenario analysis of future studies, this paper examines their performances in terms of forms of museum capital: Firstly, it analyzes current museums’ acquisition of 3D printing collection and their creative projects with artists and designers as well as its application in collection’s restoration; secondly, it analyzes the future presentation techniques in exhibitions with newly emergent materiality and spatial design; thirdly, it deals with how 3D printing engaged in museums’ interactive education programs and their future development; thirdly, it discusses bringing 3D printing back home for on-line visitors and souvenirs-making in the age of (im)mobility. Some scenarios analysis of the 3D printing’s general future impacts and the consequence of unequal development of global museum field will also be laid out as the conclusion.

Educational Inequality in China -- Preliminary Findings from Recent High School Graduates in Urban Nanjing

China has undergone an expansion of higher education in the 1990s. The crude university enrollment rate jumped from 1.6% in 1978 to 24.2% in 2009. The university enrollment rate among high school graduates increased from 27.3% in 1990 to 83.6% in 2010. At the same time, Chinese universities are stratified into key universities and non-key universities, which differ significantly in resource input and prestige. Researchers argue that in the era of mass education, the focus on educational inequality should move from quantitative to qualitative differentials. Class inequality in the US is found to be maintained through family practices in competition for prestigious universities rather than mere educational attainment. Moreover, when it comes to labor market stratification, both university prestige and extracurricular activities are screening devices adopted by employers.

Educational inequality in China has attracted much research attention in the past decade. However, little is understood about educational inequality in China in the qualitative terms. The present study thus explores the relationship between family origin and inequality in university education in terms of institutional prestige and participation in extracurricular activities. Data come from a panel survey of 759 recent high school graduates in urban Nanjing. A vast majority of these students (98.4%) were enrolled in post-secondary education in 2012, among whom 96.6% attended universities or colleges in China. The analyses are restricted to the in-school subsample.

Preliminary findings reveal that 21.5% of the respondents go to key universities. Students with university-educated fathers, students coming from prestigious high schools, and students with better self-reported academic performance are more likely than their counterparts to enter key universities. Father's education and occupations, high-school prestige, and students with better self-reported academic performance are more likely than their counterparts to enter key universities.
RUAN, DANCHUNG (Hong Kong Baptist University)

Educational Transition and Social Networks – Preliminary Findings from Recent High School Graduates in Urban Nanjing

The formation of social networks is not a random process. It is a result of the combined forces of macrostructural conditions, which provide differential opportunities to meet members of different social groups, and the tendency of people forming social relations with similar others. The macrostructural conditions are either presented in the form of social organizations. School is a major social organization in contemporary societies; there many individuals spend an extended period of time on acquiring knowledge and skills. During the course of schooling, individuals often move from one educational institution to another. A change of educational institutions would then lead to a change of macrostructural settings for social network formation. Existing studies have mainly focused on the correlates of social network formation at one time point or social network changes across different time points. Little is understood about the network impact of macrostructural changes associated with life course transitions.

The present paper investigates the relationship between educational transition and social networks in China. Data come from a two-wave panel study of 759 recent high school graduates in urban Nanjing, a vast majority of whom (98.4%) were enrolled in post-secondary education in 2012. Two research issues are addressed. First, what is the network impact of transition to higher education? Chinese universities are stratified into key universities and non-key ones, which differ significantly in resource input and prestige. Differences in network changes across different time points. Little is understood about the network impact of macrostructural changes associated with life course transitions.

Can Sri Lankan Teachers Afford to Spare the Rod?: Teacher Attitudes Towards Corporal Punishment in School

The main objective of the study is to understand the attitudes held by teachers in the Government schools in Sri Lanka regarding the administration of Corporal Punishment (CP) in school and to examine the justifications they have for resorting to CP. The study is a response to a concern raised by the authors in 2012 about the need for more in-depth exploration on the topic.

The purposive sample of teachers who participated in the study was from four Government schools in Colombo. One school was a boys’ school while the remaining three were coeducational schools. 28 teachers were chosen for study based on their gender and years of experience in the teaching profession. Data was gathered through in-depth interviews with the teachers.

It was found that a majority of teachers in the sample have resorted to some form of CP at some point in their career as teachers. Given the teaching-learning culture teachers have been exposed to as children and the authority traditionally attributed to teachers in Sri Lanka, they were of the opinion that CP can have positive impacts on children and their future success. Teachers did not seem hostile to the idea of CP per se but the “form” and “severity” of CP administered on students.

Many were of the opinion that CP was “a fine means of disciplining students” as long as it is administered with the ‘correct’ intent of guiding students. They also thought that CP becomes an “issue” only when teachers use it in brutal/inhuman manner with vindictive intents and as a means of stress release.

High levels of work related stress and weaknesses in the mechanism of appointing individuals to the teaching profession were highlighted as resulting in situations of “brutal/inhuman beating” in schools. These views expressed by teachers raise important policy implications.

Identification of Training Needs in Informal Sector for Street Vendors and Their Facilitators in Mumbai

Informal sectors are thought as a source of development. But these sources of development can be misleading by poor working conditions and poor management in these sectors. Where poor working conditions can include different problems in their day to day functioning which is also affected by poor management of the human capital engaged in the process. Therefore with increasing importance of development through these informal sectors needs to be more focused and organized, for which identification of training needs of its human capital is one major approach that needs to be addressed by different Corporate Social Responsibility (CSR) activities of organised sectors and other government and non-government organizations. Experiencing the importance of Training Needs Assessment (TNA), this paper is an attempt to highlight the difficulties they face in their work life and the way they deal with. This paper also tries to identify their skill development techniques and strategies that links to their growth and descent survival of their family in the society. This paper is based on primary data sources where, structured questionnaires were administered among the Mumbai street vendors, Government and Non-Governmental Organisations and CSR activities of organised sectors including a few case studies. The data was collected through chi-square test and cross case analysis. The findings supported that the group undergone any kind of training were able to speak about their future learning skills they require for better development of their families than those who were deprived of any kind of training for their business growth were keen to learn the skills required.

Conditional Cash Transfers, Job Markets and Capabilities in Latin America: A Missing Link

The paper is part of an on-going joint project between the National University of Colombia and the University of Buenos Aires that is re-examining the achievements of conditional cash transfer programmes (CCTs) in the region. Within the acknowledgment of their diversity in terms of targeting, modalities and composition, CCTs have been mostly praised by international co-operation agencies, indicating that they increase people’s capabilities and reduce key individual and household-related vulnerabilities. Do they provide access to a key asset such as greater job and income security? In 2012 the research project started to analyse six national CCT programmes in the region (Argentina, Brazil, Chile, Colombia, Honduras, Nicaragua and Mexico) and two regional job markets (Argentina and Colombia). The paper presents two interesting insights: a) so far the great majority of CCTs evaluations have been unable to present any solid result about medium or long-term improvements in the security of people’s livelihoods and capabilities, b) in the face of substantially unaltered rates of unemployment and informality, CCTs do not seem to have improved the participation of beneficiaries in the job market. These results are based both on the analysis of national and capital cities-based household surveys, and on programmes assessments and internally available data. Through the presentation of quantitative and qualitative the paper aims to contribute to the challenging of mainstream wisdoms on CCTs and to an already renewing debate in the region.

Issues of Atrocity and Discrimination Against the Dalits: A Study of Students Protest at the Premier Indian Educational Institutions

Even today Dalits are the victims of violation, isolation, atrocities, discrimination, untouchability, discrimination, ill-treatment, deprivation, social stigma, and the trap of the poverty in the society. Recent years that makes the state answerable for each and every instance of刚刚在缅甸和达利妇女, and particular. Needless to mention the two unfortunate incidents: Recently 30 Dalit houses were torched by the upper caste people in Lathore, Odisha. Earlier the most unfortunate incident of Piplip gang rape to a Dalit girl in Odisha, Khairlanji massacre in Maharashtra and many more. Conceptualises the problems this paper tries to explore the combined protest efforts of students’ organisations and civil society in India. The second objective of this paper is to find out, how the students’ organisations take up the issues and strategies in the process of revolution or protest against the state for the justice. It also aims at to explore the defensiveness of the students’ revolution and its impact on the process of protest and against the state for the justice. The politicalisation of the issues in the campus and the outside campus pulling the leg of success of this movement. Personal vested interest played prominent role to de-speed and de-lined the student protest from their founding motto. This study reflects how it impact the civil society, upper caste lobby and to the state silence in the discrimination and atrocities issues.

Response Latencies and IRT Estimates Using CASI

Computer assisted self-interviewing (CASI) has been used around the world for a long time in order to achieve survey data collection with a reduced cost. CASI can also be useful when the intention is to reach groups of the population who are geographically dispersed, or who cannot be available to be interviewed during normal work hours. However, it has often been argued that CASI may potentially yield low-quality data if the respondents are not motivated to respond honestly and reliably, using their full potential and concentration.

This study proposes a new item Response Theory (IRT) algorithm for the estimation of the person estimates when an attitude scale or an ability test is administered through a CASI. The algorithm weights less the responses that are given too soon after the stimuli are presented, so they may not be considered as legitimate and honest efforts for a truthful response. The new method is based on the work of Wise and Kong (2005) and Mislevy and Bock (1982) and used a modified biweight IRT estimation method.

The application of the algorithm on empirical data (N=920) in the context of the mathematics National Curriculum in England gave indications of increased validity and usefulness of test results.

The possible practical consequences of the use of this algorithm for survey research are discussed.

Decolonizing Struggles in Latin America Today

In spite of its dogmatic universalistic pretensions, hegemonic social science and liberal democracy should be understood as one of many possible historical options. These constitute distinct cultural alternatives that do not exhaust the possibilities of forms of knowledge or of the construction of plural and democratic coexistence between the human beings. They are the product of a specific historical experience and a particular mode of production, and specific ways or relating to so-called “nature”.

As has been argued by Aníbal Quijano, Enrique Dussel, Walter Mignolo and others who have been working within the modernity/coloniality perspective, the experience of modernity has meant something radically different for the North and the South. What has been characterized as the luminous nature of modernity by the philosophers of the enlightenment is only the bright side of a worldwide historical process that has its dark underside in the existence of the colonies without which the bright side would not have been possible. In the North, modernity eventually lead to material abundance, citizenship, democracy, science and technology. For the majority of the planet’s population living in the colonized, subjugated South, modernity has been an experience of imperial and colonial domination, genocide and slavery. This dark underside is as modern, as essential a component of the modern experience as the experience of the North. Colonialism, genocide and slavery were not in any way pre-modern. They are constitutive of the global modern experience. Eurocentric social sciences have overall erased this history and attempted to interpret a self-centered European history as Universal History and to characterized its particular political system (liberal democracy) as the “normal”, “modern” universal template that the rest of the world has to replicate.

Lander, Edgardo (Universidad Central de Venezuela, elander@yahoo.com)

The Tensions between the Struggles against Inequality and the Defense of the Rights of Mother Earth in South America

In the last decade and a half the struggles of South American popular movements and organizations against the military governments, free trade agreements and neoliberal economic adjustment policies crystallized in the election of many left or “progressive” governments. In these struggles and the constitutional processes that occurred in some countries, there are two central trends of struggles to be explored: first, the popular demand for the “return of the state” and social policies aimed toward social inclusion, access to education, health, food, social security and a reduction of the profound inequalities that have historically characterized the continent. The other axis refers to the relationship of humans with their natural surroundings, the struggles of indigenous peoples and peasants for their territories and rights of Mother Earth. This implies a profound critique of the very idea of development and the search for options to a civilization in crisis that has to confront the fact we have reached the physical limits of the planet. This also relates to a critique of the monocultural character of liberal-colonial South American states in profoundly pluricultural societies. The attempt to achieve these two sets of goals simultaneously has generated deep contradictions. In response to widespread social demands of the most excluded sectors of society and looking to reassert their political and electoral legitimacy, all these governments have prioritized economic growth based on extractive neo-developmentism (economic model based on an increased dependency of the export of non-processed primary goods) in a context of a significant hike in the demand and price of commodities in the world market. The purpose of this presentation is the analysis of some of the socio-environmental impacts of these governmental options and the main social and political conflicts that these have generated.

Lander, Edgardo (Universidad Central de Venezuela, elander@yahoo.com)

Work-Life Conflict In The Economic Recession

The aim of this paper is to explore from a gender and class perspective the effects of the on-going economic recession on work-life conflict and well-being of Swedish employees. For many employees, the global economic downturn has exacerbated work-life conflict making it more difficult to find an acceptable work/life balance. Some employees have lost their jobs, others have been forced to work shorter hours, lower pay and/or accept work with increased degrees of precariousness with direct implications for work/life balance. Current knowledge indicates that the recession has not affected all employees equally. Due to gender segregation and the gender wage gap women and men are hypothesized as affected differently. Furthermore, social class is likely to play an important role in outcomes for both men and women. Consequently, although
the global economic downturn has affected well-being of all employees, the ramifications for individual employees’ remain unclear.

The data used to study these issues were collected in the European Social Survey (ESS), Family, Work and Well-Being (FWW), modules for 2004 and 2010. The study is limited to a sub-sample of Swedish employees. To capture gender differences in perceptions of work-life conflict the research problem is approached from both dimensions; work-to-family and family-to-work conflict as previous research has shown that men and women experience these facets differently. In order to capture class position the study adopts Wright’s class scheme based on ownership, hierarchy and autonomy as developed and elaborated by Leifurstrud, Bison and Jensberg. The study is expected to show that some intersections of class and gender will exacerbate work-life conflict and have a more detrimental effect on work/life balance than others.

What It Needs for a Social Ego: A Survey-Based Comparison of Social Network Measures

In this paper we compare different methods of measuring social capital in conjunction with alters’ resources. Our analysis is based on a survey of two succeeding, complete cohorts of sociology students from one university. This survey includes detailed information on network ties between students. In addition, we use a resource generator and a position generator to assess ego’s social network beyond his/her fellow students. For all social network instruments, we differentiate between relationship strength, the basis for social capital, and the level of resources that are accessible via these social ties. We implement the same distinction with respect to measures of family background.

This unique design allows us to construct methodologically interesting counterfactuals. We can assess how the measured distribution of ego’s network resources differs if the accessibility of resources is not taken into account; how well we approximate ego’s resource distribution when based exclusively on indicators of relationship strength; and under which conditions – regarding ego’s network structure – we can measure social capital and related resources by using solely indicators of relationship strength, the basis for social capital, and the level of resources that are accessible via these social ties. We implement the same distinction with respect to measures of family background.

This unique design allows us to construct methodologically interesting counterfactuals. We can assess how the measured distribution of ego’s network resources differs if the accessibility of resources is not taken into account; how well we approximate ego’s resource distribution when based exclusively on indicators of relationship strength; and under which conditions – regarding ego’s network structure – we can measure social capital and related resources by using solely indicators of relationship strength, the basis for social capital, and the level of resources that are accessible via these social ties. We implement the same distinction with respect to measures of family background.

Our study is constructed as a generic methodological study. Based on our results, we can specify which conditions regarding sampling designs and measurement instruments are necessary to adequately represent the social embeddedness of egos. These results are of general importance to researchers conducting larger-scale surveys, e.g. international survey projects which rely on cluster sampling designs and/or name generator based instruments when assessing the social networks of respondents.

The New Middle Classes - Drivers of Both Unsustainable and Sustainable Consumption in Developing Countries

During the last decade, in public debates and particularly in the media, unsustainable patterns of consumption spreading also in the Global South developed into a major concern. The focus is mainly on the ‘new middle classes’. They are imputed to lack any sense of responsibility both in civic and environmental respect and, by their sheer number, to undermine any progress made so far in protecting the climate.

Nevertheless, albeit a pilot group in promoting western lifestyles, above-average levels of education and qualification, according levels of professional responsibility, and above-levels of political influence (locally, regionally...) make parts of the new middle classes important players in fostering more sustainable consumption patterns.

Negotiating a Space to Rest: Denver’s Camping Ban and Camping in Denver

On May 14, 2012, camping became illegal in Denver, Colorado. Over the past 25 years, the development of downtown Denver followed identifiable patterns of neoliberal governance. Single room occupancy hotels were upgraded into “loft-living” condos, rundown streetscapes were intensely policed then trendified, a major downtown street was pedestrianized. Urban policies focusing on commercialization and real estate development contributed to Denver’s revitalization while exacerbating the city’s problem with homelessness. As experienced in other cities, concurrently rising property values and increasing numbers of homeless people have led to various municipal ordinances intended to render homeless people invisible to the consuming public. In Denver, a sit-lie ordinance was enacted and park curfews were more strictly enforced to keep homelessness from the public’s field of view. Consequently, for residents without a permanent address, finding a place to rest became increasingly difficult. Then in 2011, playing off of popular distaste toward the Occupy Denver Movement, conservative politicians and the Downtown Denver Partnership, a business improvement district, sought and succeeded in introducing legislation outlawing camping—sleeping in public with any sort of “protection against the elements”.

Asample that the camping ban did not eliminate homelessness and interested in how Denver’s homeless residents were coping with the ban, we focused on a particularly vulnerable homeless community, injection drug users (IDU). Conducting participant and unobtrusive observation as well as in-depth interviews with 24 IDU, we learned that their continuing survival depends on a mixture of three interrelated processes: a complex moral economy of mutual aid and mutual predation within and between homeless communities, acts of often unexpected kindness by agents of the state officially charged with enforcing the camping ban, and the articulation of public and hidden transcripts playing off various tropes of homelessness, helplessness, and self-help.

WAGEMANN, CLAUDIUS (Goethe-University Frankfurt)
“Because You’re a Migrant, They Treat You Really Tough.” Findings of a Qualitative Study on Young Migrant’s Perception of the Armed Forces in Germany

In 2011 compulsory military service was suspended in Germany. In view of profound demographic changes and ethnic pluralisation of the German society, migrants now pose an important target group for recruitment. The question whether recruitment of personnel with migration background is successful not least depends upon migrants’ perceptions of the armed forces, which have a long institutional history of ethnic homogeneity and exclusion of “others”. In order to identify psychosocial factors and dynamics that influence these perceptions we conducted an exploratory qualitative study, using four semi-structured group discussions with young people with different migrations backgrounds in three different German cities. The composition of the group of interviewees allowed for evaluating effects of gender, migration background and military status in addressing recruitment issues to migrants. Our analysis calls attention to three findings: 1. The participants resisted fixed national and ethnic identity ascriptions. Multiple accounts of situational identifications demonstrated their ability to strategically play with identity constructions in different social contexts. 2. The perception of the German armed forces was essentially framed by personal or family experiences with the military or police in the country of origin. Problematic experiences with armed forces in authoritarian countries e.g. negatively influenced the image of the German armed forces as well. 3. The interviewers played a subtle role in reproducing an environment of interest/disinterest for the armed forces in the group discussions. In unintentionally activating his role as a migrant military member, one of the interviewers was repeatedly addressed as a peer expert for a military career. Hence, with regard to recruitment strategies the study hints at the importance of 1. developing an institutional sensitivity for post-national identities of a younger generation of migrants, 2. considering different migration contexts in addressing military issues, and 3. integrating migrant servicemen as positive role models for their respective communities.

Intimacy in the Research Process – Methodological and Ethical Implications of Examining the Psychosocial Dynamics of Sexual Risk Behavior in Biographical Peer Research

Sexuality is regarded as a highly sensitive topic for empirical research, especially if tabooed and stigmatized issues are at stake and sexuality is conceptualized as an integral part of one’s biography. In general, peer research that is aimed at exploring life worlds as an “insider” is seen as a privileged way for researching sensitive issues because it can facilitate field access, enhance trust and openness, and play an empowering and de-stigmatizing role in the field. However, peer research on sexuality poses considerable methodological and ethical challenges that must be taken into account if the potential of peer research is to be utilised.

The paper draws on a peer research project on sexual risk behaviour of gay and bisexual men in Germany. Based on a biographically oriented approach 58
4,000 travailleurs sous-traitants) de l'ancienne sidérurgie Acuminas, une entre-
prise étatique privatisée en 1990 et aujourd'hui détenue par le groupe brésilien
Gerdu, 14e producteur d'acier dans le monde. Une enquête par entretiens a été 
menée auprès de quelques dirigeants syndicaux et de quelques salariés de cette 
sidérurgie dans le cadre d'une thèse de doctorat sur les formes de résistance non 
institutions (SINDOBr et SINDOSt) de la sidérurgie. Les dirigeants syndicaux interviewés – trois di-
recteurs et le président – affichent leur politique auprès de la Gerdu : « négocier 
». Ils expliquent que la relation capital-travail dans la sidérurgie est aujourd'hui 
« tranquille » grâce à ce « partenariat » établi depuis de longues années avec le 
groupe sidérurgique. Les mutations de l’organisation du travail dans cette 
entreprise – commencées par « l’assainissement » financier et administratif d’avant 
de la privatisation et suivis par la politique managériale du groupe Gerdu – ont 
changé le scénario du travail et de l’emploi dans toute la région. Dans un contexte 
de précarisation sociale du travail, nous souhaitons discuter les relations entre 
la politique syndicale de la « négociation » et la fragmentation des résistances des 
travailleurs face aux restructurations du travail.

**Mobiling for Dignity: Recognition and Social Movements**

How do we understand the world wide spread of social movement of our age, from various fundamentalisms to the progressive thrusts of Arab Spring to Oc-
cupy. How have such movements fared? We will argue that the roots of these 
movements can be found in the consequences of neo liberalism that has not only 
fostered greater inequality and hardship for most, but its crises have migrated 
to the realms of subjectivity, emotion and motivation. Our analysis is rooted 
in Marxist critique of alienation, Lukacs critique of refiication, Habermas on legiti-
mation crisis, New Social Movement Theory and recent development in sociology 
of emotion. We will argue that these movements not simply for better economic 
conditions, but to overcome the adversities of a lack of recognition of a mean-
ingful identity that in turn has fostered anger, indignation and even hope. But 
these assaults to one’s identity also foster hope that leads people to social mo-
bilizations.

**Tokyo: Rebuilding the Global City in a Context of Urban Maturity**

Since the turn of the 2000s, Tokyo has been facing issues which deal with urban 
maturity, a notion characterized by two elements: stagnation of the economic 
growth, and population peak, associated with an ageing population. Those issues, 
which threaten the sustainability of Tokyo as a major and attractive global city,
necessitate new approaches for urban management, urban financement, and ur-
bani rebuilding projects.

Nevertheless, in spite of the mature urban profile of Tokyo, the city changed 
sharply during the 2000s. While demographic and economic indicators of Tokyo 
are not very favorable compared with those of the other Asian global cities, how 
could the urban profile of Tokyo change as fast and as dramatically as it did? How 
was the city able to reorganize its structure, to verticalize its skyline, to vegetalize 
its public and private spaces? After the « Japanese miracle » which occurred from the 
1960s to the 1980s during a time of prosperity, the 2000s also knew another 
miracle: an urban miracle in time of crisis, as a result of urban maturity.

The paper addresses methodical ways of dealing with phenomena of sexualisa-
tions in the research encounter, the interpretation of such data and its implications for writing-up and publishing the respective findings. Re-
ferring to psychoanalytic concepts of inter-subjectivity and counter-transference 
it argues for reflexively bringing in to the research process one’s own sexuality
as a researcher as a means for a deeper understanding of the production of sexual
life stories in the interview situation. The double-bind of being researcher and 
perceived peer that may lead to exploitations of the interviewee’s fantasies of
sameness call for the integration of ethical considerations about reflectivity,
power relations and responsibility as an integral element of the methodology of
biographical peer research.

**Neoliberal Policies and Neoliberal Politics in Latin America’s “Pink Tide”: Moral Riots, Symbolic Boundaries, and Collective Performances in Bolivia’s “Black February.”**

Analyses of Latin America’s “pink tide” (the rise of Left-wing administrations 
during the last decade) explain the demise of governments that followed the IMF 
and World Bank’s recommendations as a result of the deleterious consequences 
of neoliberal policies. I argue that to understand the rise of Left-wing governments 
we need to pay more attention to the connections between neoliberal policies 
and neoliberal politics (i.e. the political parties supporting neoliberal policies), 
and analyze the massive revolts preceding the rise of anti-neoliberal governments.

Drawing on archival research and in-depth interviews, I develop this argument by 
examining a two-day massive riot targeting political institutions during February 
2003 in La Paz, Bolivia. I analyze these events and their contentious performanc-
es to suggest that these protests targeted the political system rather than the 
institutions of neoliberal governance, thus opening political opportunities for the 
rise of Evo Morales and the Movement Towards Socialism. The Bolivian case illus-
trates that collective actions performed during massive revolts are underpinned 
by moral understandings and the drawing of symbolic boundaries, and that they 
can create turning points in historical trajectories. I examine the methodological 
challenges of studying leaderless and spontaneous protests, suggesting that the 
analysis of symbolically charged performances can be a point of entry for study-
ing such events.

**Teamwork Diversity**

The study of teamwork is facing two opposite traditions – sociotechnical 
approach, which is more developed in Scandinavian countries, and production, 
which first appeared in Japan’s industry. Within the first tradition, the implemen-
tation of teamwork is associated with the quality of working life and industrial de-
mocracy improvement. On the other hand, lean production management strives 
to improve organizational performance with the help of teamwork, increasing 
peer pressure and work intensity. Strengthening democracy or renewing forms 
of control at work – what is the real meaning of teamwork in today’s workplaces?

Does teamwork represent a breakthrough from taylorism or a strengthening of
taylorism? Does it rather represent both depending on the type of teamwork? 
Far from constituting a single homogeneous entity, teamwork takes diverse forms 
and can be distinguished depending on the autonomy workers have and the du-
eties they are responsible for. On the basis of a survey conducted in the Quebec 
municipality sectors (Canada), two types of teamwork – lean teams and semi-au-
ononomous teams – are examined in this paper. These will be compared with a focus on autonomy, work intensity, task complexity, problem-solving activities 
and task rotation.

Two logics of teamwork adoption are also contrasted. Lean team adoption re-
inforces the logic of standardization, labour cost reduction and incentive pay, 
without employment security guarantees, representation and partnership. On 
the other hand, semi-autonomous team adoption is based on employment secu-
rities guarantees, representation and partnership. Finally, semi-autonomous teams 
represent an improvement of working conditions compared with both taylorism 
and lean teams. They also constitute an improvement of democracy at work. 
However, they require an appropriate institutional context, difficult to implement 
or to develop in this era of finance-led capitalism. Consequently, it is easy to un-
derstand why they are much less diffused than lean teams.

Organizations are conducting legitimation work. Legitimation work is a social proving, and the general public provides legitimacy. In satisfying the three publics respectively).

Pre-PhD Grant funded by Catalan Government (2011 FIB 00490 / 2012 FIB 00379)

al or socio-cultural levels, and even the level of Catalan competence.

quality and artistic credibility, the government/public authorities provides fund-

deprivation, such as subjective social class, self-assessed health, access to health care,

undeserved unhappiness contributes to the advocacy for alleviating poverty, as well as to the understanding of conditions for happiness.

Social Weather Stations (SWS) has a total of 19 national happiness survey, one in 1991 and 18 in 2000-2011. These surveys found that extreme unhappiness was most felt among households suffering severe hunger, and among household considering themselves as poor. The excess unhappiness associated with hunger and poverty is the undeserved unhappiness.

SWS’ participation in the 2010 and 2012 rounds of the International Social Survey Programme (ISSP) provided data comparing Filipino happiness with that of 47 other countries.

The contexts marked by the reception of migrants, with a high degree of multilingualism, represent a scenario that clearly reveals the symbolic capital associated with the different languages spoken in the residence territories are unequal and highly relevant (Bourdieu, 1985, 1991; Heller, 2000, 2008).

Centre in Catalonia, a bilingual territory of Spain where Catalan and Spanish are co-official languages and where significant Spanish and Catalan nationalist synergies linked to languages have developed, and in the case of young Romanians, the aim of this paper is to analyze the predictive power of parental and non-parental variables related to languages in contact on self-identification with Romania.

From a quantitative approach, the main results show the importance of variables that refer to the symbolic realm of language – young people’s language attitudes toward Catalan and Spanish and their self-identification with Spain, as well as the language attitudes and self-identification of their parents – carrying greater weight than other variables of socio-structural character, as the socio-professional or socio-cultural levels, and even the level of Catalan competence.

This work is a part of a research project funded by the Spanish Ministry of Science and Innovation (EDU2009-08659EDUC). Ianos, Poalelungi and Popa have a Pre-PhD Grant funded by Catalan Government (2011 FIB 00490 / 2012 FIB 00379 / 2013 FIB 00347 respectively).

The social relevance of happiness surveys is that they also tell us about unhappiness. To the extent that such unhappiness is due to different forms of economic deprivation, such as hunger or poverty, is socially undeserved. Tracking undeserved unhappiness contributes to the advocacy for alleviating poverty, as well as to the understanding of conditions for happiness.

Social Weather Stations (SWS) has a total of 19 national happiness survey, one in 1991 and 18 in 2000-2011. These surveys found that extreme unhappiness was most felt among households suffering severe hunger, and among household considering themselves as poor. The excess unhappiness associated with hunger and poverty is the undeserved unhappiness.

SWS’ participation in the 2010 and 2012 rounds of the International Social Survey Programme (ISSP) provided data comparing Filipino happiness with that of 47 other member countries, including Japan.

This paper will compare happiness in Philippines and Japan, and the extent of undeserved unhappiness connected with various indicators of well-being and economic deprivation, such as subjective social class, self-assessed health, access to health care, family roles, and social policies related to work.

The adoption of ‘flexible modes of production’ across much of the developed world has been theoretically posited to be a substantial driver of declining mac-
to levels of social capital and generalized trust. A key facet of ‘flexible modes of production’ believed to be particularly harmful for social capital are increasing rates of job displacement (e.g., involuntary job loss from redundancy, downsizing, restructuring) and job insecurity. However, in spite of the posited association, very little has research has investigated if, how and why job displacement affects so-
cial capital. This paper explores how experiences of job displacement can affect individuals’ tendencies to (dis)trust over the adult lifestyle, using two-waves of the Great Britain National Child Development Study cohort data. Applying lagged dependent variable and change-score models, we find that experiencing job dis-
placement, between the ages of 33 and 50, appears to significantly scar gener-
alized trust, with depressed trust observable at least nine years after the event occurred. In fact, even after individuals return to employment, distrust remains higher amongst those having experienced displacement. However, the severity of the effect appears dependent on the value an individual places on work: the more central employment is to individuals’ lives the stronger the negative effect of dis-
placement. A range of mediators, such as physical health, mental well-being, and personal efficacy fail to account for the effect. This paper keenly demonstrates the importance of understanding how experiences within the economic sphere can spillover into the wider social sphere, both at micro- and macro-levels.

Due to processes of globalization, digitalization and cultural democratization, publicly funded organizations in the culture sector are in need of legitimating their own existence towards three publics. The publics provide different forms of support, that the organizations are dependent on: The producers/artists provide quality and artistic credibility, the government/public authorities provides funding, and the general public provides legitimacy. In satisfying the three publics the actors engaged in presenting the relevance and importance of the publicly funded organizations are conducting legitimation work. Legitimation work is a social pro-
cess being in motion for as long as there are actors engaged in securing the future existence of such organizations.

In this paper I present a theory of legitimation work. The theory is developed from several empirical studies of various publicly funded organizations in Norway and Sweden. I have studied the legitimation work done in the Norwegian public service broadcaster NRK and the Swedish public service broadcaster SVT, the Norwegian National Opera and Ballet and the Oslo Philharmonic Orchestra. These are all organizations that are in need of legitimizing themselves towards the three before-mentioned publics when conducting legitimation work. In the paper I discuss what characterizes a publicly funded organization’s communication with the various publics and what role they play in the legitimation work.

In northern Ghana, cultural models of how to get on have changed drastically within the last generation. Coming from a part of the country that has been eco-

ically and politically marginalized throughout the colonial and post-colonial periods, people believe that formal education and modern professional careers - instead of traditional livelihoods centered around subsistence agriculture, la-
bor migration and reciprocity within extended families - provide the only way to be successful and to achieve life chances comparable to those people in the southern part of the country have. Changing cultural models are the result of the decline of rural livelihoods that is caused environmental changes but equally rooted in internationally promoted structural adjustment policies that have dis-
advantaged local smallholders and led to the influx of highly subsidized cheap agricultural imports. But despite serious investment in education by both parents and students, poor educational quality of public schools and the lack of a condu-
to levels of social capital and generalized trust. A key facet of ‘flexible modes of production’ believed to be particularly harmful for social capital are increasing rates of job displacement (e.g., involuntary job loss from redundancy, downsizing, restructuring) and job insecurity. However, in spite of the posited association, very little has research has investigated if, how and why job displacement affects so-
cial capital. This paper explores how experiences of job displacement can affect individuals’ tendencies to (dis)trust over the adult lifestyle, using two-waves of the Great Britain National Child Development Study cohort data. Applying lagged dependent variable and change-score models, we find that experiencing job dis-
placement, between the ages of 33 and 50, appears to significantly scar gener-
alized trust, with depressed trust observable at least nine years after the event occurred. In fact, even after individuals return to employment, distrust remains higher amongst those having experienced displacement. However, the severity of the effect appears dependent on the value an individual places on work: the more central employment is to individuals’ lives the stronger the negative effect of dis-
placement. A range of mediators, such as physical health, mental well-being, and personal efficacy fail to account for the effect. This paper keenly demonstrates the importance of understanding how experiences within the economic sphere can spillover into the wider social sphere, both at micro- and macro-levels.
Economic Growth and Institutions: Gender Equality, Beyond Markets in Brazil, China, and Russia

This paper aims at comparing female trajectories in three BRICS – Brazil, China and Russia – since 2000, when a new path of economic growth opened up new opportunities for both sexes in these new mass-consuming market societies. These countries have some features in common, including their being large economies with a strong manufacturing sector, low fertility rates (under 2.0), an urbanization rate over 50%, and convergent female participation rates in the labor market (between 56% and 65%), but one major dissimilarity in terms of educational attainment: only Russia displays high shares of tertiary education (more than 50%) among the adult population, as compared to China (less than 5%) and Brazil (around 10%) (OECD Factbook 2013; World Bank GHD 2013: Capital for the Future).

In my PhD, I analyze the case of a carbon certification programme for improved cookstoves implemented since 2008 in Peru. The standard used is the Gold Standard carbon and sustainable development certification framework. The approach is multi-disciplinary and accounts for the impact of projects on indigenous communities, the making of and architecture of the chain of actors under the voluntary carbon market and the political economy of carbon offsets.

Carbon markets are often seen as one of the best success in environmental markets yet they are also subject to many criticisms. On the margin of the regulatory market, the voluntary market has developed under which certain standards set claimed ambitious criteria for sustainable development. Such standards govern a commodity of a new kind: carbon credits. The standards have ambiguous relations with the state and put at stake the notion of government. As such, they question the ability to govern sustainability from the private sector.

For this presentation I will look at how the carbon offset resulting from this value chain are sold to the final consumer. In particular, I will be interested in how Peruvian stove users are pictured in the process. The underlying question is whether the adequate representation of an environmental issue is key in motivating offsetters. Building on the analysis of various offsetters, I will show that the understanding of the Peruvian context is very different for them a is their commitment to reduce emission before offsetting. The presentation will provide insight on the current use of carbon offsetting as a corporate social responsibility practice.

Politique, Mémoire Et Changement Social

La présente proposition est fondée sur un ensemble de travaux empiriques qui envisagent la question de la mémoire au point de rencontre de l’individuel et du collectif ou mieux de l’articulation du psychique et du social, à mi-chemin ou dans l’interaction entre une « sociologie de la mémoire » stricto sensu, telle qu’elle a pu se développer ces dernières années dans un contexte où acteurs politiques et associatifs se sont saisis de cette thématique – notamment dans les contextes de démolitions forcées et de mutations urbaines – ou une « sociologie du souvenir », plus fidèle aux intentions premières de Maurice Halbwachs, penseur prédécesseur des « mémoires collectives ». Il s’agira, à partir d’une part, des transformations du monde rural en France au tournant des années cinquante et du cas d’une famille saisie sur trois générations, d’autre part, de la mémoire des conflits à la mémoire des mutations industrielles des années soixante-dix et quatre-vingt d’apprécier les effets du changement social et de ses mises en récit publiques sur les représentations ordinaires du passé, et partant sur les identités individuelles, politiques et sociales.

Conseillers à L’emploi Et Politiques D’activation : Une Gestion Patronaliste D’accompagnement à L’emploi ?

Le mode de gestion patronaliste s’est historiquement développé dans un contexte d’émergence du salariat au sein des pays industrialisés. Avec l’extension d’une législation dédiée aux rapports salariaux et la montée d’un Etat social (Cas-tel, 1995) ouvrant non seulement dans le cadre d’une gestion de type assistan- tiel, en direction des populations les plus démunies, mais aussi de type assurantiel, à destination des travailleurs réguliers privés involontairement d’emplois, cette gestion spécifique des rapports de travail, caractérisée par un contrôle social dis- créationnaire et personnelisé combinant sécurité et coercition, semble avoir perdu de son acuité, par l’établissement des droits universels.

Nous appuyant sur une enquête ethnographique menée en France auprès des conseillers à l’emploi, nous souhaitons montrer que ce mode de gestion discré- tionnaire et personnelisé des rapports de travail et d’emplois peut également s’ob- serveur au guichet du service public de l’emploi, avec la montée des politiques dites

New Ethics of French Employment Advisers and Their Clients Coping with the Unemployment Trap

This research work focuses on the transformation of the French Public Employment Service through a sociological pragmatic study of discourse and practices of professional employment counselors. We consider the reconfiguration of this profession as an indicator of changes in the welfare state to an active welfare state, which is expressed in particular by an institutional incentive project to the adaptability to employment standards and market principles. Based on a long ethnographic investigation in seven agencies with 87 counselors, and 200 observations of appointments between advisers and unemployed, the paper analyzes the effects of these two potentially conflicting targets: the subjectivation (individualized and neutralized) and the rationalization (generalized and coercive) of the unemployed.

By changing the standards, organization, this industrial rationalization of a new type restructures the structural professional divisions between socio-clinical and socio-technical standards. It brings out a new professional model, marked by an actuarial management of risks, but also supported by a moral dimension based on the individualization of treatment. However, earlier divisions persist and give rise to ethical dilemmas and polarizations (between ethic of work placement and ethic of empowerment), and strategies of avoidance or neutralization of ethically challenging modes of management, introduced in 2006 on the one hand, and the management streamlining (profiling, strengthening sanctions) on the other.

The paper examines also the notion of subjectivity in social policies and the prescriptive strength of standards and tools that accompany the activation. The streamlining and tightening of supervision of unemployed on the ground give rise to the use of social technologies of adaptability, but the observations of professional practices also reveals some areas of negotiation. They are characterized by a use of the processual dimension in assessing the unemployed’s recidivism, by the establishment of trusted devices or else by the taking account of a ‘situated rationality’ of the unemployed.

The category of ‘Leisure’ as an object of academic pursuit has historically been derivative of Western European epistemologies dominating the literature, providing the reason and intellectual spaces that scholars must somehow shoehorn their ideas into and make a feedback loop into policy circles that make concrete differences to how we live. This paper explores the domain of thinking about leisure as an object of academic pursuit and the role of leisure in a complex of social dimensions that find their roots at the intersections of continuously emergent cultural histories including millennia of globalizations. It may also contribute to discussions between researchers and clinical therapists about the value and meaning for patients to participate in qualitative research.

The Finanicalisation of Food and Farming in Australia

The ownership of Australian food companies and farm lands by overseas investors has become a national debate in Australia, with some politicians and economists arguing that just as Australia’s past development was assured through foreign capital, so the nation’s future will depend upon continuing (and accelerating) overseas investment. Others are concerned that the present extent – and nature – of the purchases is not in the nation’s best interests. Critics argue that some of Australia’s most iconic and successful agribusinesses will become a vehicle for takeover by hedge funds and private equity firms that can then make decisions that may be deleterious to the national interest. Others consider that when farms are run by external sovereign wealth funds and food is ‘repatriated’, or actors seek to protect others with similar conditions cope with their situation and to help healthcare professionals as well as decision makers understand their situation to improve care. Participants were generally grateful for the opportunity to share their story, and although they acknowledged difficult moments in reliving some of their experiences during their original interviews, no one in either study regretted participating. This paper will contribute to discussions about how healthcare professionals, including members of ethics committees, view participation in qualitative research. It may also contribute to discussions between researchers and clinical therapists about the value and meaning for patients to participate in qualitative research studies.
Negotiated Revolutions 2.0? The Arab Uprisings In Comparative Perspective

The 2011-12 uprisings in North Africa and the Middle East have helped to re-ignite scholarly interest in revolutions. But what kind of revolutions do these uprisings represent? This article situates the Arab uprisings within the context of post-Cold War revolutions, locating them within a cluster of ‘negotiated revolutions’ that have emerged over the past twenty years. ‘Negotiated revolutions’ differ from ‘modern revolutions’ five main ways: they result from a relative rather than an absolute state crisis; their trajectories are characterized by negotiations rather than armed confrontation; their participants reject the utopian commitments of past revolutions; they are welcomed rather than disavowed by leading international actors; and they lead to the development of weak rather than strong states. The article assesses the Arab uprisings within this schema, arguing that those who see the Arab uprisings as offering a new model of revolutionary change, their causes, trajectories, and outcomes are broadly familiar. Extending this point, not only do the 2011-12 uprisings sit within a family of revolutions that can be traced back to 1989, their focus on political justice rather than the ‘social question’ means that the uprisings share a family resemblance to previous instances of ‘self-limiting’ revolutions. This comparison illuminates both the strengths and shortcomings of the 2011-12 uprisings.

Socio - Economic and Health Status Of Elder Population: Some Empirical Reflections From Tamilnadu, India

The rapid spread of modernization, growing urbanization and crumbling of joint family system had conspired to increase insecurity and loneliness among the geriatric population. However, lack of family support, poor financial status, physical, mental boundaries and guilt of being dependent on others are some of the problems nagging the elderly population in India, and other developing countries around the world. Very little attention has been focused on the plight of the elderly population in rural areas of the country. Problems of the aged in rural India indicate their exclusion and alienation from the contact of their family members which in turn has affected them socially, economically, psychologically with implication of their health conditions. Their economic insecurity is the most pressing problem of the elderly population in the villages. The outside employment of the family members has further aggravated their sufferings and caused their loneliness. The care and support supposed to come form the family members are denied resulting in their deprivation and desertsions. Consequently, the welfare intervention form GO's and NGO's are looked forward to fulfill their basic needs. The health care and support systems promoted through GO's and NGO's provide some solace to their requirements. The condition of the elderly population in rural India is not properly addressed. There is also a paucity in provision of care and support and status in rural community. This paper is an outcome of the field investigations conducted on socio-economic and health status of elderly population in selected block in state of Tamilnadu, India. This paper analyses the status of the elderly population in terms of socio economic and health conditions especially in rural areas which is fragmented and loses its uniqueness which result in neglect, alienation and deprivation of elder people in the family towards the provision of care and support.

Is There a Medicalization of the Facial Appearance?

A partir d’une recherche au sein d’espaces de la réparation faciale en France et au Royaume-Uni, on se demande : jusqu’où observe-t-on une médicalisation de l’apparence, et par quelles dispositifs se traduit-elle ? On peut avancer qu’il existe des normes d’apparence que les institutions médicales et judiciaires encadrent. La problématique du normal et du pathologique imprégné les jugements des chirurgiens du visage qui nous rappellent le caractère souvent monstrueux de certains de leurs patients auxquels ils ne chercheront pas à rendre la beauté mais à rapprocher d’une norme d’humanité. Une posture pouvant aller à l’encontre des associations d’aide aux personnes défigurées, qui militent pour un élargissement des normes d’apparence. Aussi, sans proposer de typification du rapport entre réponse sociale et réponse chirurgicale, en suivant des personnes touchées par une forme de défiguration et les professionnels qui les prennent en charge sur un temps long, on peut distinguer des formes d’expérience de l’anormalité faciale fonction des appuis institutionnels disponibles dans chaque pays.

Institutional and Political Asymmetries in Coastal Risks Perception Between the French State, Local Actors and the European Union

Background

• Recent concerns have stressed a probable increase of the frequency of extreme events and new risks linked to climate change.
• Between generic models and emerging big data strategies, best predictive configurations are not firmly established.
• Political tension with legal framework under progress. Tensions occur between the State and local actors concerning the responsibility of risk prediction and preparedness, as illustrated by the case of storm Xynthia (Feb. 2010, 59 casualties mainly in France); while the State has not properly applied its own directives, it is suing local mayors for not respecting them; in turn, following the trend of participative science, local towns are recruiting technicians to have their own measures. Local territories also show growing demand of satellite observation solutions offered by the European Union.

Hypotheses and questions

How cognitive facilities and political margins of maneuver influence each other: whether, to what extent and in what cases an instrumental asymmetry occurs between the State and local actors (i.e., the State using rather generic prediction instruments, vs. local actors using rather territory-specific information). If so, are there any such asymmetries a condition or an effect of political tensions? Do scientists play a neutral role in the way they produce and disseminate data, models and scenarios?

Terrorism and approach

Comparative approach with case studies: geographical comparisons (France-USA); risk comparisons (oil spills, algal blooms); scientific and socio-technical configurations (instrumental strategies and division of labor).

Perceptions Of Executive Government Leadership In The Age Of Engagement and Community Based Decision Making

Pour aborder ces questions on pourra tirer des éléments de la mise en place des techniques de transplantations du visage au cours des années 2000 et de leurs modes de légitimation.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Exploring implications for accountability and democracy related to devolving responsibility for identifying, defining and resolving problems to the community level.

In response to significant policy challenges, such as climate change, health care demands and water availability facing decision makers and the community today new approaches that place the community at the heart of the solution are increasingly being adopted. The consequences of these new approaches and their impact on established governance structures will be a key determinant to their longevity as drivers of public policy solutions.

The research will focus on the three primary subgroups involved in the community engagement process, the community (citizens), senior government decision makers (executive level public servants), and political executive government (politicians, political elite and influencers).

What do different stakeholders (community, senior government decision makers and political executive government) perceive to be the reasons for undertaking community engagement?

What do different stakeholders perceive to be the fundamental outcomes that community engagement can be expected to deliver?

Do stakeholder’s perceptions of the outcomes of community engagement match with the perceptions of engagement’s success?

Are there differences between perceptions of desired outcomes and perceptions of success between stakeholder groups?

The emerging trend to engage with stakeholders to identify issues and collectively decide on action has the potential to significantly impact on perceptions of executive government leadership.

The perception of leadership has the potential to significantly impact upon accountability and democracy as the legitimacy of governments are strongly rooted – at least in part – through the delivery of policies and services. The increased adoption of engagement and community based decision making may devolve responsibility for decision making to a point where the perceptions of governments’ leadership and accountability reaches a critically low point.

Virtual Networks As Tools of Social Justice

The popularization of internet has changed deeply the personal and social relationships, the cultural exchanges and the production of subjectivities. The background is a focused by the desire of expansion of the capital, creating inequalities that get stronger by the mechanisms of accumulation of wealth. Social justice and citizenship are also influenced by this context.

We want to demonstrate that social networks are tools of social justice by ensuring equal access and a parallel public space of social interaction that are essential tools to enable to everybody, indistinctly, the exercise of citizenship, without the limitations of constituted social political normative structures.

To reach the objective were selected examples of usage of virtual networks from institutional profiles, personal profiles, fanpages, social movements and NGO’s. We analyzed by Qualitative Methods the options like, share and the frequency and content of comments.

The idea of justice is connected with the distribution of natural and social resources among people and the criteria and mechanisms of correction of injustices. Putting together the theories of justice by John Rawls(2003), Amartya Sen(2011), Nancy Fraser(2009) and Martha Nussbaum(2011) that represent the political, economic and cultural aspects of justice, that are related to the justice found in the ways of life and not only in the legal recognition, we can extract elements characterizing the social justice in the plan sense. Then we can also allow investigating its presence in the free participation of individuals in the social networks.

Global Cyberspace: The Involvement Problem

In the present-day information world the involvement of an individual in Cyber-space is an important social marker determining belonging to one or another social group. Your circle of contacts, social connections, profession, qualification and place in the social hierarchy will depend on whether you are or aren’t an Internet user. On the government level we can speak about the loss of the competitive position in the struggle for the spot in the global information structure.

Therefore, an important problem is cyber inequality, when an individual having no physical possibility to use the internet, is eliminated from many spheres of social and economic life of the society. It is the low level of economic development and the Internet technology development in some countries. In other countries there is a political or ideological pressure on the expansion of Internet network access. Both of these factors reflect negatively on the ability of the society to move forward.

Cyber inequality can also exist within one country and this inequality can be significant. We can see it through the example of the Russian Federation, where different regions have unequal access to the Internet technologies and the development is uneven. We can claim that the residents of the regions where there is no access to Internet economy, state digital services and virtual social space are discriminated.

Consequences of Alternative Feminist Approaches to Land and Housing Security

In September 2013, the Huairou Commission, an international non-governmental organization that works with grassroots women, and Espacio Feminista, who work with landless women in Recife, Brazil, held an expert group meeting. Patricia Chavez, founder of Espacio Feminista, said:

We need to go deep into what development is; we are just accepting a process of urbanization; people are not obliged to live in riverbanks, hills. We are being forced out of fields, to open up space. [There is a] model of development that is being imposed . . . let us not be transformed into something that is not compatible with our needs.

Increasing numbers of poor households, primarily headed by women, desperate for jobs, will flock into cities of the South and be stuck in the informal labor market that pays low wages and offers no protections. Land and housing ownership is seen as key to changing the current realities for women. The UN-Habitat and the World Bank have put forth a continuum of land ownership that carries with it different degrees of security but remains weighted towards individual titling.

This paper will offer guidelines that member groups of the Huairou Commission are recommending as an alternative to business as usual. This will be compared to ideas of the “diverse” economy as developed by J.K. Gibson-Graham, authors of The End of Capitalism (As We Knew It): A Feminist Critique of Political Economy (1996). The diverse economy is defined by different transactions (alternative market and nonmarket), labor (alternative paid and unpaid), and economic enterprise (alternative capitalist and non-capitalist). On-the-ground practices by Huairou Commission groups in Brazil and the Philippines will be compared in order to assess consequences of gender approaches for the future development of urban spaces.

Les Droits Du Patient Et La Dépénalisation De L’euthanasie Comme Lieux De Questionnement De La Médecine Contemporaine : Le Cas De La Belgique

La Belgique a connu au début des années 2000 une activité législative intense autour de la reconnaissance des droits des patients. La loi du 22 août 2002 sur les droits du patient et la loi du 28 mai 2002 dépenalisation de l’euthanasie en témoignent tout particulièrement. La Loi sur les droits du patient a fixé les obligations des praticiens en matière d’information et devait, notamment, assurer au patient un accès direct à son dossier médical. L’application de cette loi fait encore problème aujourd’hui, et pas seulement en raison de la volonté du corps médical de maintenir son autonomie de pouvoir mais aussi du fait des carences de la loi elle-même et de la représentation qu’elle cristallise des relations entre médecin et patient, représentation qui est loin de faire l’unanimité. La Loi de dépénalisation de l’euthanasie permet à un patient placé dans des conditions très strictes de demander à son médecin d’abréger ses souffrances. L’application de cette loi fait également problème et le corps médical se trouve ici aussi au cœur de la difficulté, notamment par l’entremise de la notion de « clause de conscience ». La question est cependant plus complexe car si l’autonomie du médecin peut apparaître comme un frein à l’exercice de ce type de droit, elle peut aussi constituer le moyen de s’opposer à bien d’autres obstacles d’ordre institutionnel comme la volonté de certains établissements hospitaliers de ne pas respecter la loi, tout au moins dans son esprit. La communication se propose de rendre compte des difficultés d’application de ces deux lois fondamentales, des controverses éthiques qu’elles suscitent – et notamment autour de la redéfinition de la figure du médecin – et autour de la représentation qui est loin de faire l’unanimité .

The Spases and Times of Young Culture in the New Century

It is starkly evident that in the new century young people's biographical constructions come to terms with conditions of: rapid social and cultural change; increasing choice and uncertainty, the loss of institutional reference points as models for action and the widespread perception of intensified risk. These phenomena tend to produce a contingent and situational form of identity, with a markedly individualised imprint that is closely related to the here-and-now. This contingent and situational form of identity finds expression in a re-definition of the relationship with time-space in everyday life – the chronotope. In this process, everyday time-space arrangements progressively lose their traditional meanings in the realm of the taken-for-granted, the home of the 'natural attitude'. Rather, young people's creative use of urban time-space assumes the form of a fully fledged strategy of action connected to a contingent and situational type of identity. In this framework of understanding, young people's cultural expressions can be understood as organised not so much as answers to 'problems', but rather as expressions of the active negotiation practices that young people themselves carry out in order to deal with contemporary risks and uncertainties.

The Great Transformation Of Japanese Capitalism

Contrary to the dominant vision, according to which Japan is suffering from "arthritis", we argue that Japanese capitalism has experienced a great transformation from the early 1980s. We get this result from an analysis at three levels: corporate level, characterized by an increasing heterogeneity in terms of organization and performance; institution level, characterized by a decay of previous forms of coordination and a revival; social compromise level, characterized by a surge of multidimensional inequalities.

We also show that Japan is not converging toward Anglo-saxon or European types of capitalism but follow its own original trajectory.

Understanding Welfare Diversity and Evolution In Japan, Korea, and Taiwan

This is the first of a series of three papers focusing on the welfare state in Japan, Korea and Taiwan. In the present paper, we concentrate on Japan and Korea and particularly on the evolution of non-standard employment and its consequences. We divide the process into two stages: the beginning of non-standard employment in the 1980s and 1990s and the spread of non-standard employment in the early 2000s, especially part-time work. We use the concept of "Arthritis" to refer to the changes in the wage work system following the bubble crisis in the late 1980s. We then focus on the events of the early 2000s and the consequences of the "Arthritis" on the development of non-standard employment and social movements. We argue that non-standard employment is a social phenomenon that is continuously changing and that it is closely related to the social context of the period. We conclude by discussing the implications of our findings for future research on welfare diversity and evolution in the region.

The NFA Resistance to the KORUS FTA

This paper focuses on the Korean National Farmers Association (NFA)'s failed attempt of social resistance to the Korea-US Free Trade Agreement. Located at the intersection of the local and the global, traditional methods of farming began to erode in the rural farmlands of Korea because of the Free Trade Agreement that assured US imported foodstuff to dominate the Korean market. Despite borrowing from the "Nyelani Declaration" from the international movement of food sovereignty, resistance was unsuccessful due to the fact that "larger stripes" of globalization resources did not interweave with NFA's internal strategy and traditional support. Thus, NFA's leadership and capacities failed to create a social movement to ensure viable economic food sovereignty in South Korea, as the South Korean government continues to take the path toward a neoliberal and profit-driven agricultural future.

Precarious Working Life and Militant Activism of Non-regular Workers in South Korea

From the early 2000s, non-regular employment has become a core labor policy issue in South Korea. Non-regular labor, comprised of a variety of precarious employment patterns, such as fixed-term workers, part-time workers, dispatched and subcontracted workers, home workers, and dependent self-employed workers, has proliferated in Korea, particularly along with changing corporate employment strategies after the economic crisis of 1997. The diffusion of non-regular employment has led to the growing segmentation of labor markets in the country because those workers suffer from not only inferior working conditions and a vulnerable employment status, compared to regular workers, but also social exclusion from the protection of legal labor standards and national safety net.

Given their precarious working life, non-regular workers came to the fore as a symbol of militant labor activism over the past ten years. They organized their unions even under their employers' harsh suppression and the lack of regular workers' union's support. Those precarious workers engaged in the prolonged strike action to defend their unions from the employers' suppression and protest against the discrimination imposed on them. Faced with limited movement resources, they often resorted to extreme struggling actions, such as hunger strike, sit-down demonstration at the air, and even committing suicide, in order to gain public attention and create societal pressure to resolve their issues.

This context, our paper is to discern why union behavior of non-standard workers are so militant, and to examine causal relationship between those workers' precarious working life and their militancy.

The Impacts of Cultural Heritage Tourism: A Case Study of Ajanta Caves in India

Cultural Heritage Tourism uses the remains of history which the traveler is interested. Cultural Heritage Tourism has positive and negative impact on social-cultural, physical and economic aspects of Indian society. Ajanta Caves in India which is a world heritage site and caves of Buddhist affiliation have been carved in Deccan basalt.

From a social-cultural perspective tourism affects cultural resources through changes in forms and functions of traditional artworks, commodification of living culture, crowded condition and community members. Tourist activities exact physical impacts on precious heritage in form of vandalism, wear, tear and pollution. On a more positive note, tourism from the increasing number of people, helps in creating jobs and taxes and stimulates entrepreneurialism in heritage destinations (Timothy 2011).

This study recognizes the impacts of Cultural Heritage Tourism at Ajanta Caves and its surroundings region in western India. For this research project, primary data are collected through observation and interviews of local community members, visitors, agents and officers of tourism department and on the secondary data obtained from books, journals, survey reports, publication of government. At first part of this paper presents understanding of Ajanta caves as general description and significance of Ajanta caves. Second part of this paper analyses impacts of cultural heritage tourism on Ajanta caves through the collected data as well as discusses the multiplier impacts of tourism such as physical, economic, and social dimensions on the Ajanta Caves and tries to study it from an integrated approach. This part is made of the paper, conclusions and recommendations. Thus, this study about impacts of cultural heritage tourism analyses how for best it can increase the positive impacts and restrict the negative impacts in order to preserve the Ajanta Caves, so that they can be enjoyed by contemporary and future generations on society.
Understanding Stratification in a Global Perspective: The Case of South Koreans

This study distinguishes three perspectives in stratification research based on an unit of analysis. The first is a within-country perspective which has dominated traditional stratification research. It uses data from states as the unit of analysis with an assumption that stratification takes place exclusively within nations. Modernization school, with this perspective, argues that achieved human capitals play a central role in social selection processes in industrial societies. The second is a between-country perspective that has usually been taken by development scholars. As the focuses lie on national (not individual) level comparisons, there is a lack of accounts on how between-country inequality shapes stratification and inequality at an individual level. The last is a global stratification perspective. This perspective synthesizes the both within- and between-country stratification concepts in a sense that it perceives stratification as an individual-level processes taking place globally. Which social mobility strategies are more effective can be different depending on which perspective or unit of analysis is used. For example, emigration to another country is hardly discussed in the within-country frame, but it draws attention as an important way for social mobility in the global perspective. This study aims 1) to introduce the global stratification perspective, 2) to apply it for understanding stratification among South Koreans (including Korean diasporas), and 3) to see how it looks different from the accounts of the within-nation perspective. To practice the global approach, I situates income earnings of South Koreans within a broader pattern of global inequality, and reassesses the relative weight of categorical attributes (gender, family background, country of residence, etc.) with achieved characteristics (education, skill, etc.) based on their global income standing. My hypothesis is that, from the global perspective, inequality among South Koreans remains shaped by categorical characteristics (country of residence, particularly) and the role of achievements far more modest than usually assumed.

Relational Skill Assets and Anti-Immigrant Sentiments

This study introduces a new variable in the area of sociology of professions: relational dimensions of occupational skills. Although previous studies have underscored the importance of cognitive skill assets in migration processes and attitudes toward out-group populations, the importance of relational skills has not received much attention. In this paper, we highlight the role of relational skills of native workers toward immigrants, by using a General Social Survey module (National Identity 2004). We construct two dimensions of relational skills: interpersonal and instrumental skill assets at the occupational level. We conceptualize the former as an entrancer skill barrier, and the latter as a pulling factor that attracts skilled or unskilled immigrant work forces. Then, we create a new independent variable, “relational skill specificity,” which is a relative measure of interpersonal skills over instrumental skills in one’s occupation. Our hypothesis is that workers employed in jobs requiring a higher possession of interpersonal skills over instrumental skills are less likely to develop strong anti-immigrant sentiments. The effects of relational skill specificity are highly significant and robust against different specifications, controlling for individual-level education and citizenship status along with other conventional cognitive skill-variables, demographic, religious and political findings. The grossly uneven levels of anti- immigrant sentiments between skilled manual workers (e.g. craftsmen), and skilled non-manual workers (e.g. professionals), originate not only from different levels of cognitive assets but also from varying levels (or compositions) of relational skills. Overall, the findings of this study provide a novel pathway of causal explanation of how native individual workers develop their anti-immigrant sentiments. It also attempts to advance our understanding of occupation-based social stratification processes, ethnic competition in the labor market, and attitudinal studies of race and minorities.

This paper attempts to do gendering the migration system in East Asia by focusing on housing. Inter-African migration has been one of the key characteristics in recent migration trends (WMR 2012). Jones and Findlay (1998) showed migration system emerged in East Asia by examining the various linkages among origins and destinations including FDI aids, trade and migration. Building upon Jones and Findlay (1998’s) work, I attempt to gendering the regional migration system by examining feminized migration streams: labor migration for care and marriage migration to the major destinations in East Asia including Korea, Japan, Taiwan and Singapore. In analyzing these migration streams, I explore the changes in socio-demographic and economic conditions of the destinations including the gender division of labor, care provision, (care) labor market, and state policies for migration. By comparing the state responses to the seemingly uniformed issues of care provision, I argue that the recent intensification of migration system in Asia is conditioned by changes in mode of social reproduction.

To alleviate housing problems including issues of inequality, disparity, and polarization, we need to determine exactly their present status, characteristics, and influencing factors. Hence, this research developed a spatial housing inequality index that consisted of housing wealth inequality (HWI) and housing affordability inequality (HAI); examined factors of spatial housing inequality through a multiple discriminant analysis model using statistics data from 2008 to 2012; and suggested a housing polarization index that consisted of housing wealth polarization (HWP) and housing affordability polarization (HAP). The first finding is that inequality, disparity, and polarization of housing in Korea are distinctly different factors. Therefore, examining housing problems requires any index or method in terms of spatial base, wealth, and affordability, such as HWI, HAI, HWP, HAP, etc. The second is that comparing patterns of HAP and Gini coefficient of affordable housing and affordability of household are more important subjects in Korea than the level of housing wealth; in view of inequality. The third thing is that the spatial concentration of HWI and HAI shows opposite result to each other. In HWI, only Seoul and Gyeonggi are below the total level, while in HAI, all regions except Seoul, Incheon, and Gyeonggi are below the total level. The fourth finding is that common key factors of largest gap in spatial housing inequality are inflation rate, housing price, unemployment rate, in descending order; and unlike HWI, HAI is affected relatively by unsold housing of region, the number of houses, per capita GDP. Final finding is that polarization in housing affordability is more serious than that of housing wealth in Korea. The primary cause of the disparity in HWP is MB (middle-bottom) section, and in HAP is TM (top-middle) section.
were working-poor, net-café refugees, and others who felt into “new poverty.”

This project examines public discourse about migrant workers and migration labor policies in South Korea between 1990 and 2003. Using a content analysis, this paper traces how public discourse that appeared in newspaper editorial and opinion columns evolved over time, in tandem with the transformation of migrant labor policy from the Immigration Control System (IIS, 1991-2003) to the Employment Permit System (EPS, 2003-present). In particular, I will contrast the period of 1995-1997 during which the efforts to change migrant labor policies were made but ended in failure with the period of 2000-2003 during which the efforts resulted in the successful legislation of the EPS, highlighting two major discourses: (1) the human rights theme and (2) the national economic development theme. The human rights theme was prominent among the advocates of EPS; the national economic development theme were so among the advocates of IIS. The results show that, while the national economic development discourse remained relatively stable over time, the human rights discourse gained its popularity by tapping into Koreans’ historical experiences and further developed by reflecting and changing ethnically homogenous Korean culture. In addition, there were differences in how each policy position (i.e., the Pro-EPS and Pro-IIS arguments) had incorporated these two themes. The Pro-IIS argument relied mainly upon the national economic development theme, and did not succeed in incorporating both two major themes. In contrast, the Pro-EPS argument, which had built on the human rights theme until 1997, later developed to incorporate not only the human rights theme but also the national economic development theme. This study concludes that there were significant changes in public discourse between 1990 and 2003, which may affect the transformation of migrant labor policies in 2003.

*The ‘people House’ and a New Move to Organize ‘resident Workers’ in Korea*

Recently, a region has become a major area for labor union organizing and its activities in Korean labor movement. The vast majority of workers in small firms located in local regions are both non-union workers and precarious workers. A new move to recognize and organize them as ‘resident workers’ has appeared. The ‘People House’(‘minjunguijip’ in Korean), which provides a space for workers, residents, progressive party members, labor unions, and community organizations to meet and communicate each other and to form networks among them, was established in several wards of Seoul, Incheon and Kwangju after 2008. The ‘People House’ considers that labor market for non-regular workers is formed based on the locality which they live including neighboring towns. Therefore, it tries to approach labor and livelihood issues of regional workers from a point of view of ‘resident workers’. It provides a space to workers who want to study labor law and to fight for improving their labor conditions. It holds events for residents to meet and talk about labor rights and current social-economic issues such as rail privatization. It also supports small labor unions in the region which have no union office by providing a meeting space, as well as making efforts to organizing ‘resident workers’.

This paper aims to examine practices of the ‘People House’ to organize ‘resident workers’ and to discuss implications of the practices for revitalization of Korean labor movement. Furthermore, this paper compares the ‘People House’ in Korea and ‘worker center’ in the United States which is community-based organization that engages in grassroots organizing to provide support to low-wage workers and discusses similarities and differences of the two.

*Counter Hegemonic Discourse on New Poor in Japan in 2000s – A Case Study of Two Indie-Magazines*

Along with the collapse of bubble economy and following extended economic depression since 1990s, people who failed to labor – or people who could be no longer explained by labor as it was – appeared in Japanese society. They were working-poor, net-café refugees, and others who felt into “new poverty.” The emergence of “new poor” who were undistinguishable but already everywhere alarmed the entire society where poverty had been believed to be eradicated with its dramatic economic growth, and provided a chance to reconsider and discuss “new poverty.” This study aims to investigate two discursive struggles by the young new poor who attempted to produce new discursive counter publics on “new poverty/poor.” In order to do so, two Japanese indie magazines – Freeter’s Freetoday(2007-2008) and Lost Gen(2008-2010) – are analyzed using textual analysis and interviews with editors and contributors, focusing on their strategies in terms of their contents, narratives, styles-genres, the relationship between contributors, editors and readership and etc. In these two indie magazines, the young new poor attempted to problematize public discourses on them and to produce counter-hegemonic discourse by unfoiling and re-appropriating their own experience. Moreover, these magazines provided (counter-)publics where the young new poor could reach to self-acceptance escaping from self-denial and collectively search for alternative ways of life without being captured by neo-liberal capitalism. In this process, the young new poor – not only readers – re-identify their subjectivities as laborers, political subjects, and young generation who are situated in the very middle of the social contradictions produced by late capitalism. In addition, this study explores their alternative ways of publishing as a media movement that created and managed their publishing groups as a collective social enterprise and thus struggled to cross boundaries between discursive and real practices.

*Relative Social Standing and Support for Nativism*

This paper explores the relationship between relative social standing and one’s attitude towards descent-based national membership using multi-level analysis. While much of the previous research on national identity has focused on the individual-level socioeconomic predictors, little attention has been paid to the role of relative deprivation. In this study, I investigate the effect of relative deprivation on one’s nativist attitudes by exploring the individual-level effects of education and...
income in conjunction with the societal level of inequality in 29 countries, using International Social Survey Program (ISSP 2003 National Identity module) data. I create a new dependent variable “ancestry” which measures how much importance one places on ancestry as a core component of national identity. I examine the relationships between country’s characteristics (economic conditions, income inequality, the number of foreign-born and college-educated populations) and the symbolic importance of ancestry (social economic status, occupational position, religiosity, and political party affiliation), and one’s support for ancestry-based national membership. My findings suggest that, at the individual level, non-college graduates and low-wage earners are more likely to support ancestry-based national membership. However, at the country-level, high school graduates living in highly educated societies and countries with larger foreign-born populations are more likely to support descent-based national membership. In other words, non-college graduates in societies with high percentages of foreign-borns and college graduates may feel more vulnerable and lack support for social closure against migrants through restrictive descent-based citizenship. As for income, low-income earners living in countries with greater income inequality are less likely to endorse ancestry as an important criterion of national membership. In line with the relative deprivation theory, this finding indicates that marginalized groups in countries with greater inequality (e.g. income inequality) are less likely to feel discontent and entitled compared to their counterparts in more egalitarian societies.

Coming Together and Across through Celebration: How Individuals Change their ‘Socials’

Despite its alienating forces, globalisation is noted for providing unprecedented means of mobility and communication to the masses living in post-capitalist societies. Using these instruments, more anonymous individuals are becoming ‘playing selves’ who redefine conventional social and physical boundaries and partake in the remaking of their society by actively recognising and articulating their unique positions in society. Through collective action, they also instigate social changes from the grassroots, propelling studies of social movements to (re)consider how people foster and utilise their ties as social capital to state and advance their objectives. Following this trend, this study scrutinises the emergence of ‘loose’ collective actions based on weak ties and their roles in advanced capitalist societies. It introduces two social and Japanese grassroots organisations, the Old Tokaido Road Shinagawa House Community-building Association and the East Asia Collaborative Workshop, which engage in festivities and performances to respectively revive an urban community and to achieve reconciliation in East Asia. Although it is difficult to assess their achievements in reference to their objectives, these organisations are nonetheless notable for their ability to function as a node for individuals to become playing selves and to connect with other like-minded actors. From an analysis of the social interactions within these movements, this study demonstrates collective identities sustain and renew their selves by offering an open forum for diverse stakeholders where they could mutually confirm each other’s differences and form weak ties. Through this process, participants not only build networks, but also gain empowerment as they reflect on their selves and project their reflections onto their social realities. In this light, weak organisations may not be suited to initiate social changes, but it could stir individual actors and the society encompassing these actors to reevaluate and renew their perceptions of social realities.

LEE, SOHOON* (The University of Sydney, sohoon.lee@sydney.edu.au)

Privately Public Places: Uprootedness, Care Norms and Home-Making of Migrant Women in Korea

This paper conceptualizes the private/public boundary situated in home as central to the role of care work in defining the boundaries of women. I delineate the process in which ‘unnatural’ or temporary homes of migrant women in a host country become a place where women run away from as well as a place women run to, and the implications of this process on their legal precariousness. For the purpose of this paper, I focus on two groups of migrant women in South Korea: those who engage in domestic work and those who work outside the household; the paper draws on from field data consisting of participant observation and in-depth interviews with runaway marriage migrants and (formerly) undocumented domestic workers. For marriage migrants who have run away from homes (or ga-chul yiiyusong), their absence from homes (or their husbands’ homes) becomes grounds for their legal precariousness. On the other hand, for undocumented
migrant domestic workers, homes are private places from which they can find work and, at the same time, seek refuge from the immigration raid. In this process, one is portrayed as irresponsible mothers who abandon their duty of care of their children while the other is portrayed as victims who have been failed by the economic-nationalist immigration paradigm to pick up after other women. In fact, such perspective has been materialized in real laws and policies which have further reproduced or reinforced migrant women's precariousness. I focus on women's presumed normative position as care-giver, and the role that their supposed abandonment/adoption of this position plays in public discourse in shaping the private/public boundaries of homes. Throughout the paper, I present the process in which nationalistic reproduction discourse, gender norms and uprootedness (experiences of migration) are essentialized into the duty of care in a particularized private/public place called home.

Precarious Work and New Class in Post-Industrial South Korea

This paper aims to examine precarious work in post-industrial Korean labour market. Previous studies on precarious work have focused on employment status, workforce composition and the scale of precarious work. However, we suggest that not only employment insecurity but also insecurity of market, post-transfer and social and economic should be included in the conceptualization of precarious work. In addition we include how individual workers perceive 'precariousness' and how this contributes to the definition of precarious work. Then this paper investigates the relationship between precarious work conceptualized in the paper and the new class structure in post-industrial Korean labour market. Discussion on class structure departs from the traditional division of class and highlights the structural transition from an industrial to a service economy. Gender and age will also be considered in the analysis. We exploit a mixed method of conventional method and QCA (qualitative comparative analysis) to examine how different configuration of precarious work is associated with new class structure, using Korea Labour & Income Panel Study(1st wave – 13th wave). Results from the analysis suggests how precarious work in Korea is structured within the socioeconomic context of post-industrial Korea.

The Impacts of Parent-Child Generational Gaps in Family Values on Subjective Happiness Among Korean Adolescents

Due to South Korea's (Korea hereafter) competitive education system to enter college, in addition to other developmental stressors, Korean adolescents are more likely to experience a high level of stress. Although the degree of subjective happiness amongst Korean adolescents was higher than the median in the happiness scale, recent studies have found that Korean adolescents showed the lowest level of happiness compared to Chinese and Japanese adolescents and those who lived in OECD countries. In addition, due to rapid demographic changes in modern Korea, generational gaps in family values particularly with respect to marriage, parenting, and elderly parent support have become more noticeable. Considering positive family relationships is a strong predictor for adolescents' happiness, it is important to understand how parent-child relationships influence adolescents' happiness in the contexts of modern Korea. As part of efforts to answer this question, in this study, we specifically examined how parent-child generational gaps in family values influenced subjective happiness amongst Korean adolescents. Using ordinal regression, we analyzed a subset of the 2010 National Survey of Korean Families data, consisting 91 adolescents with ages ranged from 15 - 18 years and their parents. Results showed that the smaller generational gaps in family values between fathers and adolescents, regardless of the gender of children, was an important factor that predicted adolescents' subjective happiness. For example, when adolescents had similar viewpoints to their fathers regarding values of parenting, they were more likely to be happy. When both adolescents and their fathers similarly assessed their relationship and the amount of communication with each other, adolescent children were more likely to be happy. These results imply the important roles of fathers in parenting adolescents and adolescent children's happiness. In particular, it is worth noting that the consensus in family values between parents and adolescents is important to support adolescents' happiness.

Canadian Women's Perspectives On Disability, Underemployment and Health

Disabled women are underrepresented in the Canadian workforce due to unemployment or underemployment. Some research has focused on unemployment among disabled persons but few researchers have investigated health and underemployment among disabled women. My research addresses this gap by exploring how women with physical impairments understand and address health experiences resulting from underemployment. In this paper, I review the two theoretical frameworks that guided my analytic approach— the social model of disability and feminist disability research—and present a critical interpretative textual analysis of 10 interviews I conducted with underemployed disabled women about their experiences of disability, underemployment, and health in a Canadian context. These narratives illustrate experiences of underemployment including marginalized identities, lost opportunities, limited income, and wasted energy, as well as the negative impact on physical, mental, emotional, and social dimensions of health. They also explain how disabled women can act as change agents to realize their goals for paid employment, fulfilling careers and self-actualization.

The State's Role in Gentrification: Beyond the Co-Optation and Repression Dichotomy

This paper examines the local state's role in the gentrification process. I compare two cases where gentrification pressure is high and the state has a significant role in gentrification—Downtown Los Angeles and the old neighborhoods within the city of Seoul. On a superficial level, the state seems inclusive in Los Angeles and willing to incorporate voices that rally against gentrification, and the state in Seoul seems to be exclusive, and at times violently repressive. These two cases share to align well with the existing social movement theory that projects a trend towards a “Social Movement Society”, exclusively, in the Western world, where social movements are much more prevalent, yet are contained and co-opted (Meyer and Tarrow, eds., 1998).

However, this literature can inhibit scholars from taking seriously the double role that states play, where state involvement is simultaneously co-opts and represses. In so doing, it can create a false dichotomy between the role of the Western and the non-Western state in governing gentrification. Contrary to this view, through participant observation in both cities, I come to unveil the underlying similarities of the two states' roles in controlling dissent. I analyze how both states 1) mask their involvement in repression and 2) delegitimize dissenting voices to avoid a legitimacy crisis. Focusing on similarities on the abstract level will help scholars of urban sociology to better articulate the theories of the role of the local state in facilitating gentrification, which has been under-theorized despite the early attempt by Logan and Molotch (1977) to bring the state back in with their ‘growth machine’ thesis. With comparative case study, the point is not to discern the degree of state’s involvement in various cases but to identify types of involvement of the state that will further serve as a stepping-stone for elaborating the theory of gentrification.

Erasing the Line Between Work and Leisure in Korea

This paper examines the blurring of the line between work and leisure in Korea, a research which is now in a highly industrialized, hard-working society prompted by rapid globalization. It also has a well-developed ICT infrastructure with a highly educated and skilled labour force, now evolving into an increasingly older society within a creative, service economy. In these contexts, individuals in Korea, both at work and at leisure, are facing diverse inequalities depending on their social structural conditions. This paper mainly regards leisure as un-coerced activity, while...
Looking at work and leisure from the angles of time, place, ageing, gender and activity. First, it examines why and how the once clear dividing line separating time or place between work and leisure has been erased. Then, it looks at whether the age-segregated life-cycle has been transformed into one that is age-integrated. Next, it considers women’s entry into the workforce and whether the conventional values of work and leisure have been changed. Finally, the traditional notions of labour and leisure activities are challenged by both positive and negative views on leisure. As conceptual background the concepts of devotee work, which is part of the Serious Leisure Perspective (SLP), and the labour of leisure are introduced and compared. After investigating the complex relationships between work and leisure, related implications are then taken up.

Resistance Up In The Sky: New Forms Of Labor Protest In Neoliberal Korea

The continued rise of Korean economy in the world stage is widely recognized by the presence of global brand-name products such as Samsung Galaxy phones, Hyundai Sonata, and even by the phenomenal world-hit of Psy’s “Gangnam style.” However, on the other side of this triumphant story of Asian capitalism, there is Jinsook Kim, who protested on top of an industrial crane at the height of a 15-story building for 309 days. In a vibrant economy where automobile exports contribute a lion’s share, the massive rollout at Ssangyong Motors pushed 24 auto workers to death either by suicide or by post-traumatic illness. These are unparalleled cases of labor resistance, which merit a serious scholarly examination. This study focuses on the sky struggle (haneul toojeng in Korean), like the one staged by Jinsook Kim, which represents a new form of labor resistance in contemporary Korea. In this paper, I first present data on traditional labor disputes and the new sky protest and introduce three major labor struggles - Kim’s sky resistance at Hanjin Heavy Industry, the suicidal protest of laid-off workers at Ssangyong Motors, and non-normal workers’ struggle at Hyundai Motors. Through these instances of labor contention, I elucidate how the mode of labor protest has changed in Korea in recent decades. In the second section, I elaborate on the structural and political conditions that gave rise to this changed form of labor unrest by focusing on Korean economy’s neoliberal transformation, the deepening fracture in the labor market, and democratic institutions devoid of labor representation. The paper closes by discussing the theoretical implications of these labor struggles in Korea, especially in enlightening our understanding of contemporary class conflict and collective action in a democratic society.

LEFEVRE, SOLANGE* (Université de Montréal, solange.lefevre@umontreal.ca)

Religious Diversity Management and Reasonable Accommodations in Greater Montreal Schools

Debates over the place and role of religion in the public sphere have gained significant relevance in Quebec, especially since 2006 (Lefebvre, 2008). The arrivals of immigrants with religious backgrounds other than Christian, distorted public narratives over minorities’ religious requests and the post 9/11 context contributed to this. As a result, the Consultation Commission on Accommodation Practices Related to Cultural Differences was created in 2007. Education, together with the field of health, stands as an arena for more potential tensions and more needs for religious accommodation (Zubrzycki, 2012). Framed within a larger comparative project, directed by Solange Lefebvre, on the regulation of religion in four national contexts, and based on a qualitative approach, this presentation analyzes how religious diversity is being managed in the context of schools in Greater Montreal. The inquiry pays special attention to the specific “reasonable accommodations” implemented to respond to religious requests of pupils and teachers – in areas such as personal religious symbols and dressing, dietary prescriptions, religious holidays and sports practice – with the aim of disclosing the effects that the so-called Bouchard-Taylor report has had in such institutional contexts.

Statistical Analysis of the Sport Participation in a Population: Some Sociological and Software Considerations

Estimating the sport participation rate in a given population raises the question of what it means to “be sporty”. From 1970 to 1990, new forms of sport practice appeared that forced the sociologists involved in general population surveys to enlarge the usual definition in order to really get a whole understanding of the sport phenomenon. The goal is now not only to evaluate the hard core formed by the sociological duet “training and competing” but to go further so as to include sober and more ephemeral physical activity forms. In fine, a scale of the respondent investment in the sport and physical activities is designed, representing a progression from no practice at all to the usual sport participation in its sociohistorical meaning. To this end, the interviewing mode has changed to an emic-and-etic dual approach.

Sociologists aim to discover the sociological, cultural, demographical characteristics which may influence this sporting scale. A suitable statistical toolkit readily available in an easy-to-use computing environment is thus needed. No doubt that contingency table analysis is the fundamental technique used by sociologists. The distribution-free software proposes some modern approaches for dealing with two-way tables (Yule’s Q, confidence intervals, local and global effect sizes, modality profiles) suitable for a sociological quantitative data analysis, and is specifically powerful in producing statistical graphics.

Finally, explanatory methods appropriate to the researcher’s goals (Wheaton, 2004) enable to detect and visualize (Ely, 1999) the sociological, cultural, demographical effects in the 2010 general survey of the sport practices in the French population.

Does Early Schooling Equalize Educational Outcomes Across Social Origins: Evidence from Pre-School Extension in France

Universal preschool is often seen as the mean par excellence of correcting social inequality in educational achievement. However, evidence on the short and long term effect of preschool is very limited. Over the 1960s and 1970s, France undertook a large-scale expansion of preschool enrollment. As a result, during this period, the enrollment rate of 3 years old children rose from 35% to 90% and that of 4 years old rose from 60% to virtually 100%. This paper evaluates the effect of this expansion on subsequent schooling outcomes (repetitions, test scores, high school graduation) and wages. We examine the average benefit of preschool enrollment and differences across social groups in the benefits of preschool. We find some sizeable and persistent effect of preschool and this points to the fact that preschool can be a tool for reducing inequalities. Indeed, the analysis shows that children from worse-off or intermediate social groups benefit more from preschool than children from better-off socioeconomic backgrounds.

Erditorial Expansion, Earnings Compression and Changes in Intergenerational Economic Mobility: Evidence from French Cohorts, 1931-1976

Over the last fifteen years, an important body of research has investigated the extent of the intergenerational economic mobility. Two main results have emerged from this literature. First, economic outcomes, in developed societies, are much more strongly influenced by family background than was thought two decades ago. Second, the transmission of economic inequality varies considerably across countries and high inequality is generally associated with low mobility. However, beyond the above-mentioned stylized facts, the factors that shape intergenerational economic mobility empirically have not been much explored. Why does the degree of intergenerational mobility vary across countries? To what extent does it change over time? How does the level of economic inequality relate to the persistence of inequality across generations? Have changes in the wage structure affected the degree of mobility? What policy intervention in general, and what educational system in particular, may foster equality of opportunity? Such important questions remain largely unanswered.

This paper analyzes long-term trends in intergenerational earnings mobility in France. I estimate intergenerational earnings elasticities for male cohorts born between 1931 and 1975. This time period has witnessed important changes in the labor market and educational system: large expansion in access to secondary and higher education, important compression of earnings differentials. Over the period, intergenerational earnings mobility exhibits a V-shaped pattern. Mobility falls between cohorts born in the mid 1930s and those born in the mid 1950s, but substantially increases for cohorts born in the first half of the 1970s, age-adjusted intergenerational earnings elasticity amount to around .55. This is significantly higher than the elasticity estimated for the baby boom cohorts. It is also lower than variations in positional mobility.

This paper analyzes long-term trends in intergenerational earnings mobility in France. I estimate intergenerational earnings elasticities for male cohorts born between 1931 and 1975. Ce pari se fonde sur des descriptions erronées de ce qui se passe sur la scène des commissions de vérité, et sur des images idéalisées de notre propre culture. Une de ces erreurs consiste à croire, en premier lieu, que les acteurs arrivent à l’audition avec des émotions nées de l’expérience de la violence politique, et stockées depuis lors des « traumatismes ». On suppose, en deuxième lieu, que ces émotions, traumatiques, sont suscitées par la souffrance : peine infligée par la violence, ou souffrance de la perte d’un proche. On imagine, en troisième lieu, que l’expression émue de cette souffrance permet le remplacement d’émotions de délétion, par des émotions d’adhésion : la victime s’identifie à un collectif qui la reconnaît enfin ; réciproquement, la nation se refonde dans la communion émotionnelle, dans l’effusion cathartique. On verra comment ce « tribunal des larmes » que fut la TRC met à l’épreuve ces convictions.

Leadership Research in Healthcare: A Realist Review

According to Gilmartin and D’Aunno (2008), researchers were missing the opportunity to develop general leadership theory in healthcare sector mainly because they weren’t stressing enough the role of professionals as leaders and the need of understanding the role of gender in leadership; and because of the barriers to collaboration. Everyday routine is submitted to rules and constraints, particularly in operational teams; distributed leadership, relationships, and social responsibility at a systemic level.

The relevancy and need of leadership development programs, framed within a wider strategy, emerged. Nonetheless, gaps still exist and require further investigation: particular needs in public vs. private contexts; professionals’ and women’s differentiating characters; generational gaps; associations between leadership and recruitment HR practices research; how (and if) leaders (should) influence the organizational culture and values; and developing countries specific challenges. Also, a greater proportion of relevant findings should be drawn by empirical and more rigorous studies. Finally, major attention could be paid to interactions happening at the team, organizational, and systemic level among different leaders, and among leaders, followers and external actors.

Who Will Do Science? Implications for Science, Technology and (New) Forms of Social Inequalities

Almost 20 years ago, the authors explored the ramifications for science and society of who practices (and will practice) science in the United States (U.S.).[1] Scientists determine who will practice science in the future: academic scientists act as gatekeepers in terms of the production and training of scientists (admissions, funding, training and apprenticeships); and the design, implementation, certification and evaluation of curricular content. Moreover, access to understanding of science and technology are necessary to function in a global, knowledge-based economy. These issues are still critically important to both the scientific enterprise and society.

This paper revisits these issues and implications for science policy in the contexts of dramatic demographic changes and inequalities in access to science and technology in the US. Currently, increases in the percentages of the U.S. population comprised by historical racial/ethnic minorities are not reflected among the U.S. science and technology workforce. This reinforces and exacerbates inequalities among groups. The authors explore inequalities in science and technology by examining trends in the participation of historical racial/ethnic minorities in science and engineering higher education and the workforce over the last two decades.

LEGRAND, JADE* (École Hautes Études Sciences Sociales, jlegrand@ehess.fr)

Embodying the Other As a Self

Based on ethnography of international relief organizations, this contribution explores one aspect of the daily life of aid workers: how emergency contexts bind people together and eventually melt different selves in a temporary, shared body. First, the body is considered as the biological boundaries of human being, with its vulnerabilities. Then becomes the united entity of an emergency team. What strikes about life in the field is the level of danger commonly accepted by members of the organization (Roth, 2011). Putting yourself at risk, physically and mentally, is a prior condition to humanitarian career. Incidentally, the fantasy of danger flows into our perception of aid workers as modern heroes living a life of adventure and self-sacrifice (Dauvin, Siméant, 2002). In concrete terms, kidnapping, rape, beatings and robbery are often reality. While being in the field with the teams, one can observe, even experience, that not only may aid workers put themselves at risks but sometimes also others. Life in a mission creates a high dependence between the staff, relying on each other to ensure everyone’s safety. This dynamic is reinforced by the lack of intimacy and the control over individual vulnerabilities, e.g. dress code and living conditions.}

The present study aims to investigate which progresses researchers have done in order to understand: 1) Who are the leaders in the healthcare sector and which factors (i.e. traits, skills, competencies, behaviors and styles) are needed for such a role; 2) How can leadership impact the healthcare sector and what challenges are addressed; 3) Which efforts are in place in order to educate leaders in healthcare and how relevant are those; 4) Is leadership in healthcare going towards a systemic, cross-cultural and collaborative approach.

To achieve these goals, we identified the realist review as the best methodology to analyze the relevant researches sample. We have answered questions such as “what works, for whom, and in which circumstances” highlighting: the effectiveness and acceptance of transformational and collaborative approaches; professional’s experience, expertise, and good task delegation within operational teams; distributed leadership, relationships, and social responsibility at a systemic level.

The relevancy and need of leadership development programs, framed within a wider strategy, emerged. Nonetheless, gaps still exist and require further investigation: particular needs in public vs. private contexts; professionals’ and women’s differentiating characters; generational gaps; associations between leadership and recruitment HR practices research; how (and if) leaders (should) influence the organizational culture and values; and developing countries specific challenges. Also, a greater proportion of relevant findings should be drawn by empirical and more rigorous studies. Finally, major attention could be paid to interactions happening at the team, organizational, and systemic level among different leaders, and among leaders, followers and external actors.
The Self and the Other are linked in the ethical principle of aid itself. But the way it is translated in the field is still to be described and analyzed. It opens the door to a new understanding of humanitarian bio-politics (Fassin, 2006, 2010; Agier, 2012; Redfield, 2013). Indeed, isn’t the choice of risking one’s life for the others the ultimate way to contest the sovereign power of letting die (Foucault, 1976)?

LEGRIS REVEL, MARTINE* (University Lille 2, mart.revel@gmail.com)

Are Civil Society Organisations Doing Research?

Legitimate governance of science cannot be achieved by the research community alone. Science governance should take into account issues of broad public concern. Engaging CSOs (civil society organisations) in research design and implementation more effectively could help address these issues.

Publicly funded research has an obligation to produce outcomes beneficial to the public who fund it. In the European Union this obligation is reinforced by a complementary trend toward participatory governance. Momentum is growing to deepen democratic engagement through the participation of citizens, also in the research environment.

Unfortunately, the knowledge base underpinning CSO involvement in research is extremely thin. This knowledge foundation must be strengthened if Europe is to develop a research governance structure capable of accommodating CSO involvement effectively. We need to deepen our understanding of how CSOs are currently participating in EU-funded research - to what extent, in what roles, for what purposes and to what effect...

In a rigorous investigation of unprecedented scope, our study maps these parameters of engagement and analyse their underlying assumptions. The models being identified should allow us to evaluate research outcomes more efficiently and provide contextualized understanding of CSO participation moving forward...

The findings presented in our paper are based on the results of two surveys carried out by the CONSIDER project in 2012. The surveys, which covered all FP7 projects, were aimed at gathering essential information about participation of CSOs in EU-funded research. Survey one was sent to 14,000 FP7 project coordinators and generated 2,959 completed responses. The role of CSOs in research projects is perceived very differently by academic institutions and the CSOs themselves. CSO participation in the FP7 research projects privileges an institutionalized, professional type of civil society organisation over grass roots activists

Beyond Rational Dialogue: Alternative Modes of Participation

The stumbling blocks of the “dialogical” procedures spread in the political public place and in the service of the democratic participation of the citizens can be limited, by-passed even by the development of modalities and “post-dialogical” devices of sustainable cooperation in the public and “private” places, the political spaces and everyday life, with the aim of a both reflexive and constructive democratic governance. The “post-dialogical” way suggests that the “dialogical” devices in the service of the democratic participation are neither a necessary condition, nor a sufficient one. CSOs are being identified and allow us to evaluate research outcomes more efficiently and provide contextualised understanding of CSO participation moving forward...

The project was aimed at gathering essential information about participation of CSOs in EU-funded research. Survey one was sent to 14,000 FP7 project coordinators and generated 2,959 completed responses. The role of CSOs in research projects is perceived very differently by academic institutions and the CSOs themselves. CSO participation in the FP7 research projects privileges an institutionalized professional type of civil society organisation over grass roots activists.

Marketization and Agency: Freedom and Self-Control in Low-Status Online Contract Work

How does the marketization of knowledge work and the associated creation of entrepreneurial subjectivities influence workers’ agency, or their control over their own lives? Proponents of marketization suggest that it provides workers freedom in choosing where, when and how to work. Critics fear that it leaves workers isolated, adrift and vulnerable to exploitation. In this paper, we approach the question through an extreme case: self-employed knowledge workers who contract with clients around the world through online labor markets.

The data is based on interviews of 25 online workers in United States, Nepal and Philippines, and on participant observation in online labor markets and in worker online communities. In contrast to earlier studies of independent online work, which focus mostly on relatively elite workers, we focus on workers who specialize in low-status digital tasks, such as photo labeling, sentiment analysis, and caption entry.

The findings show that online workers celebrated their freedoms and cast the uncertainty inherent in contract work in positive terms, as variety and excitement. At the same time, the lack of structure provided by an organizational context left many of the workers struggling with self-control, resulting in underwork, overwork and ineffective time use. To cope with self-control issues, many workers participated in online peer groups and used sophisticated software tools to track progress and create goals and alerts. Since well-paying tasks were available on the markets only occasionally, some workers felt compelled to attend whenever these tasks alerted, even at night, and structured their daily activities so as to be constantly available. This suggests that, at least for some workers, the freedom of marketized knowledge work may be somewhat illusory: the iron cage of corporate bureaucracy is replaced with a self-imposed digital cage.

CERTIFYING PRACTITIONERS AND ACCREDITING PROGRAMS: THE UNITED STATES EXPERIENCE

This presentation is intended to clarify the distinction between the certification of individual practitioners and the accreditation of programs in sociological practice, applied, clinical and public sociology.

In the United States the Association for Applied and Clinical Sociology (AACS) certifies individual practitioners at the Master’s or Doctoral level. Certification is earned by a sociological practitioner to document their qualifications beyond an academic degree. It is a process of evaluation by previously certified peers and includes the submission of a portfolio and the completion of a demonstration in which applicants showcase their action oriented work. Certification is not licensure as granted by a state or commonwealth.
In contrast, The Commission on the Accreditation of Programs in Applied and Clinical Sociology (CAPACS) accredits programs. Sociology programs can voluntarily seek accreditation to document their quality and performance. It involves a program self-study and external peer review of the program. Programs must meet curriculum standards in the areas of sociological theory, methods, and practical experience such as an internship. Accreditation provides impartial advice on improving the education of students. The Commission accredits programs at the Baccalaureate, Master’s, and Doctoral Level. This presentation is intended to be an informative one in which both the process of accreditation for an individual and the process of accreditation for a program will be covered. A closing argument will be made that sociological practice improving the education of students. The Commission accredits programs at the Baccalaureate, Master’s, and Doctoral Level.

Urban Land Encouragement and the Greenbelt in the Greater Toronto Area

In this paper, I look at the implications of the Greenbelt legislation that was introduced in the so-called Greater Golden Horseshoe Area in 2005 and is coming under scrutiny. The main rationale for the legislations is that (1) to protect green space from further land encroachment by Toronto’s massive urbanization pressures; (2) to secure the hydrological system that is important for the Toronto region; (3) to safeguard several ecological sensitive areas and its biodiversity. In tandem with this legislation, a second provincial legislations came into place with the purpose to direct growth to already built up areas. While it is hoped that the exurban expansion into the countryside will be alleviated with this policy, the provincial pressures on municipalities to support conditions for growth lead to different local perspectives on what the greenbelt constitutes. This paper looks into two municipalities – Markham and Barrie on the “inside” of the greenbelt and Barrie on the “outside” of the belt – and how they negotiate and integrate the physical barrier in their growth agendas, while contributing to further decline in biodiversity. By using these two perspectives, one from the inside, one from the outside, I will investigate how far the greenbelt is seen as a limit to growth, a repository for biodiversity or an important hydrological system. For this, I will look at the few remaining agricultural areas and their relationship to urbanization on the one hand and the protected landscape on the other. This paper draws on elite interviews with representatives in two municipalities (Markham and Barrie), review of policy texts, and newspapers. It is hoped to draw general lessons from it in regards to questions of biodiversity decline and water regime change in the context of urban development pressures where legislation, discourse and social practices are contradicting each other.

Inclusion and Structural Processes of Young Recipients of “Unemployment II Benefits”

This paper discusses first findings of a research project that tries to reconstruct biographical developments of young adults who are perceived as especially difficult to “include” – due to their precarious status as recipients of “unemployment II benefits”. I am especially interested in turns of events that appear surprising in the eyes of professionals and of creative “metamorphosis” (Schütze 2001). In terms of biographical analysis a special focus is put on “structural processes” (Schütze 2001) of the young adults. There have been approaches to understand the situation of young people receiving unemployment II benefits in recent studies (i.e. Schreyer/Zahradnik/Götz 2012), but the focus on the biographical context and especially the relationship with relevant professionals is missing so far. Autobiographical-narrative interviews with the target group are being conducted according to Gorer (1961) and Glaser/Stratton (1967). Insights into the interaction with the professionals are gained on the basis of spontaneous narratives of professionals (in this case: counselors in the job center etc.) about the history of their working relationships with clients (Riemann 2000).

Why Economic Inequality Matters for Criminology and Criminal Justice

The presenter, a co-author of The Rich Get Richer and the Poor Get Prison, will focus on economic inequality, which receives less attention than race or gender. This paper will start by providing an overview of economic inequality in several developed nations before discussing several ways to conceptualize the inequality between natural and corporate persons. Next, the presentation will summarize the links between inequality and crimes of the poor as well as crimes of the rich, following Braithwaite’s formulation that inequality worsens crimes of need and crimes of greed. The impact of inequality on each stage of the criminal justice system will then be reviewed. Law making is influenced by lobbying. Policing means war on crimes done by the poor and zero tolerance, but deregulation for corporations. Judicial processing and outcomes are heavily influenced by quality of legal assistance and resources. By sentencing, the wealthy and corporations who have harmed workers, consumers and communities have been largely woe-dut; it is the socio economic class that goes for a stay of prison, reinforcing the belief that they are the most dangerous. The conclusion highlights the importance of ideology in minimizing concern about inequality and its effect on justice.
 Construing and structuring life courses through the perceptions of those concerned is a promising approach to the study of life-event histories. Pioneering sociologists have developed the qualitative analysis of turning-points based on subjective quality of life-course narratives (Hareven & Masaoka, 1998); we here present data from a quantitative survey which recorded individual life-event histories together with perceptions of well-being over the life course.

This unique dataset allows to explore the evolution of well-being from birth to age 50 among a representative sample of the French population. Respondents were asked to divide their lives so far into periods, and to explain and interpret these significant phases. They identified the turning points, the general tone of each period and what they saw as the landmark events.

Our initial analyses of this abundant material show how individuals’ life courses are structured around certain factual landmarks, especially landmarks in their conjugal and working lives, and the context of historical events. We also identify how individual characteristics influence the subjective description of well-being: the respondents’ subjective experience proves to be varied, non-stereotyped and not readily predictable.

Having established some of the relevant characteristics of the declared turning points, we then explore the changes in reported well-being from one period to the next within individual life courses. To explore the perceived life courses we apply Optimal Matching Analysis to draw out their main features and establish a typology of well-being trajectory types.

**Large-Scale Dissemination of Small-Scale Renewable Energy Technologies in Developing Countries**

Access to clean energy services is considered as a requisite for any development in rural places of developing countries. In remote places, decentralised renewable generation of electricity has been considered for a long time as a desirable alternative to rural electrification with the extension of the grid. A number of alternative characteristics for cooking and heating have been designed and promoted by NGOs. But progress in the dissemination of these technologies has been slow. This paper will first examine some of the myths linked to rural access to energy and how they have been impeding the implementation of renewable energy projects.

The dissemination of small decentralised clean energy technologies in developing countries seems often analysed in the international development literature in terms of barriers to be overcome or institutional gaps to be filled. Considerable efforts have been put in subsidising clean energy technologies with most of the emphasis being on environmental impact, while other technologies like the mobile phone have spread in Africa quickly.

This paper will determine how a more dynamic approach could help to analyse the way actors interact and build relations around new technological products, so to understand how their dissemination could be accelerated. Technologies have their own life and need to produce a specific context to thrive (Latour, 1996). Markets are created by policies and institutions; a series of stable rules embedded in organizations or networks have to emerge to make them sustainable. Clean decentralised energy technologies are “new” in the sense they need a new environment to thrive compared to established centralised (and often polluting) technologies.

This paper will finally analyse how innovative business models, but also adapted institutions and regulatory frameworks for private public/partnerships are contributing to accelerate the diffusion at a large scale of technologies that can be now considered as mature.

LEMAIRE, XAVIER* (University College London, x.lemaire@ucl.ac.uk)

**Urban Planning and Sustainable Energy Transition in Sub-Saharan African Countries**

Urbanisation rates in Africa are the highest in the world and in most sub-Saharan countries energy service delivery is inadequate to keep up with the needs. The situation is often dire, with cities scarcely able to provide for their existing populations, let alone allocate resources to minimise the longer term environmental risks facing them such as global warming—leading to on-going crisis management and potentially spiralling declines in welfare and economic growth.

Inadequate access to electricity and limited mobility because of deficient public transports are common in major part of African cities, notably within informal settlements. The demographic trend in sub-Saharan Africa and massive migration from rural to urban areas can only aggravate difficulties and deepen the inequalities between the middle class and the poorest relegated in the margins of urban cities.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name. 561
Strategies to integrate energy issues in urban planning could be built to mitigate these trends, by promoting energy efficient housing, better spatial planning and public transport and also access to energy by alternative electrification approach. This paper presents a research on organisational dynamics and constraints faced by sub-Saharan cities; it surveys capacity constraints in municipal departments and analyses the gap between policies and implementation of sustainable energy transition measures. This on-going research relies on case studies in Uganda, Ghana and South Africa.

National-Ethnic Identities Of Leaders Of The German Minority In Northern Poland

The main objective of this report is to present the national and ethnic identities of leaders of the German minority organizations in the context of their activities after 1990. Of the leaders (an in-depth case study of social construction, including structure and operating principles, considering internal and external interactions and the dynamics of this system was carried out. The empirical analysis of the leaders’ identities are based on the main theoretical concept of ethnic identity that simultaneously constitutes a synonym of ethnicity by John Milton Yinger. The subject of this report includes formal institutions (associations), represented by formal and informal leaders of German minority groups in selected areas of northern Poland. The sample contains associations that operate in Pomerania, a part of Kujawsko-Pomorskie voivodship, the Warmia-Mazury voivodship and the northern part of the Wielkopolska voivodship. The location of the associations coincides largely with former province of West Prussia (1878-1920) and the territory of the former Second Free City of Danzig (1920-1939).

Cross-National Comparative Lifestyle Research: Theoretical and Methodological Considerations and a Two-Country Illustration

In this presentation, we offer a comparison of cultural stratification in France and Israel, with a specific emphasis on the association between the social field and the cultural field. Analysis of cultural stratification is interested in the degree to which individuals from different social groups are able to take part in it and develop a meaningful relationship with it. In turn, such a relationship affects life chances in the realms of education, occupation, and social status. So, analysis of cultural stratification is a powerful tool for analyzing social stratification systems and to better understand the similarities and the differences between countries in this realm. Research on this topic has developed significantly, both empirically and theoretically, these last fifteen years, but relatively little attention has been granted to research that adopts a cross-national comparative approach and that asks whether patterns of association are similar in different national contexts. Such comparative perspective will be particularly useful to test theoretical predictions regarding levels of cultural participation and their correlates in societal settings characterized by different social structures, cultural policies, market structures, and historical traditions.

We think of this contribution as joining a discussion about lifestyle spaces and cross-national differences to be complemented and continued with similar analysis in other countries. Since research on cultural stratification focuses almost exclusively on European and North American countries, the comparison between France and Israel is potentially very revealing. As all cross-national research entails methodological and typological complexities, we treat the comparison between France and Israel with caution. The general picture shows that cross-national comparison helps us to understand and further theorize the way lifestyle spaces are linked with social positions.

Contested Multiculturalism in Germany? - the Debate on Circumcision

In the words of Angela Merkel multiculturality has “utterly failed” in Germany (16/10/2010). Although the former German President Christian Wulff had stated “Islam also belongs in Germany” only a few weeks earlier (03/10/2010) the debate seemed to be settled. In contrast to other European countries adopting official policies of multiculturalism, German politics did not strive to incorporate multiculturist elements into policy making or the legal system. However, with this attitude the German secular state will face challenges with respect to the religious sphere. The 2012 medial outcry due to ceremonial circumcision recently demonstrated this ongoing societal discussion.

In this case, right-wing politicians as well as a coalition of secularist actors, and children’s rights groups opposed circumcision, an essential ritual practice for the Muslim and Jewish religious communities. As a result of this debate, an exception was introduced into the public order code: 1) the right to protect children’s rights for religious reasons legally possible. After this step the medial attention decelerated and left behind what can be seen as an attempt to introduce multicultural elements in an otherwise mostly secular jurisdiction.

My sociological take on the debate goes even beyond this description. I argue from a point of social theory that takes into account the ‘boundaries of the social world’ (Lückmann 1970). From this perspective it becomes clear that it was necessary for secular politicians, jurists, and participants of the debate to adapt the jurisdiction to the reality of the religious communities living in Germany. This involves a perspective at the German minority as a group losing ‘the right to decide back’ children’s rights into a means of their symbolic inclusion into the social sphere of a religious community. In my presentation I will elaborate on this theoretical approach as well as its implementations for the analysis of the debate and the concept of multiculturalism.

Maladies Chroniques, Transitions Professionnelles Et Changement Social

A l’occasion d’une recherche d’une durée de trois ans ayant pour thématique centrale les rapports entre maladie chronique et travail, cette communication s’efforcera de montrer que, à l’occasion d’un dispositif spécifique de recherche action clinique que nous présenterons, la rupture biographique (Bidart 2006, Grosseti 2006) se transmet en une dynamique de transformation sociale. La transformation professionnelle débouche, « naturellement », sur une (dynamique de) transformation collective via la présence d’un groupe, qui sur un temps long, conduit chacun à quitter le récit de sa vie pour soi, pour mettre en commun ce qui dans son parcours individuel fait écho aux autres participants. Le récit de sa vie, de la simple vie, de ce que certains appellent la vie nue (Arendt, 2002 ; Agamben, 1998) ou la vie vivable (Butler, 2010) se transforme peu à peu en une réflexion sur ce qu’il faudrait transformer chez soi, chez les autres et dans la société afin de parvenir à une vie en santé. Ce sont alors les normes sociales du travail entendues comme la représentation sociale du travail-emploi qui détermine l’accès aux ressources de base requises pour répondre au commandement contemporaire de l’individu maître d’œuvre de sa propre existence (Castel 2011) qui sont questionnées. Quel que soit l’âge, le sexe ou le niveau social c’est bien la question de la centralité du travail dans une vie qui est mise en débat. Cette recherche montre bien à quel point les transitions sont des occasions de co-construction du changement individuel et social. Si les façons de penser changent, elles conduisent alors à une volonté de changement social qui se manifeste via différentes stratégies que ce soit dans le milieu familial comme dans celui des organisations et des institutions.

From Foosball Table to Beer Crate – Ordering Everyday Worklife in an Internet Agency

Internet advertising agencies are production oriented service companies who mainly develop software applications for their customers, like advertising banner or homepages. They are an instructive example for new forms of organizing working processes in an exceedingly complex working field. By bringing in empirical data from an ethnographic study I will show that in spite of this complexity, employees are able to finish their work successfully. This is possible because of practices of differentiating. The focus of this talk is on the imbrication of the different talks on these practices and of a special configuration these practices carried out: masculine software developer.

The implementation will begin with introducing theories of practices as an instructive theoretical “tool” to analyze organization and materiality, secondly basic points of the conducted ethnography will be presented, following by empirical material from the field. I will show how crates of beer and a foosball table are important parts of the practices that carried out software developer and how these practices are interfinked with practices of doing masculinity. The so produced configuration can be described as a main agent in the field – in addition to account and creative. I will conclude that the ongoing practices of differentiating, e.g. differentiating the software developers from the creatives, “guarantees” the social order in the observed field.

Involved Fatherhood: Source of New Gender Conflicts

This paper, based on interviews with 36 couples, focuses on fathers who take parental leave or reduce their working time in favor of participating in family work. Although looking at the fathers helps to understand the complex dynamics of changing gender relations in the private sphere.

Involved fatherhood does not only contribute to more gender equality, it is also a potential source of new gender conflicts. The hegemonic cultural construction of masculinity in our data do not only show that involved fatherhood must be accomplished against the hegemonic pattern, but that, for involved fatherhood becoming an unquestioned routine, the father's uncommon attitude to occupational career must be shared and supported by the mother. Otherwise, the man's abstinence from career ambitions is a permanent source of conflict.

Another potential source of conflict is who is entitled to define the standards of good domestic work. Fathers who are engaged in family work find themselves often in an ambivalent situation. Our data show that, on the one side, mothers appreciate father's engagement, but, on the other side, tend to defend the household as their domain. Often the father gets into a position of his wife's “junior partner”. If men refuse to be the junior partner a new kind of gender conflict arises.

Closing the gap between “culture and conduct of fatherhood” (LaRossa) proves to be complicated in different respects. It even can evoke new conflicts.

Homeownership, Social Policy, and the Crisis: How Austerity PoliciesFortify Property-Based Private Welfare Systems

It has been argued that the nexus of increasing homeownership rates, accumulation of housing wealth, as well as financialization of housing markets have facilitated the emergence a social policy model in which households and families draw on their home as a source of private and collective security, especially at a later stage of the life course. If ever there was opportunity to reinforce such a property-based welfare system, it is the ‘black swan’ financial crisis and its consequent backlash on public budgets, the rationale being that the threat of state bankruptcy and economic breakdowns has substantially constrained the various institutional and political forces working against reforms. To investigate whether and under which premises policy-makers have acted on these opportunities, it be it due to ideological beliefs or actual external pressures, this paper applies a qualitative content analysis of the structure of austerity measures in five distinct European countries (Netherlands, England, Germany, Sweden, Italy) in the period 2009-2013. The main contention here is that if recent reforms or policy proposals have neglected the housing domain altogether, or even more revealing, if housing policy reform has targeted the social/public rental sector (including all kinds of rent allowances) but not the owner-occupied sector (e.g. through keep-

La Fabrique De L'autonomie

Dans le contexte de la mise en œuvre volontariste d’un projet utopique, construction d’un nouveau quartier de ville constitué de mixité, (...) de solidarité et d’innovation sociale, à l’initiative d’une université et de collectivités locales, un « groupe-ressource » pilote les « commissions de mutualisation », lieu incontournable des prises de décisions, de positions ou encore de pouvoir des acteurs. On proposera l’analyse de l’agenda de ce groupe-ressource, les thématiques abordées, les situations et positions, les argumentations, les processus de décision. Les sujets abordés lors de ces commissions vont de la signalisation à l’animation commerciale du site mais sont surtout pour nous l’occasion de questionner les tensions entre les notions de dépendance et d’autonomie. Dernièrement le débat autour de la vente de frites par un « food truck » sur le parking de l’université a illustré ce dilemme. Doit-on offrir à la personne en situation de handicap, l’être « dépendant », celui qui va à l’encontre de la norme, de l’idéal de nos sociétés (GAUCHET, 2004) qu’il soit en fauteuil, fou ou vieillissant, l’occasion de consommer des aliments riches en graisse ? Celui-là même que l’on pousse à l’indépendance, à participer à un projet de vie, à se prendre en main, à être autonome mais que l’on ne reconnaît pas comme capable de faire ses propres choix diététiques.

Entre une « politique de la pitié » (ARENDT, 1967) et le paternalisme des décideurs, les commissions de mutualisation peinent à s’inscrire dans une conception capacitaire des individus et creusent un fossé avec les intentions originales du projet : penser le quartier par et pour les usagers.

Changing Gender Orders and the Variety of Gender Welfare Regimes

The paper considers the present transformation towards a flexibilised gender order in a comparative perspective informed by the variety of gender regimes. The paper will outline three stages of gender orders in modernity: In the first stage of national modernisation and capitalist consolidation, the neopatriarchal gender order was established which assigned public and domestic power to men and defined women as mothers and housewives. The the difference based gender order developed as the neopatriarchal authority receded. Formal and legal male superiority was reduced with women's votes, legal reforms for women's own rights of property and decision in the family. The worldwide spread of Fordist/Post-Fordist production established men as core workers and women as housewives. Emerging welfare states institutionalised this division of labour with the breadwinner-housewife model. The varieties of gender regimes have evolved in the context of the different welfare state trajectories and the various paradigms of mass production as Fordism and Toyotism, but they also were influenced by the diverse liberal, social democratic or conservative political culture.

The difference based gender order has been eroding by women's educational advancements, by women's movements and the resulting legal and social reforms as well as by postfordism and globalisation and flexibilisation of employment. Presently a flexible gender order is emerging which is based on a pluralisation of gender and gendered employment and life forms; as various forms of sexuality have become acceptable and men, the integration of women into the labour market and increasing flexibilisation and global mobility of employment. The impact of the diverse forms of gender regimes on these transitions will be investigated.

Young Italians Surviving Strategies In The Social and Economic Crisis

The paper intends to present some preliminary results of a research we are carrying out in Italy to investigate the impact of social transformations, spawned by the 2008 financial crisis, on young people and their working conditions. The research’s main goal is to highlight, thanks to the methodological tools of sociology, not only the crisis’ possible outcomes but also how social actors cope with the new situation adopting best practices. Specifically, we concentrate on the changes in the everyday life’s routines, in the consumption practices, in the capability of viewing and planning the future, in the relational models adopted, in the emergence of new forms of identification and belonging. The main goal is to highlight paths, critical points, tactics and strategies adopted to cope with the economic crisis. The research will also point out the impact of the crisis on every day practices, on the methods of planning for the future, on the interpersonal relationships. The main research line is to highlight, thanks to the methodological tools of sociology, not only the crisis’ possible outcomes but also how social actors cope with the new situation adopting best practices. The Dimensionality Of Immigrant Adaptation In Britain: An Analysis Across Generational, Ethnic, and Gender Lines

Many theories have been put forward to explain the long-term experiences of migrants and their descendants (here termed adaptation), from classical assimilation theory, to multiculturalism and the ‘neo- assimilation’ theories of the ‘new’ straight-line assimilation theory and segmented assimilation. These hold different assumptions as to the concepts that ought to be used to qualify the immigrant experiences, as well as the paths of adaptation, i.e. the number of dimensions that the immigrant settlement ought to take, but are not always clear as to which they are, and how they link together. Moreover, current research tends to focus more on the individual analysis of various dimensions of adaptation (socio-economic, political, ethnic, religious affiliation and family formation practices, spatial (segregation), or political (electoral and non-electoral participation)) rather than an assessment of the actual number of dimensions of adaptation present across immigrant generations, which has important ramifications for understanding inequalities in the adaptation process across immigrant groups. Research on immigrant adaptation in Britain is no stranger to this trend.

The aim of this paper is to remediate to this issue by analysing recent British data to explore the dimensionality of adaptation that underlie the lives of current immigrants and their descendants. The determination of the dimensionality will follow the work by Bean et al (2012) and use factor analysis to determine the underlying number of factors behind variables deemed to be representative of the immigrant adaptation experience and assess the structural equivalencies in the factor analyses across gender, ethnic, and generational lines. The analyses will provide an empirical evidence base to: (1) assess the extent of inequalities in adaptation across gender, ethnic, and generational lines, and (2) examine the extent to which the uncovered dimensions of adaptation in the British context match existing theoretical views.

User Participation in Welfare Service Management – Possibility of Authentic Argumentation Between the Welfare Service Users and Welfare Professionals

User participation is an age-old piece of good practice advice for human services. In Hong Kong, user participation in service management and planning is mandatory for welfare service providers that receive public funding. Also encouraged by consumerist impetus, many welfare service organizations in Hong Kong include service users in their governance structures to inform the making of management decisions. However, critics often have doubt on the possibility of authentic argumentation between the welfare service users and welfare profes-
signals in these organizational platforms. Habermas’ model of a discursive space that is free from the domination of power remains an ideal to be realized.

The author has conducted a study on the participation of welfare service users in governing welfare service organizations in Hong Kong. The study sets out to interrogate the interaction dynamics between the welfare service users and the welfare professionals in organizational decision-making platforms. Drawing from Habermas’ theory of communicative action (Habermas, 1986), the presentation will discuss how the welfare service users construct their institutional identity and the institutional power relations, and the ways that their lifeworld and system world come to influence the communicative actions. The presentation will also explore the ways that discourse orientation and communicative competence of the participants shape the discursive space for organizational decision-making. The discussion will help assess the possibility of authentic argumentation in traditional power asymmetry between the welfare service users and the welfare professionals in the Chinese society of Hong Kong.

Reference:
A nationwide Nielsen survey of 7500 Australians, commissioned by the authors, gives some indication of changing values. Willingness to contribute 'substantial but affordable sums on a regular basis' for mitigation of future risks from natural disasters was systematically greater in younger cohorts and for those with direct or indirect experience of them. It varied little between risks 'in the next two years', 'during your lifetime' and 'in centuries to come', suggesting no progressive discounting of the future.

The Growing Unpredictability Of Climate Disasters - Implications For Effective Responses In An Unequal World

Locally unprecedented and unpredicted natural disasters are already becoming manifest, and will increase in frequency and intensity, around the globe, as climate change advances.

Poorer countries, with the least resources with which to respond, are often the most exposed to droughts, floods, storms, wild fires or rising seas, but there is no universal correlation between inequality and such vulnerability, which can strike anywhere, as hurricane Sandy and the flooding of the Japanese nuclear plant have demonstrated. Accelerating climate change, shifting weather systems and poorly understood tipping points undermine the predictability needed for preparedness by even the wealthy, and few nations have the resources or experience to respond quickly without help or advice.

Transnational assistance can be equally inadequate or inappropriate as illustrated by the disasters facing countries in the Global South over the past decade. The lack of preparedness for radiation effects on US personnel assisting at Fukushima.

The mechanisms for rapid trans-national or local to local assistance are as yet undeveloped and Naomi Klein and others have demonstrated the dangers of external aid, when it ignores local knowledge, brings in highly paid expatriates and foreign profit making companies that undermine or displace local activities.

On the other hand there has been too little attention to the potential in empowering and channelling aid to local bodies, and facilitating direct communication between localities around the world which have had similar experiences. Monalis Chatterjee's study of the Moombai floods, illustrates the potential effectiveness of local networks, in contrast with the disastrous and damaging imposed responses to Katrina in New Orleans.

Blurring the Boundaries: The Declining Significance of Age

This book examines changes in age-related norms, both in their substance and in their declining rigidity. The analysis of changes in age norms is embedded in a wider thesis that informal social norms in general have diminished in their influence. Jack Levin argues that the social and cultural forces responsible for the blurring of boundaries between public and private conduct, and increasing equality by gender and race, are implicated in the decline of chronological age as a determinant of major life decisions. The book address issues of the culture of youth, the relaxation of age constraints, the erosion of childhood, and the argument for a new life stage of 'emerging adulthood'.

Dr Levin argues that the declining significance of age has depended on the same changes in society as manifest in increases in cheating and in noise pollution, declination basic skills, and growing gender equality. Changes in age norms are examined in the broadest sense, from childhood, to youth to adulthood to 'boomer changes'. The book thus takes a comprehensive life course approach to ageing.

Urban Resilience and Resistance in the Neoliberal City: The Cases of Comunidade Coliseu (BRASIL – SÃO PAULO) and Es.Col.A da Fontinha (PORTUGAL – PORTO)

The world is being urbanized; the urban space is being neoliberalized (Peck and Tickell, 2002) (Leitner; Peck and Sheppard, 2007). The space neoliberalized rise up social fragmentation, polarization and unequal urbanities. At the same time however, the neoliberal spirit and practice, akin a contemporaneous religion, also arouse urban renewal struggles dynamics, renewal place strikes. The neoliberal practices and discourses produces their own spatiality and that reality is in permanent retroaction with alternative, subversive, counter-hegemonic and resilient space production and space demand. Those are the assumptions and questions criss-crossing the present essay which aims to add some contributes to the processes analysis in the neoliberal scenario. How the neoliberal direction of space production may be revert by the local people activity and their creative urban production visible on social movements, more or less resilient, more or less resistant? How the neoliberalized space interacts with resilient and resistant space, who movement these processes engage and what are fragilities and lines of flight can they offer?

On approaching these questions, we take as case studies the Comunidade Coliseu, a São Paulo’s favela – a brazilian urban slum habitation type – placed on Vila Olímpia Neighbourhood, and Es.Col.A da Fontinha, a squat-eviction process of an auto-managed collective transformed in an automated managed collective space. Immerged on dominant urban governance directed to the privatization, to globalized plans, to the flux creation, to the attractively of city, to the urban marketing, those places and those people try to opposite that path, almost heroically. Attempting those cases, the ambition is to underlying local/unprivileged urbanization ways of coping with the neoliberal hegemony, understanding how people shapes acts and discourses of their fight, viz. grasping urban resistance potentials in a neoliberal ambience.

Diversity, Segregation and the Prospects of Multi-Ethnic Education: Narratives of Israeli Educators

One challenge for societies under protracted conflicts is to develop educational programs and curricula that would both address ethnic and social differences and bridge social differences between various groups. In particular, a society under protracted conflict immerse itself in managing the conflict, thus it fails to attend to other societal issues. In the 1990s, after the signing of the Oslo Accords (1993) and with the absorption of a significant wave of new immigrants from the former Soviet Union and Ethiopia, it was thought in Israel, as elsewhere, that multicultural education would help transcending the national, ethnic and cultural boundaries that separate these various groups.
Notwithstanding the theoretical debates about multicultural education, the challenge of bridging these social boundaries has remained the same. In fact, as it became evidenced during the 2011 social protest (again, in Israel but also elsewhere), for a moment it was as if from 'bottom up' has emerged a new vision of society. In this new vision, the challenge for society was to rebuild its unity and solidarity against the present fragmentation. In education, this implied breaking with the "old" divisions and replacing them with a more cohesive educational vision. In this paper we ask to further explore this vision by interviewing educators (mainly headmasters and teachers) on their conception of multiculturalism in education. Particularly, the research will focus on the Negev area, where we will be tracing the relation between the structural, spatial segregation of education (and habitat) and the possibility of and interest in multicultural education.

**Institutional Feedback and Collective Learning in Industrial Waste Management**

Heavy industries offer an interesting research subject of complex operational environment of waste management. Due to massive amounts of processed materials, heavy industries also play a crucial role in achieving challenging recycling targets that many countries have set for the future. Major challenge is to increase material recycling between branches of industries. Production facilities should not be seen as bounded units, but as parts of wider industrial symbioses in which secondary material flow from one plant could serve as raw material for another process or as a component of a novel product. Such symbiosis-like industrial networks, however, are difficult to manage. Management and development of industrial symbioses requires that different stakeholders are constantly able to develop new possibilities for recycling. This, in turn, requires that stakeholders are collectively able to learn from each other to create nuanced picture of the network they are parts of. Considering this, the key question in industrial waste management is: how can we create such institutional tools that encourage collaborative learning? This paper presents the study on Polish hospitals concerning the identification of methods used by managers to take control over the clinical practice, the response of medical profession to managers actions, internal conflicts within the profession and defense of its autonomy. In western countries the pressure to reduce costs was increasing gradually over many decades, but in the post-communist states these phenomena occurred rapidly. Most doctors currently working in Polish hospitals entered the profession in the communist time and now not only they have to adapt themselves to new reality, but also to socialize younger colleagues entering the medical profession.

**Conversing with the Executioners: Denial and Expressed Moral Values in Interviews with Perpetrators from Nazi Germany and Operation Condor**

In this presentation, we will explore a research on testimonies of former perpetrators of mass violence coming from two contexts (Nazi Germany, Last Dictatorship of Argentina), when the latter are in an extrajudicial interview situation with journalists or co-detainees. The aim of this paper is to show the heuristic dimension of such sources for the understanding of subjectivity within committed State violence and for the study of the question of "moral-concerns" of massmurderers. As we will bring to light the power relationships characteristic of these interactions, as well as strategies carried out by the interlocutors to lead those “veterans” beyond their face-work (Goffman, 1967) and, through the framework of the encounter, make them speak more consistently about their violent acts. Secondly, we will deal with how documents of this type can give us a privileged access to questions of morality in situations of mass violence. To this end, we will look closely at places in the discussions where the mass-murderer reacts strongly and feels offended, while on the other hand he often asserts the legitimacy of the violence he committed. We will focus here on the thematics of indignation in both contexts and more specifically on the relationships to money and the management of resources that emerge for the perpetrators in the course of their duties.

**Internal Conflicts Vs. Integrity within Medical Profession Under Managerial Encroachment**

Poland, like other European post-communist countries inherited the inefficient health care system. The first major reform was implemented in 1999, ten years after the fall of communism. The reform changed hospital financing from fixed budget to payment for performance and granted private medical organization access to public money.

After the Cold War, Poland inherited too many hospitals, as in the days of communism additional hospitals were created for the military purposes, internal security forces, and even for large professional groups, such as railway workers. Thus, after the reform public hospitals have been forced to compete for financial resources and a limited number of medical professionals, not only among themselves but also with rapidly growing private sector.

In the communist system, costs control were made through a lack of access to expensive medical technologies, which absolved both physicians and managers of moral responsibility for cost containment and thus limited the conflict between managers and doctors. However, nowadays managers bear the primary responsibility for balancing the hospitals budget, and the task can be realized only through exerting pressure on doctors to reduce costs. This situation exacerbated the conflict between these roles.

This paper presents the study on Polish hospitals concerning the identification of methods used by managers to take control over the clinical practice, the response of medical profession to managers actions, internal conflicts within the profession and defense of its autonomy. In western countries the pressure to reduce costs was increasing gradually over many decades, but in the post-communist states these phenomena occurred rapidly. Most doctors currently working in Polish hospitals entered the profession in the communist time and now not only they have to adapt themselves to new reality, but also to socialize younger colleagues entering the medical profession.
The role of trade unions in relation to whistleblowing is frequently seen as reactive and defensive. They often have limited resources and regard their prime function as being to advise potential whistleblowers and to represent both those who feel they have been victimized for reporting concerns and members who are alleged to have engaged in wrongdoing. Research conducted by Public Concern at Work and the University of Greenwich in the UK suggests that trade unions are good at performing these tasks but are not particularly effective in ensuring that allegations are investigated and wrongdoing rectified. A more proactive and collective role for trade unions would be to negotiate whistleblowing policies and procedures at the workplace where employers were willing to do so. Research conducted in several countries consistently shows that whistleblowers normally report their concerns internally first and that line managers are often the first port of call. However, if this manager is not appropriate for any reason (for example, is the subject of an allegation or is regarded by the whistleblower as unsympathetic/antagonistic), the question arises as to whether, for trade union members, a lay or full-time official should be regarded as a suitable alternative to approaching higher management.

This paper will examine the existing data about how trade unions function in relation to the whistleblowing process and will consider the ways in which they could use their collective strength to play a more positive role in dealing with alleged workplace wrongdoing.

The notion of choice in healthcare is a cornerstone of many western developed health policy settings. In the Australian context, choice has been integral to policy initiatives encouraging Australians to take out private health insurance (PHI). Promoted by policy makers and marketed by the health insurance industry, choice of specialist medical provider, hospital, and even complementary and alternative services has become highly valued. This private system coexists with a universal health insurance scheme for medical care and public hospital provision. However, despite the emphasis on healthcare choice, there has been little exploration about to the factors shaping, and unequal structuring of, healthcare choice.

Drawing on Bourdieu's theoretical framework of intersecting forms of capital (cultural, social, symbolic, economic, and spatial) we explored the structuring of choice by Australian consumers using indepth interviews. Purposive sampling ensured a diversity of perceptions and experiences of healthcare choice, as well as in capacity to draw on healthcare capital when exercising choice. Interviews explored use of healthcare; purchase and use (or not) of PHI; social networks and information sources; drawn upon when making healthcare choices. Interviews were thematically analysed.

We found that people have an unequal capacity to make choices in health-care. Complex, interlinked forms of capital contribute to the unequal structuring of choice. While people's choices are most clearly enabled or constrained by economic resources and provision, economic capital is strongly shaped by social relationships and networks, geographic location and interactions with healthcare providers. Choice represents an individualised rather than communitarian approach to healthcare service provision. Therefore the prioritising of individual choice in healthcare policy and markets contributes to the maintenance of unequal health outcomes across the population.

Categorised as ‘mega-events’, the Olympics have long been an incredibly elaborate media spectacle in the guise of a purportedly idyllic and ostensibly shared global story, which uniquely reveals about host cultures, carrying real implications for international relations and domestic interests. Such a rich cultural repertoire shared in the media discourse becomes part of the popular imagination that constitutes the collective memory. It is in this sense that British media coverage of Beijing Olympics has shaped how a distant culture is discursively constructed and geopolitically defined. This article will answer the following questions:

- Which themes are focused on in the British press coverage of Beijing Olympics?
- How does the character of reportage vary between different titles?
- What is the general image of China that emerges from the coverage to be analysed?

This paper demonstrates how the Beijing Olympics relate to the wider context of an evolving repertoire of Orientalism in a discursive power struggle in the globalised context.

The Development of Chinese Sociology of Recent Three Decades in the Context of Western Sociological Knowledge

The author would like to give a talk about this topic based on the development of Chinese sociology of recent three decades in the context of western sociological knowledge and Chinese specifical experiences.

**The Trend of Educational Inequality in China during 1940 - 2011**

Because Hukou system has been existing for long time which resulted persistent and severe inequalities between urban and rural residents, including educational inequality. In today’s China, urban-rural segmentation is the most
The aims of this paper are to explore whether and how men are preferred and advantaged in the primary teaching workplace with reference to the context of the teacher surplus issue by analyzing the responses of the teachers in the campaign against male power. In addition to official statistical data, the data presented is derived from an ethnographic case study carried out in a primary school in southwest Taiwan. Non-participant observation and semi-structured in-depth interviews are the main sources of data collection. The non-participant observation included shadowing six class teachers for a week, and in the case-study school, interviews were conducted individually with eight teachers, including the six teachers shadowed, one male class teacher and one female subject teacher for a gender balance.

The analysis of data from official statistics and state publications identified the seriousness of and impacts from the teacher surpluses in the Taiwanese context and in the case-study school. The research evidence suggests the image of female teachers as a silent majority in their workplace. However, while confronting difficult challenges rooted in the teacher surplus issue, women's image may be changing as empirical illustrations of women displayed their capabilities and dedication to fight against the male principal for their ideals. When compared to their female colleagues, the involvement of male teachers in the campaign seemed passive and obscure. More importantly, this campaign process calls attention to gendered power within this highly feminised teaching workplace and reflects the complexities of gender and power; that is, the relations between gender and power exist not only between men and women but also between men. As argued, female teachers seemed to suffer more negative experiences from the principal's leadership or from the power relations, while male teachers were supportive and reliable allies of their principal to share power and to trust because of their gender.

According to my fieldwork data, in the 2008 academic year, 10 out of 13 males (76.92%) held managerial posts, while only 25% of female teachers were in similar positions. 21 (18 class teachers and three subject teachers) of the teachers having no managerial jobs were female, whereas only three of them were male. That is, it indicates the persistence of gender segregation: male dominance in the higher tiers and a concentration of women in the domain of classroom teaching. Furthermore, there are three important points to suggest the preference for men in the school management. First, men are preferred and advantaged to take on the managerial posts because of men's abilities and availability associated with masculinity. The second is the alliance between men, which were beneficial to their seeking upward mobility. Third, in contrast to men's advantaged position, women's domestic responsibilities and roles are suggested as hindrances for their access to higher echelons. Yet, the quotes give evidence that some male teachers did not agree the preference as an advantage, due to invisible pressure from gender norms. In addition, the findings also demonstrate that some male teachers in the study prioritised their family responsibilities, rather than their own professional advancement. Men's dissociation may imply that men can also enjoy working with children and the solid teaching profession.

This paper provides a comprehensive review of empirical evidence linking parental nonstandard work schedules to four main child development outcomes: internalizing and externalizing problems, cognitive development, and body mass index. We evaluated the studies based on theory and methodological rigor (longitudinal data, representative samples, consideration of selection and information bias, confounders, moderators, and mediators). Of 23 studies published between 1980 and 2012 that met the selection criteria, 21 reported significant associations between nonstandard work schedules and adverse child development outcomes. The associations were partially mediated through parental depressive symptoms, low quality parenting, reduced child-parent interaction and closeness, and a less supportive home environment. These associations were more pronounced in disadvantaged families and when parents worked such schedules full time. We discuss the nuance, strengths, and limitations of the existing studies, and propose recommendations for future research.

Exploring the Sense of Justice about Grades in Group Projects

In this paper, we study the sense of justice among college students about grades in group projects. We estimate the just grade function for each and every rewarder student. The problem of free rider is ubiquitous in governing the commons. It often leads to injustice in allocating the rewards in any group projects. This paper investigates formal methods in which the instructor may adjust individual students’ grades relative to grades earned on a group project that reflect group members’ sense of justice. Data are collected from 77 college students enrolled in a sociology course. We estimate the just grade function for each and every rewarder student in each group, and show how to use these estimates to set their grade adjustments. We also engage a recent debate (Markovsky and Eriksson 2012; Jasso 2012) about how to measure the just reward.

This paper is motivated by two bodies of literature. The first one concerns the free-rider problem ubiquitous in the social world when public goods are involved (Hardin 1968; Marwell and Ames 1979). Specifically, every instructor must have encountered the difficulty of how to determine individual students’ grades when they assign assignments to be completed and evaluated in groups. While many instructors may have treated it as a nuisance in their grading duties and proceed in various eclectic ways as long as the students do not complain, it is indeed an important issue to address if one takes seriously the idea of justice and the authoritative duty an instructor/grader performs. The second one concerns the social psychology of distributive justice (Berger et al. 1972; Deutsch 1975; Jasso 1980; Konow 2001). Specifically, we argue that theoretical and methodological developments in this literature (Jasso 2007) may be applied to the free-rider problem of allocating rewards to individuals participating in group projects. In this paper, we demonstrate such a particular application in the classroom context.
better account for the rise of art districts. The focus on timing enables us to understand how the state shapes the trajectory of urbanization. Over the past two decades, the “norms” of urban development and political maneuver under the pretext of environmental protection. Contrarily, environmental governance reflects a genuine commitment to ecological sustainability, even at the cost of economic growth. The empirical discussion informed by ethnographies in four Chinese cities, including Baoding, Dujiangyan, Hangzhou, and Tianjin. It also draws from archival research in Beijing. This paper concludes that, in China, environmental protection is the most politically devolved policy area. Thus, environmental governance exhibits significant diversity across localities in places where the bureaucracy remains tightly controlled by the central state, environmental governance reflects a genuine commitment to ecological sustainability, even at the cost of economic growth. Contrarily, in places where the local state enjoys higher levels of autonomy and flexibility, bureaucracies are more likely to pursue partnerships with private businesses and other non-state actors. These partnerships tend to promote business development and political maneuver under the pretext of environmental protection.

**Down to Earth: Environmental Governance and Flexible Bureaucracy in China**

The notion of “flexible bureaucracy” is an oxymoron; by definition, bureaucratic institutions are not amenable to change. The sociological literature on the East Asian developmental state has articulated the processes by which authoritarian states relied on rigid bureaucratic structures to implement development policies during the late twentieth century. Despite historical legacies, the authoritarian bureaucracies in East Asia have undergone substantial transformations in the last decade. This paper discusses the relaxation of bureaucratic rigidity, and devolution of political power towards non-state actors in the face of environmental challenges. This study focuses on the case of China, seeking to understand how environmental issues have brought challenges and opportunities to the regime. How have localities in China devised different strategies to respond to pressures from above and below regarding environmental degradation? As different places experiment with innovative forms of environmental governance, what are the resulting differences in policy outcomes? These questions are not only important for understanding the current state of environmental governance in China, but also critical for contributing sociological knowledge about mechanisms of accountability, institutional isomorphism, and political legitimacy under authoritarianism. The empirical discussion informed by ethnographies in four Chinese cities, including Baoding, Dujiangyan, Hangzhou, and Tianjin. It also draws from archival research in Beijing. This paper concludes that, in China, environmental protection is the most politically devolved policy area. Thus, environmental governance exhibits significant diversity across localities in places where the bureaucracy remains tightly controlled by the central state, environmental governance reflects a genuine commitment to ecological sustainability, even at the cost of economic growth. Contrarily, in places where the local state enjoys higher levels of autonomy and flexibility, bureaucracies are more likely to pursue partnerships with private businesses and other non-state actors. These partnerships tend to promote business development and political maneuver under the pretext of environmental protection.

**Class Boundaries in Cross-Class Friendships: A Preliminary Study Based on Social Eating Network Data in China**

China’s class structure is changing dramatically after market-oriented economic reforms. Economic marketization and privatization of ownership has created a new pattern of social stratification, which differs from the cadre-dominated social hierarchy in the state socialist era. Based on a national survey in China which reported social eating network among 5000 households, this paper documented social networks structure among 12 occupation-based classes, and examined patterns of friendships ties across class boundaries. In particular, analysis of strength and diversity of cross-class social ties suggests (1) the pattern of friendship is affected by social class structure, and social resources can be mobilized across class boundary through social network channels, (2) Varying degrees of social-network cohesion is exhibited among different social classes, (3) the manual-unmanual boundary is significantly more permeable than authority, expertise and property-based class boundaries.

**Living in the Gray Zone: State’s In/Exclusion of Live-in Migrant Care Workers in Taiwan**

Since 1992, in order to accommodate demographic necessities—including the increase in the number of double-salary families and the “graying” of the population in Taiwan as fertility rates decline and people live longer—the Taiwanese government has allowed the immigration of domestic workers and care workers as short-term contract labor force to shoulder the responsibilities of caring for older adults, people with disabilities, the sick, and younger children. In 2013, the number of migrant care workers in Taiwan reached a stunning 200,530 compared to 26,233 in 1997. In contrast to their counterparts working in the factories, live-in migrant care workers are not applied to Labor Standard Law that defines the rights of workers. Relying upon institutional ethnography, in this essay I demonstrate how the specific lived experiences of live-in migrant care workers are shaped by the social organization of carework in Taiwan within the context of labor migration. This study investigates migrant labor policy in general and migrant care labor policy in particular to illustrate how the Taiwanese government includes migrant workers into private labor market to solve the shortage of care labor on the one hand. On the other, live-in migrant care workers are excluded from full legal protection by the Taiwanese government through its practice of state sovereignty.

**Exploring the Meaning of Social Justice in Chinese Context**

The globalization process has been greatly affecting the development of many professions as well as the young people who strive to become one recognized member of the professions. Among the many professions, social work, with its long tradition in pursuing social justice is the major concern here. This paper attempts to investigate how social work undergraduates in China understand and interpret the key concept of social justice, the value that they should be devoted to defend, and what factors contribute to their understandings and interpretations. As a qualitative research, in-depth semi-structure interview was adopted to collect opinions from 23 social work students in Guangdong province. The result indicates that this group of interviewed students perceives social justice as a distant ideal which is too difficult to achieve. From the students’ narratives, a strong sense of powerlessness was detected and they feel constrained a lot by current social and political reality in Chinese society. They mostly construct the idea of justice within a nation-state framework by using a resource-distribution scheme. Their conception of social justice is largely a mixed product of Western-orientated social work education and their growing-up experience in transitional Chinese society. In addition, it is worth exploring the distinctive and long-lasting effect of their received political education (mainly derived from Marxists’ theories) in high school, which offers them vocabulary, standpoint, and theoretical assumptions to develop their interpretations of justice. Based on above empirical findings, this research suggests some future directions for promoting a more inclusive and globalized understanding of social justice among the Chinese youth.

A Text-Mediated Buddhist Conglomerate and Its Practitioners: Using Institutional Ethnography to Explore Lay Followers’ Religious Experience in Tzu-Chi

The purpose of this paper is to use concepts of Institutional Ethnography (Smith, 2005) to explore the way in which texts coordinate lay followers’ religious activities in the Tzu-Chi Organisation (hereafter, Tzu-Chi), one of the largest and most resourceful Buddhist civil organizations in contemporary Taiwan. Although it started as a small civil foundation with a few Bikkhunis and a dozen of lay female followers in the late 1970s, it has grown into an international religious “conglomerate” within half a century, and owns subsidiaries across charity services, educational institutions, medical centres, media industry, and so on. Offering a wide range of charity services and voluntary programs, Tzu-Chi organization transforms the way in which Taiwanese people think about and practice Buddhism. Scholars are aware of the thriving power and transformative structure of this organization. However, not enough bases have been devoted to a) the way in which lay followers, especially female participants, respond to this new form of religious organization, and b) interweaves the discussion with rapid socio-economic changes of 20th century Taiwan. Therefore, the researcher conducted 10 in-depth interviews on female volunteers of Tzu-Chi in order to find out the way in which the followers adapt Buddhist doctrines and practices through the organization’s modern form. The research findings demonstrate that a) in a rapidly changing society, Tzu-Chi transforms Buddhist groups into a new form of religious organization that offers practices where housewives build up horizontal ties outside the private sphere; b) media texts such as the founding nun’s book publications, monthly magazines, TV dramas produced by its own TV network, and so on, as well as lay followers’ participations in the organization’s volunteering activities help to consolidate and coordinate lay followers’ religious identities.

Religious Sisterhood Among Female Audience of Da-Ai Dramas

The purpose of this paper is to examine the way in which the audience responds to prime-time dramas broadcast on a widely watched religious channel (and another commercial TV network), owned by one of the largest Buddhist civil organizations in contemporary Taiwan—Tzu-Chi Organisation. Tzu-Chi started as a humble civil foundation with a dozen of lay female followers and a few Bikkhunis that offers charity-based services in the late 1970s. Within half a century, it has grown into a huge religious “conglomerate” which owns subsidiaries across charity services, education institutions, medical centers, media industry, and so on. Among its various types of multimedia platforms, the success of its TV network (Da-Ai TV) draws attention from one of the largest commercial TV network (CTI TV) and started to broadcast the Da-Ai’s prime-time drama (also known as Da-Ai Dramas) on both networks from Jun, 2013. As Tzu-Chi has increasing visibility and influence in a competitive TV market in Taiwan, this paper aims to explore the way in which the prime-time dramas are watched and interpreted among followers and non-followers. The researcher has conducted in-depth interviews on 13 female audience who have been watching prime-time dramas on Da-Ai TV for more than six months. The research findings demonstrate that the audience focuses on the edu-entertainment purposes when choosing to watch Da-Ai TV because a) watching these dramas is seen as an easier alternative to acquire sophisticated Buddhist doctrines, and to practice them in everyday life; b) discussing these dramas with female colleagues or friends can be educational and encouraging, and, thus, helps to form horizontal ties among female audience.

Social Desirability Bias and Mode Effect in the Case of Voting Behavior

Response distribution and data quality are influenced by different mode of data collection. Such consequences are seen as mode effect. One significant influence of mode effect on data quality is social desirability bias, which is related to whether an interviewer is involved, pace of cognition process during interviews, sensitivity of survey questions, etc. For example, social desirability bias is more likely to occur in face-to-face interview when compared to telephone interview. Slower pace and the development of rapport in the former encourage respondents to think thoroughly and provide a socially desirable answer. However, previous researches of social desirability test did not obtain significant findings. The problem of social desirability bias is found to be more severe in tele- phone interview than in face-to-face interview when dealing with voting turnout (Díaz de Rada, 2011; Voogt and Saris, 2005). This issue of such responding bias with the consideration of mode effect is worth further examination.

This study aims to examine mode effect on social desirability bias by comparing CATI and face-to-face interviews on the voting turnout of the 2004 president election in Taiwan. Data are drawn from two national representative sample conducted the same year after the election to eliminate recall error, with face-to-face survey data from Taiwan Social Change Survey and CATI data from Taiwan Social Image Survey. After weighting by population characteristics, socio-demo- graphic variables will be compared first to examine the dis/similarity of the two samples. Voting behavior, political attitudes and other related variables will be included in the multivariate analysis. Conclusion and discussion will be provided.

10th Anniversary of Hakka Television: A Study to Examine the Ethnic Broadcasting Policy in Taiwan

It is 2013 that the 10th anniversary of Hakka Television, the first ethnic broadcasting system in Taiwan. Reviewing the past 10-year development, there have been 3 ethnic television stations founded and operated in Public Television System to protect the minority language such as Hakka, Holo, and Indigenous. In this important moment, it is necessary to examine how the ethnic broadcasting worked in the past decade in Taiwan.

This research summarized the development of ethnic broadcasting during this decade from 2003 to 2013 in Taiwan by reviewing the literature, especially in Hakka communication. Furthermore, it also interviewed those who participated in either practical or academic field to discuss and give a suggestion for the next era.

The result shows that the population using Hakka is consistently growing owing to the broadcasting; however, it is still stated in an unequal position of language using as a vulnerable one. In addition, this kind of situation is also shown inside Hakka community among different 5 accents; moreover, the gap is even widened in this group. It is obvious that the policy protecting the right of using and reducing the development gap among dialects still needs a great improvement in next decade.

A Mapping of the Current Reality of Regional Inequity

This document will focus on the continuity of a power that emanate toward the provinces of the interior of Argentina and the power relations between the national state and different sub-national states.

It will be shown that there are colonial models from Mexico to Argentina that have their origins in scholastic currents found in the peninsular cloisters of medi eval Europe. Under this influence, and a century after the conquests carried out in the region of the Rio de la Plata, the first institution of higher education was conceived. The most important philosophical currents in the region could be seen to parallel the political regime introduced there.

Furthermore, the economics and the general development of the Argentine territory were considered from their inception focusing on external trade of primary resources whose main activity consisted in the creation of a handful of precarious territories were considered from their inception focusing on external trade of primary resources whose main activity consisted in the creation of a handful of precarious export-port cities and surrounding areas of the interior with the products being exported to Europe exclusively without balance and with diametrically opposed strategies.

These two main aspects –economic and philosophical-political- imbued Argentina with a distinctive profile in the development of its institutions and in the power dynamics that have persisted for almost five centuries.

This specific distribution led to a particularly non-disruptive path; a path that is highly inequitable with regard to the development of ideas, of power and its institutions and with delayed economic development.

This exploration will give rise to a mapping of the current reality of regional inequity under protection of a biased and caudillista political and economic power.

Democracy and Education: A Strategic Alliance For The Exercise Of Future Freedom. The Case Of Argentina

Argentina today finds itself in the midst of a crisis, with a weakening democracy and an education system in decline. Any solution to the country’s current problems must focus on not on one or the other of these issues, but on the two together, as inseparable.

The discussion presented here will first focus on the school as a highly planned and compulsory training institution for minors.
Second, social networks and new technologies will be considered inviting a rethink of the inclusion of these non-mainstream tools in the fields of intensive training.

In fact, both the democratic transition and the educational system can be studied from the political point of view as an alliance and strategy for the construction of citizenship where students now have extended power coming out of the classroom and are intertwined with the adult world and "control".

From there, decentralization and participation mechanisms were built in that focused on serving and satisfying the diffuse demands of its citizens.

Thus, the expansion of the democratic base with the introduction of students trained in an irreversible process as is the information era and digital culture has led to a dislocation of representation and alliances.

As such, the discussion here will briefly include how new political consensus, access to education and new social networks have strengthened democratic processes around the world.

In particular, it will be asserted that the new school within and with the democratic context in Argentina comprise a strategic alliance that must be ensured in order to discourage the development of undemocratic contexts conducive to coups or destabilizing conflict.

In the first part, the current situation regarding democracy and education in Argentina will be presented. Next, an analysis of this situation will be given. Finally, conclusions and some ideas for future changes will be proposed.

Stigma, HIV Law, and HIV Testing Among Offenders Under Community Supervision

In 2010, the U.S. Office of National AIDS Policy (ONAP) promoted a national strategy for HIV testing and linkage to care ("test and treat"), with emphasis on communities at risk. Potential barriers to HIV testing were cited, including HIV laws that criminalized non-disclosure to sexual partners. In order to identify such barriers, this study assessed knowledge and attitudes toward mandatory disclosure and HIV testing among 197 probationers and parolees in a southern state. Over two-thirds of participants had heard about the law (69.2%) and most believed that it was fair (85.5%). Most participants also supported HIV testing for offenders under community supervision (68%). Despite this support, 65.6% of participants believed that the law was a barrier to HIV testing because of fear, stigma, and potential for arrest. Perceptions of HIV/AIDS as a crime and non-disclosure as murder suggest increased stigma and resistance to "test and treat" among convicted offenders.

Women Foreclosed: A Gender Analysis of Housing Loss in the U.S. Deep South

Women were a focus of subprime lending during the housing boom, increasing their risk of mortgage foreclosure during the Great Recession of 2007-2011. Following Valentine's (2007) call for a feminist geography on interactions between social categories and spatial processes, this article investigates housing loss among women foreclosures in a southern U.S. county with a history of residential segregation. We collected data manually from legal notices and public access property records between 2008 and 2013, and then combined the information with census tract data for GIS analysis. We found significant differences between women foreclosures in terms of marital status, race/ethnicity, and location. While married women foreclosures typically lived in majority-white areas throughout the county, their unmarried counterparts were clustered in low-income Black neighborhoods close to the county seat. Women's foreclosure activity followed historical patterns of residential segregation, with privilege and disadvantage in juxtaposition with social hierarchies of race and class. We conclude that housing loss in the U.S. South is complicated by racial history and the subordinate status of 'women alone' in the property market.

Public at Risk or Public As Risk? Managing Environmental Concerns through Risk Governance

Public relations, risk communication and participatory approaches to risk management have emerged as means to handle diverging interests in society; not least public perceptions could be a source of risk in the sense that public perceptions and opinions could pose a threat to the legitimacy and stability of existing ways of managing risk. Thus, risk governance focuses on how organizations deal not only with the technical calculation of risks, but also with the actors they perceive as possible threats and potential risks to the stability of the organization.

This paper analyzes risk governance and the implications of it. The empirical material consists of three interview studies and two studies of public records on how Swedish authorities handled citizens and stakeholders' claims for regulating nature. The analysis finds that the public claims were seen as a particular risk, where public outrage and loss of political legitimacy became part of the risk panorama of the responsible agencies. In particular five mechanisms were used: dissemination of knowledge; naturalization of the problem; development of public action; inclusion of stakeholders; and individualization of responsibility. Through these mechanisms, governmental agencies succeeded to influence stakeholders and citizens' understandings and modify their claims. Thus, what took place was not only a process for governing nature, but also for governing people. The paper ends by addressing the question whether this conclusion indicates the end of public participation or if it can serve as a trigger for more radical approaches of public participation.

On The Development Of Talcott Parsons' Conception Of Societal Community

On the Development of Talcott Parsons' Conception of Societal Community During the 1950s and early 1960s, Talcott Parsons tried to write a general interpretive book on American society using the analytic methods he had developed within the function paradigm. Around 1960, he was joined in the task by his recent doctoral student, Winston White. Although the work was interrupted when White suddenly left academia in 1962, over 1200 pages of draft chapters and preliminary working papers were produced. Among the drafts and working papers are Parsons' first attempts, using the four function paradigm, to develop a conception of the integrative subsystem of society. The initial attempt built essentially on Chicago School ecological notions of community in the sense of local community. It conceived the integration of society in terms of an aggregate of local communities. A later draft, from 1966, explored a range of social institutions that serve to integrate American society as a whole. In this work, Parsons sought to develop in analytical detail and in application to a complex modern society, the conception of societal community that had emerged in early drafts for his Societies; Evolutionary and Comparative Perspectives and The System of Modern Societies. Our presentation will discuss the differences between the two conceptions of the integrative subsystem and American society and will attempt to compare Parsons' conception of societal community to current analyses of civil society and to Jeffrey Alexander's The Civil Sphere. Parsons emphasized complexes of integrative institutions that have strongly equalitarian effects, but in contrast to Alexander and others, included as well institutions that have stratifying effects. He understood differences in levels of influence among individual actors, collectivities, and associations to be essential to social integration.

Misrecognizing the Modern: Japan and the Failure of Social Theory

Modern social theory rests on a series of misconceptions, the most important of which are ethnocentrism and presentism. That is, classical social theorists equated the modern with the west (and particular parts of the West at that) and with their contemporaneous reality. In so doing, as important as they are, their theorizing systematically misrecognized the nature of the modern. Yet "modernizing" Japan, and especially its social theorists, used the culture-bound and time-bound notions and in so doing not only misunderstood the nature of the West but also of the non-West, including most importantly Japan itself. Furthermore, the Japanese misunderstanding would in turn be absorbed by Western writers who were seeking precisely to overcome the limitations of classical social theory and its legacy. Needless to say, I am aware of disparate and divergent strands in social theories both in the West and in Japan but I wish to focus on the leading writers - most importantly, Marx and Weber - and consider the genealogy of misrecognition that continues to hobble the task of social theory today.

BEYER, HEIKO (University of Göttingen)
Using Factorial Surveys and Stated Choice Experiments to Investigate Discriminatory Attitudes and Preferences

Empirical research on discriminatory attitudes and behaviour grapples with the social undesirability of its object. In many studies using regular survey methods, estimates are biased, and the social context of discrimination is not taken into account. Several methods have been developed, especially to deal with the first problem. In this regard, the estimation of the ‘true value’ of discriminatory attitudes is at the centre of interest. However, methodological contributions focusing on the social context of attitude communication and discriminatory behaviour, as well as the correlation between both, are rare. We present two experimental methods which address those issues: factorial surveys and stated choice experiments. In a first study, the usefulness of factorial surveys is demonstrated with data on German anti-Semitism (N=279). We show that the rate of approval with anti-Semitic statements increases if (a) respondents are told that the majority of fellows agree with such statements, (b) the term “Jews” is replaced by the term “Israelis”, and (c) reference to the Holocaust is made. Apart from the main effects of these experimental factors, significant interaction effects regarding the political attitudes and social status of respondents are observed. In a second study, a stated choice experiment on the purchase of olive oil and tomatoes was conducted in Germany (N=440). We find that respondents prefer Italian and Dutch products (control treatment) compared to Israeli and Palestinian ones (discrimination treatment). In this study, the correlation between those attitudes and stated behaviour (purchase of Israeli, Palestinian and jointly produced products) can be found. This adds support to the hypothesis that discriminatory attitudes hold behavioural consequences.

Conflict and Economic Consequences: Comparative Notes on “Going to WAR”

Wars are beneficial some argue. Wars are costly others argue. Some experiences prove that technological development in warring situations (may) have positive spin-offs later on. Wars can be simultaneously costly and beneficial others argue. Some suggest that being a victor in one war can create a psychosis or collective social memory that propels the victorious state/nation into long term militarist adventures that eventually leads to its downfall. Against this background we are discussing four case studies.

These paper explores in some detail four economies in terms of preparations and consequences during the Second World War, namely that of Nazi Germany, the UK, the USA and South Africa. A look is taken at the economic state of these countries both the war, preparing for war, economic developments during the waging of the war and the socio-economic and political outcomes. It concludes with some lessons learnt and pointers for the future. In our conclusion the reader may find in his/her own deduction that going to war – even if coming out victorious – may be far costlier on the long term than we tend to think.

Does Age Matter? Experiences of Prison and Release Among Juvenile Lifers

More individuals than ever before are currently serving long-term sentences. Many of them have been incarcerated as juveniles. Little is known, however, how imprisonment influences these individuals, and how they fare upon release. To assess the dynamics of age during incarceration and upon release, life-history interviews with second-degree lifers were conducted. Those who were incarcerated as juveniles were compared to those who were adults at the time of incarceration.

Three hypotheses are discussed in relation to this special group: Long-term imprisonment as a ‘deep-freeze’, prison as a school of crime, and prison as a place of cognitive transformation. The influence of long-term imprisonment is examined with a view to greater understanding of subsequent desistance post-release.

Reconciliation of Work and Family Life Among Welfare Recipients in Germany. Determinants of Mothers' Ability to Leave the Benefit System Via Employment

In the first decade of the 21st century there have been reforms in German family and social policy towards an "adult worker model", aimed at improving reconciliation of work and family, and linking receipt of welfare benefits more strongly on achievements on the labour market. Mothers receiving welfare benefits are subject to both new policies. In this paper it is investigated how these mothers succeed in entering the labour market, to what extent they are able to end their benefit receipt via employment and what the determinants are. Reconciliation of work and family life is a central area of political debate about reducing poverty among families and lone mothers in particular. Therefore the role of mothers' child care responsibilities in the process of ending welfare benefit receipt is evaluated while controlling for individual labour market resources. Special emphasis is laid on the impact of child care infrastructure and labour market conditions.

In a first step, the probabilities to take up employment are estimated from administrative data for lone mothers and mothers living with a partner. Care responsibilities in the household and mothers' labour market resources influence the process of labour market integration. Lone mothers are more likely to take up work when they don't have young children in the household than mothers living with a partner. For both groups of mothers employment is predominantly not full-time.

In a second step, determinants of the probability to end benefit receipt with the new employment are estimated, taking into account that there is a selection on unobservables at the first step. Care responsibilities only play a minor role in this part of the process, while household size and characteristics of the new job (occupational prestige, working time) are of major importance.

The Impact of Unemployment on Male Gender Role Attitudes in Germany

Germany has a long-standing tradition as a welfare state with a pronounced male breadwinner orientation in social and family policy. In the last decade there have been some reforms in the direction of a more gender egalitarian "adult worker model", particularly for families.

In this paper we want to explore the impact of unemployment on men's gender role attitudes within this new policy framework, assuming that unemployment might lead to a more egalitarian view on gendered work-family attitudes. The new labour market policy in Germany has a general notion that assigns obligations to work to both male and female recipients of unemployment benefits which might lead to less pronounced male breadwinner attitudes among unemployed men living in a couple.

For women it has been shown that employment status has an influence on gender role attitudes. In explaining this phenomenon, it has been argued that there are two mechanisms at work: first, there is a selection effect implying that women with more employment oriented attitudes have a higher probability to be employed. Second, there is an adjustment of attitudes, that is, changing one's own attitudes in response to employment status in order to reduce "cognitive dissonance". We conduct an empirical analysis of the relationship between gender role attitudes and unemployment for men and women who live in couple households. For our analysis we use the German panel study 'Labour Market and Social Security' which is covering the general population. In a first step we analyse the impact of unemployment on gender role attitudes controlling for other covariates influencing gender role attitudes and unemployment status. We are particularly interested in the effect parenthood has on this relationship. Fatherhood, in particular, might lead to a persistence of male breadwinner attitudes among men as it fosters male responsibility for family income.

Theorizing Queer Temporalities

Traditionally, feminist research has focused more on the content and the supposed effects of gender norms and their relations to power, than how the gendered power relations may change. However, there has been a tenet within feminist and—more recently—masculinity studies, which more specifically discuss how to change these power relations. A further research specifically looking at how such gender norms change is warranted. How might the gender stereotypes that surely inform the enactment of violence, transform into something new? In queer pedagogy advocates try to find solutions for resisting gendered norms, for example, through queering time. The question is what is mean by ‘temporality’ and ‘queer’? What norms of temporality are queer supposedly challenging? Taking temporality in queer studies as starting point new strategies of resistance,
against different gendered power relations, prevail. This paper, discusses various resistance strategies in relation to different attempts to reach gender equality.

Change of Basic Human Values in Europe 2002-2012

Values research is gaining an increasing popularity among social scientists and there exists several theories, trying to deal with this complex phenomenon. Given study is based on the Basic Value theory by Shalom Schwartz, which while describing a theory of basic values has created a robust framework for both cross-time and cross-cultural value comparisons.

During last two decades, Schwartz has developed several value instruments, which has been used in numerous surveys around the world. Given analyses use data from European Social Survey (ESS), which includes one of mentioned instruments - a short version of portrait value questionnaire (PQV-21).

ESS is a comparative social survey with free access and very high quality criteria. It was started in 2002 and is conducted in every second year in most of European countries. Therefor this survey provides a database with nearly 300000 cases from year 2002 through 2012, covering very dramatic period of developments in Europe.

Given study is not analyzing value change only on country level, but distinguishes also major ethnic minorities where applicable, which gives a more adequate picture of real differences and enables to describe occurred change in more detail.

The broader aim of this analysis is to fit the change of Europeans basic values into larger societal-change context, following the transition from economic prosperity to regression, which would also allow a better understanding of the value phenomenon in general.

LILLRANK, PAUL* (Aalto University, paul.lillrank@aalto.fi)

The New Normal As a System Challenge

Since the Lehman shock 2008 there has been a growing sense that the economy is out of joint. The world is not as it used to be during the period of Modern Normal, roughly from 1870 to 1970. The growth potential and progress of advanced economies is lost in systemic changes.

There have been several attempts at grand diagnostics. Francis Fukuyama and Avner Offer have described the Great Disruption in the microsystems of social life as a consequence of mass opulence. For the majority of people in the advanced world biological survival is no longer a daily concern, therefore the traditional foundation of morals have been eroded.

The New Normal argument by Tyler Cowen and Richard Gordon has it that "the low hanging fruit" of modern technology, demographics, the cold war, and educational mobilization have been picked.

The fall of the iron and bamboo curtains have opened the world and, according to Moises Naim, created the "more, mobility, and mentality revolutions". Daniel Pink distinguishes also major ethnic minorities where applicable, which gives a more adequate picture of real differences and enables to describe occurred change in more detail.

This absence of conflict reveals that Zainichi journalists do not necessarily engage in the universal professional norm of journalists such as objectivity, the other adopts a viewpoint as a minority in journalism. This study tries with these principles to pioneer the strategic universal Asianism unless falling into a trap of 'Great Asia', which had been identified as the main obstacles in the way of East Asian integration.

Focusing on the past debate inherited in the present to criticize certain version of ethnic identity, this article will examine the dynamics of critical regionalism in Asia from the 1990s to today, and suggest new dimensions of universal Asianism like peace, prosperity of mankind, democratic sovereignty, and socio-cultural integration.

Rediscov ery of Asia - from the Value-Based Orientalism to Strategic Universal Asiamism

Rediscovery of Asia – from the value-based Orientalism to strategic universal Asiamism

The so-called Asian Values debate has long history. In the late 19th and the early 20th century not only in Japan but also in China as well as other Asian countries (e.g. Korea and India), the Asian intelligentsia had dealt with the modernization. They faced with the essential problem, in which they would want on the one hand to slough off categories of the objectivism such a like an Orientalism defined by the western, so basic values have to be channeled into productive investments, but absorbed by new corporatism.

There have been several attempts at grand diagnostics. Francis Fukuyama and Avner Offer have described the Great Disruption in the microsystems of social life as a consequence of mass opulence. For the majority of people in the advanced world, biological survival is no longer a daily concern, therefore the traditional foundation of morals have been eroded.

The fall of the iron and bamboo curtains have opened the world and, according to Moises Naim, created the "more, mobility, and mentality revolutions". Daniel Pink distinguishes also major ethnic minorities where applicable, which gives a more adequate picture of real differences and enables to describe occurred change in more detail.

This absence of conflict reveals that Zainichi journalists do not necessarily engage in the universal professional norm of journalists such as objectivity, the other adopts a viewpoint as a minority in journalism. This study tries with these principles to pioneer the strategic universal Asianism unless falling into a trap of 'Great Asia', which had been identified as the main obstacles in the way of East Asian integration.

Focusing on the past debate inherited in the present to criticize certain version of ethnic identity, this article will examine the dynamics of critical regionalism in Asia from the 1990s to today, and suggest new dimensions of universal Asianism like peace, prosperity of mankind, democratic sovereignty, and socio-cultural integration.
Social Justice, Philanthropy and Ecology: The Symbolical Legacy of Brazilian NGOs

This work seeks to analyze the longstanding symbolical legacy that frames Non Governmental Organizations’ experience in Brazil. The main objective is to identify the social values which give sense to the very notion of NGO by analyzing its variations of meaning throughout history. Firstly, I present a macro sociological approach in order to deal with the emergence of the NGO field in Brazil. The connections between church, state and society for the promotion of social welfare generated the three major social values that confer meaning to the contemporary phenomenon of NGOs in Brazil.
were conducted with 38 academics in the Field of Education from across Taiwan including 17 full professors, 10 associate professors, and 11 assistant professors. P. Bourdieu’s field theories, M. Burawoy’s theory of voluntary servitude, and neo-liberalism that has become globally dominant in higher education policies were referred as the primary theoretical frameworks.

The conclusions are as follows.

1. In terms of Education Faculty members’ perceptions, the SSCI-oriented academic evaluation systems were established top-down and followed in the logic of natural science. The main purpose and underlying logic of the SSCI-oriented academic evaluation systems are against the professional scholarships of Education, and the resistance of faculties thus is inescapable.

2. What Education Faculty members propose to modify the SSCI-oriented academic evaluation systems reflects authentically their calling of re-emphasizing the education core values.

3. The research contributes mainly to unearthing the difference of practical concerns and responsive strategies amongst full, associate, and assistant professors. Theories of field, capital, and social space proposed by Bourdieu present a substantially analytic framework, while neo-liberalism and Burawoy’s voluntary servitude theory offer modest explanations.

4. The research provides delicate analyses of relevant factors in the institutional field, although the difference within gender, university types, and dis/advantaged positions are not yet systematically discovered. The relevant factors in the institutional field include the messages embedded in and transferred from the institutional practices, and the hidden rule of the review process. The factors explain why different faculty members share the same response.

**Identity Formation and Social Relations on Facebook for Taiwanese College Students**

The purpose of my research is to reveal how Taiwanese college students express who they are through Facebook. Based in Taipei, Taiwan, this study applied a multi-sized approach and methods including interviews and textual analysis to explore the identity work and social relations on Facebook among college students in Taiwan, which exists under the surveillance of unseen audiences and the influence of technocapitalism in the context of cultural globalization and consumerism.

Facebook has gradually played a substantial role in students' college life due to cultural globalization facilitated by information and communication technology, and the international mobility of higher education. Specifically, Taiwanese youth culture embodies a hybrid of American, Japanese, and Korean popular culture because of Taiwan's historical context and geographic location. This cultural phenomenon thus reflects not only the global influence of American site Facebook but also the cultural interflow within the Pacific Rim area between Taiwan, Japan, and Korea.

32 participants were recruited from the same department of two universities for analytical purposes, as they offer similarities and differences that make for an interesting comparison of dissimilarities not only in urban and rural areas but also in public and private universities. In each university, 8 first-year and 8 fourth-year were recruited to compare changes of identity formation influenced by each university over time. Within each year, there were 4 male and 4 female students for gender consideration.

The conceptions of performance introduced by Goffman, distinction proposed by Bourdieu, and surveillance developed by Foucault are referred as the primary theoretical frameworks in this research. The preliminary findings are as follows.

1. It’s all/not only about having fun?
2. Awareness of image management vs. ordinariness;
3. Intersection of gender and class.

The results will be situated in debates on subculture versus post-subculture within youth cultural studies.

LIN, MEI-LING* (National Open University, Taiwan, paulina@kcu.gov.tw)

**The Global Crisis, International Migration and Social Change : Increased Needs for Employment Flexibility and Its Consequences for Social Inequalities**

The recent global economic down-turn, resulting in insecure and precarious labour markets, is likely to intensify the societal transformations. The paper seeks to provide a deeper understanding of global social inequality and addresses contemporary inequality from the perspective of the multiple discourses of difference. Migration, and porous economic, social and political boundaries burden governance and demand innovative solutions to problems unique to global crisis. Asia is not only a migration-receiving area but it is notable for sending massive emigrants. The author utilizes the mobility paradigm or integrates it with other perspectives of inequality, such as global cultural and political economy.

This paper examines mobility as the paradigm for understanding social life, and explores these new migration situations as well as the attempts of management of this new migration landscape. The author articulates three analytic approaches of migration: (1) the first one focuses on spatial dynamics bound to the international mobilities of populations whether they are transnational or transborder; the second one, from working sites, consists in analyzing the strategies of mobility and migration that structure labor markets; the third one deals with the temporal dimension of migration, in its family and social components. The paper that should address include: (1) the uneven embeddedness of transnational migrants in the societies to which they are connected transnational migrants' adaptation strategies to become embedded in more than one society, (2) constructions of cultural hybridity and/or cosmopolitanism as strategies to attempt to maintain and/or increase social integration in more than one society, (3) the issues that arise for transnational migrants when they have crossed national boundaries to live elsewhere in terms of not being or feeling integrated in either one society. The author concludes with a summary of the main arguments and recommendations. The methods of the study include literature review and survey research.

**Youth Education-Work Nexus and New Configuration of Social Risks. Young People, Inequality and Youth Work**

This paper examines the education and work nexus in the lives of young people to demonstrate varied forms of potentialities, vulnerabilities, and types of resilience, and explores experiences of youth in terms of how education and work are integrated and/or disintegrated. The author examines the nature of shifts occurring in the field of social policy thinking and practice, examines the analytic details of the labour market reforms, that share the same logic of selective exclusion for younger cohorts, and then considers their social, occupational, economic, and demographic consequences to depict the inequality scenarios can be predicted for the local communities. The paper is structured according to a number of key topical foci, namely: (a) to seek to determine what social, economic and institutional factors account for the different degrees of social vulnerability present in a young population, (b) to explore the causes and (un)intended consequences that globalization has had on labour market outcomes in different phases of the life course, (c) to engage with youth in austerity and young people's responses to inequalities, (d) to understand economic insecurity, youth poverty and social protection, (e) to engage youth discourses in potentialities, vulnerabilities and resilience, and to determine how well these themes apply or unsuitably capture the nature of education and work structures impacting contemporary youth, (f) to understand the development of social inequality structures in the course of increasing needs for employment flexibility, and how the process of globalization has influenced life-course patterns and inequality structures in the local communities. The author would like to debate the results of qualitative and quantitative empirical research, but also focus on the conceptual tools used in the analysis.

**The Unequal Pathways to Adulthood in China: A Holistic Approach of Assessing the Role Transitions**

Rapid economic and social changes coupled with constant changing policies have had impacts on the way in which young adults structure their pathways to adulthood in China. Different from previous studies on demographic markers in young adulthood in China where the focuses are on specific life events, our paper applies a holistic approach to the transition to adulthood based on the 2006 and 2008 waves China’s General Social Survey. This study enhances the literature by exploring the ways in which social class and structural factors influence the occurrence and timing of major life events as a whole. We have distinguished five prototypical pathways to adulthood. Clear differences are found in the trajecto-

Governing Natural Disaster: State Capacity, Democracy and Human Vulnerability

The paper discusses how state capacity and democracy interact in affecting human vulnerability of natural disasters. For rule and revenue, political elites have the incentive to build up relevant state capacity preventing disaster impacts on the population and property. The incentive of the elites and the capacity protecting citizens shall be stronger under democratic competitive elections. Thus, strong state capacity effectively reduces human vulnerability especially in democracy. A panel data of 150 countries from 1995 to 2009 are used to illustrate the relationship between state capacity, democracy, and the impact of disaster. The empirical findings from the multilevel models imply that strong state and democracy are associated with the lower disaster death and victim tolls.

Politics Of Production In a World Factory: The Global Fragmented Despotism In Foxconn

In this article we describe some special characteristics of the world's greatest factory (in terms of the number of employees) belonging to the Taiwanese enterprise, Foxconn group in Shenzhen, China. We argue that the factory regime has been shaped by three key elements: (1) internal globalization: it refers to the global brand names, especially the Apple group's authority and interventions of the production process in the factory; (2) organizational fragmentation: the fragmented structure of corporate governance, that is, the vertical fraction of business groups (BGs) and the horizontal segmentation of employees belonging to different nationalities. The fragmentation led to the strong autonomy of BGs and incomplete information between BGs; and, (3) workplace despotism: the surplus of Chinese low-skilled rural workers enforced the arbitrary managerial power on the shop floor. According to the three elements, we name the factory regime as the "global fragmented despotism." The organizational structure of world factory may be helpful for explaining Foxconn's poor labor conditions and workers' suicides happened in 2010.

Mapping the Climate Discourse Networks: Media Coverage of Climate Change in Taiwan

There is an increasing media coverage and visibility on climate change in Taiwan. Few studies, however, have been done with regard to how issues of climate change have been reported in the newspapers. This paper intends to examine Taiwan's newspapers from 2007 to 2008 as well as semi-structured interviews with climate experts. Through discourse and relational networks methods, the paper examine how and why the climate change media discourses have been framed and represented, and how they interact or reflect national climate change politics and policies. It concludes with a discussion of how these findings help us understand multiple actor and discourse networks that effect national climate policies.

Visualizing Voices of Women

There has been a gendered shift in migration from men to women in the past several decades. This feminization of migration is particularly noticeable with the exodus of Asian women leaving their countries - to serve as nurses in the United States, as domestic workers in Hong Kong or the Middle East, as hostesses or sex workers in Japan. A precious commodity and valuable export for their countries, these women are compelled to migrate throughout the world, duty-bound to abandon the families in search of economic opportunity. Migration patterns have been studied and established regarding this gendered phenomenon. However, the main objective of my research is to explore the global feminine experi-

ence using the methods of visual anthropology and portraiture by working directly with individuals. What are the personal stories behind these women, and how can offering the means of self-expression contribute to their empowerment to and their collective experience? The act of creating self-portraits will offer these women a chance to express themselves creatively and visually while gaining technical skills. The long-term objective is to contribute to their sense of empowerment and awareness of their rights as women and as workers through this process of self-reflection. Through an intimate process of gaining trust and access to different communities of migrant workers, I carefully build and cater a specific format for each group that will encourage them to share their stories. Local and migrant sex workers in Hong Kong will visualize their own voices by participating in making media themselves. This paper will examine the results of this study and the effects of these personalized narratives and the role it plays on the awareness of gender and migration at large.

The Effects of Family Support and Friend Support on Adolescent Functioning: A Taiwanese Case

A number of factors affect adolescent functioning. This study investigates the respective contributions of perceived support from family and friends to various adolescent functioning, including deviance, depression, and self-esteem. Although previous studies have examined the relationships between family support, peer support, and adolescent functioning, these studies have some limitations, such as using the western sample (e.g., U.S.) and cross-sectional data. Using the Taiwan Youth Project (TYP), we employed latent growth curve model to explore how these two supports influence adolescent functioning. We expect to see that adolescents who experience high level of family support may have better functioning (e.g., high self-esteem and low depression) than adolescents who have low level of family support. We also expect to see similar results when support from friends is in the model. In addition to the individual effect from the two sources of support, we also investigate the moderating effects of these two supports on adolescent functioning. We expect to see significant interaction between these two supports such that high level of family support may have stronger effect on adolescent outcomes when friends' support is at high level. In contrast, low level of family support may have negative impacts on adolescent functioning even when the level of friends' support is at high level.

A Multi-Level Analysis of the Effect of Age on the Female Employment Rate in Japan and Taiwan

Do women overcome the limitation of their life cycle in Japan and Taiwan? Scholars have seen that the relationship between female employment rate and age is an M-shape in these two countries. More women enter the labor market after graduating from high schools or colleges, leave labor force due to marriages and/or childcare, return after their children are somewhat grown, and leave for retirement. Some scholars assert that this M-shape reflects the dilemma between families and jobs for women, while others believe the curve is only due to cohort differences in women's behavior.

The OLS regression model cannot entangle the independent effects of age, period, and cohort because of statistical issues, and thus we need Age-Period-Cohort (APC) model to do so. Using this method, we attempt in this paper to clarify how age, period, and cohort each affect female employment and whether women's participation in the labor force correlates with their family obligations or cohort transitions of women in Japan and Taiwan.

This research indicates that the M-shape is more suitable to describe relationships between female employment and age in Japan. The female employment rate has a dip around the late twenties and early thirties. This indicates that Japanese women choose to leave the job market because of marriage or childbirth and they will later return to work when their children begin to attend schools. Nonetheless, the present research produces more like an inverse U shape in Taiwan. Compared to their Japanese counterparts, Taiwanese women nowadays rarely give up jobs once they enter the job market. Taiwanese women re-entry to the labor force around 35 to 44 years old was observed in 1980 through 1995 or so. Since 2000, however, this re-entry has not been readily observed.

Emergent Innovation - Towards a Complexity Theory of Innovation Research and Management

During the last decades, there has been a broadening of the field of innova- tion management. Models of innovation have moved from simple linear mod- els towards increasingly complex interactive models (Rothwell, 1992, Lundvall, 1994, Chesbrough, 2003). Innovation management is moving from an expert function to one expanded in R&D units towards an integration of technological, market, organizational and institutional dimensions (Tidd, Bessant&Pavitt, 2001) implying a need for broad interaction of a multiple of actors (van der Ven, et.al., 1989, Sawyer, 2005). Innovation is recognized as complex self-adaptive systems with a need for not only all members of organizations but also external part- ners, customers and other agents in the ecology. Based on these developments the paper aims to clarify emergent innovation as a novel paradigm. It is a per- spective that describes innovation as something that is continuous (Burnes, 2009, Weick&Quinn, 1999), can emerge everywhere, and wherein anyone can become an innovator. Novelty is understood as emerging through fine-grained human interaction in interaction with containing coarse-grained structures (Gell-Mann, 2002, Hazl&Ashey, 2011) in what Stacey, et.al. (2000) call complex responsive processes. The ways in which human interaction dynamics generate emergent innovative structures can be clarified using complex systems models that include organizations and processes. Skeptical and pragmatic epistemology can illuminate the way knowledge and cognition is situated in concrete physical, so- cial and cultural environments and innovation is emerging in spaces from within this ecology (Peschl&Fundneider, 2008). Continuous self-organizing by multiple agents driving innovation need to be accompanied with complexity oriented lead- ership (Goldstein, Hazl & Lichtenstein, 2010) providing enabling structures from an eco-organizational perspective. We propose a complex system model of orga- nizing emergent innovation.

The International Migration of Nurses and Doctors into Healthcare Systems: A Look into the Philippine Case

The international migration of health professionals, such as nurses and doc- tors, has been a growing phenomenon in the globalization of the healthcare labor market, with serious consequences on the source countries' capacity in maintain- ing sustainable domestic healthcare system. One consequence is an estimated shortage of 4.3 million health professionals required for delivering essential health care services to populations in need, posing a major barrier to providing the essential lifesaving health services. A significant contributing factor to this shortage is the transnational migration, export and/or recruitment of health pro- fessionals from low and middle-income countries.

The general pattern of the international migration of nurses and doctors---where the movement is generally from the periphery/semi-periphery to the core market---is understood as emerging through fine-grained human interaction in the global economy. The combination of the international migration of nurses and doctors from the periphery of the global care economy comprises the larger portion of the international migration flow of nurses and doctors.

This paper focuses on the Philippines as the top-ranking source country for nurses and doctors fourth for doctors in the global care economy. It provides a brief profile of Filipino international nurse and doctor migration, offers an explanation of this phenomenon and what the consequences are of this pattern. It incorporates insights from interviews the author conducted on the experiences of Filipino nurs- es and doctors who migrated to the US, Germany, and Denmark as part of a multi- project research project on the international migration of nurses and doctors into healthcare systems. A look into the Philippine case can provide insights into the uneven outcomes of labor migration in the global care economy in the context of neoliberalism and their policy implications.

Changing Water Cultures To Achieve Water Sensitive Cities: The Importance Of Communities and Households

Achieving the vision of water sensitive cities in Australia (and elsewhere) is a complex task involving simultaneous social, institutional and technological change. In this paper I review key concepts and findings from the socio-cultural literature on domestic water cultures and argue that four key domains need to be considered to enable positive change 1. more flexibility in systems and infrastructure so the public could escape ‘path dependency’ including flexibilisation of large scale supply systems, drainage and sewage systems and water governance systems including water policies and pricing 2. The development of water sensitive practices in local communities and households. Bringing water sensitive practices to the core of community life in diverse public spaces, enabling community building around local water projects. Developments would take geographic diversity into account as well as the all-inclusiveness of possible harms and the necessity for offsetting all based regulation. The focus on efficiency on the one hand and the comprehensive transformation into a risk, attributing probability and damage values .

MANAGING SOCIAL UNREST THROUGH RISK: REINTRODUCING THE DEBATE

LINNELL, MIKAEL* (Mid Sweden University, mikael.linnell@miun.se)

Managing Social Unrest through Risk: Reintroducing the Debate

Sweden has in no way been spared from riots similar to those that took place in Parisian suburbs in 2005 and in the UK during 2011. Two events well known to the Swedish public were the manifestations of civil unrest in Malmö during the winter 2008 and Stockholm 2013. Recently municipalities in Sweden have begun to include the notion of social unrest in their local risk- and vulnerability analyses. Hence, social unrest is placed at the same ontological level as for example natural and manmade disasters, pandemics and climate change. Put differently, social unrest is managed by being represented as a risk phenomenon which consequently legitimizes specific measures to reduce the potential threat of societal disorder. Within the horizon of Foucauldian theorizing risk is employed here as a technology allowing calculations about probable futures in the present followed by interventions in the present in order to control that potential future* (Rose 2001:7). In documents pertaining to local risk- and vulnerability analyses social unrest is thus considered a phenomenon with an existence in itself, while at the same time specific groups are defined as being both at risk and being a risk to societal order. With this background there seems to be reason for returning to an old sociological debate on the status of social unrest. During the 1970s, Herbert Blumer (1971; 1978) engaged deeply in the nature and role of social unrest, arguing that social problems are fundamentally products of a process of collective definition rather than phenomena existing independently as objective social arrangements. In this paper I return to Blumer’s writings aiming to find out what he has to offer in a discussion on the present development. In addition I describe through a Foucauldian lens the process through which social unrest is made manageable using the technology of risk.

Religious Socialization and Dimensions of Spiritual Violence

Young adulthood is a critical period of life in religious communities, with regard to whether a person stays in a community or diverges from it. The continuity of many Christian movements is based on not only the recruitment of new people, but rather the fact that a person remains in the community she or he has been raised in. Joining a religious community in adulthood constitutes a rather dramatic change in one’s life. The situation is definitely different when one is born into a religious community. I.e. a child is socialized, or brought up in a religious community from birth. Socialization in religious communities takes place through concrete activities as well as the spiritual teaching undertaken by the community. In addition, the socialization of children and young people takes place with the help of family, relatives, friends, and acquaintances.

The socialization of a young person in a religious movement can occur without problems. In this presentation however, the focus of the examination is in those dimensions of socialization which may show up as being problematic for young persons. Socialization is analyzed as a potential form of spiritual violence, which is understood as a mental or physical violence articulated through one’s belief or existence in the religious community. It is an exercise of power against members of the community, which reduces the ability to determine one’s own future. Birth into a religious movement is not in itself a spiritual violence, but in the socializa-

Digital Use As a Mechanism to Accrue Economic and Symbolic Capital: A Bourdieusian Perspective

The digital divide is a social side effect of the information age. The technological mismatch enables people to band together also serves as a wall to separate and stratify populations that have access to it, and the skills required to acquire information through it, and those who do not. This study examines the “second level” digital divide, which characterizes the surfing patterns of those connected to the internet, between the Jewish majority and Arab minority in Israeli society. The scope of this paper were: to frame the digital divide between these two groups; to examine the connection between digital uses and economic and symbolic capital and to characterize the link between the digital divide and social stratification. The study is based on the Israeli Central Bureau of Statistics Annual Social Survey data, collected by means of face-to-face interviews conducted in 2011 among 5,972 interviewees aged 20-65 years old.

Sweden is commonly regarded as a country with some of the best housing standards in the world. The provision of ‘good housing’ has been at the core of the Swedish post-war welfare model, but, over the past decades, a systematic process of marketization has led to increasing housing shortage, and the lowering of housing standards, particularly affecting low income groups. A large amount of housing owned by local authorities was also in urgent need of renovation. Those who do not have the possibility to buy a dwelling are dependent on a shrinking rental market due to the systematic conversion of rental housing stock to tenant-owned housing, and the current reluctance of developers to start up new building projects. The current situation is said to be the result of the Swedish housing system has been thoroughly deregulated from the 1990s onwards, to ‘gradually become one of the most liberal market-governed housing markets in the Western world’ (Hedin et al. 2012, p.444). The lack of national government interventions and the absence of a national urban policy have led to an increased debate within private sector, tenant organizations, as well as the growth of new social movements based on housing issues. The social movements articulated around housing provision are fighting against the fear of ‘renovicton’, territorial stigmatization and the difficulties for young people to enter the housing market due to the increased housing shortage.

This article will shed light on the organization, arguments and reception (by authorities and police) of these new social movements. We will give examples of the debate and present results from an ethnographic study based on interviews with activists from several marginalized housing areas in Sweden. We argue that this ‘dysfunctional’ housing market is supplied by the social movements develop new tools of decision (e.g. SIA, local partnerships, consensus conferences) that have prevailed until the early nineties, they have proved to be unsuccessful and are increasingly labelled by some scholars the “participative or deliberative wave of contestation and will durably alter the social agency of local actors.

LITS, GREGOIRE* (Université catholique de Louvain, gregoire.lits@uclouvain.be)
The Role of Social Scientists in Dealing with the “Social Aspects” of High-Level Radioactive Waste Management in Belgium. Will Sociologists Tame Resistance?

In most of the European countries that are confronted with the problem of nuclear waste, an important shift in the way decisions are made seems to happen. Several researchers point at how the Swedish housing system, a technical solution for the safe management of the radioactive waste, seems to be very effective in preventing the apparition of nuclear waste, an important shift in the way decisions are made seems to have taken place, labeled by some scholars the “participative or deliberative democracy processes, leading the different agencies to transform their approaches integration of what they call the “social aspects” (or the “problem of social acceptability”) of the waste into their research agenda.

In this context, this paper examines the way in which the nuclear sector has developed different strategies to react to this generalized contestation. It precisely analyses one of these strategies: the setting up of the “Forum for stakeholder confidence (FSC)”. The FSC is an international arena that was created in 2000 within the Radioactive Waste Management Committee of the Nuclear Energy Agency (NEA) at the OECD. The FSC gathers representatives from different national nuclear sector organisations and aims at facilitating the sharing of experience in order to “en- sure an effective dialogue with the public with a view to strengthening confidence in the decision-making processes”.

Drawing from qualitative fieldwork conducted in Belgium, document analysis and non-intrusive participation in meetings of the FSC, I will argue that the setting up of this international arena, in his ability to centralize all the experiments made regarding public participation and stakeholder involvement in different countries, and, therefore, in his ability to develop an diffuse “good practices” of public participation can be seen as a “strategy of glocalization” as defined by Ulrich Beck (2006) or of multi-level strategy that is almost invisible at the local and national level, seems to be very effective in preventing the apparition of new wave of contestation and will durably alter the social agency of local actors.

LITTLE, STEPHEN* (The Asia Pacific Technology Network, little@stephenlittle.com)
Social Resilience: Learning From Hanshin and Tohoku

Disasters inevitably expose social relationships and processes that in more normal times are harder to discern. The 1995 Great Hanshin earthquake inspired attempts to address the multilevel governance failures exposed by that disaster. However, neo-liberal narratives still focus on technical and individual responses at the expense of engagement with any broader social context.

In 1995 older buildings in low rent areas fared worst and poorer residents faced extended periods in temporary housing. In the 2011 Tohoku triple disaster buildings resisted a more severe earthquake but extensive tsunami protection measures failed. The third component of the disaster was exacerbated by institutional complacency in the administration of nuclear power.

The immediate mobilisation of defence force resources reflected lessons learnt in the hiatus following Hanshin. A flexible, combined military command structure developed to coordinate overseas humanitarian intervention was rapidly redirected to the co-ordination of domestic relief operations.

However, the focus remains on physical components of resilience even though technical interventions in the form of tsunami barriers actually eroded traditional aspects of social resilience such as nursery rhymes telling children to ‘go to the hills’.

Effective resilience requires a social dimension which in turn can only be developed in a bottom-up and inclusive fashion. Communities in the area affected by 3/11 created a range of short and medium term fixes for the loss of infrastructure and logistic support, the longer term response of formal governance structures is less clear. As the third component of the triple disaster resolutely fails to respond to remedial intervention, a continuing institutional hiatus becomes evident.

This paper draws on recent literature on ‘place branding’ and ‘place leadership’ to identify the creativity in national and international grass roots responses, not least in support of the recovery of identity and location, that offers cause for optimism.

Struggling Against Capitalism: Informal Education, Insurrection and Everyday Life of Russian Anarchists

This paper examines attitudes towards education and explores informal educational structures in the urban community of anarchists and DIY (Do It Yourself) activists. Informal education is one part of the ways of life that can break through the barriers of the education system and break through the barriers of the education system and create governable and disciplined subjects. My findings show that anarchists real-ize their own needs and carry out appropriate learning activities that are consistent with their values and beliefs. Offering opposition to formal education and suggesting authentic ways of knowledge and skills producing and sharing (distro, workshops, open sources, etc.), anarchists embody them in their daily routine. Their rhetoric, deeds, consumption practices and forms of communica-tions are tightly connected (in dialectical way) with those attainments that are distributed by channels of anarchistic knowledge and skills sharing.

This paper is based on the case study of young people (age 17-30) who identify themselves as anarchists. The empirical data includes 28 in-depth interviews (from one up to five hours), field diaries (app. 100 pages) and video files (more than 20 hours of shooting). The case study was conducted within the framework of international MYPLACE (Memory, Youth, Political Legacy and Civic Engagement) project.

The Marriage Squeeze for Aboriginal Men in Taiwan: The Impact of Ethnic Intermarriage Between Aborigines and Han Chinese People

Before 1970, the main stream of ethnic intermarriage in Taiwan was the elder veteran from Mainland China marrying aboriginal women, but the pattern of ethnic intermarriage between aborigines and Han Chinese has been changed due to a series of economic transformations. In the past three decades, aborigines moved from their native villages to large metropolitan areas increasing and their spatial segregation from Han Chinese was decreased substantially. Accompanied by the population redistribution, the intermarriage rate of aborigines and Han Chinese increased, and the likelihood of marriage for aboriginal men declined. Although men and women both leave their hometown, the shortage of marriageable partners only appeared in specific local marriage markets, i.e., their hometown areas in the mountain or the peripheral southeastern coast. The spatial distribution of indigenous population become unequal and sex ratio skewed in some areas due to the migration selectivity of sex and education. The propensity of migration of aboriginal women is higher than men and the well-educated tend to stay in urban areas where they are more likely to marry Han Chinese. With the social constraint of the marriage gradient and mating threshold, the less educated aboriginal men who stayed in hometown are compelled to stay single due to the shortage of marriageable women in local marriage market. Using the 2000 Taiwan population census, we try to reveal the complex relation among intermarriage, migration and marriage market. The ultimate goal is to provide some empirical evidences to revalue the impact of ethnic intermarriage in the perspective of marriage squeeze.

Conjectures on Labor-Environment Alliances

This paper examines different historical contexts under which labor and environmental movements have taken their current shapes, and offers some conjectures about possible future trajectories. We put forth a broad schema for explaining the character of labor and environmental movements according to two historical determinants: the historical strength of organized labor, and the overall character of the state (i.e., whether or not it bears an authoritarian legacy). In contexts where organized labor is historically strong and remains dominant, environmental movements are more likely to incorporate livelihood and class politics issues in their agenda, cases such as India and Brazil. However, once the hegemonic labor movements show signs of decline, environmental movements are likely to engage in fierce ideological competition against the dwindling left - cases such as Germany, England and Korea. This competition might take two different paths: the greens attempt to absorb the left (e.g., Germany), or the greens in no small measure cut themselves off from the leftist tradition and do so intentionally (e.g., Korea). In contexts where organized labor is chronically weak, environmental movements are more likely to incorporate livelihood and class politics issues in their agenda, cases such as the US, Japan, and Taiwan, and more likely to emphasize the purely ecological dimension of environmentalism and to jettison the class politics embedded in many other environmental controversies. We close the paper with a description of possible future paths of convergence and divergence of labor and environmental movements across the world sectors we have described.

Chinese Elite Higher Education and Reproduction of Educational Inequality

In 2004, China adopted a novel strategy for admission to elite higher education as a reform of the traditional method of enrollment through Guokao examination only. This new strategy is called Independent Freshman Admission (IFA, or Zhi Zhu Zhao Sheng in Chinese). Whereas ample evidence exists for the social disadvantages of people with low SES in the ability to access and complete elite higher education in Westernized countries, research on educational inequality at elite universities in non-Western countries has remained scarce. This research, using administrative data from one Chinese elite university in the years 2007 and 2008, presents behind-the-scenes details of admission processes at Chinese elite universities for the first time and demonstrates the impact of these processes on educational stratification in a radically changing society. Significant associations were found in the IFA selection process between students’ socioeconomic origin and whether they passed the multi-stage selection process to access tertiary education. The new IFA system favors students from higher socio-economic origins at the expense of students from lower socio-economic backgrounds in admission to elite universities. Furthermore, this institutional reform of elite higher education will likely have a long-term impact on the social origins of the intellectual elite and changes in social structure in Chinese society.

Inequality, Government Trust and Election Participation

It is a hot topic that how to promote Social transformation of the trust in government and election participation in China. This paper emphasizes the relationship of inequality, government trust and election participation and why people take part in conventional political participations. The author argues that government trust plays an important role in conventional political participation, but contrary to more traditional models, there is regional disparity of the conventional political participation in China. In addition, the authors posit that government trust is strongly affected by perceptions of income inequality and social preferences for income inequality not real economic inequality. Using the data of Chinese General Social Survey 2010(CGSS2010), the author presents Hierarchical Linear Modeling (HLM) on the effects of inequality and government trust on the conventional political participation, controlling for other related factors. Finding indicates that inequality is the strongest determinant of government trust and that government trust has a great effect on conventional political participations.

Locality and the Moral Inequality of MDMA Users in Taiwan: A Case of a Newly Democratized Country

The ‘normalization thesis’ has been developed to explain the massive increase of drug consumption in recent years, because of the growing popularity of dance/ club scenes within the young populations. Different from most of the criticism, this paper thinks it short of ethical prudence and sociological insight: it incites moral panic for its effect to legitimizing the drug use without identifying the social attributes of drug user. Seeing these weaknesses, this paper presents a figurational approach to explore moral narrative of different social space, and their response to drug use regulation. Data were collected by reinterpreting the existing researches in Taiwan, as well as by the fieldworks implemented in Taipei City and Pingtung County by way of semi-structured interview. It is confirmed that individual pleasure is the reason to take MDMA in both regions and ‘peer pressure’ plays no role in their use of MDMA. Taking relational ontologies, this paper finds that there exists two kinds of moral narrative in term of their attitude toward the moral centre. Those who live in Taipei City are more interested with, and capable of challenging the moral discourse that MDMA is illegal and dangerous, while those living in Pingtung County take a relatively detached view from the moral centre. In other words, the closer MDMA users to the moral centre, the more likely they take an active way to defy the centre; the farer are they from the centre, the more possibly they take a passive stand without the intention to do with the moral centre. By way of the figurational approach, this paper concludes that there exists two kinds of individualization developed along with the democratization, and their capacity to challenge the moral centre is unequal.

Relationship Among Fathers’ Occupation, Fathers’ Parenting Behaviors and Children’s Academic Performance during Early Adolescence in Modern China

The purpose of this study is to clarify two points: (1) whether or not there are differences in parenting behaviors of parents depending on strata and (2) how parenting behaviors of parents influence the accomplishment of children’s education. By incorporating cultural capital in Bourdieus’s theory of reproduction, therefore, an empirical study was conducted by putting together a study concept of “economic strata of fathers’ occupations”→fathers’ parenting behaviors→accomplishment of children’s education” by considering parenting behaviors of parents as cultural capital. The subjects included 746 groups of second-year high school students and their fathers and mothers, and a questionnaire survey was conducted in the rural part of the Shansi Province in 2009 and the urban area in 2010. The most important aspect as a result of analysis was the strong influence of the “father’s occupation” on academic performance of children. Therefore, it was successfully confirmed that economic strata cannot be ignored and Bourdieus’s theory of reproduction can be applicable to society in China, with a significant influence from fathers’ parenting behaviors on self-esteem and academic performance of children. First of all, parenting behaviors of parents in the blue-collar stratum including farmers and temporary workers have a weak influence on self-esteem and academic performance of children, with a higher requirement on school education than home education. On the other hand, fathers in the white-collar stratum who work for government institutions, corporations and organizations gain a relatively higher income than the blue-collar stratum and emphasize more on parenting; therefore provide more home education to children. Self-employed fathers have higher income than blue-collar and white-collar
strata and own abundant network resources; however emphasize education for males over females.

Sell the Cow and Drink the Milk: China’s Community Building Discourse and Its Implications for East Asia

Despite East Asia's efforts towards integration over the past two decades, political and historical antagonisms and sovereign disputes among powers and stakeholders in the region have greatly hindered the process. Besides direct conflicts among powers, this author argues that the difficult state of community building in East Asia is also the result of the securitization of economic integration by respective states in the region, particularly by great powers such as China.

Based on the concept of securitization developed by the Copenhagen School, this paper examines the case of China and how Chinese discourse in the new century has reshaped state relations in East Asia. Specifically, this author seeks to explain how China's discourse on economic security conflict with its parallel discourse on the establishment of a harmonious regional order. The impact of China's mixed discourse is to re-open the dual debates of Beijing's peaceful rise vs. potential challenge and Beijing's maintenance of status quo vs. lean towards revisionism. The debates entail the possibility of China's re-introduction of a tri-utary-like system in East Asia, which has significant implications for state relations in the region.

The purpose of this paper is to explain how China plays a critical role in the regional community building process and to draw the connection between securitization and the development of integration in East Asia. This paper proceeds in five parts: part one lays out the main argument of how securitization influences community building and integration in East Asia; part two reviews Chinese foreign policy in the new century; part three traces Beijing's discourse and its implications for regional integration; and part four elaborates on the implications for state relations in East Asia and the response of neighboring states towards China's behavior.

Gender, Law and Legal Professions in China

Based on surveys, interviews, and archival research, this paper attempts to analyze Chinese women's current status and impact in the legal professions. This paper introduces and compares the Chinese pioneer women lawyers and some current model women judges to demonstrate that so-called "legal characteristics" and "female temperament" do not necessarily conflict. In the past, being affected by biological determinism, gender essentialism and dualism hierarchy; the ability of women to study law and work in the legal professions was not fully implemented. Since Chinese judicial reform started to pursue harmonious justice and multiple dispute settlement mechanisms, Chinese women judges, due to their abilities of mediation, have played more of an important role in the Chinese judicial system. Sex discrimination and gender bias however still exists in the legal professions in China.

Local Institutions and Historical Contingency: Divergent Paths in Local Economic

This article examines the paths of local economic transition over the past thirty years in Wenzhou and Wuxi of China from an institutional perspective. Chongqing will serve as a minor case in comparison. It argues that local institutions matter in explaining divergent paths of development in the era of market transition. Specifically, the passive nature of the local state complemented with the bridging behaviors of the local associations and the more independent entrepreneurship of local firms in Wenzhou have contributed to a local transition from a semiliberal capitalism throughout 1980s to a market economy coordinated by the local state at the turn of the century.

On the other hand, with a dominant local state intervention and the weakened business associations and entrepreneurship, Chongqing transformed from a typical path of planned economy to the current economy of state capitalism. This article further traces the historical origins of different local institutions in Wenzhou and Wuxi, arguing that a historical contingency of self-liberation in Wenzhou at a critical juncture of the 1949 socialist revolution explains an inactive local state with a more lenient attitude toward the local private peasant sidelines, in contrast to the liberation by Mao's regular Army from north in Wuxi and Chongqing, which disrupted the local status quo and switched the loyalty of local power hierarchy to socialist transition in Mao's era. Thus the initial genesis of institutional arrangements as a result of punctuated equilibrium in localities shapes the way in which local institutions evolve for decades to come.

Cultural Stigma and Social Exclusion for Adolescent with Mental Illness: A Case Study in Guangzhou, China

Due to the prevailing stigma towards people with mental illness, adolescents with mental health problems are facing overwhelming social exclusion in mainland China. In order to respond to the lack of studies on the social exclusion for young adolescent with mental illness in Chinese context, this study tried to explore the process of seeking medical service and daily struggles for teenagers with mental health problems in China. A case study has been conducted to understand the social exclusion for a middle school student in her school life. The data was collected from researcher's one-year placement as a social worker in a junior middle school in Guangzhou, China. The girl, her classmates, her parents, and her teachers were targeted interviewees. According to the research findings, the cultural construction of mentally disabled people as violent and demonic from social media and Chinese traditional belief has profoundly affected the adolescent's mental well-being. The research also identified a dilemma faced by young people with mental health problems. On one hand, they are entitled to the social welfare on the other hand, the labeling effect in social welfare provision and legal responsibility for school to take care of students' safety in Chinese social context result in an unfriendly environment for the young people in school, as being rejected by school and teachers once diagnosed. Chinese cultural value that emphasized family to take care of it member also leaves the family with great anxiety. A number of middle-class social workers - teachers - families - peers for social work intervention, which seeks to promote community understanding on adolescents with mental illness, reduce the labeling consequences of 'stigma', and initiate a more positive social support environment for young patients' rehabilitation was advocated.
the psychosocial development of senior middle school students, and whether and how resilience and self-efficacy could serve as mediators for the relation between various forms of social capital and development outcomes. 231 senior middle school students in Zhongshan participated in the survey. Results show that school quality concerning students’ interaction to school and teachers display significantly positive relation with adolescents’ mental health, behavior adjustment, clear and positive identity, but not with students’ social capacity. Family social capital as parental supervision and community social capital as reciprocated exchange also positively relate to students’ behavioral adjustment. Students with more encouragement and reciprocated exchange in the community are more likely to develop clear and positive identity. Moreover, students who scored higher on teacher encouragement, structural bonding and perceived mutual help with peers, and child-centered informal social control in the community are also more likely to have higher score on social capacity. However, not all sources of social capital have significant relations with students’ development outcomes. In addition, according to the research findings, resilience and self-efficacy also mediate the effect of social capital on mental health, clear and positive identity, and social capacity, while only resilience could have the mediation effect on the relation between social capital and behavior adjustment. Implications for family service and family policy, everyday educational practice at school, and community development program are discussed.

**Educational Expansion of the Upper Secondary Schools in Taiwan**

After planning and designing the ‘Twelve-Year Compulsory Education Policy (TYCEP)” for 30 years, Ministry of Education in Taiwan finally officially announced in 2011 that the policy will be implemented in 2014. However, despite the Taiwanese government promised the policy for more than two years, the issue is still continuing to cause intense disputes and to gain numerous opposite views. In particular, the proportion of normal to vocational school students and the ratio of public to private schools, both of these two pre-existing structural issues of the upper secondary education in Taiwan will be the main problems to implement TYCEP.

Therefore, this study suggests that for TYCEP, it is necessary to clarify the importance of these two key issues and review the impacts on the educational opportunities for high school students. Thus, this study aims to explore the history of educational expansion of Taiwan’s upper secondary schools and to analyze the backgrounds and major factors of developments of those two structural issues through the literature and field survey. Furthermore, this study scrutinizes ideas, impacts, and challenges of TYCEP’s implementation.

**The Development of Inter-Firm Trust: Cases from the Animation Industry**

Nowadays, technology has played important role in the society and even shaped the way business operates. However, there is also an awareness of the “soft sides” of business, among which is the inter-firm trust. This is particularly observed in the animation game industry where increasingly more internationalization and inter-firm collaboration takes place. Such topics as “how to select the right and suitable partners”, “how to continuously maintain good relationships with collaborators” are of great value for both academic studies and business practice. This paper explores the inter-firm trust issues in business collaboration. It creates a trust development process model together with an evaluation system. From literature review, the questions of “how inter-firm trust is developed”, and “what the constructing components of trust are” need further investigation. With a theory building approach, a conceptual framework consisting of the dominating concepts – values of trust, and process of trust – are developed. Case studies into animation game industry in China, UK, USA and Japan are carried out to illustrate key issues of inter-firm trust, covering the crucial relationship between OEMs and outsource studios/operators/character manufacturers. Prioritized values are summarized from the interviews and observations, which are further developed into trust dimensions. The main findings are: 16 dimensions to assess three basic types of trust – competence trust, reliability trust and goodwill trust; a 3-stage process model of trust with details of decision making areas – trust formation, trust development and trust continuation. Future research should seek to validate and improve the above models, along with a further linkage between trust and different national culture contexts.

LIUKKO, JYRI* (University of Helsinki, jyri.liukko@etk.fi)

**Disability and the Limits of Knowledge. Uncertainties of Expert Practices in Insurance Companies**

Disability is one of the most significant insurable risks in human life. Insuring disability, either statutorily or voluntarily, is not an easy task for insurance companies. Ability to work is more or less subjective, but insurance companies are expected to evaluate it objectively and unambiguously. Disability insurance as well as rehabilitation involves different kinds of expert knowledge. Disability is a construct of medical, legal and insurance institutions which are entangled with each other. Experts of these institutions try to prevent disability, define it and control its development in distinct ways. The interaction of these professions entails a lot of uncertain elements. Furthermore, as an increasing number of disability insurance applications and benefits are based on mental illnesses, the situation has become even more challenging than before.

This paper studies expert practices in disability insurance and rehabilitation in Finland. The focus is on statutory disability insurance system. The main question is: how do different experts and institutions interact as they make decisions on disability insurance benefits and rehabilitation? The empirical material consists of interviews of medical, legal and other insurance experts, observation of institutional practices and technologies in insurance companies, and some key documents. The study shows how decisions on disability benefits and rehabilitation are a result of complex and case-specific negotiations between different professions and organizations, including (occupational) health care. Disability is not only a medical condition but thoroughly a social, political and judicial phenomenon. Hence, the ability to recognize the limits of expert knowledge and the related uncertainties has a crucial effect on the practices of insurance companies and the treatment of the insured.

**Conflicts Between Artisanal Miners and the Government in Mongolia**

In autumn 2013, Mongolians witnessed gun shootings and an attempt to blast bomb near the Parliament House, motivated by the Civil Environmental Movement of Mongolia. The country’s basic economic revenue comes from mining sector and since the democratic transition; the country started using the mineral resources with the ratification of “Gold Program” in 1994.

As a result, the number of artisanal miners who exploit gold in abandoned areas has increased extensively and they have been one of the main factors to the environmental degradation as they operate out of law. Those 65,000-100,000 people, so-called “micro miners” have been working and living without any legal coordination and official registration for the last decade. The Government made an effort to dissolve those illegal and environmentally hazardous groups in 2005, but it led to extremely acute conflict between the two sides. Remarkably, no comprehensive survey was conducted on this newly generated community in Mongolian society.

Accordingly, a research was carried out for determining forms and consequences of conflicts between the artisanal miners and the Government on example of cases in Mongolia. The fundamental conflict theory and approaches were applied in this paper. As a result, the main conflicting parties in artisanal mining were identified as local authorities and the root cause for long term dispute was defined as having no mediation and facilitation in the process. Eventually, the conflicts resulted to unsustainability in artisanal miners’ activities, more risks in safety issues and many people were injured during their rudimentary operation.

The research, carried out in deep study on essence of the artisanal miners and process of their institutionalization, has been recognized as significant project which will contribute to effective natural resource management and resolution methods on conflicts over natural resources.

LOBO, FRANCIS* (Edith Cowan University, f.lobo@ecu.edu.au)

**Leisure in an Unequal World: Gender Differences in Australia**

Leisure in Australia has been male-dominated. Historical analysis paints a picture of women in supporting roles with regard to leisure. They have been placed in an inferior position. The home care role of women has been contrasted with the breadwinner role of males. While men dominated recreation resources, women were expected to facilitate men’s leisure. In contemporary times, the gender gap between leisure provision and participation has narrowed with observations of separate pathways in types of activities and parity in total participation. Development of gender equality in leisure has occurred through research studies; measurement of leisure engagement; and the diversity of recreation offerings and programs. The paper is structured historically with gender activity described in traditional aboriginal life, during colonial times and at post-1945 and contemporary eras.
Temporal Scales of Justice and Sustainability: Aboriginal Peoples and Environmental Governance in the "Wild" Landscapes of Northern Australia

Sustainability evokes concepts of social and environmental justice that are inherently temporal. It assigns rights to future generations and works to apprehend risks to human well-being stemming from as yet indeterminate environmental change. While the future-oriented temporality of sustainability is of manifest importance, research in environmental justice highlights the parallel importance of contemporary social and spatial relations, and the historical roots of those relations, in the determination of social-ecological futures. This presentation explores the temporality of sustainability and environmental justice in context of Aboriginal peoples’ involvement in environmental governance in Far North Queensland, Australia. It argues that while indigenous Australians are ascribed unique legal and moral rights in environmental decision-making, aboriginal involvement in environmental governance is often restricted, in practice, to conservation of natural and cultural heritage. As passage of the Wild Rivers Act 2005 illustrates, aboriginal aspirations for futures that integrate natural and cultural heritage with the development of natural resources, diversification of remote economies and/or political self-determination often meet active state resistance.

Partners in Change: Using Patient Narratives for Service Co-Design

Objectives: To use a national video archive of patient experience narratives to develop, test and evaluate a rapid patient-centred quality improvement approach ('Accelerated Experience-based Co-design' or AEBCD).

The intervention was an adapted form of Experience-based Co-design (EBCD), a participatory action research approach in which patients and staff work together to redesign care. EBCD draws on transport theory and narrative persuasion, using locally collected video patient narratives to help staff see through patients’ eyes. The accelerated intervention used national rather than local patient narratives (in lung cancer and intensive care). This shortened the timetable from 12 to 6 months and halved costs.
Deus Ex Machina? Religious Texts, Spiritual Capital and Inequalities – In Continuation of the Current Debate

This paper is borne from three impulses: broadly, the presently ubiquitous influence of liberation theologies within mainstream Christianities; narrower, the widespread religious assumption that the divine addresses the world through the “Holy Word” of the Bible; most specifically, a current South African debate (in which the author is a participant) on the contextual relevance of scholarly exegesis of these texts. The contention here is that the usual “application” of biblical texts to modern issues of inequality is undertaken in unsophisticated ways. First, the hermeneutical tools are often left unacknowledged. Second, the exegesis is often poor and seldom new, because the prime concern is a pressing modern issue. However, third, with little academic background in socio-political, economic and related fields of study, the pressing issues are often analysed superficially. Thus, good intentions flounder on poor scholarship, based on a critical (by now, cliché) rejection of the “exegesis” by scholars. This “closed-mindedness” is combined with an ideological and semantically conservative “Western” biblicism. The underlying assumption is that Bible texts can be directly brought to bear on modern issues. The concepts of spiritual or religious capital can ameliorate this. The history and implications of these concepts are therefore reviewed. In constituting the religious identity of individuals, the Bible may well be an influence, but one among many. The thus-molded religious identity of persons so inclined may lead them to address social inequalities, pursuing a less unjust and, usually, more egalitarian society. Agency is mediated by such a constructed religious identity. The issues addressed, almost exclusively socio-political, are addressed to a trend of new-shamanism. My analysis is focused on how new-shamanism is being developed and reconfigured in contemporary Western world.

Both spiritual and therapeutic research share the same objective attainable through activities borrowed from other disciplines like yoga, traditional medicine, Eastern philosophies and neo-shamanic practices.

My analysis is focused on how new-shamanism is being developed and reconfigured in Western world, being it considered a form of therapeutic primitivism populated by small fleeting groups gathering together during meetings and seminars (with fee) in France in order to learn new “exotic” healing techniques.

In this context, the Shaman plays the role of a teacher-therapist in front of the novice-patient; both are involved in a healing and education process where teachings are all about the possibility to raise awareness in exotic cosmologies by learning visualization techniques capable of carrying participants into the shamanic universe fitting the western world demands.

The purpose of this paper is to lay special stress on the modalities used by such western participants (mostly middle class women, aged 40-50) to embody and assimilate the techniques they learn during seminars. The common objective to such techniques is to allow participants to bring to effect the so called “shamanic voyage” without resorting to psychoactive drugs.

It is my opinion that the possibility to reach a different, transitory and unknown cosmology implies the ability to embody another self.

It relates to a self which possesses a specific “ritual face” capable of manifesting itself during the symbolic interaction taking place in the social microcosm of shamanic seminars for western people in France.

LOMBARDI, DENISE* (Ecole Pratique Hautes Etudes , lombardi.denise@gmail.com)

Embodying Another Self for Western Shamanic Voyage

New Shamanism is one of the many answers provided by Western countries in order to satisfy the new spiritual urgencies proposed by modernity. Spiritual research and physical wellness care the two basic constituents through which the argumentation about health is built up in contemporary Western world.

Both spiritual and therapeutic research share the same objective attainable through activities borrowed from other disciplines like yoga, traditional medicine, Eastern philosophies and neo-shamanic practices.

My analysis is focused on how new-shamanism is being developed and reconfigured in Western world, being it considered a form of therapeutic primitivism populated by small fleeting groups gathering together during meetings and seminars (with fee) in France in order to learn new “exotic” healing techniques.

In this context, the Shaman plays the role of a teacher-therapist in front of the novice-patient; both are involved in a healing and education process where teachings are all about the possibility to raise awareness in exotic cosmologies by learning visualization techniques capable of carrying participants into the shamanic universe fitting the western world demands.

The purpose of this paper is to lay special stress on the modalities used by such western participants (mostly middle class women, aged 40-50) to embody and assimilate the techniques they learn during seminars. The common objective to such techniques is to allow participants to bring to effect the so called “shamanic voyage” without resorting to psychoactive drugs.

It is my opinion that the possibility to reach a different, transitory and unknown cosmology implies the ability to embody another self.

It relates to a self which possesses a specific “ritual face” capable of manifesting itself during the symbolic interaction taking place in the social microcosm of shamanic seminars for western people in France.

LONGHOFER, WESLEY* (Emory University, wesley.longhofer@emory.edu)

Foundations of Global Giving

Social scientists have long been interested in the origins of generosity, altruism, and compassion in society. However, a relative handful of studies have looked at the effects of social context on organized charitable activity, particularly from a cross-national perspective. This talk will introduce an ongoing study examining the effects of global and domestic institutions on charitable activity among individuals and organizations in a large number of countries. I study philanthropic and charitable activity in what world polity scholars have called a “global moral order” that champions virtue and positions voluntary associations, including foundations and charities, as legitimate actors for solving global problems. The first part of the study draws upon survey data to explore why individuals join charitable organizations in 35 countries. The second part of the study turns attention to the growth of philanthropic organizations in more than 100 countries since the 1970s. Results from the study find that models of charitable activity are structured in the culture of world society.

UMARIK, MERIL (Tallinn University)

Educational Changes: The Adoption of Standardizing Reforms

The paper discusses the post-Soviet reform in two educational sectors – general education (lower secondary) and vocational education – from the viewpoint of adoption of standardizing policies by teachers in Estonia.

By being inspired by the concept of social innovation we concentrate on two questions: What has been the outcomes/social benefits (e.g. empowerment of teachers) resulting from the reform process, and secondly, how the reform policies (context of changes) have been adopted by the teachers? We base our arguments on a) analysis of the documents and previous researches and b) empirical qualitative studies on adoption of curricula changes.

In the Soviet time, the education system and curricula development was highly centralised and ideologically controlled by Moscow. In 1987-1988, even before the independence, the transition period in Estonian general education began. The quickest changes were evident in general education where powerful movement of teachers started to innovate the curricula with the aim to de-ideologize it. The general education reform in the post-re-independence time comprised of two radical transformations: from Soviet system of education system and neoliberal transition from the second half of 1990. The latter period have comprised both standardization and decentralization (e.g. decentralization of school network and growing principals’ autonomy) tendencies. In VET, as compared to the general education, the reform process started later and has been more inclusive.

Our analysis will show that the impact of standardization has been differentiated on two levels: firstly, the different education sectors (general and vocational education) has been affected by reforms differently; secondly, in the course of the reform, teachers have adopted different coping strategies, in other words, the reform process divided the teachers into different adopters’ categories according the meanings attributed to changes. However, to a certain extent, the patterns of adopters’ categories in both education sectors are similar.

Organization within Organization Studies: From Core Object to Unspecified, Awkward Relic

After the outbreak of the financial crises, scholars and public intellectuals have sought to uncover the roots of the current economic downturn. Prominent in this discussion has been a renewed discussion of the appropriateness of the state-regulation and laissez faire, as well as a critique of the preceding decades accelerated financial deregulation. The current crises, however, should also be seen in conjunction with its organizational dimensions. On the one hand, these dimensions can be traced to the beliefs held and the actions undertaken within a multitude of organizational institutions, including banks, credit institutions, etc. On the other hand, these dimensions should also be regarded in conjunction with a range of historical developments within organization studies (OS) itself, where the core object of the ‘organization’ seems to have been problematized to such an extent that it is rather unclear what remains of this foundational theoretical construct. By attending to these latter historical developments, the paper argues that specific, yet highly diverse, modes of theorizing within OS progressively seem to have undermined organization studies’ core object. This loss, the paper claims, have made OS ill-suited to adequately respond to the organizational dimensions of the economic crisis. Only by re-attaching and re-appropriating this core object can OS revitalize itself as a practically useful and relevant academic discipline.
and the boundaries between them gradually fade as far as their social perception. Sociological approaches in this area have been aware of these more structural changes expressed by this type of consumption: (i) the therapeuticalisation of performance; (ii) new dimensions of pharmaceuticalisation; and (iii) commodification and consumer culture in the production of new needs. In this communication, we intend to discuss performance consumptions focusing on the subject contexts – particularly labour and academic contexts. The goal is to shift the focus from the mechanisms of consumer culture to the contextual effects. We aim to discuss how social contexts structure individuals’ investments on performance; how they affect in the construction of social consumption needs; how they generate legitimacy to consume; and how they shape performance expectations. For this purpose, it is intended to compare the performance consumptions between two young population groups – university students and young workers (without university education) – exploring the analytical triangulation between consumption, performance pressures perceived by respondents, and shared expectations. The empirical support for this questioning is based on extensive as well as qualitative data, collected within a study carried out in Portugal on young population (18 to 29 years old).

Human Rights As Political Imaginary

The language of human rights has become one of the most important normative and political idioms of our time. Along with the struggle for democracy, this quest for human rights resonates with a striking number of societal and political projects; indeed, for some, it is the uncontested emancipatory project of a globalized world. Due to their ineradicable normative nature, however, normative approaches predominate in the human rights field; this remains the case even in the important emerging sociological scholarship.

This paper draws attention to the fact that human rights do not exist as a ready-made object of sociological analysis; hence their sociological “thingness” needs to be elucidated. The paper addresses the type of conceptual and theoretical work that is required to make human rights an object of sociological analysis in order to avoid normative restatements of the origin of human rights in a sociological register. A model of human rights as political imaginary is proposed and used to constructively review contemporary sociological accounts of human rights. However rather than a mere review, the conceptual framework proposed by the political imaginary model makes possible a cartographical approach to the field. Thus the goal of the paper is not simply to catalogue existing approaches, but to theoretically relate them to one another in order to contribute to the development of a more synthetic sociological framework for analyzing human rights.

La Formación De Profesionales Ante La Inegualdad. Desafío ético De La Educación Universitaria

La educación superior en México tiene hoy día el desafío de formar jóvenes ante un mundo altamente inequitativo. La ética profesional en los procesos de formación universitaria puede contribuir a la comprensión de este fenómeno social y, consecuentemente, a desarrollar la moralidad de la juventud tendiente a la constitución del ethos de los futuros profesionales. La racionalidad técnica combinada con la cultura de la rentabilidad inhumana está predominando en la educación, particularmente en el nivel terciario, cuyos efectos en el desarrollo moral de los educandos son preocupantes, si tomamos en cuenta el desinterés que muestran por contribuir desde sus campos de conocimientos a la mejora de la democracia y la justicia en sus ámbitos de vida. Una de las necesidades prioritarias en la universidad mexicana es concebir a la ética profesional no sólo como códigos de buen comportamiento sino, además, como un dispositivo intelectual y moral para hacer la crítica a la ausencia de equidad en la distribución de los bienes que la sociedad ha producido. Al observar lo que acontece en los escenarios institucionales y escuchar las opiniones de los estudiantes, así mismo, al identificar las limitaciones culturales inherentes de los profesores en una universidad del noroeste del país, la cual seleccionamos para nuestro estudio, nos permitió apreciar los rasgos de esta problemática de la educación superior, analizada desde la perspectiva de la ética profesional. Crear conocimiento en este campo, hace posible imaginar alternativas para la intervención educativa con un sentido transformador y progresista.

Socioética y Antropóptica Profesional Para Una Educación Universitaria Contra La Desigualdad

La modernidad que postuló a la razón como el camino hacia la libertad, la fraternidad y la igualdad, implicó la exclusión de la ética como medio para terminar con estas desigualdades. Por el lado de la ilustración y el liberalismo porque la ética se consideró un elemento subjetivo, no científico y se apostó por la construcción de una sociedad igualitaria a partir de los avances de la ciencia y sus aplicaciones tecnológicas. En la vertiente marxista porque la ética era un elemento de la superestructura ideológica que justificaba el statu quo mientras el modelo socialista construiría la igualdad cambiando la estructura socioeconómica a partir de la eliminación de la explotación que implicaba la propiedad privada de los medios de producción.

En este contexto, la educación universitaria tendría que estar sustentada en una capacitación científica y técnica de alto nivel, lo que produciría profesionales que en su práctica promuevan la sociedad igualitaria.

El desarrollo histórico demostró el fracaso de ambas vertientes de la modernidad y la imposibilidad de que una sociedad sustentada en el racionalismo eliminara las desigualdades sociales que se han profundizado, produciendo la dualización y el liberalismo. Así, a partir del principio fundamental de “exclusión de la exclusión” que sustenta la sociética y la antropóptica que conforman la ética planetaria que propone Edgar Morin, esta ponencia presenta elementos teóricos y metodológicos para una formación ética profesional que contribuya a la construcción de una ética profesional que promueva la igualdad.

A Multidimensional Measure of Social Stratification: Composite Indicator of Inequality

In previous works (Fachelli, 2009; Fachelli & López-Roldán, 2010, 2012) we analysed the changes in the social and economic model of Argentina in the period 1997-2001, we observed that the social structure, measured by a variable that typifies stratification, remains basically unchanged during the years analysed in spite of the profound crisis that occurred at the end of 2001 and along 2002. With this general framework, we developed a multidimensional model where are combined 4 dimensions (work, education, housing and income), 6 variables and 38 categories. With them we obtain a typology with four basic types. The methodology we apply is called “structural and articulated typology”: we use factorial analysis, including multiple correspondence analysis (MCA), in order to reduce the initial attribute space into “m” factors. Then we apply cluster analysis to classify individuals into “key” groups or “types” on these factors.

Our goal is to obtain a single measure of social inequality. However, the multidimensionality of the concept of social stratification makes difficult to obtain a complete ordering of households according to “inequality” level. The question that arise is how generate a composite indicator, that we call “social distance”, based in a multidimensional measure taking into account the principal factors components. We follow the work of Asselin (2009) who applies this strategy in the context of the analysis of multidimensional poverty. The communication will show the results based on the analysis of the Labor Force Survey of Argentina in 2012.

From Induced to Spontaneous Circular Migration: The Case of Seasonal Labor Mobility Schemes in Spain

For the past ten years, the management and promotion of circular migration flows has been a pivotal element of migration management policy in Spain, particularly of low-skilled workers in sectors such as seasonal agriculture and hospitality. It was commonly considered that this type of international mobility allows migrants to adapt to receiving countries labour market needs without incurring in the social costs of permanent settlement. Additionally, circular migration is regarded as a beneficial form of international mobility for migrants themselves and countries of origin. The aim of this paper is to analyse the Spanish policies developed in relation to the seasonal migrant workers for agriculture. We try to answer two key issues: (a) how Spanish policies regarding seasonal workers have been designed (b) and what purposes they responded to. We take into account three dimensions of the policy making: (a) national labour market demands (b) international relations framework (c) and the legitimization and meaning of these policies in the domestic political arena and economic relations between enterprises, trade
Guestworkers Programs in Uncertain Times. Economic Crisis and Seasonal Labour Mobility Schemes in Spain

Since the 1970’s, the global economy has been characterized by liberalization of trade and capital, but also by transnational movements of people. Recruitment of migrant workers has become popular in states facing the ever-changing nature of labour workers. Temporary labour migration has become an attractive resource in several low-paid jobs within the agricultural, service and construction sectors. Accordingly, there has been a growth in temporary migrant worker programs in several countries in Asia, Europe, and North America. New immigration countries, such as Spain, implemented also TWP during the economic boom in the 2000’s.

In this paper we aim to shed light into the process of policy-making and implementation of these programs in the Spanish agri-food industry during the last decade focusing on three dimensions: a) country selection and recruitment process, b) recognition of rights and transitions to permanent migration and c), actors and multilevel governance.

The final part of the article focuses on the impact of the economic crisis on the implementation of these programs since 2008 and its prospects in these new uncertain circumstances.

LORENTZ, PASCALINE* (Masaryk University, pascaline.lorentz@gmail.com)

regular jobs are occupied by women. Increasing labor market participation by women reportedly largely went into non-standard employment. While this is essentially true, we can evidence a strong tendency toward closing wage gaps both between men and women, and between regular and non-regular employment. As the latter effect is particularly strong for women, we cannot draw any evidence for possible mitigation gender inequalities for our investigation period. On the contrary, our findings suggest that women have made significant inroads into formerly male-dominated regular employment.

Hypothesizing about potential reasons for this bias, we suggest (a) that this negative perception stems from a general “adaptation problem” referring to the transition from high to low-growth economy, and (b) that the ongoing strong prevalence of the societal ideal of a male breadwinner in Japanese society effectively forecloses a positive appraisal of young women increasingly finding their way into regular employment where this happens at the expense of men.

Civil Liberties or Civil Rights? Muslim American Advocacy Organizations

This paper considers the extent to which two of the most prominent Muslim American advocacy organizations have been able to follow the pattern of advocacy established by the Civil Rights Movement as they have sought to confront Islamophobia in the USA. These two organizations – the Muslim Public Affairs Council (MPAC) and the Council on American-Islamic Relations (CAIR) – have long been at the forefront of Muslim American advocacy. The analysis considers the trajectory of MPAC and CAIR given the cultural and political context of the current ‘post-Civil Rights era’. I begin with an overview of what I call the “civil rights mode” of advocacy, a race-conscious strategy historically used by many civil rights advocacy organizations. This is then contrasted with a “civil liberties mode,” a race-neutral or “color-blind” one that has recently gained favor in the current climate. My findings suggest that the power of the civil liberties mode in contemporary American advocacy politics has played a crucial role in limiting the effectiveness of Muslim American advocacy efforts.

Etched In Stone: Preservation Of Cemeteries and Cultural Identity

Cades Cove was a thriving Appalachian mountain community in the United States prior to the establishment of the Great Smoky Mountains National Park. The creation of the park effectively brought an end to this community. It now exists within the park as a tourist destination (approximately 2 million visitors per year) with a few remaining ‘primitive’ homesteads and cemeteries. Everyone knows what cemeteries are, but in that familiarity, there is dismissal, for few know that cemeteries are far more than what they know them to be, and in that regard, cemeteries are far more than sequenced repositories for the deceased. Cemeteries constitute libraries of stone and are proxies or microcosmic expressions of the communities they represent or represented and are an important element of community.

The first task of this research has been to conduct a sociological examination of Cades Cove and the associated cemeteries, archiving the socio-demographic data of the former communities and their residents. The second objective has been to collect precise GPS coordinates of all known stones & markers in the cemeteries of Cades Cove.

A major disaster can strike at any time, endangering precious cultural property. Our cultural preservation efforts of these cemeteries are an important component of disaster preparedness in Cades Cove and to members of the surrounding communities with direct familial ties. These cemeteries have tremendous religious and spiritual importance to the families with ancestors buried there and are a significant marker of their cultural identity. Without these preservation efforts, a major disaster could destroy these libraries of stone and they would be lost forever. This would potentially threaten the future continuity of the communities and their cultural identity, destroy the artifacts of their ancestors and their family histories, and hinder recovery efforts.

Role of Sociological Theory in Deconstructing Sociological Phenomena In Africa – the Social Exchange Theory and the Small House in Zimbabwe

Sociological theories continue to illuminate various sociological phenomena found in Africa and act as conceptual and analytical tools in deconstructing sociological knowledge. This study uses the lens of the social exchange theory to analyse the small house practice in Zimbabwe. The ‘small house practice’ is the trend among married men in Zimbabwe to maintain a single woman as a quasi-permanent sexual partner of social and familial marriage. This relationship is considered subsidiary (small) compared to the official marriage yet it is important to the welfare of both man practicing it and the unmarried woman being looked after. The study reveals that those engaged in small house interactions are rationally seeking to maximize the profits or benefits, especially in meeting basic individual needs of both the man maintaining a small house and the woman being looked after.

LOW, KELVIN* (National University of Singapore, socleyk@nus.edu.sg)

The Spatial Politics of ‘Noise’

This paper attends to sounds and noises as sociocultural phenomena taking place in everyday sonic environments. If noise is considered as sound that is out of place, then how and where does this evaluation transpire in order for noise to qualify as an aural transgression? In defining what constitutes as sound or noise, the process also involves locating how noise is dealt with in different places that we inhabit (public space as shared/private space), at different levels (smallest/large-scale) and by different social actors (individuals, groups, social institutions etc.). Cases of auditory alterations in urbanity will be analysed in order to demonstrate how sounds and noises acquire socio-cultural valences in the ways that urbanites regard and utilise spaces in city life. By interrogating how places are experienced and contested vis-à-vis auditory encounters, the paper attempts to shed light on the relationship between sound, noise, and sociality in place, and also illuminates how aural information structure social positionings, divisions and hierarchies in everyday life.

Space as Material Culture

The concept of space continues to represent a challenging category in the field of sociology owing to its implicitly referring to the material dimension of things. Following the “spatial turn” in the social sciences, relational definitions of space have prevailed; yet there is still a clear lack of systematic research. However, the concept seems ideally suited to grasp the configurational nexus of complex relations between performativity, iconicity and materiality more accurately. The presentation introduces space as a cultural sociological concept and shows recent examples of how space constitutes social meaning.

BIGGS, SIMON (University of Melbourne)

Approaching Generational Intelligence: Complexity and Agency in an Intergenerational World

‘Generational intelligence’ (GI) proposes a psychosocial approach to the questions of cultural adaptation to demographic change and a reconceptualization of ageism. It places age-related generational identities in the domain of intergenerational relations and contexts such as families, workplaces, in policy development and in civil society. GI suggests three dimensions, key to addressing the degree to which it is possible to place oneself in the position of another age group. These include: the degree to which one becomes conscious of self as part of a generation, a relative ability to put oneself in the position of other generations, and a relative ability to negotiate intergenerational connection.

It is argued that dominant forms of adaptation provide limited opportunities for personal development and for age-specific identities to take shape. The value of empathic understanding, negotiated solutions and complementary roles between generational groups are examined as we move towards the discovery of age-specific contributions that may also throw light on the wider human condition. As such the approach works phenomenologically and is not overly concerned with refutation based on lineage, cohort and chronological age. It also discloses critical psychodynamic understanding of social relations in so far as a preconscious ‘unthought known’ is seen to play an important role in the maintenance of legitimized social identities and inequalities based on age. Implications for policy and the conduct and training for research are also critically examined.

This exploratory paper investigates the modality between data collected using an online questionnaire filled in on a mobile phone device and on laptop computer and a paper-and-pencil questionnaire. An experiment was conducted on 5th of July 2013 in thermal comfort conditions of a lab at the University of Ljubljana, excluding external effects. A total of 75 students were randomly assigned to three experimental conditions. A short questionnaire included questions on knowledge, attitudes and behaviour towards organic food products. The two online questionnaire versions were designed in a way that the visual design was most similar to the paper-and-pencil version. In order to explore the participants' willingness-to-buy and willingness-to-pay for organic certified food, the paper-and-pencil version involved the actual presentation of a glass bottle of organic apple juice of 1 L and a package of organic spaghetti of 500 g, while the online surveys involved the video projection of both organic foods. For the online versions, para data on time and changes of answers were collected. The results and experiences from the three data collection modes will be explored in order to answer questions on the time differences between the modes, on the data quality, and on respondents' performance. This experiment is one of the first studies on mode effect for mobile phone online questionnaires as the lab conditions guarantee the exclusion of confounding effects of self-selection and non-response which typically limit the measurement of the pure mode effect.

Dimensions of Exclusion in the Lived Experiences of Adult Survivors of Childhood Liver Transplant: A Micro-Analytic Perspective

The first paediatric liver transplants were performed in the early 1980s and continue today, saving thousands of children’s lives. Underlying syndromes, the transplant surgery, comorbidities and side effects of medication leave young people looking and feeling ‘different’ from their peers, especially in childhood. Through analysis of in-depth interviews with 27 now-adult survivors of the first cohort of childhood liver transplant recipients in Europe, we take a micro-analytic perspective in reporting how the processes of fear, self felt, and enacted exclusion began in early childhood for this group. Exclusion through liver transplant is an additional intersectional dimension to more recognized societal exclusions such as age or gender, and appears to be fluid throughout the lifecourse. Adapting Goffman’s work on stigma and presentation of the self, we see that problems of exclusion are only slowly resolved in a number of social role interactions, where others appear to feel free to comment on the appearance of individuals’ bodies. For example, felt exclusion of schoolchildren often occurred through physical education, where the transplant scar could be observed unless the child learnt to hide their body in communal changing spaces. Learning how to present one’s identity to others continues throughout the lifecourse. Narrative restarts, such as changing school or employment, appear a common way to ‘pass’ by losing the identity of a liver transplant recipient. However, this strategy is fragile, being contingent on the medical history not being uncovered. Positively revealing oneself as a liver transplant recipient was reported to result in inclusionary practices more as an adult rather than a child. For most, a sense of inclusion appears to be reached by this ‘new’ ageing population only through growing older: the understanding that everybody has ‘differences’ and that being ‘normal’ is something not closely defined for self or others.

HILEY, CHRIS (King’s College London)

Growing up with a Childhood Liver Transplant: Medical ‘Pioneers’ and Beck’s Normativity of Diversity

The concept of a stable biographical narrative and its potential undermining by long term health conditions is one that underpins much medical sociology. This is particularly true of chronic illness rather than acute conditions constituting forms of biographical disruption. More recently, the influence of approaches derived from theories of reflexive modernity have started to challenge the salience of the modernist notion of the lifecourse, introducing notions of indeterminacy and contingency into how individuals construct individualised narratives of the self. Consequently, health conditions can constitute identity rather than be threats to it. Ulrich Beck has also argued that not only is reflexive modernization (or second modernity) constituted by the ‘side effects’ of modernist discourses such as those surrounding the welfare state or modern science but that this has also given rise to a ‘normativity of diversity’ which has replaced the more simple normativity of contingency into how individuals construct individualised narratives of the self. Consequently, health conditions can constitute identity rather than be threats to it. Ulrich Beck has also argued that not only is reflexive modernization (or second modernity) constituted by the ‘side effects’ of modernist discourses such as those surrounding the welfare state or modern science but that this has also given rise to a ‘normativity of diversity’ which has replaced the more simple normativity of diversity itself.

Evaluating Government’s Environmental Performance: Evidence from China

While China has achieved miraculous economic growth over the past 30 years, this process is accompanied with numerous environmental problems, which result in substantial economic losses, social conflict, and rising health costs in China. How do the Chinese assess their government’s environmental performance? Based on the survey data of the 2003 and 2010 CGSS data, this article provides an empirical analysis of government’s environmental performance in the first decade of 21st century China. The main results of analysis are as follows: (1) Compared to other countries, 39.56% of the respondents think that their government’s performance is too little; while 6.17% of the respondents think that their government’s performance is too much. (2) Environmental performance in central government or local government become even worse in 2010 than in 2003. (3) As for central government’s environmental performance, rural respondents give more positive evaluation than urban respondents. However, urban residents’ central government’s higher environmental performance score than rural respondents. (4) Multivariate analysis of government’s performance in environmental protection indicates that education is the strongest factor in while negative relationship with the central government’s environmental performance. These results suggest that government’s environmental performance in China today are a mixed system, in which objective environmental problems and resident’s subject perception and social characteristics coexist to determine how the Chinese evaluate their government’s environmental performance.

The Reproduction of Intangible Heritage Successors in Heritage Tourism

With the development of heritage tourism, intangible heritage became a kind of tourism attraction, which holds a fascination for the tourists all over the world who try to touch the landscape, human heritage, and customs of other places. In the understanding of heritage tourism, intangible heritage becomes attraction, and tourism can be good guides for the tourists. They can tell the legend, the origin, the meaning of the intangible heritage and they can also show some skill about the intangible heritage for the tourists. What’s more, they can get some financial support from the government because they have the duty to pass the skill on. Gradually, the way of selection of the successors, the explanation of the intangible heritage and the inheritance of the intangible heritage are changing. For they will inherit the heritage within the ethnic group, they will deal with all kinds of relations outside the group, and then another kind of reproduction within themselves can be seen. In this article, we will discuss the reproduction of the intangible heritage for the successors.

The Formation and Change of Taiwanese Young Adults’ Attitudes Toward Gender-Roles: From Adolescence to Adulthood

[Abstracts are organized by first presenting author’s last name.]

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This study examined patterns and predictors of changing young adults' attitudes toward gender-role during Taiwan's social transition in the beginning of 21st century. Based on panel data from 2000 to 2011 and latent growth curve modeling methods, the study identifies patterns and predictors of attitudes formation and change from adolescence to adulthood. The young adults showed an attitude of highly supportive for gender equality, which was following by the declining egalitarian outlook during their transition to adulthood.

The findings indicate that the parental characteristics and their gender-role attitudes have significant influence on the formation of adolescents' gender-role attitudes as consistent with socialization perspective. The study also suggests that the parental attitudes have larger effect on adolescents' attitudes than does parents' behavioral modeling as indicated by parents' household labor pattern. On the other hand, the findings disclose the important source of influence from school and community contexts on both the initial adolescents' attitudes and the changes over a significant period of years, as indicated by the significant effects of school track, academic achievement, class interaction, work experience and participation in community activities.

Furthermore, the results of the latent growth curve analysis evidence the inter-weening mechanism of socialization and symbolic interaction. Therein the socialization background has far reaching impact, not only shaping the initial adolescents' attitudes but also affect the trajectory of the attitudinal change through the various social-interaction contexts.

Coproreneurship and Gender Dynamics in Small Family Firms in the Transitional Economy of Taiwan

This study explores the relationships between entrepreneurship and gender relationships in family firms during the global recession in Taiwan. Although previous literature has conceptualized women's transition through trajectories in family businesses, certain studies have indicated women's substantial contributions and indispensability. The gender dynamics within an entrepreneurial setting remain under-investigated. In this study, the power dynamics within day-to-day entrepreneurial processes in Taiwanese copreneurial firms during the global economic recession are explored from a family embeddedness perspective.

Qualitative data generated through in-depth interviews of 24 family firms across economic sectors in 1995 and the follow-up interviews in 2010 show the diversity of the gender relationships and the complexity of the power negotiation between copreneurs and patriarchies. The findings suggest that the adaptive strategies provide a context in which women are able to negotiate the patriarchal system and reconstruct their position by utilizing their entrepreneurial capability. The findings show that gender dynamics and wives' bargaining power in copreneurial firms may vary with copreneurs' entrepreneurial capability, the nature of their specific industry, and family relationships. Wives' adaptive copreneurship based on years of accumulated tacit knowledge and capability, is crucial for firms' risk management and coping with market uncertainty. Wives' roles tend to be characterized by greater autonomy in industries that utilize female skills than for wives in other industries. Conversely, wives of copreneurial firms in a strong patriarchal culture, particularly those in an extended family environment, are more likely to work as unpaid laborers and have no say in firms' decisions.

The observations further reveal that wives' entrepreneurial identity is shaped by the patriarchal cultural context. From the perspective of daily organizational routines, which can increase their self-empowerment and improve women's agency. However, lack of opportunity to cultivate their entrepreneurship asserts their gendered identity and reinforces marginality.

Communication As a Basic Element of Organizations: Contributions and Perspectives from Digital Social Networks

From the overview of the communication as a requirement to support the organizational activity, related aspects of the digital mediated communication are proposed. Mediations supported in the new technologies appear as the most common way in which communication processes take place in the organizations of advanced societies. The organization cannot exist without the dynamic and complexity that communication provides. It is a fundamental cohesion factor.

Digital social networks introduce new concerns and problems to the mediated communication, particularly since its participatory and collaborative possibilities. In a wide sense, this requires a deepening approach from theory and practice. This study will address contributions of social networks to the organization at the internal level not are clear enough because it is considered that the commercial issues tend to prevail. From here, there are some questions to solve: Is this a merely external communication issue? Is there a meaningful contribution that the comprehension of social networks brings to the organization? In the other hand, far from the importance of implementing social media as a resource in the internal communication it is also important to point out on the challenges that a “brand new” type of communication demands to the organizations. Introducing new technologies could be adopted very fast but the social comprehension of subtle changes, like those in communication, requires extra analysis.

Prejudice Incidence and Estimated Exposure to Prejudiced Authorities in the United States

Analysts have debated why substantial declines in the estimated proportion of persons prejudiced against women and blacks has not been accompanied by large declines in key indices of race and gender socioeconomic inequality. Some analysts contend the measures of prejudice are flawed, and this has spawned an exciting effort to measure prejudice unobtrusively. While accepting the research on implicit prejudice, I note that the sociological debate has presumed that the incidence of prejudiced attitudes is the appropriate focus of analysts attention. I submit, however, that using the measured incidence of prejudiced authorities and accounting for the social organization of exposure to those authorities produces better estimates of the exposure probability. Data limitations made it necessary to focus only on women and blacks, but the methods used can be applied to any group for which measures of prejudice exist. The results of the analysis indicate that, with levels of prejudice obtained for the year 2012, African Americans are almost certain, and girls are even more certain, to encounter authorities prejudiced against them. After presenting the findings, the implications of the findings for a thorough-going asymmetry of experience are noted. It is suggested that this asymmetry, and the doubt as to others' sincerity it fosters, undermines prospects for positive societal response to the problem posed by prejudice as well as any effort to inhibit the transformation of prejudice into discrimination.

On the Transformative Effect of the Digital Divide on Health Inequality: A Case of the Philippines

Objectives: The current study examines the transformative impact of the digital divide on health inequalities in the Philippines. Methods: A mixed-methods research design was employed, combining a survey of the digital divide and a qualitative study of the health effects. Results: The study found that those with access to the digital divide reported better health outcomes, while those without access experienced higher health inequalities. Conclusion: The digital divide has a significant transformative effect on health inequalities in the Philippines.
Rethinking Methods and Ethics in Male Sexual Risk Behaviour Research

Studying sexual behaviour of men is always a challenge to many researchers. This is a qualitative study on the sexual risk taking behaviour of men in the context of HIV/AIDS. The occupational group of seafarers are chosen as this is a particular study in the port city of Santos, Brazil. Seafaring is a male dominated mobile occupational group at very high risk to HIV with many seafaring countries having reported high prevalence rates of HIV. Ethnographic work in the red light district was conducted consisting of in-depth interviews and nightly observations. Local non-profit organizations working in the field were approached for entry to the site. Results showed that sexual behaviour remains a sensitive topic to discuss. Researchers need extra skills and knowledge to elicit substantial and quality information. Sex of the researcher and the way he deals with the individuals play important roles in data gathering. The study encountered various hurdles in the areas of research, and safety was given the nature of the study, which dealt with a semi-legal environment of prostitution and drugs. Language, cultural differences, and other idiosyncrasies have to be considered in doing the fieldwork. Ethnography is an effective method to understand many phenomena because this form of inquiry digs deeper into the relationships (with the sex workers). Length of time of researcher’s immersion in the field makes him strongly embedded. A rich reflexive account in an ethnographic setting is a major output in a qualitative study. Methodological issues raised in this study provide substantial contribution to the continuing search for appropriate methods in enriching areas of research in the field. To reduce uncertainty in both the field and in their views concerning 45 different images. All images were chosen on the basis of a content analysis of five Polish color magazines addressed to various audiences.

Theoretical underpinnings of the presented study stem from the works of Pierre Bourdieu, but they are not limited to this perspective. The other important perspective is evolutionary theory informed by modern biology. Thus, presentation focuses on both proximate (cultural) and ultimate (evolutionary) explanations of the aesthetic taste.

The main research hypothesis states that individuals with folk cultural capital (inhabitants with low educational level, and low economic level) exhibit preferences described by sociologists as “low” (i.e. visual expressions drawing on the so-called “Hudson River Biedermeier” style characterized by realistic and emotionally marked landscapes). Such preferences resemble to a large extent the “universal aesthetic predispositions” discussed in the evolutionary theory. These preferences can be also referred to as ‘conservative’ (or ‘collectivist’). However, according to evolutionary theory, these preferences should be found across all social strata. Contrary to this belief, building on Pierre Bourdieu’s class-based understanding of taste diversification, I presume that a natural aesthetic taste is rather than on force and material interests— heavily depends on the hard power diversity of North America’s public opinion. Ironically, a network that promotes diversity is a natural case for understanding the relationship between internal migration, rural-urban marriages, and stratification. Past studies show that during Mao’s era when internal migration was banned, rural people married within 25 km from their villages. Social mobility through marriages and migration for work was hindered. After the ban was lifted in 1978, hoards of rural migrants escape rural poverty and flood to the urban areas to improve their life chances. It is logically expected that spatial mobility brings people with rural and urban origins closer culturally, socially and economically, and thus increasing the odds of rural-urban marriages. However, this is not happening. The urban and the rural marriage markets are not overlapping despite migration. Based on 62 in-depth interviews with urban and rural people and participant observations in various parts of South China, I found that opportunities for rural-urban marriages are seriously constrained by the ascribed stratified “hukou system” (household registration) in various ways. First, this system links people’s accessibility to state-provided opportunities and benefits for urban people like housing, education, and health care, which cannot be enjoyed by the rural migrants. They are thus degraded as second class citizens in the urban areas and become the least desirable in the urban marriage market. Second, spatial segregation in education, housing, and workplace has reduced the opportunities for rural migrants to meet urbanites and/or developing urban ties that facilitate rural-urban marriages. Third, day-to-day discrimination against rural migrants has forced some to self-eliminate from “marrying up.” However, facing these constraints, some individuals employ strategies to break the social and spatial segregation by using Information Communication Technologies in dating and by upholding and adopting “modern” urban cultures and values so that their status is comparable to the average urbanites.

LUDWIG, SUSANN* (Centre for African Studies Basel, ludwig.susann2@gmail.com)

Working on Futures, Reducing Risk – University Graduates in Mali and Their Strategies of Action

The research examines the conditions and opportunities of university education in Mali. The West African state counts two state universities, five state graduate schools and various private universities. The capital city’s University of Bamako with more than 50,000 students is obviously the center of higher education. Facing precarious conditions due to the shortage of means and professors the majority of students manage nevertheless to successfully graduate. Being young and highly qualified, university graduates are still strongly affected by unemployment.

Given the problematic conditions of studies and the major difficulties entering the labor market, a university degree does not create the certainty expected, but provides and even provokes risk again. Consequently, the main questions to be answered are: Why do young Malians study nevertheless? And how do young academics cope with a situation characterized by uncertainty and unpredictability? Achieving individual life goals demands decision-making processes characterized by the evaluation and reevaluation of personal circumstances and risks. The application of a biographical approach will highlight how university graduates work on their situations in order to reduce future risks. Based on six months of field research in Bamako, this predominantly empirical paper will investigate past, present and future aspirations and subsequent strategies of action deployed by university graduates in Mali focusing on how risk is perceived, evaluated and dealt with.

Hukou Intermarriage and Mate Selection Process of Rural Migrants in Urban China

China is a natural case for understanding the relationship between internal migration, rural-urban marriages, and stratification. Past studies show that during Mao’s era when internal migration was banned, rural people married within 25 km from their villages. Social mobility through marriages and migration for work was hindered. After the ban was lifted in 1978, hoards of rural migrants escape rural poverty and flood to the urban areas to improve their life chances. It is logically expected that spatial mobility brings people with rural and urban origins closer culturally, socially and economically, and thus increasing the odds of rural-urban marriages. However, this is not happening. The urban and the rural marriage markets are not overlapping despite migration. Based on 62 in-depth interviews with urban and rural people and participant observations in various parts of South China, I found that opportunities for rural-urban marriages are seriously constrained by the ascribed stratified “hukou system” (household registration) in various ways. First, this system links people’s accessibility to state-provided opportunities and benefits for urban people like housing, education, and health care, which cannot be enjoyed by the rural migrants. They are thus degraded as second class citizens in the urban areas and become the least desirable in the urban marriage market. Second, spatial segregation in education, housing, and workplace has reduced the opportunities for rural migrants to meet urbanites and/or developing urban ties that facilitate rural-urban marriages. Third, day-to-day discrimination against rural migrants has forced some to self-eliminate from “marrying up.” However, facing these constraints, some individuals employ strategies to break the social and spatial segregation by using Information Communication Technologies in dating and by upholding and adopting “modern” urban cultures and values so that their status is comparable to the average urbanites.

Power without Representation: The Coherence and Closeness of a Transnational Governance Network

Transnational governance networks usually claim to represent at least an important part of global public opinion. In the absence of institutions that sustain such claims, their members must constitute themselves and act in accordance with two opposing principles: coherence and openness. Both the legitimacy and efficacy of these networks depend on their ability to strike an appropriate balance between such principles. To analyze the practical challenges that derive from this need, this paper focuses on the North American Section (NAS) of the Trilateral Commission. A network-like organization bringing together leaders of several influential think tanks and outstanding personalities from business corporations, political organizations, academic institutions and media firms, NAS is a major player in North America’s transnational arena. To analyze it, we approach it in two steps. First, we review the membership of NAS at three levels: the entire NAS, its executive committee, and its three national groups. This analysis shows that even though NAS is rather than on force and material interests— heavily depends on the hard power diversity of North America’s public opinion. Ironically, a network that promotes diversity is a natural case for understanding the relationship between internal migration, rural-urban marriages, and stratification. Past studies show that during Mao’s era when internal migration was banned, rural people married within 25 km from their villages. Social mobility through marriages and migration for work was hindered. After the ban was lifted in 1978, hoards of rural migrants escape rural poverty and flood to the urban areas to improve their life chances. It is logically expected that spatial mobility brings people with rural and urban origins closer culturally, socially and economically, and thus increasing the odds of rural-urban marriages. LUND, REBECCA* (Aalto University, rebecca.lund@aalto.fi)
The Work of Producing Quality in Changing Academia from the Standpoint of Junior Female Scholars

This paper is a chapter in my doctoral thesis. It builds on another chapter in which I explore the gendered work of ‘boasting’ in the context of changing academia, and how this work is essential for furthering ruling purposes and interests connected to the marketization and global competitiveness of Finnish academia. I pick up from there to study the evaluation ideology from the standpoint of junior female scholars. This involves explicating: how particular managerial texts, textual technologies and artifacts, including those related to tenure track recruitment, hold people accountable in ways that lead to the production of particular notions of quality; how this is part of furthering particular organizational and managerial purposes; and how the work related to producing this quality involves the (re)production of a particular gendered order in academia. I work from there to suggest a reworking of the concept of homo-sociality in academic recruitment. In the analysis I draw mainly on an in-depth interview with one female scholar; the various versions of an article manuscript she wrote as it developed over a lengthy review process for publication in a top journal within her field; the review documents; as well as the correspondence with editors of the journal in question. Furthermore, I draw on interviews with differently positioned scholars and academic managers, field notes from various events, and text material produced over a period of three years.

Social Science and Alienation In School

School can in many ways be seen as a place distant from life in general: In classrooms students are kept separate from the familiar parts of life. School and life outside of school follow different schemes so many students seems to put their real life on hold.

Social science class ought to be one occasion where life in school became more real and more similar to life outside of school, since it is supposed to be all about life in society. According to the curriculum for the Swedish upper secondary school it is not enough to learn about society, the students should also become a part of society through active participation – by doing democracy, not only learning about democracy (a legacy from John Dewey). In spite of this we do not appear well equipped for taking an active part in society even after the twelve years in school that the majority of Swedish citizens complete. The importance of active citizenship is emphasized, but in the room where students and teachers do their daily work something stops the development of active citizenship.

My doctoral study focuses on the intriguing tension between what is told, said and written in theory and what is being done in practice within the field of education and democracy in general and active citizenship in specific. Alienation theory can reveal why the well-intended work within the frames of social science is failing. Alienation in school could be seen as one part of the greater social tendency to postpone life by not living in the present. This paper will examine alienation theory and if in addition to how it can be used to understand the tension mentioned above and thereby search for a path that may have the potential to lead to changes of the situation.

LUNDBY, ERICA* (Linnéaus University, Erika.Lundby@lnu.se)
Young Consumers In Sweden

In this presentation the question of how economic resources influence children’s peer relations will be addressed, with focus on the Scandinavian setting. This question is of particularly importance in times of changing discourses surrounding children’s role in the consumer society. The ways Scandinavian children are portrayed as consumers have gradually changed, from making explicit notions towards competent actors in their own lives. In total, 48 Swedish children aged 9 were interviewed in focus groups, using a projective vignette technique and pictures. The children were asked if and how children in general could gain new friends through material possessions and money. The findings indicate that children perceive possessions as multi-functional tools in peer relationships. The ability to fit into the peer group, by the use of different possessions, was perceived as especially important. Additionally, the children perceived money as an altruistic tool to demonstrate kindness. As the Scandinavian countries become more liberalized, with higher economic differences between households as a result, we need to address the question of the consequences. We should consider the significant effects of increased consumption on children’s social relationships. If children perceive peer pressure of having “cool” things, and if they believe that they can use material goods to become more popular and accepted, they may be highly vulnerable to the internalization of materialistic values.

Surveillance often sparks responses relating to “privacy.” The era of state surveillance, read through warnings like Orwell’s, makes being watched seem negative, undesirable. We want to escape, to hide, or just be “private.” But this approach seems myopic in a world of mass media and now social media. The world of celebrity makes being seen a matter of privilege, of desire. The consequences for surveillance are far-reaching – from the unwanted eye to welcome watching. The desire to be seen may help to naturalize and legitimate surveillance of all kinds, to encourage new modes of cooperation of the surveilled with their surveillors. The desire to discover (large scale surveillance) meets the passion for publicity in social media. Flexibility, mobility and connectivity are sought through social media but users find themselves tracked and recorded using the same media. How do we account for the apparent willingness to be visible to all, or to have a secure or desirable position, when it is known that daily routines and whereabouts are tracked and traced constantly? While social media allows everyone, in a sense, to surveil, it also facilitates in fresh ways classic activities of state agencies. Such forms of surveillance penetrate the time-space paths of everyday life (using constant updates, location tracking). This paper explores these questions sociologically and critically.

**LYTKINA, EKATERINA** (National Research University, ekaterina.lytkina@gmail.com)

**Transformation – Reality or Simulacrum?**

In this report the concept of transformational societies will be revised. The concept was widely applied to address post-communist societies and especially value, institutional, normative change and related phenomena. However it is unclear whether the change is accomplished and what a post-transformational society is or should be like. Besides, a broader context should be considered. Are transformational societies only those with the communist past or can other societies, for example, experiencing economic crisis or different kinds of social instability such as revolutions or wars, or even those who enter the European Union also experience a transformation? Surely, the contemporary context is totally different from the change meant by Durkheim when he wrote about the transition from the traditional society to the industrial one. Contemporary societies are characterized by pluralism of normative and value systems together with high uncertainty. Post-Soviet countries experienced a relative stability. Post-Soviet countries can be conceptualized as the ones who underwent a symbolic change and a statistic demographical change when it comes to women in policing. The issue put forward in this paper is the impact of these ongoing transformations in everyday police work. Rather than evaluating the gender equality regimes, this project investigates into the micro politics of changing gender regimes at the work place. The results show that change is undisputable but unevenly distributed in the organisation with regard to the gendered division of labour and gender symbolism and the grand narrative of gender equality is put under scrutiny. Further the author argues links between processes of professionalization and academization of policing, as well as altering organizational ideals as pertinent in this process.

**Unique Societies-Common Alienation? Revisiting Alienation in Contemporary Context**

The paper is aimed at examination of the difference of nature and characteristics of alienation and in post-Soviet and Western countries. Recent findings (Lytkina, Wenzel 2013) show that in such post-Soviet countries as Russia and Kazakhstan anomie can be measured by powerlessness and normlessness whereas meaninglessness, social isolation and job dissatisfaction form a measurement of alienation. The linkage of powerlessness and normlessness might be explained by the general Mertonean assumption of discordance between the culturally defined goals and the means the social system provides an individual with. Hence, lack of control over desired outcomes (powerlessness) causes anomie behavior (normlessness). Still, powerlessness is commonly used as an indicator of alienation (Seeman 1982, Olsen 1965, Dean 1961) whereas meaninglessness is sometimes used as an indicator of individual anomie, or anomia (Seeman 1982, Legge 2008). These arguments make formulate the following problem: are thus alienation and anomie in post-Soviet and Western countries different? If yes, what are the reasons for its difference and how can the differences be captured theoretically and empirically? Post-Soviet countries can be conceptualized as the ones who underwent the process of social transformation, thus they can be conceptualized in Durkheimian logics. One can assume that in the time of transformation the level of anomie rose significantly. Western European societies, on the contrary, experienced a relative stability. Post-Soviet countries experienced a dramatic change in the value and normative systems which before the collapse of the Soviet Union were characterized by the collectivistic nature, whereas Western societies were characterized by pluralism of normative and value systems together with high level of individualism. Which phenomena and which indicators are thus relevant for the two types of societies? These and other considerations will be taken into account.

**LÖFQVIST, LOUISE** (Linnaeus University, louise.lofqvist@lnu.se)

**Gender Change and Constants. the Case of Swedish Police and Gender Equality Policy**

The aim of this paper is to present the case of gender equality policy and politics within the Swedish Police Service. The main object is to investigate the relation between gender equality change and local gender formations and experiences. The paper provides an outline and a theoretically and empirically informed discussion of specific organizational, historical and socio-demographic factors that are key in an understanding of gender and police work in Sweden, and putting this within a framework of political and policy development. Sweden is often portrayed as world-leading when it comes to issues of gender equality, and state policy has put forward ideals of equal opportunities in all areas of society. In this context the national police service is interesting, as a male-dominated, masculine, state organization where gender change is visible.

Ideals and discourse concerning gender as well as gender equality policy and gender equality projects have been a part of police organization since the 1980’s and the female-male ratio is slowly but constantly evening out. There has been a symbolic change and a statistic demographical change when it comes to women in policing. The issue put forward in this paper is the impact of these ongoing transformations in everyday police work. Rather than evaluating the gender equality regimes, this project investigates into the micro politics of changing gender regimes at the work place. The results show that change is undisputable but unevenly distributed in the organisation with regard to the gendered division of labour and gender symbolism and the grand narrative of gender equality is put under scrutiny. Further the author argues links between processes of professionalisation and academization of policing, as well as altering organizational ideals as pertinent in this process.

Reconsidering the within-Country Digital Divide and the Global Digital Gap: Comparing Students’ Daily Life Experiences with Information and Communication Technologies from 40 Countries

The rapid development in Information and Communication Technologies (ICTs) has drawn scholars’ attention to a new social problem—the digital divide. However, there has been little work examining the link between national contexts and students’ experiences with ICTs. This research combines two groups of literature: micro-level accounts on the inequality of digital usage and macro-level studies of the digital divide. Using data from the Organisation for Economic Co-operation and Development (OECD) Program for International Student Assessment (PISA) 2009 data, I utilize hierarchical linear modeling to examine how institutional variables at the country-level are associated with students’ digital usage across 40 countries. I use Cook’s distance to diagnose the influence of data points from the cluster level. Three institutional factors are examined: economic development, income inequality, and educational expenditure. Results are twofold: (1) The digital divide between socially-advantaged versus socially-disadvantaged students is wider for countries with lower income, higher inequality, and lower educational expenditure. (2) The effects of institutional characteristics on digital usage only matter for low SES students, but not for their high SES counterparts. This research helps scholars identify key national characteristics that influence the inequality of digital usage.

Exploring the Impact of Birth Cohort Size on Education Achievement of Cohort Members

Using the data from China General Social Survey 2005, this research explores the major and modulatory effects of birth cohort size on education achievement of cohort members in China, from longitudinal and cohort perspective. Results show that birth cohort size has significant impacts on education achievement of cohort members, and cohort members in larger size birth cohort have lower education achievement. However, the impacts of birth cohort size on male and female, on urban people and rural people are different, and the reduction of birth cohort size will narrow the gap between these two groups. Besides, this paper decomposes net effect of birth cohort size by simulation and points out that it is the discordant change between population reproduction and education capacity that leads to this result.

Why Should I Know? the Relevance of Absorbing and Sharing ERP Knowledge

In an ERP (Enterprise Resource Planning) system, all necessary business functions, such as financial, manufacturing, human resources, and distribution, are tightly integrated into a single information system with a shared database. Such a system potentially allows firms to manage their integrated business processes and associated knowledge, and to have more control of information and data in the organization. However, ERP systems are very knowledge intensive and require high levels of knowledge absorption and knowledge sharing between organizational members in order to be used successfully.

In the military organization we study, ERP systems are aimed at improving supportive, secondary processes. This means that many military employees prioritize efforts related to the primary process of the military over actions connected to the ERP system. Still, top management mandates employees to use the ERP system and perform these secondary tasks, leading to tensions/user resistance including the reluctance to incorporate or share ERP knowledge. In turn, this lack of knowledge exchange can become dysfunctional since it prevents the use of IT that could benefit the organization.

We applied qualitative methods including 40 semi-structured interviews with ERP users and their managers in three separate business-units, who have been using the ERP for two years. In the study we assess why and how users of the ERP system become averse to the exchange of knowledge and how military organizations are able to overcome tensions between primary processes and ERP implementation/knowledge sharing as a secondary process. By combining theories about user resistance and informal/formal knowledge structures we grasp the underlying reasons of the reluctance. Moreover we contribute to the literature by studying IT as a supportive technology leading to user resistance, instead of focusing on how organizations incorporate core technologies effectively (e.g. Barley, 1986).

Cybercultur @ and Cultural Management For Development

México is a multicultural and mega-diverse country. With this richness and abundance in natural and cultural resources, Why Mexico is a country with a high index of poverty and low social development? How could we work in terms of community development? This paper focuses primarily on a proposal for the development of a thinking culture development as a large system formed by multiple sub-systems. We argue how Sociocybernetics let us understanding and explaining the culture as an eco-system. In this proposal, Central System is the culture for development, and each sub-system is related and complemented with each other in building concrete procedures of observation and analysis units, as the elements of a larger system analyzed from a constructivist operational methodology. Specifically each subsystem may have different value and processing degree, and they are part of “culture for development” system. Each subsystem invites communities to making decisions and taking actions with a methodological model by the Sociocybernetics proposal and from a cybercultural perspective. Then, we explain how sociocybernetics allow us to construct a methodological proposal based on an Emerging Community of Local Knowledge system, CECL’s, in order to understand culture and development as an eco-ecosystem; we explain how the eco-ecological processes in a community are multidimensional and multi-relational processes. These processes permit the culture to appear as a fundamental component of a sustainable development.

Global Education in Japan

Global education has become a trendy phrase in Japan. A recent international symposium entitled “Primary and Secondary Education in the Global Age,” held in August 2013 by National Institute for Educational Policy Research (NIER) and Japan International Cooperation Agency (JICA), attracted a large audience confirming interest in this area. Among the discussions at the symposium, a central one was the debate about the meaning of “a global person.” For some, especially those in economic circles, diversity is regarded as a source of competition. For others, particularly multicultural educators, diversity is regarded as one reason to implement changes to the social welfare policies and education in an increasingly global society. With these two polarized positions in mind, I examine what Inter-cultural Education Society in Japan has tried to achieve since it first introduced the word “intercultural” into Japan 30 years ago. Because of the efforts of the society, the largest Japanese association in this field, most people in Japan are now aware of the term “intercultural.” However, research from the society has concentrated on promoting dichotomous viewpoints based on comparisons between Japan and other countries such as the U.S. The focus of the society's research is primarily on the differences between nations, while it has scarcely put any effort into the investigation of diversity or power differences within society. In other words, in spite of the organization's goals, it has failed to scrutinize the idea of “intercultural” in terms related to internal diversity or issues connected to social justice even as Japan has experienced a number of changes related to these in this age of globalization. In this study, I examine and analyze the context above and consider the reasons for the tendency identified in this field of Japanese education.

Judgments about Inequality and Economic Elite Among the Middle Classes: Discontents and Sociology of Critique

This paper will present the preliminary results of a research on the Chilean middle class and its perception of the socioeconomic elite. The global emergence of the middle class is also examined, including recent surveys (Bardasi 2010, Kliman 2011, Franco et al. 2011, Dobbs et al. 2012, Ferreira et al. 2012, López & Ortiz 2012, Oliveira 2012, Chunling 2012) has created a renewed interest towards “new” middle classes in global sociology due to its rapid growth and the socio-political challenges that these poses. How do those who belong to the middle classes in emergent countries feel and think about the social order? In particular, the more salient expression of world inequalities, the socioeconomic elite - i.e. “the 1%”? Does a perception of injustice, discontent or critique emerge towards the elite? How does that happen - or not? Our team conducted a study using an experimental methodology based on games that replicate social exercises applied by social scientists through studies in different countries. “unknown persons” and “dictator” games. Starting with a middle-class differentiation through occupation and distinguishing by type of territory where they live and work, the simulation was located in three cities of different sizes in Chile. In each city, six simulation games were conducted with participants from five strata of Chilean middle classes and one from non-qualified manual workers. This method allows the study of feelings and perceptions that arise in simulated situations of social interaction, which could not be observed through surveys or interviews. We will present the preliminary results, especially subjective elements that nourish and give meaning to middle classes, reproducing or challenging inequalities. The paper will contribute to topics that are relevant to stratification in the context of globalization, such as different discourses in middle classes, their feelings, perceptions of justice/injustice, discontent and critique towards the socioeconomic elite.

MACAMO, ELISIO* (University of Basel, elisio.macamo@unibas.ch)
Science and Technology Studies, Africa and the Long Shadow of Unspoken Assumptions

Science and technology studies have injected new blood into social theory over the past 20 years. Their assumption that the workings of science and technology are a good guide into the constitution of (modern) society has played a central role in sharpening sociological thinking over the notion of modernity and its analytical relevance in research. A paradox underlies the importance of science and technology within STS. On the one hand, STS seem to refer to a very specific type of society, namely highly technological modern society. This would seem to rule out the possibility that STS might have anything to say about societies which do not fit this description. On the other hand, however, and because STS produces social theory, i.e. a vocabulary designed to make the social world intelligible, it can lay claim to the ability to deliver concepts that can be deployed in efforts to make non-modern societies intelligible, even if only by default. This paper will try to address this paradox critically with a theoretical claim. The claim will be that the reason why STS may work well as a research programme may have to do with the fact that it takes the settings within which science and technology operate for granted. In other words, STS research works under a “ceteris paribus” assumption - legal predictability, economic and political stability, etc. - which constrains the translation of concepts into different settings.

Is the Concept of Patriarchy Useful to Comparing the Gender Relations through the World?

Is the concept of patriarchy useful to understanding and comparing the gender relations throughout history and the world? To answer this question affirmatively we must first consider patriarchy not as a system of male domination that imposes.. social hierarchies. Secondly, our approach also shows that in most non-Western societies, such gender arrangements are not just traditional patriarchal arrangements, but traditional patriarchal arrangements that have been modernized (by colonial hegemony) and re-remodeled (by globalized hybridization). A major consequence is that these hybrid arrangements possess both the contradictions inherent in the modernization of traditional patriarchy and those specific to post-patriarchy. Recasting patriarchy in this way enables one to grasp the logic of action and internal contradictions of each type of arrangement by identifying their singularities without placing them hierarchically on an “axis of progress”. Moreover, this analytical move also makes it possible to compare all gender arrangements according to their relationship to the principle of patriarchy.

Women Appointment and Political Participation in Brazil

This work aims to study the change identified in the women's participation in Brazilian politics in what concern the high positions of state bureaucracy. Specifically, it will be emphasize the kind of change's patterns followed in what regards women political appointees by two different governments in Brazil, such as, Fernanda Henrique Cardoso (FHC), Luiz Inácio Lula da Silva. This study uses the social-democracy theory to analyse the social sphere as main focus of public politics and reforms, as well as to consider it as a movement of women's inclusion in politics and a redemption of their role. Due to cultural history of women's inferior role in the political participation in Brazil, this study will be emphasize the kind of change of these factors might signify a relative change in the participation patterns.

Longevity, Leisure and Landscape

This work seeks to develop a critical reflection on leisure from the interaction with natural and cultural landscapes, declared patrimony of humanity, in the city of Rio de Janeiro, in the neighborhood of Copacabana. This site has the second highest concentration of seafronts considered by Municipal Law “preferred tourist destination of the third tier”; the theme will be presented from the theory of complexity, dialoguing with assumptions regarding sustainability and active aging on longevity.

The methodology presents the translation of perception of 60 to 100 years of elderly residents at the site, in personal interviews with women political appointees by two different governments in Brazil, such as, Fernanda Henrique Cardoso (FHC), Luiz Inácio Lula da Silva. The theme will be presented from the theory of complexity, dialoguing with assumptions regarding sustainability and active aging on longevity.

Gender, Food Security and Climate Change Adaptation in Bangladesh

This paper examines the links between gender, food security climate change and adaptation in Bangladesh, and investigates how a social justice approach to adaptation – with a commitment to participation, recognition, equitable governance and environmental integrity - may work to improve local level food security, and address social vulnerability. Southwest Bangladesh is facing a range of ecological and climate changes, including rising sea levels, cyclones, variable rainfall, respiratory and skin diseases. Smallholder farmers, agricultural labourers and poor women are particularly vulnerable, with ecological changes interacting with other layers of vulnerability, including poverty, gender, political and social discrimination. A range of ideas are present in development and climate change literature, making links between gender and food security, both in terms supply and demand. In particular, women's role in household food security is highlighted. Here, I critically examine these theories and assumptions, within the contexts of existing social, cultural and other vulnerabilities, with reference to projects and research from Bangladesh. I then discuss these ideas in relation to climate change adaptation, and I also discuss adaptation theory argues that for adaptation to be sustainable, transformative and effective, initiatives need to be responsive to existing social inequalities, while working to reduce vulnerability and create transformational change. Many NGOs, the Bangladesh government and other key stakeholders, have recognised the complex vulnerabilities facing women, both within their households and in communities, and are attempting to incorporate these ideas into adaptation responses. However, it is unclear whether these efforts represent...
strategic change for women from poor households, involving a transformation of gender structures, or only practical changes, in helping women survive.

The Right to Democracy and the State in Moments of Crisis: Lessons from the History of Radical Unionism

For the last four years square occupation movements have formed the core of a revolutionary wave calling for radical forms of directly democratic organization. It remains an open question to what degree these rights to democratization can be accommodated by states and the larger structures of global capitalism – or all. Solving this puzzle requires examining the trajectory of state-movement interaction of the syndicalist unions which are the most long-standing example of a directly democratic mass social movement organization on par with the square occupations. Toward that end, I take a world-historical perspective that allows a comparison of syndicalist attempts at extending democratic rights across two time periods: the early 20th-century crisis of British hegemony and the syndicalist resurgence in the current crisis of the Eurozone. The focus is on examining how syndicalist-state interaction differed from the more hierarchical worker organizations putting forward much narrower sets of rights claims. Studying the manner in which crisis-torn states of each period deferred, coopted or adopted the democratization claims of the syndicalists reveals the trajectories of state-movement interaction to be conditioned by processes of global capital and the specifics of local structures of dependency and exploitation. Social movements theories of democratic movements have been to both enrich and reconfigure the rights of this long-term perspective. In addition, this study reveals how the movement’s rights claims to economic democracy (both inside and outside the workplace) underwent a transition from largely implicit to explicit human right frames, thus facilitating connection with non-labor democratic movements. Finally, tracing state-movement interaction in unstable economic contexts bears on questions of the meaning and realization of economic rights; the crucial test of such rights claims in periods of crisis becomes the degree to which workers and other stakeholders have democratic input on policy and thus avoid “cost shifting.”

MAEDA, TOMOHIKO* (Meijo University, tomoged@meijo-u.ac.jp)
The Legal Cultures Observed By and Observed Among the Pioneers of Japanese Socio-Legal Studies

Since Professor Takeyoshi Kawashima provoked the debate by his classic work, *Legal consciousness of Japanese*, in 1967, theories of legal consciousness and legal cultures have been key factors for our contemporary empirical studies. First, they would provide viewpoints for studies on legal reform and adaptations in various countries. We should keep eye on the culture and social consciousness shared by elites leading legal reforms in our empirical studies on the legal adaptation to globalization around the Pacific. We should observe what kind of legal consciousness and legal cultures the leading groups have and what kind of impact they have in molding new legal systems or institutions. Second, they would keep their positions in the socio-legal grand theories on use of law, legal adaptation, legal conversion, and so on, though it would be difficult to test empirical validity of such theories.

I would illustrate that Japanese theories of legal culture themselves were reflection of the legal culture shared among the pioneers of Japanese socio-legal studies. I would straight up the key factors of Japanese theories on legal culture and relate them to the social and academic backgrounds and interests shared among the pioneers of Japanese socio-legal studies. I would also try to reconstruct theorethical framework, in which legal consciousness and legal culture serve as key factors for our contemporary empirical studies.

Revolution from below: The IMPACT of Market-Oriented Management of Hospital Employment in Germany

Internationally, health care has seen the advent of (quasi-)market governance in a public service environment and, concomitantly, the rise of organisational policies derived from private business. Hospitals are a case in point. While still being accountable for the universal delivery of medical services, they are expected to behave like enterprises geared towards earning revenue, sometimes in a regulatory environment featuring free user choice and provider competition. Thus, ‘market accountability’ becomes an issue for hospital management. Exploring the case of Germany, the paper explores how this translates into managerial concepts related to workforce issues including the roles of doctors, nurses, and further staff seeing the patient. We depart from the assumption that employment norms are shaped at sector level rather than in a single hospital but wonder whether this configuration will persist. Following a brief (statistical) overview of the evolving employment patterns throughout the German hospital sector, we examine the labour-related discourse of two sorts of actors: those of major intermediate regulatory bodies (which are critical players in the German health care system) and those entrusted with leadership functions in the hospital itself. Using material from years of research on this project focusing on sense-making processes at sector and organizational level, we can show not only that there is new discourse related to labour-related issues but also how this discourse is reflected by evolving employment policies. Overall, ‘market accountability’ puts long-established professional concepts under strain. However, the ‘sense-making’ is different between

Completely Included, Partially Included or Partially Excluded in the Labour Market? an Exploratory Schema of Social Vulnerability in Late Careers

Life course sociology corresponds to an area of study traditionally interested in the analysis of vulnerability during early and middle adulthood careers. Yet, given an increasing attention over the last occupational period in Western countries, the current article aims to analyze the vulnerability confronted in late careers, focusing specifically in Switzerland. To this end, a new exploratory schema of vulnerability based on seminal life course notions and an inclusion/exclusion theory, is proposed for the analysis of late careers. Moreover, another aim corresponds to analyze how different life course determinants -such as life experiences in different domains and positional factors- impact the likelihood of confronting, or not confronting, the social vulnerability during this occupational period. Longitudinal data comes from the Survey of Health, Aging and Retirement in Europe (SHARELIFE). Used methods are cluster, optimal matching, and discrete regression models. Results allow concluding first that the proposed conception of vulnerability based on an inclusion/exclusion schema has an acceptable empirical support. Second, the study highlights the likelihood of vulnerability during late careers depends mainly on early life experiences in family and occupational domains, as well as the positional status of workers.
regulators and those who have to implement regulations. This suggests that the rationale of hospital employment is changing bottom-up, often against what regulators conceive as an adequate design for hospital work.

Childcare and Elderly Care in Bologna

Family is the main provider in the Italian welfare system. As a consequence, supports for care in Italy are underdeveloped since care is almost totally delegat-ed to women capable to sustain its members. Such model had strong influences on women’s work and it has been the first to introduce childcare services in the ‘60s, while promoting a wider support for dependency in addition to the national provision. The result is that Bologna has the highest female participation rate to labor market in Italy. However, the financial crisis and the consequent reduction of public funds have put in question the sustainability of Bologna’s model in recent years.

In the present paper, we will show results from a series of 8 focus groups involving 34 working women conducted in Bologna during 2013, which have been selected because they have care responsibilities. Stemming from an investigation of both individual and social factors, the analysis will focus on the work-life bal-ance of women, assessing the role of their partners, their family and the local welfare system in it. The comparison between women with childcare duties and women with elderly care will also show how the overload of women in their 50s will be the real challenge for Bologna in the next years, as long as they combine the roles of grandmothers, children of dependent elderly and worker.

Possibility of Area Management Organizations for “Bulwark” Against Neoliberal Urbanization – Thorough the Cases of Public Development Authorities (PDAs) –

In some cities in US and in Japan entirely new organizational structures have sprung up to promote urban development in the new contextual situation. In this presentation, a new structure, “Public Development Authority” (PDA) is treated, which has mainly developed in west coast of US, and is getting attention in terms of neo liberal urbanization. PDA is quite unique-style entity that is established by cities (municipalities) as special purpose government for promoting specific pur-pose (such as areal management, or historical and business management of his-torical market), equipped with business specialist-staffs, and also it is governed by volunteer citizen board members. “Half private, half government”entity is run or governed by citizens.

Some PDAs has been observed to behave as “developer” in the “neo-liberal” urbanization process. But considerable PDAs, for securing neighborhood’s core and culture, are trying to build the devices for helping local business owners and individual citizens mentally and physically, as of Seattle Chinatown International-al PDA (idea space project) for assisting local small businesses, using “visioning”method . These trials are expected to be effective “bulwark”against diverting impacts of neoliberal developments. This presentation concretely gazes at the PDAs’ efforts (and the like’s of area management organizations) to keep local core of cultures, local “life economy” with concrete devices from the stand point of citizens eyes and “advocacy”. And the conditions for preventing PDA to fall into “developer” are sought.

Just for accessing the present big picture in terms of area management organ-izations in neo-liberal trends in US, Japan etc, CDCs (Community Development Corporation) in US and “Machizukuri Kaisha”, special purpose agency in Japanese PPPs are shortly mentioned as well.

Instrumental Action and Rhetoric: Framing Rational Action on Language Field

The paper makes a theoretical reconstruction of a model for instrumental action in language, using the notion of rhetoric. It takes persuasive language to be constitutive of instrumental reason, and analyses the possibility of bring to the theory of social action some concepts from linguistic field. The first step establishes an analogy between instrumental rationality and rhetorical movements like projection of future, or reconstruction of past. In those operations we use rhetoric in order to create the persuasive frames of reality and use them for self-persua-sion and for persuade other people to go into a specific course of action. Since deliberation is a problem of collective action and rationality we can understand rhetoric in terms of building a new descriptive model of rationality, in other words, we can describe rationality as a rhetoric operation: it consists in giving different in degrees of truth to the information available and then create conditions for choosing a specific way. This approach builds a critical view to the notion of information as objective data collected by rational actors, and points to the delib-eration as a cognitive way to deal with framed discourses about reality. Based on this model we can criticize some analytical problems from the theories of rational choice concerning collective action, here represented by M. Olson’s paradox and, in the same way, criticize Jon Elster’s paradox of indeterminacy, based on the con-cept of optimal amount of gathered information. The concepts of rhetoric give to the theory of rational action a key to understand how in empirical situation words, and sometimes just words, are enough to create action.

Social Norms and Policy Influence on Family Formation in Sweden

This paper seeks to extend existing knowledge about gendered transition to family formation and parenthood by looking at whether and how public policies influence fertility. Our research is part of a larger international project on gender equality and low fertility in postindustrial societies. The theoretical framework is developed to comprehend the ways in which family- and gender-role norms, institu-tions, and economic context intertwine with the family formation intentions and behaviors of young adults. We focus on two sets of social norms (family- and gen-der-role norms) in influencing individuals’ intended and achieved fertility. The two sets are viewed as separate constructs, the first dealing with the definition of the “nuclear” family, and the second dealing with the appropriate roles of men and women in the family and in the public sphere, especially the labor market. Our analytical model seeks to attribute equal explanatory power to men’s as well as women’s opportunities for engaging in positively viewed activities in the spheres of family and work. In our empirical analyses we rely on a mixed-methods ap-proach. In this paper, we combine a quantitative analysis based on data extract-ed from the Swedish Young Adult Panel Study on attitudes to work, family and gender roles and their possible impact on family formation (intentions) among Swedish young adults in the first decade of the 21st century, with a qualitative analysis of narratives in in-depth interviews (N=80), carried out with women and men aged 24-35 years in two metropolitan areas in Sweden in 2012. The findings for the qualitative part indicate that young adults view Swedish family policies as good even when having little first-hand knowledge of them. We discuss similari-ties and differences across gender and family status, as well as the implications of our findings for research and for policy design.

Development, Modernity and Nanotechnology: The Challenges Of a Time

This paper aims to raise some thoughts on the present time and the relation-ship between modernity, environment and development, starting from some questions: if we continue to follow the current economic model, of neverending development and capital expansion, what awaits for us? Is there a future? Will the human species take part in it? How to divert the course of this rudderless steamer? How can we command Progress? In search of clues that point to the possible answers, we walk at some tracks left in late 1960s and early 1970s, by Josué de Castro, on the changes that had already been felt in his time and the threat that hovered in the world due to environment imbalances arising from the development model based in the expansionary logic of capital, the rampant belief in science and technology, then to reflect on the reality of our time and the progress and achievements in the field of science and technology, and the chal-lenges we face against the advance of new technologies - and this is the case of nanotechnology. Nanotechnology is a technology that can have and already has numerous applications. It’s, in the point of view of the market, a safe investment for the future. In this sense, we must discuss the ethical and legal issues that should regulate the use of nanotechnology. There is no certainty about the pos-sible impacts that the use of nanotechnology may have, regarding the health of people and the environment. This paper is the result of the research “Nanotechnol-ogy applied to food and biofuels: recognizing the essential elements for the development of indicators of risk and regulatory frameworks that protect health and the environment” (898/2009), funded by CAPES, a government agency linked to the Brazilian Ministry of Education.
Women's experiences have been the nucleus of domestic violence literature, discourse, and policy, and have shaped the therapeutic and/or punitive measures that are characteristic of domestic violence prevention – measures that research has shown are largely ineffective in curbing violence. Consequently, we still know relatively little about why men batter, and how they make sense of the negative “batterer” credential that corresponds with their offense. The few studies that explore batterer behavior are primarily psychologically, reducing their violence to individual pathology that can be “treated” in therapy. Accordingly, non-psycho- logical studies are characterized by evaluations of the utility, effectiveness, and/ or therapeutic techniques of Batterer Intervention Programs, thus missing the sociological roots of batterer behavior. Drawing from in-depth interviews with 15 male batters, my research shows that these men make sense of the offenses of which they have been accused in different ways, both with regard to the role they attribute to the state in their felt disempowerment and emasculature, and the role the state plays in perpetuating their violence and the perpetuating their violence to a number of factors – factors I argue must be addressed to the extent that they are linked to recidivistic risks of battering. The analysis presented in this paper therefore provides a foundation for creating more effective social remedies for battering behavior, and it provides an opportunity to reconsider gender-based theories of interpersonal violence more generally.

RC29-499.3

MAHI, LARA* (Université Paris Ouest Nanterre, laramahi75@gmail.com)

Sentencing: ‘health Determinants’ of Criminal Sanction

Des travaux en sentencing ont mis en avant les inégalités face à la sanction pénale. Que l’on soit une femme ou un homme (Mary-Portas, 1996 ; Cardi, 2007), que l’on ait la peau de couleur ou non (Steffensmeier, Ulmer, Kramer, 1998), que l’on ait un travail ou non (Herpin, 1977), ou encore, que l’on ait un nom à consonne stridente ou non (Jobard, Névanen, 2007), on n’est pas égaux face à la sanction pénale.

En matière de santé, la question de l’impact de l’état de santé somatique des justiciables sur les jugements est systématiquement étudiée au profit de travaux sur les déterminants de santé mentale (Thys, Korn, 1992 ; Laberge et al., 1995 ; Cartwright et al., 2010). Pourtant, le haut taux de prévalence, dans les prisons françaises, de personnes vivant avec une pathologie lourde (6,2%) par rapport à ceux observés en milieu libre (DREES, 2005) interroge l’existence de formes de sur-pénalement des malades. Y a-t-il un lien entre l’état de santé des justiciables et la peine à laquelle ils sont condamnés ?

Après avoir observé 412 procès correctionnels à l’audience de grande instance de Paris, nous avons analysé statistiquement les liens entre « état de santé du justiciable » et « condamnation ».

Nos résultats font état d’un contrôle particulièrement coercitif, par l’institution judiciaire, des justiciables malades faisant part d’une absence d’engagement dans un processus de soin. Au cours d’un procès pénal, ces derniers sont sur-con damnés à de la prison ferme et à de plus longues peines.

Au delà de la chaîne pénale, ces résultats nous invitent à repenser la définition que donne Parsons (1951) des rôles du malade et, plus largement, à interroger les formes du contrôle social qui pèse sur les malades.

The Social Fabric of Solidarity Economy Initiatives: On the Emerging Creative and Collective Action Devices

Solidity economy initiatives are not obvious. They need specific contexts to emerge and develop themselves. We have to better understand conditions under them individual and collective processes of initiatives can emerge, be designed and implemented.

As Hans Joas formulates it, the sense of action builds itself at the heart of the very action. So, we need to consider solidarity economy initiatives as a social construct. This proposition questions and participates in current researches on social entrepreneurship. My point of view emphasizes on the social contexts and conditions of alternative entrepreneurship.

A second idea, continuing the first one, leads me toward two hypotheses. As a first hypothesis, I consider that solidarity economic initiatives find their dynamics within creativity of action develops by alternative collectives of actors and social entrepreneurial communities. We should better know these collectives in order to differentiate their actors at the same time social activists and entrepreneurs. My second hypothesis concerns their devices which give its sense to collective actions and the processes of their design and implementation. These acting devices should be observed and analyzed in depth as far as they gather, promote, mutually develop and capitalize solidarity economy initiatives. Then these processes and their attributes determine the role of the social fabric of solidarity economy initiatives.

In order to develop and begin to validate these hypotheses, I shall present and discuss first results of a qualitative research focus on several collective action devices as developed by social actors in France. These alternative collectives and their acting and learning devices are developed at the very heart of co working

Migrants Sending Money and the Family

Abstract: To know why migrants send money to home, this paper introduces a new conceptualization of the relationship between the migrants and their families. Based on 30 in-depth and unstructured interviews, supplemented by ethnographic participations, this study recognizes the mingling of the immigrants' self with the recipients in their origin country as essential in remitting. Thus, this paper makes significant contribution to the study of migrants’ family by adding a relational approach that identifies fluidity in the individuals’ identification to the family through migration and remitting.

Constructing a Gender Discourse inside the OECD: The Working Party on the Role of Women in the Economy

The study provides a multifaceted analysis of contemporary grandparenthood in Germany. Building upon ideas rooted in a sociology of the family and in a sociology of ageing, the study aims to demonstrate the usefulness of a perspective of social inequality for the study of the multigenerational family in later life. Social inequality is on the one hand conceptualised in the form of unequal access to the grandparent role (e.g., the transition to grandparenthood). On the other hand, social inequality is conceptualised in the form of unequal outcomes connected to grandparenthood (e.g., levels of subjective well-being).

Based on data from the German Ageing Survey (DEAS), applying a three-generation perspective, the study demonstrates that access to the grandparent role is in fact unequally distributed: higher educated parents are less likely to experience the transition to grandparenthood and become grandparents later in life than less educated parents. In contrast, the subjective importance of experienced access to the grandparent role does not vary by levels of education and other indicators of social class. Given the unequal access to the grandparent role, grandparenthood could evolve into a highly valued but unequally distributed social resource for later life. Furthermore, social inequality also exists as a result of grandparenthood: positive and negative outcomes of relationships with grandchildren for grandparental subject(s) well-being are unequally distributed across educational groups.

Based on these results, it can be concluded that social inequality in relation to grandparenthood exists in two forms: first, access to the generally highly valued societal position of grandparent is unequal. And secondly, advantages and disadvantages are unequally connected to the grandparent role. The study shows that the perspective of social inequality is essential for an adequate description and analysis of grandparenthood in social and demographic change.

Constructing a Gender Discourse inside the OECD: The Working Party on the Role of Women in the Economy

The ‘motherhood penalty’ is invoked to explain the lower labour force participation of Irish women. Mothers with third level education earned incomes that enabled them to compromise their respective orientations to work and their reconciliation strategies. Mothers in both groups articulated a strong intrinsic, social and instrumental orientation to their work and a distinct worker identity, separate to motherhood. As working mothers they had all overcome the first penalty.

Mothers with third level education earned incomes that enabled them to compromise childcare for aged (0-3) using private nurseries which facilitated their full-time employment, but at considerable financial cost. But low income earning mothers could not afford the 800-1000 euros a month fees. This explains their lower participation rates.

The exceptional mothers in our focus groups with low educational levels were facilitated by getting a childcare place in a local community créche with fees of 95 euros a week full time and pro-rata reductions for part time. Grandparents or siblings also provided care. These constitute a mixture of reconstitution strategies not easily replicated. Childcare policies in a neo-liberal perspective are essential for an adequate description and analysis of grandparenthood in social and demographic change.
The UN International Decade for Women and the four UN Conferences on women helped to put gender equality on the global agenda. Although feminists are rightly critical of the slow pace of change, gender equality retains an important place on official global (and regional) policy agendas. This paper examines the work of the OECD Working Party on the Role of Women in the Economy (ROWITE). Formed in 1974, in advance of the first UN Conference on Women, ROWITE constituted an important site for the consolidation of a feminist agenda for the Global North and, through its support for the Women in Development group within the OECD’s Development Advisory Committee (DAC) supported the promotion of gender equality through its members’ labors and programs. Although ROWITE was disbanded in 1998, its concerns were, in partly picked up by the Social Affairs Division and thus continues to have a resonance in contemporary debates.

Perceptions of the Concept of Physical Activity Among Older People and Staff in Residential Homes
Annsofie Mahrs Träff, PhD-candidate
National Institute for the Study of Ageing and Later Life, Linköping University, Sweden
This presentation aims to present parts of my doctoral work focusing on the ability and desire to be physically active when you live in a residential home for the elderly. The aim for this part of the study was to identify and describe variations in perceptions of the concept for “physical activity”. Physical activity is described as positive and important for all people. My thesis is to investigate how people are interested in, and able to, maintaining physical activities even though they often have significant disabilities. And also to investigate how older people in residential homes are experiencing opportunities for physical activity and how their physical environment affects these opportunities.

The interviews show that the older people often describes physical activity in one way when asked about what the concept of physical activity means to them and sometimes also states that physical activity is something that they do not perform. Later in the interview the very same person can describe the activities of a physical nature which they do in everyday life, for example to walk. A number of staff describe that physically activity is one thing when it comes to themselves, but something else when it comes to the older people.

To have different perceptions of a central concept can affect both hopes and expectations.

MAIA, JOÃO* (Fundação Getulio Vargas, joao.maia@fgv.br)
Global Arenas of Knowledge: Perspectives from the Brazilian Case
This paper aims to present the major guidelines of the project ‘Global Arenas of Knowledge’ and its first results. The project involves theoretical work to reformulate the sociology of knowledge in contemporary global perspective, and three empirical studies dealing with key elements of global knowledge production and circulation. The study runs first in three southern-hemisphere countries which are part of the post-colonial periphery or (in world-system terminology) semi-periphery, but which are not part of the impoverished ‘third world’, and where knowledge institutions are well established: South Africa, Brazil and Australia. It will then move to linked institutions in the global metropole, in the USA and UK. The empirical work takes three domains of knowledge as starting-points (HIV/ climate change/ gender studies), and examines them in several ways, combining ethnographic work, interviews/documentary work and quantitative methods of citation-context analysis to study the patterns of centrality, inclusion and exclusion of researchers across the global arenas. In this paper, I present the results of the first part of the study, which involves interviews conducted in Brazil with senior researchers in three different domains of knowledge and historical analysis of each domain. I focus on space. It is then closely related to the proposed session: a) how the dynamics center/periphery affects knowledge production in the Brazilian case; b) how Brazilian social scientists in these different domains of knowledge build their careers in a global scale.

MAICH, KATHERINE* (University of California, Berkeley, kmaich@berkeley.edu)
Legislation and Its Discontents: Consequences of the Peruvian Household Workers Law
Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling a centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered, private and contained within the intimate space of the home, where discrimination based on race, ethnicity, gender and class looms. Colonial relations persist in the apartments and homes across wealthy districts of the capital yet measurable Lima moves ever so forward by pushing costly modernization projects, developing its booming tourism industry, and promoting its global culinary fame.

Peru passed national labor protections for trabajadoras del hogar ten years ago, with negligible improvements in the lives of its household workers. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate the nature of the outcome of political inclusion and state-granted labor rights in Lima for household workers, privy to capital’s growth and yet [arguably] further marginalized through labor regulation, which grants few benefits, offers no retirement wage, and lacks real enforcement in practice. When the state steps in to regulate the informal sector, what possibilities and potential problems result? How does the implementation and specifics of legislation come to bear on the lives of those it attempts to protect, offer benefits to, or bring into political inclusion? My dissertation grapples with the intersection of gender, law, the state, and the political economy of domestic work in Peru with specific attention to new organizing strategies for household workers in the face of myriad obstacles. When and how can the law matter in the case of informality, and what else is to be done?

RC32-554.5
MAICH, KATHERINE* (University of California, Berkeley, kmaich@berkeley.edu)
When Does the Dust Finally Settle? Peruvian Household Workers, Reproductive Labor, and Sweeping Changes
Peru is currently understood as one of the fastest growing economies in Latin America, one whose wealth is highly concentrated in the capital, fueling a centralized and unregulated flow of labor. Many indigenous internal migrants work as trabajadoras del hogar in Lima, situated within a vulnerable context since their work is highly gendered and isolated in the home, where threats of discrimination based on race, ethnicity, gender and class loom. This practice of domestic labor is broadly accepted in Peruvian culture, demonstrating the profoundly deep, entrenched nature of colonial relations within contemporary Limaño society.

I analyze domestic work as both a daily, lived-out practice and a culturally inscribed phenomenon within Peruvian society. Peru passed national labor protections for trabajadoras del hogar ten years ago, with negligible improvements in the lives of its household workers as the law offers no minimum wage, few benefits, and lacks real enforcement in practice. Based on nine months of in-depth interviews and ethnographic fieldwork, I investigate outcomes of political inclusion and state-granted labor rights for these women workers, privy to capital’s growth and yet [arguably] further marginalized through labor (mis)regulation as they continue to sweep, iron, cook, and care for the future class of Limaños. My research finds that rather than Lima paving the way for a modern, egalitarian Peruvian state, inequality and colonial relations are alive and well in Limaño homes, with serious consequences for a future, more egalitarian, and ‘modern’ Peru, and Latin America.

How does the implementation and specifics of legislation come to bear on the lives of those it attempts to “protect”? My dissertation grapples with the intersection of gender, law, and the political economy of domestic work in Peru with specific attention to challenges facing women workers confronting the burden of colonial history on a daily basis.
assassination was a “political earthquake” that shifted the attention of the Leba-
nese society from mainly pan-Arab concerns, to internal concerns and anti-Syrian
activism. The analysis of our findings suggests that a change in political relations
leads to sectarian tension when two main conditions are met: (a) the majority of the
sectarian group follows one leader and; (b) when the two opposing communi-
ties are equal in size and in power.

Australian Carers’ Income Support Since 1983 – Changing Frames and Persistent Gender Inequality

Many Australians provide unpaid, informal care for a relative or friend with a
disability, illness or age-related frailty, and women are more likely than men to
be the main ‘carer’ in these circumstances. A dedicated income support payment
for some Australian carers has been available since the 1980s. Unlike many other
forms of income support, which have been progressively restricted as part of a
wide-ranging neoliberal reform process, eligibility for Carer Payment has been
extended to an increasing number and range of carers in recent years.

This paper reviews the history of this policy area, focusing on the manner in
which reforms to the social security legislation have been framed. Drawing on Fio-
nia Williams’ analysis of the claiming and framing of European childcare claims (2010),
we argue that changes to Australian carers’ income support have developed with-
in competing frames of social justice and social investment. The social investment
frame, which prioritises paid work over care, has become particularly prominent
in recent years. This echoes the increasing concern with paid work participation
in other areas of income support, such as unemployment benefits and payments
for sole parents. However, the changes to carer policy reflect a unique tension be-
 tween competing goals of promoting paid work participation for all working-age
people and ensuring the supply of unpaid carers in the community.

Neither of the dominant policy frames addresses Australian women’s ongoing
responsibility for the bulk of unpaid caring, and income support policy potentially
reinforces this inequality. We argue that these issues must be addressed in future
reforms to ensure that the competing pressures on women to care and to engage
in paid work do not lead to greater disadvantage for carers and the people who
they care.

Middle Class Women’s Work and Childcare in Paris

Today, France draws attention from neighbouring countries because of its high
birth rate. French women are also relatively active in their labour work participa-
tion. In Paris, the number of women in work is especially high, and the number of
nurseries is inadequate. How do women manage to find a place or person to look
after their children while they are at work? How are women and class related to
the issues of childcare? These are the main interests of this paper. In France, the
most widely used form of childcare is the registered chidminder, the so-called
“Assistants maternels”, and not nurseries as in Sweden. The paper will put the
emphasis on this French registered childcare system.

According to a French national report on childcare, in 2011, 37 % of children
under three whose parents worked full time were left with registered childminders
who were approved by the local authorities and received children mainly
under three whose parents worked full time were left with registered childminders
who worked in the children’s homes.

The French “Assistant maternal” system was passed into legislation in 1977 to
clarify the undeclared work, and progressed during the 1990s to increase jobs in
the domestic sphere. Local authorities conduct home inspections, and 120 hours of
professional training is required for approval. The state takes charge of the
social security cost of childminders.

Now in Paris, many childminders are immigrant women and they help middle
class French women to work outside the home and to get higher wages than the
childminders do. Mothers are generally satisfied with this system because of the
flexibility of working time, which means the longer and less well paid work of
immigrant women supports the work and families of French middle class women.

The Transformation Of Self-Concept In Japanese Youth: From 1992 To 2012

Japan’s economy entered a long period of stagnation, known as the ‘Lost Two
Decade’, after reaching its peak in the late 1980s and early 1990s. In this peri-
od, many politicians, business person, and intellectuals criticized Japanese youth:
tending to lose their temper with the darkness of mind, chasing their unplanned
dream without regular jobs, and not leaving their nests. Critics also told fragile
about self-consciousness. We stress the importance of Japanese youth. But we can get another figure of
Japanese youth from the outcome of the research of Japan Youth Study Group,
conducted in 1992, 2002, and 2012. For instance, most Japanese youth love them-
seves, and feel senses of themselves. They are anything but fragile. By the way,
our result of comparison of three or more time point is that we can distinguish
between temporary trend and long-term trend. For example, the ratio of re-
spontents of feeling sense of oneself has declined by degrees from 1992 to 2012.
The ratio of keeping one’s individuality in any situation has declined too. And the
ratio of changing oneself depending on the situation, and engaging in superfi-
ciality has increased from 2002 to 2012. These means long-term trend of diver-
section of the self. On the other hand, the ratio of loving oneself has increased
from 1992 to 2002, but has decreased from 2002 to 2012 (temporary trend). What
causes for these? We can consider two matters. First, the cultural-social change
underpinning long-term trend, for instance, the diffusion of mobile media and
social network service accelerating the diversification of the self. Also, we need
consider what happened in 2002 (about temporary trend). We try to explain the
structure of self-affirmation by comparing the determinant and related item of
self-affirmation on each year. Finally, we discuss the effect of intertemporal re-
search on public opinion in Japan.

A Method to Construct the New Framework for the Equitable Water Distribution -the Case Study of the “Water War” in Bolivia-

Why does the water resource problem in Bolivia remain despite the victory
of “Water War”? “Water War” in 2000 was an anti-privatization movement towards the public
water service and it changed the water law and forced a private company to with-
draw.

The goal of the social activists who had played a main role in “Water War” was to
improve water resource accessibility. However, the success of “Water War” did
not solve the water resource problem in Bolivia. Does it mean that the other issue
was needed to improve the water resource situation?

Existing literature has mainly focused on the strategy of water war, and the
water situation not mentioned. In order to investigate a real driving factor that had
caused the problem, analysis of the Water War should be revisited from dif-
f erent angle. A water shortage is classified into two factors: “Real scarcity” and
“Manufactured scarcity” (Mehta 2003). While real scarcity refers to a shortage of
volumetric quantities, incurred mainly from population growth, industrialization
and an ecological system, manufactured scarcity is constructed by powerful ac-
tors such as politicians, bureaucrats and irrigation farmers to gain profit at the
exclusive possession of water resource.

I assume that the goal emphasized in “Water War” was directed towards man-
f actured scarcity, it prevented its focus from real scarcity, which is also pivotal
in order to solve the water resource problem. This study uses the original data
of fieldwork and local newspapers from three times of fieldwork by the author. I
will use discourse analyses to expose the process of why social activists chose to
focus on “Manufactured scarcity” in order to gain the civilian support.

I present the importance of recognizing the each characteristic of water scarcity to improve
the water resource problem. This research intends to provide a new framework for
equitable water distribution.
ences to the women's historical and cultural location and their gender socialisation, I contend that not only is there an individual biography, but also a collective story. There is however diversity amongst these women's life experiences. Through some specific actions such as attaining higher education and continuing to work after marriage, they enacted their individual agency and challenged the prevailing patriarchal narrative. Their actions although offering 'liberating' narratives, become more evident in the experience of their daughters and granddaughters. The women's – formal and informal – participation in the labour market has not brought them real benefits in their old age, as most of them do not have their own occupational pension, thus making the role of the family central to their well-being in old age. This is relevant in relation to family arrangements and commitments that define the contexts of care and the social and economic capital these women have access to.

The Complex Adaptive Systems Approach. a Socio-cybernetic Reading

Since the foundation of the Santa Fe Institute in the United States in 1984, and especially during the 90s, was formed a new wave in the science of complexity: the Complex Adaptive Systems (CAS) approach. CAS is based on modeling and simulation of complex systems using advanced computational techniques such as cellular automata or agent-based modeling. With an interdisciplinary and universal classification main methodological approach has dominated the scientific discourse around complexity. Numerous interdisciplinary complex adaptive systems centers have spread throughout the world, from United States to Europe, from Latin America to East Asia.

We need a more reflexive and critical approach to CAS, taking into account its epistemological limits. Socio-cybernetics, through authors such as von Foerster, Varela, Maturana, Luhmann or Morin, is very useful here, because of its emphasis on the question of the observer/subject and its construction of the observed/object. Something that CAS models ignore, seeking to determine objectively and algorithmically probabilistic patterns in complex systems, without considering that the observer and complexity are primarily attributes of an observer, an operation of “punctuation” in his knowledge of the world. The simulated systems are doubly result of the intervention of the observer: the real system is an “invented reality” (von Foerster) and the system that simulates the real system would be doubly so.

CAS-epistemic limits become more evident in its sociological models called “Artificial Societies”. The intervention of the modeler/observer here is even more evident in self-reflexive systems that are able to observe themselves, “self-referential” (Luhmann) systems of meaning in which both the constructed nature of the subjects themselves (Foucault) and the structures or social spaces of objective positions where the subjects are located (Bourdieu) cannot be ignored in favor of a mere behaviorist study of patterns of interaction among agents and their resulting and irreducible emergences.

Not No Place: Fragments of Johannesburg

Not No Place is a collage of visual and written fragments on Johannesburg’s historical, archival, archival and found and self-generated. The book is the result of documenting and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, as well as fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of "not no place") to make the city seem more familiar and thus more real.

Mattering Difference Cervical Cancer, HPV Vaccines and Global Health

Vaccines are a contested technology. On the one hand, they have been presented by health policymakers, researchers and practitioners as the most powerful weapon in the war against global disease. On the other hand, vaccines have been an object of criticism and distrust by anti-vaccines social movements. Cervical cancer is a woman's disease in that it is a deeply gendered disease. It has had an important capacity for embodying historical power relations and material conditions of women experience. Cervical Screening programmes and a general improvement in healthcare services in the “developed” world has meant a significant reduction in its incidence and mortality. However, such improvement has not occurred in the “developing” world at the same rate. HPV vaccines dwell between these worlds. HPV vaccines are not only a good case for understanding the convergence of such tensions, but also they make visible new problems such as co-production between gender, technology and disease.

This paper presents the discourses on cervical cancer and vaccines as the framework used in the production of narratives about HPV vaccines. I use the terms politics of disease and politics of prevention in order to describe the arrangements of objects, narratives and institutions that involve the contemporary perceptions on cervical cancer and vaccines. I describe the tensions that make vaccines a contested technology and cervical cancer a marginal disease. On the other hand, cervical cancer has a particular story as a melody associated with poverty and sexual stigma. I discuss the permanence of these narratives in the contemporary policies and practices on cervical cancer and development. Finally, HPV vaccines establish a connection between the worlds of cervical cancer and vaccines. These technologies not only gather such tensions, but also they make visible new problems such as co-production between gender, technology and disease, the development of “anticipated” cure.

The Impact of Fukushima on Evacuation Preparedness in Case of Nuclear Disaster in Slovenia

Kriško Nuclear Power Plant (KNPP) located in Slovenia has met expectations about safety and stability of operation so far. Stress tests conducted by the EU a few months after Fukushima disaster in 132 NPPs in 14 EU member states proved that KNPP was one of the safest installations. However modern technology brings inherent risks therefore failures and accidents are in some way inevitable or even “normal”. The nuclear disaster in Fukushima proved that this can happen in one of the most developed countries in the world. There is no reason to assume that such disaster could not occur elsewhere including KNPP.

Drawing on results of the survey among inhabitants and interviews with the highest representatives of institutions and companies conducted in a 3-kilometre radius around KNPP, the paper seeks to establish the level of preparedness of population, institutions and companies for the evacuation in case of disaster in KNPP. The analysis reveals that despite communication efforts made by the authorities almost three quarters of the population in the potentially most threatened area are not familiar with the locations of reception centres assigned to them in case of disaster, whereas two thirds of them do not know the evacuation routes. The level of preparedness of institutions and companies is also rather low due to fatalistic attitude, and poor nuclear disaster planning, training and coordination. These facts suggest that crisis management actors, including Slovenian military, would face extremely demanding situation in case of nuclear disaster similar to one in Fukushima. The role of the military will be especially scrutinized in this context taking into account previous experiences of military’s involvement in disaster management.

Transnationalization of Labor Mobility Development Trends and Selected Challenges of Its Regulation

Ever since the early development of the industrial mode of production paid employment has been strongly structured by regional or at least national mobility structures until the end of the 20th Century. Ways to the workplace were primarily daily oscillations; spatially varying work assignments concentrated on relatively small groups of experts and construction workers. With the internationalization of value chains, migration and organizations, this picture changed dramatically. Labor mobility becomes transnational for a constantly growing share of the working population. This concerns inner-European labor migration as a crisis-induced labor migration, as well as contract and subcontract work, but also the growing cross-border mobility within profit and non-profit organizations as well as the increase of locally recruited employees who have the nationality of the "parent organization". In our contribution, after conducting an empirical assessment of selected types of new transnational labor mobility, the related challenges of regulating their labor, employment and participation conditions will be discussed. Along with secondary data this paper refers back to the results of a project funded by the German Research Foundation (DFG) on cross-border personnel mobility in organizations.

MALICK, MIRA* (Waseda University, lequin@ruri.waseda.jp)

Leisure based youth subcultures are often depicted and best remembered in the common imagination as the material manifestations that they occupy at the height of their popularity. The styles, behaviors and shared practices of these subcultures are often thought to reflect how participants feel, what they value and the lifestyles they desire. Oftentimes dismissed as mere “fashion fads” or instances of deviance, subcultural participation is characterized and reduced to a passing period of youth to be outgrown or resolved as one moves into adulthood.

Visual Kei refers to an aesthetic movement in Japanese rock music as well as the subculture surrounding the consumption, production and practices of its performers and fans. This paper critiques such notions of subculture as tied to a temporal period of youth by examining the generational shifts and continuous participation that extend well into adulthood from within an established leisure-based subculture such as Visual Kei, which is now in its third generation of practice and (re-)production.

To this end, this paper will compare the difference between each generation of the subculture by focusing on subcultural symbols and how the meaning attached to these symbols (in the form of dress, discourse and performance) transforms over time. It is suggested that these symbols form both the basis of a common shared history that links the members of different generations and at the same time functions as a resource for newer members to utilize creatively, forming a common shared history that links the members of different generations and at the same time functions as a resource for newer members to utilize creatively, forming a common shared history that links the members of different generations and at the same time functions as a resource for newer members to utilize creatively, forming a common shared history that links the members of different generations and at the same time functions as a resource for newer members to utilize creatively.

The article concludes that potent symbols that continue to resonate with the values and orientations of people over time say much about people's feelings regarding larger, hegemonic socio-cultural norms as they do about individual values.

MALINAS, DAVID ANTOINE* (Paris Diderot University, davidmalinas@gmail.com)
Youth and Social Movements In Japan Characteristics Of The Rebellious Youth and Its Mobilization In Japan

Though not as spectacular or massive as in other countries, recent mobilization of the youth in Japan is however a major phenomenon that triggers the attention of the media and the general public. Especially, the mobilization of young non-regular workers since 2000 had a major role in strengthening the national anti-poverty movement. It supported, for instance, the reform of the assistance law and the reform of the temporary workers law.

However, has been anecdotally analyzed or has been simply bypassed by some researchers. As a matter of fact, we still know very little about the social mobilization of the Japanese youth.

By analyzing results of our research focusing on members of the « Union of the Youth of Tokyo », a leading organization of the anti-poverty network, I would like to present new findings concerning two dimensions of this mobilization:

1) What are the characteristics of the young people who mobilize (in terms of age, gender, income and socioprofessional class)
2) What are the characteristics of their mobilization (primo-mobilization or not; short term or long term mobilization).

Our findings are based on quantitative and qualitative data: the archive of the SU (630 entries) and in-death, longitudinal interviews of 50 members that started in 2008, during and after their mobilization in the « Union of the Youth ».

Uneven Development and Social Inequality in American Shrinking Cities: Can the Growing Social and Economic Gap be Narrowed?

The phenomenon of uneven development as a way of differentiating growing and shrinking cities is well-established, but emerging patterns of uneven development within many shrinking cities have been less extensively examined.

With a strong degree of internal variation within United States shrinking cities, these variations have become markedly more pronounced in the past decade. A conjunction of market shifts, demographic trends, and economic pressures have resulted in some areas seeing regeneration at levels not seen for many decades in these cities, while decline appears to be accelerating in other areas. The evidence of central core revitalization on the one hand and the accelerating decline of many traditional single-family neighborhoods on the other is particularly striking, with population growth, job growth and housing market strength increasingly spatially concentrated in the core, leading to a growing polarization of these cities by race and income, and raising important questions of economic and social equity. This paper will begin by summarizing the evidence from research into economic, demographic and racial change over the past decade in a cluster of ten large American shrinking cities including Detroit, St. Louis, and Pitts- burgh.

This paper will explore the challenges and implications for policymaking and governance of this increasing polarization, leading to a proposed conceptual framework for how governmental and NGO actors, particularly community development corporations, can foster more equitable revitalization in American shrinking cities. This framework will address the question of the policy space available for local decision-makers and for environmental, social and political interventions and constraints, and the extent to which in turn dictates rethinking governance roles and responsibilities in shrinking cities.

MALLICK, BISHAWJIT** (Karlsruhe Institute of Technology (KIT), bishawjit.malllick@kit.edu)
Resilient Or Vulnerable? Analyzing Disaster-Triggered Migration Process Of A Tropical Cyclone Prone Coastal Community

The capacity of coping with the effects of a disaster is not only an economic capability; it is also a result of socio-politically constructed vulnerability matter of the survivors. Thus, the migration decision by the disaster victims is not only exogenous; it is a long-term consequence of societal mechanisms that is determined through unequal distribution of resources, opportunities and power. Consequently, the aftermath intervention programs in disaster affected communities succeed to social inequalities – as well as population displacement. Taking this theoretical and conceptual debate into consideration, this paper explores how the aftermath intervention programs influence the community resilience or social vulnerability in coastal Bangladesh? Do such interventions introduce social disparities, and finally, result to a migration-decision of the cyclone victims? Results are derived from a field survey with 1555 respondents. The survey was conducted during 2009 and 2010 in 48 southwest coastal villages; those villages were affected by cyclone Aila. Applying principle component analysis (PCA) in SPSS, a social vulnerability index (SVI) is constructed and then the respondents are classified according to their socio-demographic characteristics. Findings show that socio-politically vulnerable population is proportionately more displaced than the socio-politically resilient population. Thus, it increases the dependency of powerless on the powerful classes in the society.

MALLICK, SAMBIT** (Indian Institute of Technology Guwahati, sambit@iitg.ernet.in)
Contested Proprietary Technology: In Search Of A Non-Proprietary Technology in Agriculture In India

The paper reviews the strategies by the Government of India over time to improve the state of agriculture. The strategies and the institutional and organizational framework within which these strategies were conceived of and implemented though have contributed to improvement in agricultural productivity have led to larger consequences – exclusion of some regions, communities in the region and crops and marginalization of knowledge of those engaged in the cultivation of such crops and their marginalization from the process of development, exasperation of inter-regional and intra-regional socioeconomic disparities, and environmental problems in raising questions of equity, sustainability, justice – attributed as well as cognitive. Further, productivity based on green revolution strategy has
reached a plateau and substantial yield gaps still persist. In this context, modern biotechnology tools having potential to improve crops assume significance. The paper focuses on the potential of non-controversial, genomics-based Marker-Assisted Selection (MAS) technology for addressing biotic and abiotic stresses and yield enhancement in agriculture. As a corollary the institutional, organizational and regulatory issues associated with the development, application and deployment of MAS technology for innovations in agriculture in India are important. In other words, the national innovation system especially with reference to agriculture has to be restructured by establishing productive linkages among public R&D institutions, policy making, regulatory issues and large scale production of products including seed based on MAS. Priority setting with respect to which crops and which traits in a given crop has to be made and adequate resources, physical and human, and institutional and organizational arrangements have to be developed to achieve useful results. Further, MAS is a non-proprietary technology, and hence conflict related to ownership and control will be kept to the minimum. The MAS has the potential to promote more inclusive and user-centered innovations in agriculture in all the regions including rain-fed areas.

Telling the Stories of Disasters Study Juku: A Series of Workshops in 3 Disaster-Affected Areas in Japan

What are the ways that disasters are memorialized, and how are the lessons of disaster transferred to future generations though preserving objects as well as the actual experiences of people who experienced the disaster? The Telling the Stories of Disasters Study Juku is a series of 3 workshops held in 2013, in 3 areas of Japan that have experienced disaster: Tohoku, Chuetsu, and Kobe. Each workshop includes a tour of the local area, with a focus on the way that local institutions pass on the stories of the disaster experience, involving local community members.

In recent years, large natural disasters are happening throughout Japan: in 1995 the Great Hanshin-Awaji Earthquake, in 2004 the Chuetsu Oki Earthquake, and in 2011 the Great East Japan Earthquake. Yet in the disaster area those terrible memories are not being forgotten. Many efforts have begun to preserve and pass down these memories through sharing experiences, items, documents, video, etc., towards the creation of a future society which is stronger against disasters.

The “Telling the Stories of Disasters Study Juku,” visits each disaster area, engages in practical activities related to the collection and preservation of documents in the disaster area, listens to the local people who are involved in passing on the stories of disaster, and learns in the style of a study retreat. Incorporating the discussions of the participants, we consider the ways to pass on the stories of disaster. This paper will review the experience of the Study Juku, along with the different memorialization and disaster storytelling examples from the 3 disaster areas in Japan.

MAMADA, ROBERT* (University of California, Irvine, himamada@hotmail.com)  

A Mathematical Extension Of The Resource Mobilization Approach Of The Social Movement Theory: An Analysis Of The Emergence Of The Arab Spring

This paper proposes a mathematical extension of the Resource Mobilization approach of social movement theory to answer the questions: Why does a particular social movement occur at a certain time of history? Does the social movement inevitably occur at that time? Or is it simply a historical coincidence? Current social movement theories are adept at providing us with the analyses of social structure of social movements; however, many of them, with several exceptions, do not seem to be ready to answer these questions. In this paper, I incorporate the Resource Mobilization approach of the social movement theory into a mathematical model of the propagation of information and attempt to ascertain that the shock wave of information and the subsequent information vacuum are the fundamental driving forces of the emergence of a social movement. This paper suggests how the shock wave and the information vacuum have played a crucial role in the emergence of the protests in Tunisia that ultimately triggered the subsequent Arab Spring. Prior to the emergence of the protests, social networks and social movement organizations have to be prepared so that the shock wave and the information vacuum can propagate in society. Thus, the Resource Mobilization approach paves a road to the emergence of a social movement. But for a movement to emerge, a shock wave and the subsequent information vacuum need to propagate in society because, during the information vacuum, people are attracted into the “field” of the protest, and the subsequent activities are coordinated there. Thus, this paper argues that the combination of the Resource Mobilization approach and the analysis of the propagation of information clarifies the detailed steps of the emergence of a social movement.

I would like to submit my paper for the Best Graduate Student Paper competition.

The Making Of “Homo Financius”: The Emergence Of The Financial Literacy Field In Israel

In the era of financialized capitalism, states not only supervise and regulate financial markets, but also discipline individuals, requiring them to take responsibility for their financial decisions and their current and future economic situation. Attendant to the privatization of risk, varied actors attempt to instill among individuals the knowledge, skills, predispositions and attitudes considered necessary to function as responsible and wise consumers in the financial sphere, thereby creating a capable and reliable “homo financius”. In the last years, the constitutive traits of homo financius are being specified and promoted using and diffusing the concept of financial literacy, which refers to a set of capabilities that are seen as underpinning proper and responsible financial conduct. Based on a detailed process-tracing study, this paper examines the emergence of the new institutional field of financial literacy and analyzes the actor networks and dynamics of the field. In the study, the array of actors populating it, and the various notions and practices that are being formulated, negotiated and institutionalized. The emergence of the field has been the result of interactions among actors responding to numerous changes initiated by state agencies in the local financial system and to the institutionalization of financial literacy as a compelling global standard. Following these developments, new opportunities were created for many and varied actors – both state and non-state – most of them existing before the emergence of this field. These actors propose varied notions and practices of financial literacy, drawing different field boundaries and promoting varying rules of interaction between the actors populating it. Patterns of cooperation and conflict among the actors surface mainly around the establishment and institutionalization of boundaries and rules of this emerging field.

The authors aimed to analyse the typical socio-ecological problems in contemporary Russia, Belarus, Ukraine and Moldova and the main reasons of their appearance in terms of socio-ecological consequences of Chernobyl nuclear disaster. These tragedies - Chernobyl, Russia 1986 and Fukushima, Japan 2011 - have shown that everything people do is not enough to prevent the damage to environment and societies if the country is not nuclear-free. The findings of the expert survey proved the 25-year level of socio-ecological tension in the region of exposure even after 25 years of this event. The data selected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present. Observation, content-analysis of mass-media devoted to ecological problems and expert survey were used during the research. The conception of reflection of ecological environment to social behavior and orientations of different social-demographic groups of population was adapted and developed as well as conception of socio-ecological monitoring and conceptual scheme of origin and development of social-ecological (tension) conflict in Post-Soviet dimension. The conception of reflection of socio-ecological interests in mass behavior of different social communities in transformation was approved. Such important issue as a problem of availability of information on environmental activities is presented. It is characterized by:

- establishment of united federal unified information system on nature protection and environment protection;
- introduction of up to date information technologies and systems into the process of the decision making in the areas of nature use and environment protection;
- provision of state guarantees of public participation in solving of environmental problems, development of effective social partnership;
- organization and implementation of the environmental education of population.

The data selected in the article is derived from the project “Transnational Migration Trajectories of Immigrant Women Professionals in Canada: Strategies of Work and Family” (2009-14), supported by SSHRC through a research grant to Guida Man (PI), Tania Das Gupta (CI), Kiran Mirchandani (CI), and Roxana Ng (CI).

MANALO, MELANE* (Independent Researcher, melenemanaloo@gmail.com)

Education-Inequality Trap: State Contributions to the Vicious Cycle

The education-inequality connection is not only apparent but very strong in the Philippines where discussions of inequality, usually in household incomes, almost always never fail to mention the role education plays in maintaining the wide gap among Filipinos. Conversely, this gap accounts for most of the inequalities in education. If the potential of education to increase incomes and allow access to higher-earning sectors of the economy is limited by one's social standing, the marginalized will remain marginalized, while the dominant and rich fortify their position. Thus, inequalities and education—access to it and its outcomes—form a trap that leads to the reproduction of initial inequalities.

Intervening in this vicious cycle is government. It has a no-tuition policy for basic education levels and operates more than a hundred state universities and colleges. On top of these, it regulates and sets the standards for the whole education sector. Thus, government policies and programs have the potential to define the possible connections between education and initial inequalities.

In this paper, state actions or inactions that strengthen the education-inequality trap are identified through the examination of public policies that impact the education sector in the Philippines. To provide context to the state’s role, this paper also presents the education inequality situation and evidence of the education-inequality connection in the country. This investigation of the different paths through which the state actually prevents some sectors of the population from fully enjoying their right to quality education can aid in understanding the complexity of the policy, political, economic, social and historical environment facing the millennium challenge of “education for all.” Viewing high inequality negatively and not necessarily impedes growth but also restricts people’s exercise of their freedoms, the paper also attempts to partake in the discourse of inequality and its relation to development.
As first order cybernetics deals with observed systems which are teleological and second with observing, which are teleonomical; a third order of cybernetics studies mutually observing systems and are teleological and teleonomical at the same time. A fourth order of cybernetics can also be expounded as the realm of human cognitive systems, which are self-observing systems and have the features of both first and second systems. Third cybernetics has language as a basis, while fourth has cognitive coherence; social cybernetics can be understood as the interplay of third and fourth order cybernetics.
the “choices” made by the system (Bourdieu). In public schools, where most of the students belong to low middle class families, judgments made in this context are predominantly moral, therefore more social than academic. Learning problems are considered as being originated outside of the school. Students’ personal dramas influence grades, their families are also subject to judgment. Teachers’ work is not part of the debate, teaching strategies that promote learning are not discussed, which ultimately leads to school failure. The institution investigated attends middle to upper class students and has been evaluated as one of the best schools in Brazil after several national assessments. How would be the trial in an institution where the student body is already selected socially? It was observed that the evaluation criterion has an academic origin, but the criterion is not strictly academic. Disposition’s considered fundamental at schools of excellence are: docility and academic aptitude (Bourdieu). The social selectivity in this school is a distinctive selectivity. Cutting class will operate in the kind of attitudes towards school, and the possibility of ascension through school. The student desired profile is the middle class one, whose families adhere more easily to the school values, since they have the cultural goodwill as Bourdieu defined.

MANDIC, DANILO* (Harvard University, mandic@fas.harvard.edu)

What role does organized crime play in determining the success of separatist movements? My paper explores the role of organized crime in the separatist movements of Kosovo in Serbia and South Ossetia in Georgia. From 1989-2012, two cases that share remarkable similarities but have generated different outcomes in the level of successfulness of the separatist movement. The crucial difference, I will argue, is that while both Serbia and Georgia were thoroughly criminalized states in the 1990s, the former took negligible and the latter substantive steps towards curbing the extent of organized crime. This crucial difference accounts for Kosovo’s greater success in securing sovereignty compared to South Ossetia’s more limited success. Exploring the relations between separatist movements and organized crime in these two cases sheds light on different opportunities for resource mobilization afforded by criminal enterprises, and on differing strategies of states, crime networks, and separatist movements towards each other.

Cultures of the Future: Habitus, Reflexivity and Capacity to Aspire

Human action, as Schutz observed, is constructed within an imaginative horizon of multiple plans and possibilities. While we move in the temporal domain “with great agility, pirouetting and swiveling to face both past and future, twisting and turning in the knowledge realms of perception, memory and anticipation” (Adam 2004), the sociological understanding of the same process is far from easy. The analysis of the cultural dimensions of projectivity (Mishe 2009) is a very important task cultural sociology has to achieve to understand action and social change.

The imaginative process of projection requires what Appadurai (2004) calls “capacity to aspire” that is to say the set of cultural resources shaping the ability to project into the future. In this presentation I try to explore the very complex “capacity to aspire” that is to say the set of cultural resources shaping the ability to project into the future. In this presentation I try to explore the very complex performative dimension of these rites of institution, that is, on how status and social roles are assigned to participants in these rituals. Drawing evidence from ethnographic observations and from interviews that I conducted, I will study the sequencing of these rituals and the verbal and non-verbal performative practices that happen during these rituals, as well as the representations of the participants related to them. Thus, I will consider what social conditions allow for effective performance.

MANFREDO, MARIA TERESA* (Universidade Estadual de Campinas, manfredomt@gmail.com)

Reflections on a Rural Community Traversed By the Process of Globalization: The Case of the Tupé Reserve (Amazon, Brazil)

This paper aims to present preliminary results of a PhD research that focuses on the dynamics of social relations of rural population living in a sustainable development reserve, the Tupé Reserve (Manaus-Amazon, Brazil). In this area, which is located on a regional reserve, a new project of sustainable development was launched in 2009, featuring a reserve – an uprooted space geared towards international luxury tourism. In this context, specific elements of the globalization process are involved, such as financial (global and regional), touristic and political interests. The Tupé Reserve appears as an arena of interaction among several actors, being a bridge between production and consumer, and new lifestyles in which imagieries, values and worldviews are shared. Thus, the social relations therein are no longer constrained by the local context of interaction, as various forces (local, national and global) are at stake. These, far from being seen as happenings put as part of a dialectical process of socialization of a particular culture. In short, we propose a paper that discusses the effects and constraints of the transformations and conflicts in the relations between global
social changes and local reality, its cultural representations, and identities of the people who live there. The question of how, and to what extent rural communities produce, and are made by, globalization is central to our work. Therefore, we are led to discuss, among other things, the vitality and renewal of topics related to rural communities.

Seeing Both the Trees and the Forest: Closure and Social Capital in the Indian Interorganizational Network

The Indian economic context is characterized by the importance of business communities such as the Parsis or Gujarathis. These communities enable trust and norms in interorganizational transactions, and substitute for weak legal institutions. Current research in the interorganizational network context has focused on closure in the local network, and does not do as well in explaining how trust and norms can be maintained within large communities. We go back to the original Colemanian conceptualization of closure and social capital which describes the operation of trust and norms in large communities. In addition, this theory emphasizes the importance of closed structures and also the importance of having “good standing” with closed structures. Hence the theory is two dimensional, and has a positional and structural element. Current interpretations conceptualize closure as a closed triad, but this conceptualization is reductive, and (a) reduces the collective element of closure to a property of actors’ local network, and (b) loses the second positional element of Coleman’s theory. We rely on the latest advances in network methodology and a complete population network of Indian firms to look at macro closure, and position of the actor within macro closed structures. Using this macro conceptualization of social capital, we find evidence for both the structural and positional dimension of Coleman’s theory.

MANKY BONILLA, WALTER OMAR* (Cornell University, wmb264@cornell.edu)

In 1993, Peru experienced one of the most radical neoliberal reforms in Latin America. In its attempt to attract international investors, the government deregulated the labor market, undermined labor rights and created a non-interventionist legal environment for collective bargaining. As a result, the number of unions, strikes and collective agreements fell dramatically, while the labor movement almost disappeared. Nowadays, Peru is the Latin American country with the best economic projections—in spite of its increasing inequalities—it is the second world producer of copper and silver, and multinational corporations control 85% of the country’s mineral resources.

In this context, miners have mobilized to get better salaries and working conditions, and have started organizing to bargaining with global mining companies. Most of the studies about these efforts have focused on the contention between labor and capital—particularly within specific workplaces—but have overlooked the role that State has in the dynamics and outcomes of the collective bargaining and the labor conflicts.

Using unique quantitative data of all the state’s interventions in the mining industry’s collective bargaining between 1993 and 2012, as well as qualitative evidence of two in-depth case studies, this paper analyzes the role of the state in the configuration and outcomes of labor disputes. The study shows that, in spite of the commonplace ideas about the “neoliberal state” and its pro-employer tendencies, Peruvian workers have been able to engage in face-to-face negotiations with public workers and politicians in order to confront global companies. This paper offers a typology of the main negotiation mechanisms between state and labor unions; analyzes their main differences with previous strategies used by workers’ organizations; and discusses its implications for a theory of the relationship between the labor movement, the state and the global capitalism in Latin America.

Negotiating the Margins: The Trajectories of Subcontracting Laws in Peru and Chile. the Case of the Mining Industry

In spite of their different development levels, Peru and Chile have several elements in common. In both cases the basic principles of the neoliberal reforms have persisted—in contrast with the political transformations of other Latin American countries—mining is the most important economic activity; and more than 70% of this industry’s workforce is subcontracted. As in other societies, this labor market segmentation has produced precarious employment, from which global companies have largely benefited in the last thirty years.

Additionally, both countries experienced the biggest and longest strikes since their return to democracy in the last decade, and in both cases subcontracted miners worked organized the main mobilizations. Although miners were not the only group claiming for a reform in the labor legislation, because of the industry’s importance, they were the most visible and powerful one. As a result, both countries changed some parts of their subcontracting laws in the last years.

Based on a comparison between Peru and Chile, this study analyzes the relationship between workers’ mobilizations and labor law’s trajectories. Whereas previous studies have focused on how workers struggle, this one attempts to explain and theorize the results of that contention. Using news clips, legal archives and interviews to union leaders, the study argues that, in spite of the similarities between their contexts, workers’ mobilizations produced divergent outcomes. In Chile, state-controlled workers organized their own national federation, which helped them to build a strong identity, whereas in Peru the traditional mining federation rapidly absorbed workers’ struggles, making them unable to unify their demands in a national scale. I suggest that the networks and structures of the subcontracted workers’ organizations affected the reforms they got: restrictive in Peru—they are not for all the workers in the industry—and more inclusive in Chile.

DSM V, a Sociological View

What does sociology have to say about the DSM? Sociology as a discipline has two approaches to analyzing a classification system such as the DSM. Looked at as an object of sociological study, questions and observations are about the way in which this is connected to general patterns of social structure and social action. For example, how do the organizations function that produce the DSM? How do they produce the DSM? What are their sources of income and power? How do they change? And how does the DSM function in relation to them? A second sociological approach is to accept the general priorities of a field which is committed to some particular outcome and to try to bring sociological knowledge to bear on its problems. From this point of view, sociology could be used to try to help or improve the process of producing a classification system such as the DSM. Sociological analysis of how the DSM is produced, the way it functions in research and clinical practice and its relation to the nature of knowledge and medical care could all have been incorporated into a DSM that is developed. The DSM has not happened, and I shall argue that this has resulted in the very substantial failure of the DSM to work. In this paper, I will analyse the nature of the DSM as a classification system and its performance. Secondly I will examine the way in which the DSM became rapidly and widely accepted. Thirdly I will advance some general explanations of the way DSM has been produced and the functions it performs.

Highly-Skilled Immigrant Women’s Labor Market Access: A Comparison of Indians in the United States and North Africans in France

Using the concept of cumulative dis/advantage, this paper examines how early dis/advantage in immigration generates barriers to and/or pathways by which highly-skilled North African and Tamil (an Indian regional group) immigrant women access professional labor markets in France and the U.S. respectively. It draws on ethnographic projects with North Africans in France and with Tamils in Atlanta, Georgia.

It finds that despite their more advantageous position upon immigration—student migrants, single women, and French-style North African educational qualifications—North African women experience barriers in accessing skilled work — difficulties with French work-authorizations, temporary work contracts, lack of professional networks and of local work experience. They therefore strategically work in skilled-technical, low-wage capacities or in the ethnic economy. In contrast, Tamil women’s immigration is marked by early disadvantages—their legal status as “dependent” wives, the non-transfer of Indian credentials and responsibilities for care work—that contribute to their de-skilling. In response, they strategize through the pathway of gradual ascent — moving from low-wage to high-wage work; (re)education and direct entry; and skilled entrepreneurial work to successfully access highly-skilled work.

Four mechanisms explain these divergent outcomes—education-work experience nexus, interactive effects of local labor markets and immigration policy, social capital in classed social networks, and racialization. For Tamil women, the cumulative effects of these converts their early disadvantages to “contingent advantage” resulting in them becoming highly-paid professionals in America. For North African women, these contribute to the erosion of their early advantages leading to their “categorical disadvantage”- long-term confinement to low-wage work with few ladders into the primary labor market in France. Therefore the...
downward mobility associated with skilled immigrant women is not universal, as is often theorized, but relational across national contexts such that some groups are more successful than others in accessing skilled work.

MANSOURI, VALI* (George Mason University, vmansouri@masonlive.gmu.edu)  
**Similar Roots and Diverging Outcomes: Uprising and Revolution in Iran and Egypt**  
Recent uprisings in the Middle East have increasingly been characterized by spontaneous mobilization, decentralization, and the lack of dominating charismatic leadership. This research will demonstrate the salience of Horizontalism in constructing and contrasting the Iranian Green Movement of 2009 with the Egyptian Revolution that started in 2011 through the use of Ideal types. Attention is devoted to assessing the strengths and added resilience of these decentralized movements against their Authoritarian states. Analysis through identification of different processes leading to variations on success, stalemate and repression, this will build on previous studies of revolutions to better understand contemporary social and political change.

The Green Movement, despite months of sustained mass protest and delegitimizing the government, solicited little to no concessions or change from the state, while the Egyptian Revolution within only 18 days was able to topple the head of state, ushering in a struggle for the future polity between shifting alliances and elements of the old regime. Identifying key political institutional arrangements illuminates potential vulnerability or resilience to uprising. Construction of state is key, in the case of Egypt there is a coexistence of diffusion of centers of power in institutions such as the Supreme Leader, the government and Revolutionary Guards, combined with limited but competitive elections allow for flexibility, making for added resilient state. On the other hand Mubarak’s National Democratic Party (NDP) of Egypt was more closely characterized by Patronymial bureaucratic rule, which led to competition and conflicts in interest between NDP members and affiliates who rose since the Infitah and the Supreme Council of the Armed Forces (SCAF). By looking at these social uprisings and the changing states will help to explain the current divergent and potential directions of these two movements and their future.

**Patterns of ICTs Using and Information Flow: A Study of Rural India**  
Patterns of ICTs Using and Information Flow: A Study of Rural India  
*patterns of ICTs using and information flow: a study of rural India*  
**ABSTRACT**  
Information and communication technologies (ICTs) are widely acknowledged as important resources in all the aspects of socioeconomic development and this is especially articulated in national policies. Among developing countries, this perspective incorporates ICTs into the development agenda because of their relevance in transforming human activities and in presenting new opportunities for economic growth. Even if ICTs appear ubiquitous in this day and age, it still exists, the growing presence of digital divide and social exclusion. A considerable number of marginalized groups, such as rural folk, women, and low-income youth remain unaffected by the benefits ICTs are supposed to offer. The vision of a so-called “information society for all” as stated in both developed and developing countries’ ICT policy documents today does not apparently include “all” (Chiumbu 2008).

This paper presents the patterns of people’s ICTs using and information flow perceived in India, especially in the rural areas. India is a country of multiple divides as social and economic divides already exists in the country and now with the emergence of new ICTs new divisions are shaped on the basis of many factors involved in its use and access. Today growing ICTs and the telecommunication in country has given opportunities to the excluded sections to be part of this new information society. But the impact of ICTs in rural areas is still very limited, despite its penetration into every corner of modern life. There is need of relatively good flow of information and special skills to make full use of ICTs for socio-economic gains.

MANZENREITER, WOLFRAM* (University of Vienna, wolfram.manzenreiter@univie.ac.at)  
**Homeless Diaspora: The Impact of Return Migration on Latin American Japanese Communities**  
Currently more than 2.5 million Americans living on the South and North American continents are Nikkei or descendants of Japanese migrants. The history of their departure/return migration and their dispersed schooling generation. Their interest in issues of living in the diaspora, the meaning of ethnicity and citizenship has been renewed by the recent wave of sojourner migration by Latin Americans of Japanese origin into Japan. Virtually nothing is known so far about the impact of “return migration” and the “returnees’ remigration” on the diaspora in Latin America. To what degree have ideas of ethnic or political loyalties, and national and cultural identity been shifting one way or the other due to the increased proximity to their ancestors’ place of origin and the influx of material and immaterial goods from Japan? And how have narratives on the experience of hostile or discriminatory treatment by the Japanese impacted on the collective image of the Nikkei in Latin America? The Nikkei return home migration, to the land of their ancestors, has not fulfilled the postulated ‘negation of a diaspora’ (Clifford 1994), it has squared the sensation of being diasporic in the sense of being displaced twice and having multiple relationships with distinct nations which are neither just homeland nor hostland. Based on multi-sited fieldwork in Japan, Argentina, Bolivia, and Paraguay, I argue that the Nikkei are entangled in a squared diaspora in which the juxtaposition of homeland and hostland itself becomes questionable, instable and fluctuating.

MANZO, LIDIA K.C.* (University of Trento, lidia.manzo@gmail.com)  
**Community Politics and the Middle-Class Desire for Diversity and Difference. Evidence from 40 Years-Span of (super)Gentrification in Brooklyn’s Park Slope**  
The transformation of New York City into a global corporate city and the consequences of boom effects on small firms and on dwindling employment opportunities for some and to exacerbate displacement problems for others. By encouraging suburban home ownership, discouraging rental housing construction, and upwardly redistributing income through federal and municipal tax policies, Brooklyn’s Park Slope, at the beginning of the 1970s faced a racial and tenure status division between its neighborhood residents. Reform institutions emerged from neighborhood civic organizations and broad-based interest groups.

Drawing the evolution of its demographic and housing resettlement, I found that different social groups had different class interests and ideologies and therefore they were differently affected by abandonment and resettlement processes. The involvements and influence in community politics of twenty community organizations were analyzed through archival and bibliographic researches from the late 1960s to the present time; among them four historical institutions – which still exist - and four more recent ones, were followed through the ethnographic activities and other researches and are reported in this work. There is, in fact, a social and ‘moral pluralism’ to understand (Schumaker 2013), especially when a neighborhood has been dealing with racial, ethnic, class, and religious changes.

This longitudinal study on the process of Park Slope super gentrification investigates the middle class’ desire for diversity and difference (Lees et al, 2000), as well as the influences of housing-abortion and resettlement processes on 1) the types of institutions that emerged to represent different class interests; 2) the types of social groups that came to inhabit the neighborhood; 3) the pattern of that emergence over time; 4) the particular goals, scope, and strategies that these organizations evolved; and 5) developmental changes in the relationships between local institutions, government agencies, and private investors.

MANZO, LIDIA K.C.* (University of Trento, lidia.manzo@gmail.com)  
**Cool Streets: Attitude or Commodification? What - and Who - Is Driving Gentrification Along Two Changing Boulevards in Milan and Brooklyn**  
Streets do possess attitude. What usually community preservationists define as ‘spirit’ or the ‘soul of place’, here is re-interpreted both in terms of design attractiveness - human scaled, fine grained, mixed use, or highly walkable – and urban lifestyles (Jacobs 1989, Zukin 1995, 1998, 2010, Parham 2012). Especially during a gentrification process, we can discuss how streets embodied essential elements of ‘coolness’ – showing off trendy styles and great flavors - which seems a reflection of the commodification of cultural production.

In using the concept of tool as a frame of understanding it as a cultural category in its own right (Pountain and Robins 2000) – this work explores the way gentrification interconnects with the development of an individual habitus as a
Spatial manifestation in which the street coolness is crucial to the construction of stylish individual personae. This exploratory paper describes the relationship between aesthetics, symbiotic meanings, understandings of street character, and patterns of socio-spatial change on local shopping boulevards in two neighborhoods - Milan and Brooklyn - which are discussed in terms of financial speculation and gentrification. These neighborhoods, once considered a symbol of blight in the 1970s, today are one of the most appreciated places for Milan and New York's wealthy and educated people. As I have observed, their street practices sometimes overlapped with working class poor-people's supersifications and sometimes do not. However, with hip bars and cafés, used-books stores, yoga studios, and renovated townhouses, they are 'no longer regarded by the public as blighted, but instead are both celebrated as sites of cultural consumption for a new middle class' (Ossman 2011-8).

Drawing on several years of field research (2007-2013), empirical quantitative and ethnographic data on the current, and historical aesthetic characteristics as well as types of stores, and value-creating practices are considered.

**South Africa within Brics: Emerging Society and Sociological Discourse**

The formation of the BRICS contingent opened up new political and economic debates and discourses. The BRICS members are all developing or newly industrialised countries, and they are distinguished by their large, fast-growing economies and significant commitments to financial speculation and geopolitical projects. In 2010, South Africa was the last country joined the BRICS and currently holds the Chair of the Group. Against the afore-mentioned background, as well as South Africa's strategic position in Africa, facets of the social structure as well as critical processes act as key drivers for social change in the country as well as parts of Africa, and simultaneously, provide the platform for rigorous sociological discourse.

Consequently, this paper aims to – in terms of social structure – critically analyse the political, economic, educational and health institutions of South Africa, and the differences and similarities within the broader BRICS contingency. Macro level issues, for example good governance, democracy and social services, developmental state, economic growth and policies, development programmes and projects, literacy and access to education, crises in the health sector (HIV/AIDS, etc.), as well as other issues related to sustainability will be touched on. Interwoven with the above-mentioned, the normative component of culture, namely values, norms and sanctions will also be part of the picture.

Closely linked to social structure, the following critical processes will in an integrative way be put under the magnifying lens, against the BRICS background: ideological reconciliation, nation-building, economic transition, nationalisation, migration, globalisation and post-globalisation.

In the final instance, the paper will sought to – from the South African perspective – analyse the contingency (BRICS) as a whole and the role of South Africa within it, specifically in terms of participation (e.g. politically, economically, culturally and militarily), autonomy, inter-dependence, and a designated leader role in certain parts of the world.

**Can the Racialised Other ‘Belong’? Rethinking Race, Racism and Belonging in Australia – Perceptions of Skilled Black African Migrants**

This paper centres the perspectives of a group of black skilled African migrants to interrogate the notion of ‘belonging’ within the Australian context. Specifically, the paper explores how participants’ constructions of belonging are grounded in narratives (and experiences) of racism, racialisation and racial discrimination. There is a significant body of work that explores the migrant’s experiences of racism, racialisation and racial discrimination in narratives (and experiences) of otherness’ evoke feelings of the perpetual stranger or outsider who does not belong. We therefore interpret the participants’ perceptions of belonging as exposing an ‘other’ paradox of skilled migration: where feelings of being ‘needed’ (invited) into Australia to fulfill an identified ‘need’ in the labour market co-exist with experiences of discrimination to construct an ‘other’ who simultaneously belongs and does not belong. In the end, while the discussions in this paper are mainly concerned with belonging as subjective, personal and emotional attachment to particular groups and constructs of home, they also expose the power relations, contestations and complexities inherent in the notion of ‘belonging’ particularly when one has to contend with racism and racial discrimination persistently and consistently.

**Social Innovation in the Housing Policy in Spain**

The context of this research is the economic and financial crisis that has had the effect of exponentially increasing unemployment and evictions across the country. This research has one general objective, and two more specific objectives. The general objective is to develop the analysis of social innovation in the area of housing to solve the problem of housing, both in public and private. The first specific objective is to understand the new models of housing as a result of social innovation, and the second is to evaluate the policy of social housing in Spain, after the beginning of the crisis (2008) to the present. The first specific objective is to review the scientific literature in order to find successful actions at the international level in the fight against the loss of housing that have allowed more people, belonging to the most disadvantaged social groups, to have adequate housing. The second and final specific objective is to identify if there is a presence of some of these successful actions in the field of housing in the context of Barcelona, where I place this research, and how social movements have influenced the implementation of these initiatives. The results show that there has been a change in housing policy and citizenship, and crucially contributed substantially to this change through innovative solutions and social pressure towards the Spanish political system. The innovation introduced by the social movements are both at the individual level (processes of financial literacy, empowerment, deliberation and participation) and at the civil society level (collective action, collaboration with organization promoting new models of housing, such as cooperatives). These innovations have open a new path for the future development of the housing policy in Spain and also has turned civil society more powerful and a significant actor in the dialogue with the State institutions.

**Female Migration in Greece and Integration Issues: Access to Welfare System and Political Participation**

Greece has turned in recent years into an immigration region. While immigration started in the early 1980s, it was only in the early 1990s that significant numbers of economic migrants started arriving and became a new destination country. An additional important feature of the immigration process in Greece is the large proportion of women who migrate alone in search of employment. With regard to the integration problem of migrant women many studies in the last few decades have shown that women have difficulties to integrate. This research is carried out in the context of the current crisis which has put women from social goods and welfare national system and the non-active participation in social and political life in the countries of residence are of paramount importance. Furthermore, the access to welfare goods is associated with citizenship, while social security and health system use are key in the early 2010s in particularly to measure the degree of social integration of transnational migrants. At the same time, active political participation highlights the level of their integration.

In the context of the problematic for the social integration of women migrants in new immigration countries a nation-wide survey on a sample of 600 economic migrant women who had residence and work permit was held by EKKE (National Centre for Social Research) in 2010. This paper refers to some issues related to the integration of women migrants in our country on the results of the above survey. More concretely we will analyze the access of migrant women to social - welfare services, investigating issues related to social security - coverage and the use of public health services. We will also discuss the interest of immigrant women in political life, and their participation in collective political activities and organizational schemes.

L’accroissement des emplois atypiques au cours des années 1990 a-ce...
The meaning of transparency is seemingly obvious and simple, however, in political terms transparency is more "the condition of being transparent". It arises in opposition to corruption, secrecy and lack of clarity in the management of organizations and institutions. Today, it is more relevant than ever as a consequence of all kinds of recent scandals. Citizens of democratic societies demand a more open and transparent government.

This requisite of transparency is a political goal, which is supported by the possibilities for openness produced by the microelectronics revolution. This has modified the technological, social and political scenarios. It is more than the Internet; it is also the global ICT system where available information is increasing daily, as are the possibilities of accessing and processing data.

In this context this paper proposes, first, an analysis of public policies according to the principle of traceability of decisions. This means that it is possible to identify the full cycle of a public policy and its relationship with the different actors of decision in the policymaking process. Second, imitating food processing traceability tools, it is possible to propose a "policies processing software" for recording all the traces of public decisions and an open system to retrieve and access this data. Third, it describes the theoretical conditions and prerequisites for a "barcode" to reveal who proposed an action and how it was designed, implemented and evaluated.

*Is There a Unified Recipe to Predict Civic Engagement? Comparisons of 47 European Countries*

This presentation is focused on comparative framework of civic engagement in contemporary Europe. The database of the European Values Study (2008) is used as a main set of information, though some indexes (e.g., World Bank's, Free-dom House' indicators) are used as a supplementary source. The scope of the research takes into account 47 countries. Civic engagement is conceptualized in three aspects: cognition, motivation and actions. Each of these aspects has the following elements that influence each other: (1) content and actors of civic engagement in Europe and (2) factors that shape civic engagement in its two parts, namely Post-Socialist and developed Europe. In such a way, the main idea of the paper is to clarify whether in the latter prevail contextual, external factors, while individual factors of civic engagement are more important in the former. Thus, the levels of analysis include both individual and country, main methods are correlational and regres-sional analysis. The research is implemented individually under the guidance of Laboratory for Comparative Social Research in the National Research University “Higher School of Economics”, Russia.

*Hasidic Pilgrimage As a Cultural Performance: Challenges and Opportunities*

This presentation deals with the research of Hasidic pilgrimage in nowadays Ukraine on the examples of two settlements, Uman and Medzhybizh. The research is aimed to shed light upon the Hasidic pilgrimage through the lens of cultural sociology and the theory of “cultural performance” elaborated by Jeffrey Alexander as the most suitable theoretical and methodological tools in the analyses of this issue. Despite long standing historical prerequisites, Hasidic pilgrimage is still a new issue in Post-Soviet Ukraine which has become a special “core” in the world context. The understanding of performativity in the issue helps unveil the stable and emerging elements, as well as show the most problematic areas and possible consequences. It is shown that the Hasidic pilgrimage in Ukraine does possess certain features of different elements of a successful cultural performance: collective representations (as well as background symbols and scripts), actors, means of symbolic production, mise-en-scene, power and audiences. Research methods (which included visual observation, media documents analysis and interviewing) help outline and analyze typical resources, lines of communication and possible conflict areas both in time (2009-2012) and space (two mentioned settlements) perspectives. The author pays attention that the Hasidic pilgrimage is far from becoming an established phenomenon with defined areas of sacred and profane in the contemporary Ukrainian society, though it is constantly bringing new challenges and opportunities.

*Openness, Transparency and Traceability of Public Policies*

The paper focuses on first generation immigrants who arrive to Sweden in the later school years. This group of students is at a major disadvantage compared to native students as well as to second generation immigrants and even to first generation immigrants who arrive before school entry. Statistics imply that a low number of “late arrived students” enter upper secondary education, and of those who do the drop-out rate is high. The educational gap between young students in Sweden is thus increasing, creating larger social inequalities between natives and children of recent immigrants. The review will touch upon conceptual, empirical, and methodological issues involved with the study of multigenerational effects; the interdependence of stratification and demographic processes (including two-sex marriage markets, assortative mating, fertility, and mortality); and how geographic and spatial mobility contribute to socioeconomic and other forms of spatial segregation. The paper will use empirical examples from the author's own research on China, Sweden, and the United States, as well as related work by other researchers.
The restrictive Assisted Reproductive Technology (ART) laws and ‘moral safety valves’ in Singapore and their role in creating Singaporean reproductive tourists or exiles

The paper analyses why some Singaporeans are crossing borders to avail of Assisted Reproductive Technology (ART) treatments like In Vitro Fertilization (IVF), Pre-implantation Genetic Diagnosis (PGD), surrogacy, et cetera. A major factor that hinders or discourages couples from getting ART treatments in Singapore is the Bioethics Advisory Committee’s (BAC) strict regulations on ARTs—one of the most stringent in Asia. Formed as Singapore’s counterpart to the UK’s Human Fertilisation and Embryology Authority (HFEA), the BAC prohibits certain technologies like surrogacy, PGD for sex selection as well as ‘race or traits shopping’ through selection of egg and sperm donors. It also does not allow access to certain people, gay and lesbian, women over 40-45, singles, and women who cannot gestate. The BAC’s ban on donor payments, reveals a logic of racial hierarchy that perpetuates a local versus outsider divide at the guise of protecting ‘weaker classes’ and ‘not importing Singapore’s fertility issues into other nations’.

As a result of the BAC’s ban on donor payments, there is a huge sperm and egg cell deficit in the country. Many Singaporeans do not want to donate or acquire genetic material within the small city-state for fear of incest or custody issues. Internet is enabling many to circumvent these ‘moral safety valves’ that the BAC had set in place. In the case of Singaporean patients, Singaporean doctors’ perspective of how city marketing operates in daily business and a critical, independent opinion about the ‘outcomes’ of these efforts could be achieved. In addition, local archives have been combed out to discover how different campaigns are promoted and negotiation processes draw light on the local ‘urban imagery’ (Strauss 1960).

The presentation is focusing on the image production of two globally intertwined cities: Frankfurt, Germany and Singapore, UK. Throughout several fieldtrips, city marketing leaders are leading to the creation of a new media landscape. Therefore doctors’ perspective of how city marketing operates in daily business and a critical, independent opinion about the ‘outcomes’ of these efforts could be achieved. In addition, local archives have been combed out to discover how different campaigns are promoted and negotiation processes draw light on the local ‘urban imagery’ (Strauss 1960).

The rules of market exchange do not only distribute the value added (Gereffi, 1994) but also reduce uncertainty and control opportunism in business partners’ relationships (Kelly, 1991). In Russia in the 2000s retailer-supplier contracts included different requirements such as pricing and bonus requirements of retailers, unpaid services and penalties to retailers, compensation for retailers’ services. Those requirements made the behaviour of business partners predictable. But in 2009 the trade law was passed and the most of the requirements must be excluded from the retailer-supplier contracts. Nevertheless, the business partners still reduce uncertainty and control opportunism in their relationships even in the new contracts. The objective of this research is to analyze how retailers and suppliers altered their rules of exchange after the political intervention. The empirical data are two quantitative surveys that were carried out in 2007 and 2010. About 500 managers were questioned in Moscow, Saint-Petersburg, Ekaterinburg, Novosibirsk and Tyumen. The half of them are retailers and the others are suppliers. The findings demonstrate that after the enactment of the trade law the most of unallowed requirements were excluded from the retailer-supplier contracts but they are still used as separate contracts. This practice gives the business partners an opportunity to make each other’s behaviour predictable in the new conditions. Retailers and suppliers also continue to discuss the content of the political intervention and the consequences of its application.

Organized Hypocrisy – Disorganized Technocracy: The Assumed Retreat of Politics in Contemporary Governance in Historical Comparison

Today, it is widely assumed that a power shift has taken place over the past few decades – a shift away from politics and in favor of the market. According to this view, neo-liberalism has since the 1970s and onwards reduced the scope of “the political”, limiting the exercise of public power in general and planning in particular.

Despite this assumed retreat of politics, politics is still, at least medially and rhetorically, tasked with providing some guidance for the future, based on scientific evidence, and to generate tangible results in a logic of input and output legitimacy (Scharpf 1999). Public power is still held accountable as if it possessed the power which is by now to have been lost. Political control is still to achieve results as if it would be possible to exercise public power without the use of planning, raising the question: Why do we expect more from politics at a time when it is supposedly able to do less?

This paper proposes that this conundrum – which could be seen as an organized form of hypocrisy (openness) coexisting with an increasingly disorganized form of technocracy (transparency), to paraphrase Nils Brunsson (2002) – can be analyzed by confronting Karl Popper’s concept of “open society” with Gunnar Myrdal’s notion of “constructive social engineering” and Karl Polanyi’s concept of “double movement”, as generated in the context of pitted conflict between laissez-faire liberalism, totalitarianism, and democratic socialism of the 1930s and 1940s, a conflict which in some ways resemble the contemporary contest be-

Rethinking Environmental Movements In Developing Nations: The Case Of Cameroon

Conventional wisdom holds that citizens of developing nations rarely participate in movements similar to the “mainstream” environmental movements of the developed world. Instead, like dispossessed groups in developed countries, their mobilization generally takes the form of locally based, confrontational responses to direct threats to their livelihoods and health. A large literature examines such movements, but it generally ignores developing nations where such mobilization is infrequent. This paper examines the case of Cameroon, where mobilization of large numbers of citizens for confrontation with government or business interests over environmental issues has been limited and infrequent. Our data come from an extensive literature search and interviews with 52 NGO leaders from five of Cameroon’s ten regions. We conclude that the relative absence of large scale, clear, and immediate threats to the livelihoods or health of large numbers of citizens, in combination with a resilient, quasi-authoritarian government characterized by patronage, divide and conquer strategies, and mild repression, have mitigated against such movements. Cameroon does, however, possess scores of NGOs and citizens’ groups that address environmental problems through lobbying, public education, and concrete projects to protect the environment. Although they lack a mass support base, they do enjoy significant support. Their accomplishments are real, especially in relation to the obstacles they face; however, they are severely limited by lack of funds, expertise, and equipment. Factors cited above, combined with heavy reliance by the most successful NGOs on funding from international environmental NGOs and international aid agencies, predispose them to avoid confrontation, and only a few engage in it. Our findings suggest that conventional wisdom about environmental movements in developing countries represents a considerable oversimplification and that environmental action can assume diverse forms in developing nations. It also raises important questions about how environmental movements are to be defined, which we explore in the conclusion.
between neoliberalism, progressivism, and traditionalist backlash but also provide some instructive contrast.

Shaping the Things to Come: Concepts of Planning and European Modernity

Planning—in the sense of purposive action geared towards the anticipated future—has usually been seen by anthropologists and social psychologists as a characteristic of universal human reason. As a specific socio-political practice and scientific theory, however, historians and social theorists have often identified planning as a specific trait of European (Western) modernity, for better and for worse.

This classic analysis of scientific social and political planning speaking of politicians, revolutionaries, reformers, and scientists infatuated with the success of the natural sciences, dreaming of a brand new world. According to this view, the social sciences would be as closely integrated with politics as the natural sciences had already been adopted by business, medicine, and the military. In some more extreme “technocratic” interpretations, planning and science would eventually replace politics altogether.

Either planning has been seen as a largely technologically determined, if not outright “neutral” response to the complexity of the modern world. Or, more commonly, it has been criticized as a misguided attempt at controlling human relations and social circumstances in the same way as humans have sought to control nature. As such, planning is a key concept in European modernity. However, the many applications and diversification of planning belie any simple categorization, making it an appropriate topic for conceptual historical analysis.

Yet, it is a key concept whose historical trajectory is yet to be written. This paper maps out points of disruption between the historiography of concepts of planning, such as cybernetics, management, planning, rationalization, social engineering, and technocracy on the one hand, and the actual historical usage of these concepts on the other. Thereby, the paper brings previously isolated historical and theoretical strands into dialogue with one another with a view of initializing a new take on “critical planning studies”.

Foundational Political Myths in Divided Societies: The Case of Montenegro

This paper provides an analysis of the constitutive role of founding myths in the formation of nation-states. In particular, it aims to elucidate the odd cases of identity formation in complex and ethnically divided societies where, it is argued here, the historical and cultural legacies are passed on rather differently than in the case of homogeneous societies mostly analysed in the literature on political mythology. With the intention to submit a phenomenon that belongs to the family of the most basic and yet arcane and essentially contested concepts of political theory and political culture to an impartial political investigation, the founding myth is first reconstructed with respect to the general theory of myth and political myth. In the second part, the role of mythological legacy in the genesis of the statehood of Montenegro both in the past and present is analysed. The author argues there are two founding narratives in Montenegro, explains their ethno-nationalist character and attempts to deduce patterns of their instrumentalization by the rulers of the Petrovic-Njegos dynasty and the current government. The paper ends with concluding remarks about the controversial status of competitive foundational mythology and the need to set forth new and republicanized forms of legitimisation that would disengage the regressive dialectics induced by the myths discussed thus far.

Post-Nationalism in Practice: European Citizens’ Initiative

The discussion on the practical and heuristic value of cosmopolitanism and post-nationalism has informed and shaped the debate on the future of the European Union from the Maastricht Treaty onwards. The recent literature on belonging, allegiance and political identity suggests that cosmopolitanism is too thin of a concept to account for the gradual emergence of a common European public space visible primarily in the convergence of the EU’s civil society movements. In this context, the notion of “constitutional patriotism” is analyzed due to its centrality in the debate. Before proceeding to the central part of the paper, the author argues that social constructivism portrays a more realistic and substantive picture of the nature of the sense of European belonging. The paper concludes with an examination of the European Citizens’ Initiative and attempts to assess to what extent this institutional novelty of direct democracy in the EU has provided empirical leverage for post-nationalist belonging. Through the comparative and case study analysis of the most paradigmatic initiatives submitted thus far, this investigation aims to provide the reader with a possible dynamics of post-national identification in the EU.

When Art Worlds Look to Sociology for Inspiration: A Case Study of Contemporary Art Conservation Strategies

Recent scholarship in cultural sociology has provided new theoretical frameworks and methodological strategies for studying diverse (and sometimes incomensurable) value systems (Boltanski and Thevenot 2005, Heinich 2008). This paper examines the relevance of trends in the sociology of values (or pragmatic sociology) in a case study of recent international initiatives involved with the development of new approaches to contemporary artistic heritage conservation. The paper presents research on the activities of four international initiatives devoted to the development of new strategies for the preservation of artistic heritage. The paper examines how contemporary art conservation networks are attempting to grapple with the increasing realization that diverse value systems and multiple meanings of the arts they care for can be taken into account in new visions of the role of conservators in the preservation of artistic heritage. It examines recent trends in conservation research, in particular the efforts of art conservators to adopt sociological methods and theories for inspiration. Conservators have become increasingly involved with research about the ‘meaning’ of objects and cultural heritage sites when planning interventions. They study records of the creator’s intent, conduct interviews with artists or other authorities, critically analyze the historical contexts of the work’s origins and of subsequent transformations. This paper looks to sociological insights for guidance regarding the model overall. Some intriguing differences are revealed in the model when examining results for countries individually within the three regions.

Environmental Trust: A Cross-National Study

Environmental issues, topics, and concerns are some of the most pressing global challenges of our times. Research demonstrates public opinion on environmental concerns is global, yet simultaneously wide-ranging and varied. Despite its importance, however, our understanding of the within-country dynamics related to the expression of environmental views remains underspecified. This research examines environmental trust using the International Social Survey Program Environment data from 2000 to 2018 to examine the literature on the globalization of environmental concern by articulating its content and expression in three regional clusters derived from previous research. Important similarities are shown across regions regarding the model overall. Some intriguing differences are revealed in the model when examining results for countries individually within the three regions.

Pathways to Environmental Activism Across Time and Place

This paper tests a model of pathways to environmental activism using three waves of data from the International Social Survey Program. Given expectations from the theory of planned behavior and value-belief-norm theory, a path model is specified that examines how individual resources, knowledge, awareness of consequences, attitudes, willingness to contribute, and efficacy affect environmental activism. The mediating effect of willingness to pay or make environmental contributions is investigated in detail given previous research. Results demonstrate support for the model across the three waves of data. The causes of resource, awareness of consequences, and attitudes combine affect environmental activism. Moreover, mediating tests were conducted that demonstrate a prominent yet not exclusive role of willingness to contribute in promoting activism across nations, uncovering relations that are masked in previous cross-national research. Results reveal that the model is robust over time and across places, with some exceptions, yielding insights for future comparative and cross-national studies.
The complexity of family arrangements that constitute the return migration of Brazilians from Paraguay can be identified as an important element in maintaining the threads that link past, present and future in intelligible ways. Furthermore, the use of uchronias is particularly helpful in comparative historical analysis, introducing conditional reasoning and “as if” instruments of analysis, offering a clear cut division between universal rules and the ancillary elements. Secondly, the use of uchronias is particularly helpful in assessing how societies evaluate current dangers and future risks. Building up dystopian times (such as SF movies and TV shows) is an important device to assess how societies evaluate current dangers and future risks. Building up dystopian times (such as SF movies and TV shows) is an important device to assess how societies evaluate current dangers and future risks.
Tortured Bodies, Ravaged Flesh, Killing Machines: David Cronenberg and the Sociology of Disgust

Over the past two decades, reflections on disgust and repulsion have been piling-up in Social Theory. Moving away from an analysis entirely centred on biological reactions or emotional expression, theorizing disgust became an important instrument to understand moral boundaries and civilizational constructions. Disgust seems to fulfil a position akin to incest prohibition – adequately universal to be declared biological, and sufficiently particular to be deemed cultural. If the traditional views on disgust revolved around the issues of purity, pollution, and contamination, having the body at the centre stage, some of the contemporary approaches are linked not to external threats to the human integrity but to the transformative capacity of science and technology, breaking barriers, violating invasions, and destroying moral boundaries. The danger of the body snatchers becomes the menace of the creators of revulsion. Terror and horror movies, tend to epitomize the dilemma of disgust faced by their audience: facing the mutilated, raped and transformed bodies of the victims of epidemics, and serial killers or on the creative and uncontrolled hubris of the brilliant but mad scientist that aspires to play a demiurgic role in a new but demented universe. This double feature of disgust is paramount on the films of Canadian director David Cronenberg, representing both the civilizing and uncivilizing roles that disgust can play, especially when linked to scientific projects. If science is seen as a cornerstone of modernity, a civilizing process and symbol of progress and enlightenment, reducing human suffering and enabling longer, healthier and happier lives, it is also possible to see these as the boundaries of the artificial-natural divide or the human-animal partition. Cronenberg’s filmography is a clear example of how the medical, biological and chemical sciences have entered the realm of disgust, side by side with porn or sexplotiation.

Developing a Pattern Language For Science-Engineering-Art-Design (SEAD) Collaborations

Acknowledged similarities and prospective synergies underlie the work of artists and scientists in perceiving and describing the natural world; however, there are few formalized or easily recognized methods to utilize those commonalities for enhancing art-science collaborations. The notion that observable or archetypal patterns could represent a form of communication or a language among professionals from different fields was explored by architect Christopher Alexander, who introduced a pattern language consisting of hierarchically arranged patterns that are linked together in countless ways. Whereas the use of patterns and rhythms to communicate art or music is relatively straightforward, the utility of spatial or temporal patterns to portray or explain scientific data is less obvious. Some branches of science focus specifically on nature’s patterns and rhythms; however, most scientific data can be expressed in terms of frequencies, cycles, and other common descriptors of temporal patterns, as well as distributions, geometries, and similar descriptors of spatial patterns.

The use of a pattern language for art-science communication would initially identify and collect numerous patterns to be labeled and categorized, but discernable similarities among seemingly different patterns would likely reduce this number over time. Distinguishing among natural, ideal, and abstract patterns could be a first step in categorization and might provide a handy framework for users to perceive relationships among different forms of information (e.g., ideas, data, designs). The precise structure or syntax of the pattern language (i.e., naming, ranking, illustrating, exemplifying, and referencing patterns) should be less important than an unambiguous depiction of the collected patterns and their links. Patterns and rhythms may be more recognizable to people than art words, numbers, or symbols, thus providing a means of communicating across disciplines and cultures. This paper was presented as a SEAD white paper, and supported by the National Science Foundation under Grant No.1142510.

An Integrative Model for Analyzing Strategic Corporate Social Responsibility in Portugal

Capital increasingly takes the integration of corporate social responsibility (CSR) into account in the development of business strategy. Nowhere has this been more the case than in the European Union, where commissions on CSR have reported and made policy recommendations to the European Parliament.

Different firms adopt different CSR perspectives, from denial of any interest to commitment to a long-term CSR strategy for sustainability. The paper identifies levels of commitment that we place on a continuum that we call CSR maturity. Previous studies have neglected the relationship between different business strategies and the firm's degree of CSR maturity. The research considers the variables underlying commitment to strategic CSR by looking at major companies listed on the Portuguese stock exchange. We are interested in how these companies formulate, implement, and align CSR with business strategy.

After a critical literature review of strategic CSR, we present a matrix and analysis grid that distinguishes different types of strategic CSR orientation, and assesses their degree of maturity. The paper includes the findings of a pilot case study that will apply to our ongoing research.

The proposed model identifies six types of strategic CSR by looking at patterns in the company-environment relationship. This matrix serves as a diagnostic and improvement tool for the company to take advantage of CSR as a strategic force that can simultaneously create competitive advantage and social value.

The paper advances understanding of strategic CSR and proposes a model to evaluate the maturity of a firm's integration of CSR into its business strategy. The research holds special interest at a time when Portuguese capital seeks to balance shareholder pressure to find new markets and sources of profit with strategic decisions on whether to pursue CSR as a viable path to profitability and long-term sustainability.
evaluate (a) the high competitiveness of the selection process, how is the association between social origins and chances of obtaining a place at this elite institution; and (b) if this association varies depending on which undergraduate course option the student applied for. Research has already shown how students from private schools have more chances of progression in all educational levels (Ribeiro, 2010; Montalvão, 2011) in the country, but the IEO between different tracks in public higher educational institutions in Brazil has never been analyzed before. Also this proposal relies on the use of data collected in the moment that the application is made, and it contains information on the entire universe of candidates in the selection process of this specific institution, which is another contribution to the empirical literature on the theme in Brazil, based mainly on cross-sectional household surveys.

Examining the Long-Term Effects Families: Preparando La Nueva Generacion, a Culturally-Specific Mexican American Parenting Intervention

The purpose of this study is to test the long-term results of the efficacy trial of a culturally-specific parenting intervention called Familias: Preparando La Nueva Generacion (FPNG), designed to increase the effects of keepin’ REAL (kiR), an efficacious school-based drug abuse prevention intervention targeting middle school students. Randomized at the school-level, parents and youth in nine schools were assigned into one of three conditions: (1) control condition, (2) youth-only condition -receiving only kiR, and (3) parent + youth condition -receiving FPNG and kiR. Youth and parents completed a wave 1 pre-test prior to implementation, a wave 2 short-term post-test 12 months later, a wave 3 long-term post-test 12 months after. Using a path analysis in Mplus on adolescents whose parents also participated (N=462), both direct and indirect effects of participating in FPNG were examined. Findings indicate that participation in FPNG and kiR had a significant direct effect in lowering adolescents’ amount of substance use. For alcohol and cigarettes at wave 3 in comparison receiving only kiR. These effects, however, were completely mediated by anti-substance use norms - youth whose parent also received FPNG had significantly stronger anti-substance use norms, which in turn resulted in significantly lower amounts of alcohol and cigarettes used. These results are consistent with the Ecodevelopmental Theory and provide further evidence to the theoretical premise that strengthening parent-child communiation of norms can have a positive effect in preventing adolescent substance use. In addition, these results support the assumption that involving parents in prevention efforts has a major effect in strengthen the efficacy of youth-only classroom based intervention. Because FPNG was designed with Latino parents and for Latino parents, FPNG is emerging as a curriculum that can positively affect familial and parent-child influences that characterize Latino youth and families and reduce substance use among Latino adolescents.

NUÑO-GUTIERREZ, BERTHA (Instituto Mexicano del Seguro Social)

Preventing Youth Substance Use and Dependency: The Long-Term Effects of Keepin It REAL in Guadalajara, Mexico

Despite high rates of substance use in Mexico, only 43% of young adults report receiving a substance use prevention program. In response, keepin’ REAL (Marténte REAL), a substance prevention program developed in the US for Mexican American youth, was implemented in central Mexico by a bi-national team of investigators. Two middle schools in Guadalajara, Mexico, were randomized into a treatment (N=226) and control (N=206) condition. Students completed a pre-test prior to implementation, a short-term post-test 12 months later, and a long-term post-test 12 months later. Substance use measures were 30-day amount and frequency of alcohol, cigarette, and marijuana use. Baseline adjusted OLS regression models predicted short-term outcomes, while growth curve models with missing data imputation examined program effects on trajectories of substance use. OLS regressions showed significant relative reductions in use of alcohol and cigarettes for youth participating in keepin’ REAL compared to youth in the control group. Growth curve models indicated that over time the effects of keepin’ REAL are gendered. Females in the treatment group drank alcohol significantly less frequently over time. Males in the treatment group drank alcohol significantly more frequently over time. Milieu in the treatment group decreased, while the control group increased. These results indicate that keepin’ REAL can be an effective tool in teaching drug resistance strategies and reducing substance use and dependency among adolescents in a major urban area in Mexico.

From the Family to the Market – the Complexity of the Care Finance

From the family to the market – the complexity of the care finance

The problem of payment for the care delivered to old or disabled persons, because of its complexity, is rather difficult and not very popular. Simultaneously, it creates the significant element of the state’s social policy, sometimes being shaped in the previous political regime and strongly connected with the constitutional guarantee of the special rights given to the dependent persons. Despite the development of anti-discrimination legislation and the public perception of disabled, it is still one of the main factors of poverty, the stigma and exclusion. Moreover, it affects not only directly a dependent person, but indirectly this persons friends and family, who (in many countries) are legally expected to deliver the care and become fully dependent on the system of public care services. Along the change of economic regime, we can observe the strengthening of the care recognized as a commodity. This care, no matter the source of finance (public or private) has to be bought on the market.

This paper presents the initial effects of the research grant focused on the theoretical model of financing the care delivered to dependent persons, especially in the situation of social structures evolution and resources limitation. This project finalizes the few-year studies on the original theory of the costs of disability, which systematizes the expenses on disability policy and called for transparency and concentration. The elaboration will focus on the financial situation of caregivers in different social systems. It will compare legal solutions across selected counties, the impact of the financial advantages and disadvantages for the family of dependent person, connections between public and private sources dedicated for care delivery. The discussion over types and forms of care will be tested introducing financial aspects as one of the recommendations.

Rethinking the Marketisation of Australia’s Employment Services

In Australia the dominant construction of citizen obligation for the unemployed has legitimised a host of policies and practices, including ‘strong paternalism’, punitive financial sanctions and tightly scripted employment pathways that allow little room for the exercise of autonomy. Moreover, the Australian Government has devolved responsibility for the exercise of rights and obligations to a ‘quasi-market’ network of private and non-profit organisations in the form of Job Services Australia. The institutional design of unemployment policy combined with the privatisation of employment services has created a number of unintended consequences over nearly two decades of reform. The ‘helping relationship’ has been commodified, front-line staff discretion has been removed and the employment outcomes for the long-term unemployed have seen little improvement. Incremental reform by successive Australian governments has done little to address the power imbalance and unintended consequences associated with disciplinary power-governance. This paper however seeks to examine how these processes and outcomes might be transformed so that employment assistance can become a key plank of a more just and respectful society. To this end, the paper will employ a historical and comparative analysis to problematize governance of the unemployed in Australia, reviewing recent evidence. I will argue that a new system does not imply the creation of a new form of governance. Non-profits can play an enabling role in the field of employment, but they must be freed from compliance burdens and strong paternalism that has subverted their capacity for public accountability, social advocacy and a mutually beneficial alignment of employer and worker needs.

NGOs in Complex Global Social Governance Arrangement: Drivers of Policy Synergy or Policy Conflict?

NGOs in Complex Global Social Governance Arrangement: Drivers of Policy Synergy or Policy Conflict?

Global social governance is increasingly characterized by complex and fragmented institutional arrangements. In this paper, we study the role of NGOs in these governance arrangements. In particular, we are interested in the question whether NGOs have the potential to be drivers of policy synergy or policy conflict. We understand policy synergy as a situation in which the interaction of different types of policies leads to more favorable outcomes than would have been achieved independently. Policy conflict describes then a situation in which the interaction of different policies results in more negative outcomes than if these

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
would have been implemented in isolation. To study the impact NGOs have on these questions, we first take stock of their engagement in global social policy and then assess to what extent their role has been adequately captured in the academic literature. In a second step, we examine their potential to influence the institutional integration, norm conflicts, and actor constellations in such a way that either makes policy synergy or policy conflict more likely. Thirdly we draw on the governance literature to investigate the impact this has on the larger field of global social policy.

Ethics As a Professional Responsibility From a Higher Education Perspective

We present reflections provenient of two investigations doctoral in responsibility social universitaria. Por una parte el desarrollado en la Universidad de Valladolid en el cual se indaga sobre la percepción de la sociedad (stakeholders) acerca de lo que esperan de la Universidad. El segundo estudio desarrollado en universidades de 4 países iberoamericanos (Colombia, España, Perú y Chile) realizó una evaluación del aporte de la educación universitaria a la formación de una ciudadanía responsable. El estudio mostró datos que cuestionan el fomento de unos valores presenciales desde que accede a la academia el estudiante hasta que finaliza su grado.

Es de interés para esta ponencia el resaltar la necesidad de confiar en la denominada responsabilidad social de las universidades, aspectos que conllevan a la relación de diálogo con el entorno, y promueve en su mismo seno para ser una institución agente de cambio social en conducir a profesionales con sentido ético de responsabilidad y una ser instituciones que promueven un desarrollo socioeconómico sostenible y que favorecen la progresiva disminución de las desigualdades no tan solo a nivel global si no también en su entorno cercano.

Junto a la presentación de reflexiones sobre los estudios doctorales, se señalarán algunas de las directrices internacionales emitidas por organismos como la UNESCO o la OECD en base a las que se señala el necesario rol de que la educación superior se alinee con los objetivos del milenio, y capacite en competencias no solamente técnicas sino de carácter transversal y valores solidarios. Considera la perspectiva del presente trabajo la necesidad de progresar en modelos de evaluación de responsabilidad social a nivel interno y externo como medida que garantice a la sociedad que se da una transparencia en la visión y visión de las universidades, y su práctica hacia la sociedad y en su malla curricular.

Managing Organisational Religious Diversity in Finland

The paper will discuss and analyse how the Finnish public administration copies with religious and spiritual diversity in the 2010s. In the post-World War II times, state’s involvement with religious affairs was on a low level with the exception of the two national churches: The Evangelical Lutheran Church of Finland and the Orthodox Church of Finland. During the 1990s and 2000s the presence of different religious traditions and organisations has grown considerably. The main contributors to new religious diversity have been (1) Pentecostal and Charismatic Christianity, (2) religions of immigrants and (3) New Age and similar types of spirituality. Simultaneously the historical churches have experienced continuous secularisation. There has been both a novel interest in religious affairs by the Finnish public administration and a shift of governing religions from church law to networks (e.g., representative councils, interfaith associations). The new model does not fully replace the historical church-state relations, but it works alongside it. The paper argues that in order to analyse how states’ aim to regulate and manage contemporary religious diversity, we should look at how the historical church-state relations function together with new forms of governance networks.

Impacts of the Financial Crisis on Family Trajectories: The Case of Living Together Apart Couples

Family trajectories and transitions, union formation and dissolution, are strongly linked to or framed by economic and cultural context. In that perspective, family life has to be considered more as a result or the expression of contextual parameters than a universal phenomenon that could be looked at isolated from these parameters (like work conditions, economic assets, etc.). The 2008 financial crisis and its consequences on housings revealed in different countries such a relationship between external macroeconomic factors and family transitions: the case of couples who continue to live together while considering themselves to be separated. We have studied in parallel some of these “living together apart” situations in different countries: France, with Andrew Cherlin and Caitlin Cross-Barnet. We have collected in different social classes, the main arguments delivered by people concerned with such situations of forced cohabitation. Among them, we identify situations where residential separation is not possible, either because of the need to keep up appearances, often for the children’s sake, or because total separation is too frightening or living in separate homes is unaffordable.

In this contribution, we want to go beyond a typology of these situations to use them as a mean to compare our respective national family culture concerning marriage, divorce, cohabitation. France and USA are effectively two very different nations regarding family issues. The common economic trauma of the financial crisis that we are still facing in our respective countries is an occasion to reveal these cultural dimensions.

God Is Argentinean, and Also the Pope! Catholicism, Popular Religion and the National Imagination

The arrival of Jorge Bergoglio to the Holy See has introduced a number of changes in the relations between the Catholic Church and the State in Argentina. While traditionally, these relations have been characterized by the preferential status of Catholicism as quasi-official religion and its active presence in the government's decision making, in the last decade it was noticeable a succession of conflicts between the Church and State. However, few days after the coronation of Pope Francis, government discourse changed radically, emphasizing the importance of having a “Argentinean Pope.” The media and various forms of popular expression (graffiti, jokes, cartoons, montages on Facebook, etc.) express how unprecedented and unexpected this situation was, from a key that combines various representations of national culture.

In this contribution, we want to go beyond a typology of these situations to use them as a mean to compare our respective national family culture concerning marriage, divorce, cohabitation. France and USA are effectively two very different nations regarding family issues. The common economic trauma of the financial crisis that we are still facing in our respective countries is an occasion to reveal these cultural dimensions.

Black Ethnicity and Rethinking Assimilation Theories: A Multilevel Analysis of Housing Values Among and Between Whites and Native- and Foreign-Born Blacks in the U.S

Black-white residential segregation is still a reality in America. Research shows black homeowners are more segregated from white homeowners than black renters are from white renters. The findings have been interpreted to mean blacks do not benefit as much from home ownership because home ownership does not lead to greater access to white space. Implicit in this interpretation is the mistaken belief blocks ultimately desire residency in white neighborhoods and home ownership in said neighborhoods is evidence of the completion of the assimilation process. Focusing almost exclusively on home ownership as an indicator of assimilation is inadequate. To accurately understand whether blacks are assimilating, housing values must be analyzed. If blacks are assimilating the gap between them and the dominant racial group should decrease over time. Using census-based data for the past few decades, the present study examines the following research questions: 1. Are there racial disparities in housing values for blacks and whites and how have they changed over time? 2. Are the racial disparities larger or smaller between whites and foreign-born blacks or between whites and native-born blacks? 3. What social and demographic variables account for the variations in housing values by race and by ethnicity? 4. What are the theoretical and methodological implications of the study findings?

Gender Inequalities in Health and Socioeconomic Status: Analysis through Healthy Expectancies in the Basque Country (Spain)

In the Basque Country, like in most societies, women survive longer than men but are less healthy. However, several authors have criticized this fact as being too simplistic and not taking into account that men and women are heterogeneous groups. It is necessary to study gender inequalities in health considering other variables such as educational level, social class or age that can explain this gender gap.

The aim of the present paper is to examine gender inequalities in health and their change in the Basque Country considering two variables of socioeconomic status, and healthy expectancy as the main result variable, which integrates health and mortality. This measure also allow separating life expectancy into years of life in good and poor health. Educational level and a deprivation index of the residence area were used as socioeconomic status variables. The last one summarizes four characteristics of census tracks (unemployment, manual and eventual workers, insufficient education overall and in young people). Health expectancy is the measure of life expectancy at each of the socioeconomic status for different ages was calculated in two periods (1996-2001 and 2001-2006).

Women lived more years than men at all ages, periods and social groups, but the gender gap varied by age and social position. Thus, differences between men and women were greater as the level of education decreased or increased the deprivation index. The difference in the number of years between men and women was lower when considering only the years in good health, so that women lived more years in poor health. The gap between men and women decreased in the second period comparing to the first.

A comprehensive vision which integrates gender and socioeconomic inequalities is necessary to adequately understand the health differences between men and women.

Gender, Ageing and Everyday Life: Visually Representing the Body

As people grow older, daily norms and practices can be disrupted, the taken for granted nature of embodiment challenged, and people may increasingly be required to make sense of bodily changes in order to maintain and/or re-negotiate their identities. Drawing on the findings from an empirical study Photographing Everyday Life: Ageing, Lived Experiences, Time and Space funded by the ESRC, this paper explores the significance of the body in everyday life for 62 women and men aged 50 years and over in the UK. Participants took photographs of their different daily routines to create a weekly visual diary, which was explored through in-depth interviews to make visible the rhythms, patterns and meanings that underlie habitual and routinised everyday worlds. This paper explores the ways in which lived experiences of gender and ageing intersect and are performed and represented through the visual accounts of participants about their daily lives. In doing so, it focuses on two key aspects: (1) the ‘everyday’ appearance and body practices of participants visually depicted – which include work done on and with the body, through engagements with clothing, hair, make up application and shaving; and (2) representations and discussions of dieting and weight loss. The paper further highlights the potential disruptions, bodily betrayals, and moments of flux, in experiences of constructing the body in everyday life, and in representing the body through the visual diary that these discussions and participant narratives discussing their daily practices, indicate that the body is a process of ‘becoming’, a continual bodily ‘project’ (Gill et al., 2005), which is both socially and physically constructed through the practices participants engage in to maintain, discipline, and work on and with their bodies. The paper overall highlights participants’ negotiations of, and sometimes resistance to, dominant ideas and discourses surrounding gender, ageing, and the body.

Cultural Representations of Widowhood: Social Media and the Declaration of a Status

The lens of widowhood research has moved from a focus on role loss to challenge dominant public narratives of misery and decline, pointing instead to a complexity of experience rooted in personal biography and in gendered life course. Cultural gerontologists promote further enquiry into the symbolic resources of scholarly knowledge in the social sciences, to reveal an even more complex and varied picture. Theatre and film have emerged in some cultural contexts as powerful tools to inform and emancipate widowed women from degrading widowhood rituals and norms. In addition, the rise of social media, with blogs, websites and interactive messaging, has transformed public representations of widowhood. While older women in particular have traditionally had access to a reference groups of widowed age peers, the defining quality of those interactions is different from the new world of social media. As with structured (‘grief support groups’) and loose (‘pure interaction anxious and estranged social media groups’) brought together in structured situations through the widowhood status they have in common. Through social media, contact begins more anonymously (visiting websites, reading blogs) or highly publicly (creating a website, authoring a blog, filming an online video) and then may lead to interactions and connections beyond one’s local community – through widow conferences and meetings, with some becoming sustained interactions. In historical context, one thus sees, over the period of about 75 years, cultural shifts from the public ‘wearing’ of one’s widow (widow’s weeds) and other aspects of dress and appearance) – that ended by the 1930s; to the subsequent ‘visibility’ and denying of widowhood and bereavement for some decades; to use of social media as a declaration or even reifying of widowhood, especially amongst younger women, those for whom widowhood is off-time, or for those experiencing dis-enfranchised grief.
enous women who work in the agricultural fields. Using qualitative methods, the objective of this research was to recover the voices of the farmworker women regarding the inequalities to which they are subject.

The instability and insecurity of their employment produces and guarantees a docile and inexpensive workforce, thereby permitting companies to reduce the financial risk implied by the cost of guaranteeing work and benefits. This situation reflects the invisibility of these women in the eyes of the state, which leaves them in a condition of social vulnerability. The asymmetry of social relations explains how the state can offer low-quality services to this population and reduce their working conditions and precariousness. The socioeconomic vulnerability in which this population is found is reflected in job insecurity and the inability to defend themselves against the state.

MARTÍNEZ, MARÍA* (Universidad del País Vasco, maria_m_g@hotmail.com)

The crisis has had a big impact in Spain and specially on those who were already in increased precarity situations as women. But in order to understand women’s situations in a time of crisis, we need a longitudinal analysis that show us the weaknesses and advances and the precarization of their living conditions in the last years. The aim of this paper is to analyse the evolution of women’s living conditions and the process of precarization in Spain between 1995 and 2010. We will address the common hypothesis that women constitute a more precarious social group than men, and we will try to complex these researches. In a first moment, we will analyse women as a precarious group as a whole by using other recent researches done in Spain around mainly the work and labor conditions of women (Borjedías, Carrasco y Torns, 2011; Torns, 2012) and the exploitation of statistical data, but we will try to look into differences among women, depending on social positions (employment, marriage, age, origin...). It is an attempt to show empirically the feminist theoretical proposals around the diversity of women by examining which variables explain more about those differences among women. In a second moment, we will centre our attention on the socio-economical dimension of precarity (employment, income and education levels) to analyse the paradoxes of a high level of precariousness among women in spite of the increase of women accessing the work place. This paradox certifies that the incorporation of women to the work place is always done in conditions of precarization of jobs (temporality, partial jobs...); and that this process might lead to reinforce the traditional gender roles.

Contemporary Japanese Migration Process in Spain: Cultural Boundaries and Social Networks

The relationship between flow and fixity in globalization literature, leads to questions about how a sense of belonging is achieved, especially when given concepts such as home, family and nation are becoming detached from physical boundaries. In adding to the literature on migration and belonging, this project focuses on how Japanese immigrants in Spain build new social networks and questions how this process changes the way they relate to Japan and their Japanese identities.

In the history of Japanese migration belonging and identity have been managed in different ways. From the business migration system (1970s and 1980s) to the voluntary migrants (1990s, nowadays), migration reasons, interests and lifestyle have changed a lot. However, voluntary migrants are underrepresented in the literature on Japanese migration, and as they do not have the same institutional support structures as the businessman group, it is important to understand the methods through which they create a sense of belonging.

This project employed a grounded theory approach and collected data through semi-structured, in-depth interviews with 44 Japanese living in Spain. The preliminary outcomes suggest that Japanese who have created solid support networks with predominantly non-Japanese networks have a firmer grasp of their Japanese identity. Conversely, immigrants with few Japanese links are more willing to identify their home in the host society. As a result, a Spanish-Japanese identity based on the reminiscence of Japanese traditions and the willingness to become part of the host society is rising.

By focusing on the experiences of Japanese immigrants within the host community the research results provide insights into the construction and consolidation of social networks and how they contribute to a new sense of Japaneseness. Understanding this process and the relevance of identity within the Japanese community can help prevent inter-group and social conflicts as well as promote a multicultural society.

From Latin America to Spain, Migrants Trajectories of Integration in a Rural Province

Recent migration patterns are characterised by their global nature and the preference for urban destinations. In Spain, immigrants tend to settle in the main cities of the country. Social Social network play an important role in both the decision to emigrate and the choice of location. However, the life and social network, very little is known about patterns of integration and community participation in rural and low population density contexts in Spain.

This communication explores these issues and is based on a study, in the province of Teruel (Spain), using a sample of 324 Latin American migrants over the age of 18, selected by sex and place of residence. A standardised test – the Musitu
and Gracia AC-90 Community Social Support Questionnaire and open questions were employed. ANOVAS analysis showed significant differences in community integration and participation in accordance with socioeconomic, motivizational and social interaction variables.

Results show us that the changes in lifestyle, customs, language etc., the peer group, the family and the neighborhood provide the base from which feelings of self-esteem and self-efficacy are derived, although contact with local people (Spaniards) is one of the main agents of social support; it is therefore important to examine the relationships that are established between the indigenous populations and the immigrants. Prejudices and stereotypes are easily generated in a climate of mutual ignorance and isolated rural enclaves are no exception. In addition to policies of control and regulation, Spain's immigrants require support in the development of the processes of integration and peaceful coexistence.

Being Wives, Mothers and Sisters in the Absence of Men: Bargaining Power of Women Left behind on Oaxacan Rural Areas (Mexico)

This paper analyses how men's international outmigration affects traditionally extended gender family dynamics in some indigenous areas of Oaxaca (Mexico). From the 1970's, not the individual but the family or the household has been considered the most appropriate decision making unit to understand how migration and development are linked. Since then, gender dynamics in rural sending areas have been mainly analyzed in terms of marriage transformations. However, other relevant family relations have not been widely studied. This paper highlights the importance of including mothers and sisters of migrated men to completely understand how traditionally gender norms and discourses, especially those related to inheritance and access to land, reproduce or change in rural Oaxaca.

The main argument of the paper is that son's and brother's migration along with other structural changes on sending societies has broken down the traditional system of protection based on son's inheritance. It is also argued that mothers try to build new family alliances with their daughters to be cared in old age. In terms of marriage, the paper shows that changes in wives bargaining power must be seen within a cultural context to really understand if women did improved their situation, without establishing direct causality relations as women's paid work greater bargaining power.

Two Oaxaca communities were selected following 5 criterions: rural areas, indigenous communities, high-medium index of poverty, and men’s migration to USA and finally uses y costumbers (ruled by indigenous customary law). The methods used to carry out the investigation were long interviews, to measure shifts on gender discourses and the analysis of quantitative secondary database, to measure functions and capabilities.

On the Relation Between Well-Being and Communication: The Ethical Turn in Conceptualization of Communication with Case Analyses of Negotiation and Decision-Making in PEPFAR

Conceptualization of communication has a crucial effect on communication itself and on communication research. This paper explores how communication affects and is affected by psychological well-being with case examples from an HIV/AIDS international treatment program (PEPFAR) implemented in Southern Africa. It calls for a re-evaluation of Weaver's metaphor on communication as exchange of information and develops Buber's and Peters' ideas on communication as a manifestation of the ethical, where the ethical is described as openness to otherness. Communication is viewed as a tension between reproduction of Self with alterity. Mutuality is not viewed as a necessary condition for the ethical because it involves intimacy that can only be discretely expressed. It is assumed that the end of theodicy is not the end of the ethical because the ethical is a space of profound intimacy, beyond preachment. Extreme cases of annihilation of otherness can be established and in some cases there is no ethical interaction, others have deeper roots than modernity. The paper identifies challenges for the ethical turn in communication such as patriarchal order, implantations, involvement of the ego, dehumanization, isolation of larger contexts, traumatic disorders, and states of denial. It also identifies what enhances communication as an ethical process: reciprocal adaptation, intercultural communication, nurturing of hybrid cultures, and distance taking techniques such as time, distance, attention/topic shift, emotions such as feelings of awe, and art. Case analyses of negotiation and decision-making in PEPFAR are discussed. Implications of effective interpersonal & intercultural communication through the process of reciprocal adaptation for program success, reduced participant stress, and higher participant morale and psychological well-being in HIV/AIDS treatment programs in Southern Africa are described.

MARTINS, CARLOS BENEDITO* (University of Brasilia (UnB), carlosh@unb.br)
Science without Borders: An Academic Mobility Program from the Brazilian Government

At the international level, contemporary higher education has undergone profound transformations in its organization and dynamics due to the globalization process that has reached a majority of countries in various ways. In addition to the worldwide growth in school enrollments from the institutional differentiation of the international circulation of knowledge, a notable increase in the mobility of students, professors, educational institution administrators is being observed. In various parts of the world, national governments have developed specific policies to bolster academic mobility. Ranking sixth among industrial nations, Brazil has a long history of revamping its system of higher education in order to produce highly qualified professional staff. There are currently 7.5 million students enrolled in higher education. Going back to the 1970s, the country has instilled a postgraduate system covering all areas of knowledge. Stemming from this, a scientific community was created with high potentials for academic mobility. In 2011, the federal government created the Science Without Borders Program with the goal of sending 100,000 undergraduates, graduate and science/technical students to centers and research facilities of renowned international standards located abroad. The program also envisages attracting researchers from foreign locales to settle in Brazil. Through intensifying mobility, the Program wishes to stimulate and refine the research applied in the country, seeking scientific and technological development and to increase the competitiveness of national businesses and the country on the global stage. The study being presented analyzes the results of the program as well as the possible difficulties it faces in achieving its goals.

Collective Rights to Life and New Social Justice: Lessons from Latin America

For a long time, the basic legitimation of capitalist power was the private power ideology revealed by the rights of the elite to privatize collective and natural resources. This privatization strategy was central to pointing out another dogma, that is, the idea of inexhaustible resources supporting unlimited accumulation. However, the social and political recognition of the exhaustibility of resources is central to the discussion on economic development paradigms. Additionally, they suggest a new social justice hierarchy that underlines the priority given to collective and natural rights in public policy management. Latin American cases, particularly Bolivia's, are interesting ones to reflect about this change of development paradigms.

Intellectuals and Development: Reflection from Diverse Latin America Statements

Intellectuals and development: reflection from divers Latin America statements

Paulo Henrique Martins

Summary: In this paper I will try to reflect about two points: the difference between economic growth and development, on the one hand, and the existence of different statements about development, on the other hand. The first point is important to remark that the idea of development in Latin America is connected to the traditional criticism about imperialism and dependence. This understanding is particular to the region and it was born in the World War II when Latin-American economists such as R. Prebisch who noted that international economic relations that question the general rights of privatization. Additionally, it is impossible to generalize this understanding of development to others continents but it is very important to try to compare some different processes. The second point is that the idea of development in the region is linked to the idea of power system, because what is developed is not the country but the power. Then, in this sense, it is possible to define some different development patterns in Latin America that reflect some possibilities of alliances between social and political forces that contribute to organize national power systems in the last decades. To demonstrate our papers we will try to show the differences and similarities between Brazilian and Bolivian cases. It is important to show the relationship and
differences between economic and political spheres and about global and local views, from different contexts.

Intergenerational Relations in Rural Tamil Nadu: Grandparent – Grandchild Relations from the Perspective of Grandchildren

The bond between grandparents and grandchildren is of special interest as it involves a relationship cutting across generations. Grandparents are in a unique position to offer love, advice and receptive ear enhancing their ability to provide emotional support. Their financial aid at critical junctures is not uncommon. In the absence of or inability of parents, the adult grandchildren generally provide care for their grandparents. In the absence of established expectations, obligations and rights permits both in the dyad have enough flexibility to build their relationship tailored to their needs and wishes while allowing freedom to minimize their contact or withdraw from the relationship.

The present paper examines the intergenerational experiences in terms of proximity, contact, time spent with, engagement and exchange from the perspective of 304 grandchildren residing in 9 villages in two districts of Tamil Nadu, India. The districts and the villages were selected using lottery method and the respondents each village were selected by systematic random sampling from interview method was used to elicit data. Analysis provided percentage, mean, paired analysis of difference and analysis of variance.

The findings reveal lineage and sex of grandparents are significant factors in shaping grandparent-grandchild relationship. In general, proximity, contact, time spent together and degree of exchange are greater with paternal grandparents than with maternal grandparents. Likewise grandchildren have greater integration than grandmothers. However, age and sex of the grandchildren play no significant role. The findings also underpin the role of joint family and large family size, which may imply joint living with grandparents, in enhancing the quality of intergenerational relations.

Making home, becoming neighbours: the effects of immigrant home-making practices on living together in the diverse urban areas of a small city

The paper explores home-making practices of immigrants living in the historical centre of Desio, a small city in Brianza, an industrial district up north of the Milanese metropolitan area (Italy). The process of everyday construction of domesticity is explored taking into account the symbolic and material engagement with the house and the home area. Aspects related to housing tenure, processes of self building and care, forms of cohabitation, various uses and forms of private-ness/publicness of the domestic space, will be analysed in order to account for different forms of belonging and ways of “feeling at home”.

The research question explored in the paper is that different forms of investing in the house and the domestic space - varying accordingly to status and socio-economic gaps, habits and cultural traditions (in terms of gender roles, ethnicity and religion), migratory paths (settled vs newcomers), together with the housing market and policies regulation - are crucial elements affecting sociability (neighbours relations and the construction of the neighbourhood as a shared space) social networks (ethnic or non-ethnic forms of incorporation into the local context), social cohesion and the role played by everyday encounters in promoting interethnic relations and knowledge.

The paper will focus on two of the housing complexes explored in the ethnographic fieldwork: a building hosting only Pakistani immigrants, and a courtyard which instead is marked by ethnic and social “superdiversity”. The ultimate aim of the paper is to show how “hard” elements (material and socio-economic conditions) are more relevant than “soft” elements (ethnicity and culture) in shaping cohabitation in diverse urban settings.

Pakistani Immigrants in Central Brianza’s Small Cities (Italy): The Ambivalence of Ethnic and Non-Ethnic Forms of Incorporation into the Catholic Social Knit of an Industrial District

The paper focuses on Pakistani immigrants’ social emplacement in an area of small cities in central Brianza, up north of the Milanese metropolitan area. The diffused territorial model of immigrant incorporation in Italy – with a significant presence of immigrants out of the main metropolitan contexts – and the great variability of local governance schemes, qualify such areas as an especially suitable context to inquire the relation between migrant communities and local regulatory practices. In this paper we focus on a small city – Desio – and its surroundings, belonging to an homogeneous area in terms of immigrant composition, economic structure, political and cultural tradition. International migration has become relevant here since the early ‘90s: in Desio, migratory flows from Pakistan have become more and more significant, producing one of the higher concentration of Pakistani citizens in Italy. Immigrants found employment as both unskilled and specialized workers in the small industries which stretch all over the Brianza territory. Over a decade, consistently translocal networks have spread over there, most of them originating from a specific area of Pakistan Punjab. The paper aims to explore the relational everyday life emplacement of Pakistani immigrants in the local context, as it takes place trough ethnic and non-ethnic forms of incorporation shaping inter-ethnic and non-state actors, like associations and NGOs of a catholic background. The data collected (through ethnographic fieldwork and qualitative interviews with immigrants and privileged observers) show the ambivalence of such forms of incorporation, in which different features of the immigrant population – such as status and socio-economic gaps, habits, cultural traditions and migratory paths - together with the local government practices and discourse, coalesce in defining different trajectories of immigrants’ emplacement in the local society as well as transnational social spaces and urban fields.

Mobile Precarious Workers? the Case of Post-2008 Latin American Onward Migration from Spain to the UK

Contemporary studies on intra-EU (European Union) migration have paid in- sufficient attention to forms of secondary mobilities, either in the case of mobile European citizens or, more significantly, in terms of third country migrants who have acquired citizenship in one Member State and subsequently migrated to another. This paper will contribute to this area of research by focusing on the case of Latin American secondary migrants with EU citizenship who have undertaken onward mobility from Spain to the UK post-2008. Existing studies have found that, for Latin American migrants, it is common to enter the EU via Spain, Italy and Portugal, where they expect obtaining citizenship to be easier, e.g. through historical and family connections. However, subsequent onward mobilities seem to have become more common after the onset of the financial crisis and its harsher consequences in southern EU countries. Drawing on a small-scale transnational project involving secondary data analysis and 25 semi-structured interviews with key informants from Latin American migrant voluntary organisations and statutory services working with migrants in Spain and the UK, this paper will explore the emerging picture of the contexts, causes and motivations that underlie these increased onward mobilities and the situations faced by secondary migrants and their families when settling in the UK. Despite these secondary migrants' hopes of escaping financial difficulties and unemployment in Spain by making use of the right to free mobility which they have acquired with their European citizenship, settlement in the UK has been fraught with initial arrival problems (i.e. lack of language skills, access to jobs and housing) and the vulnerabilities of joining many fellow Latin American migrants’ socially disadvantaged position as precarious workers in the UK.

MASI, ANDRÉS ALBERTO* (Universidad Católica de Cuyo, masiandres@yahoo.com.ar)

La problemática de los liderazgos presidenciales (LP) constituye un eje de estudio relevante para la Sociología y la Ciencia Política, y su estudio es la abundancia de producciones bibliográficas en el campo. Empero, la relación entre construcción de LP y E-Government (EG) ha sido trabajada en forma insuficiente, advirtiéndose un vacío académico en el análisis del impacto de la tecnología sobre los sistemas políticos en general y la construcción de liderazgos en particular. Las actuales problemáticas acerca de los sistemas políticos de los líderes se han focalizado en el abordaje de la disponibilidad de recursos de poder (institucionales, sociales, financieros, de estrategia política y apoyo ciudadano) que un presidente posee o es capaz de generar, pero no han abordado categorías analíticas innovadoras que aborden el impacto del EG en la construcción, consolidación y debilitamiento de sus LP. Esta investigación apunta a corroborar que el EG supone no solo un cambio de paradigma en la teoría existente sobre liderazgo, sino también el surgimiento de un nuevo recurso de poder (RP) al que apelan los presidentes latinoamericanos con el propósito de obtener legitimidad en sus iniciativas políticas. En esa dirección, el EG deviene un mecanismo que supone toda una renovación de los canales de comunicación política, permitiendo a los Jefes de Estado el acceso...
rápido y directo a franjas masivas del electorado, el fortalecimiento de su relación con la ciudadanía y la posibilidad de disponer de cuantiosa información para la formulación de las políticas públicas.

En definitiva, el EG constituye un RP que contribuye a generar cambios en la modalidad de ejercer el poder político, deviniendo un instrumento clave en el incremento/deterioro de la capacidad político-institucional de un líder presidencial y dando origen a un nuevo escenario de comunicación, acción y movilización política, en el que cobran entidad los LP y los regímenes democráticos de América Latina.

Payng Bonuses for Safety: Pitfalls and Proposal

Recent events including the Global Financial Crisis and the BP Texas City refinery disaster have highlighted that incentive structures for senior executives worked against process safety. Equally, the Global Financial Crisis was found to be precipitated by people whose behaviour was a direct consequence of their financial incentive regime. Financial incentives have long been used to influence professional values and practices, and at their core are assumptions about the nature of human motivation. Neo-classical economic theory starts from an assumption that people are rational, self-interested calculators and therefore respond in predictable ways to financial incentives. By contrast, work from within sociology has emphasised a breadth of human motivation beyond self-interest.

This paper engages with this debate both empirically and theoretically in the context of the present and potential role of incentives to manage major accident risk in hazardous industries. Incentive schemes are one way that organisations are seeking to manage organisational risk. Organizations are using incentive schemes to reflect and reward changes in risk management and performance. We explore the extent to which people respond to financial incentives in this environment, the potential for perverse consequences, and approaches that most appropriately focus attention on major hazard risk. This analysis is based on qualitative interviews and document analysis on the incentive schemes in oil, gas, chemical, and mining companies.

We argue that despite discomfort with the concept that safety decisions might be influenced by money, financial incentives do influence priorities and behaviours. We conclude that financial incentives matter in corporate environments because they do not rely for their effect on economic self-interest alone. Instead they tap a number of human motives, among them the need for approval, the need to belong and the need to be recognised as making a valuable contribution.

Cultural Imperatives: Peacebuilding in Afghanistan through Local Culture and Customs

As the 2014 deadline for withdrawal of coalition forces approaches, Afghanistan's fate remains uncertain. Officials have long concluded that the war in Afghanistan could only be won through a negotiated settlement and not militarily. After years of a series of pursued talks with the Taliban, however these ambitious plans have now been deemed as being too unrealistic to achieve by 2014. To promote reconciliation and unity the socio-cultural factors that enable communication among conflicting parties is important. Communication is also a decisive factor in social integration as well as the structural solidarity in society. In the case of Afghans, communication in conflict resolution is central to the concept of jirga and is deeply embedded in Afghan history, practice and people. Jirga refers to the gathering of people for the purpose of consultation. Its integration into national politics is a reflection of the nature and success as a mechanism of conflict among most Afghan ethnic/tribal groups; “it has national currency.” Although the Karzai administration made use of this “national currency” in 2002, the Emergency Loya Jirga, it is evident that it failed in its attempts at national reconciliation due to a multitude of factors. This paper will investigate those factors while examining peacekeeping/peacebuilding initiatives in Afghanistan. We will use the use of Afghan indigensm and methods of local dispute-resolution for reconciliatory purposes. While there is a continuing need for jirga in resolving local, tribal and national conflict, the socio-cultural significance and political potential of jirga is ignored as it has only minimally been adapted to the current efforts in Afghanistan. This paper will investigate the feasibility of a national jirga process and how it can be more inclusive and widely used, representing both men and women, initially from a grass-roots level and ultimately to a national level.

MASOODI, MOHAMMED M.* (Queen's University, m.masoodi@queensu.ca)

Risk Management: The Effects of Militarization and Surveillance within the Canadian Context

Since the inception of the ‘war on terror’, Canada has been among the group of prominent democratic countries to the militarization and subsequently relied more heavily on surveillance technologies to monitor its citizens in the name of security. It can be contended that the purpose of surveillance technologies and the militarization of Canadian society post-911, is a precursor to greater government control; constructing ideal citizens that are ‘governable’ and can benefit the government by giving up certain freedoms, supporting government initiatives aimed ostensibly at securing citizen safety. This logic fits in nicely with narratives that argue there is no end to the ‘war on terror’ and therefore countries like Canada will continue indefinitely to militarize and rely on surveillance technologies. This proposed paper will examine sociologically the relationships between on the one hand, popular discourses and practices of militarization, and on the other, the adoption of surveillance systems whose software and hardware have become routine aspects of negotiating everyday life for all citizens. While government uses such risk management knowledge to seek security, decisions, evaluations of the latter are overwhelmingly driven by economic rationalities, very often at the detriment of adequacy, security and equity. On the other hand, social policy literature mostly focuses upon the consequences of these decisions on pension income, rather than upon the governance of pension funds investment decisions that cause them. The paper argues that research on pension fund governance is either driven by economic rationalities, or focused upon insulated aspects of governance or regulation or the role of actors involved into decision-making. Within the latter, I aim to adopt a holistic approach in order to deconstruct the way in which actors interpret regulations and proceed to pension fund investment decisions, along with their implications for pension systems objectives.

MASSALA, THOMAIS* (University of Bath, T.Massala@bath.ac.uk)

Governance of Pension Funds Investment Decisions Between Financial and Social Returns

Funded mode of pension financing has been a common ingredient of pension reform agenda in the context of international efforts to cope with demographic and economic challenges that pension systems face. However, a central concern involves the consideration of additional risks in funding and how these are addressed in order to maintain core pension system objectives, like adequacy, security and intergenerational equity. Governance, including regulation of investment decisions around pension resources is a crucial variable to these concerns, given that related decisions carry risks and implications for pension system objectives. Despite an increasing interest in the governance shaping pension funds decisions, evaluations of the latter are overwhelmingly driven by economic rationalities, very often at the detriment of adequacy, security and equity. On the other hand, social policy literature mostly focuses upon the consequences of these decisions on pension income, rather than upon the governance of pension funds investment decisions that cause them. The paper argues that research on pension fund governance is either driven by economic rationalities, or focused upon insulated aspects of governance or regulation or the role of actors involved into decision-making. Within the latter, I aim to adopt a holistic approach in order to deconstruct the way in which actors interpret regulations and proceed to pension fund investment decisions, along with their implications for pension systems objectives.

Beyond the Official Version? Israeli Teachers’ Perspectives on Citizenship Education

In societies under protracted conflicts the challenge of teaching about citizenship is inevitably overshadowed by the conflict itself. Stemming from a larger research project, aiming at understanding the dilemmas and challenges of citizenship education at all levels of the Israeli educational system, and across its various branches (general, religious and Arab), this paper is set to examine how teachers circumvent these difficulties and confront the challenge of teaching about citizenship in a society where citizenship is stratified and divided. More particularly, we offer a thematic analysis of in-depth interviews with teachers, from which we learn on the ways teachers, while not avoiding the concept of citizenship altogether, employ more multi-dimensional (educational) acts towards citizenship giving it different meanings and shaping it in various ways as either ‘localized’ or ‘integrative’ conceptions (or in between). This, we propose, allows the teachers...
to deal with the challenges of teaching about citizenship, yet without directly confronting the system that requires from them to teach only the official version of citizenship. We specifically explore, based on the teachers' own perception, what practices are used in delivering their own conceptions of "citizenships", and how they confront the explicit and implicit supervision of the Ministry of Education.

RC16-300.1

MAST, JASON* (University of Warwick, j.i.mast@warwick.ac.uk)
The Immigrant Factor: The Resignification of the Grasshopper

This paper offers a theory of cultural innovation derived from engagement with Saussurian semiotics, Sahlins's analysis of Western industrial food production, and Judith Butler's performativity of gender. Marshall Sahlins (1978) set out to turn historical materialism on its head by demonstrating that the industrial complex of meat and protein production is organized around the cultural logics of the edible, around understandings of humanness and cultural proscriptions such as the incest and cannibalism tabous. "Edibility is inversely related to humanity," he argued. Particular animals such as horses and dogs, and the internal organs of edible animals, are closely associated with humanness, and the idea of consuming them precipitates feelings of disgust and betrayal. Sahlins was right that edibility is related to understandings of humanity. However, in addition to symbolic proximity, too much symbolic distance, such as in the case of the grasshopper, may also produce feelings of revulsion and disgust. In this paper I develop a theory of cultural innovation, whereby objects associated with disgust may be transformed into edible objects connected to the dominant edibility or even subversive edibility. An insect on an American dinner plate, except in rare and select places, represents "matter out of place" and will produce a ritual cleansing of the plate. Variable across time and culture, the signifier of the grasshopper has been associated with pestilence and filth. Nonetheless, efforts to resignify these creatures are currently taking place. The challenge is overcoming "the ink factor" – the eyes, the wings, the legs... people won't accept it beyond novelty," one proponent, or agent of resignification, states. Building on the above as well as on Douglas and Durant, I examine contemporary efforts to place bugs and grubs on American and Western European dinner plates, or to turn these creatures into "mini-live-stocks," ones that are interpreted as not merely edible but as desirable.

MASULLO, JUAN* (European University Institute, juan.masullo@eui.eu)
Building Local Peace in the Middle of a National War. Community-Based Noncooperation Strategies in Colombia's Civil War

Despite of the high risks involved and the high levels of uncertainty, unarmed civilians organize themselves to collectively defy armed groups in order to avoid displacement, seek protection from violence, reclaim autonomy over daily affairs, and/or build local zones of peace in the middle of war. This paper presents findings from an ethnographic analysis of two communities that, in the midst of Colombia's civil war, chose noncooperation as a strategy to cope with war and live a life free from armed groups' violence and rule: the Peace Community of San Jose de Apartadó (PCJA) and the Peasant Worker Association of the Cararé River (ATCC). Although both are instances of community-based noncooperation strategies of noncooperation, they form this strategy to cope with war while ATCC declared itself neutral without any bargaining with armed groups, the ATCC negotiated its noncooperation strategy with armed groups. The aim of the paper is, therefore, twofold: explain what drove these communities to choose noncooperation over other possible responses (e.g. flee, obey, actively collaborate) and explain the determinants of variation in the form of noncooperation. The paper explores rational, moral and emotional considerations behind the choice; attention is paid to both the capacity and the desire to defy armed groups, and both pre-war conditions and processes that are endogenous to war are analyzed. The choice is explained by examining in detail rational, emotional and moral considerations behind the choice. Mechanisms such as pay-offs reassessment, belief (trans)formation, anger and resentment, norms of reciprocity, and moral outrage are spelled-out. Attention is paid to both the capacity and the desire to defy armed groups, and the internal organs of edible animals, are closely associated with humanness, and the idea of consuming them precipitates feelings of disgust and betrayal. Sahlins was right that edibility is related to understandings of humanity. However, in addition to symbolic proximity, too much symbolic distance, such as in the case of the grasshopper, may also produce feelings of revulsion and disgust. In this presentation, I would like to point out what the Japanese new concept "Co-Living Many Cultures", the traditional philosophy "Wa" and the Australian "Multicultural Policy" concept have the common idea despite significant differences in demographics and ethnic relation policies in the in two countries.

MATEVEKSI, ZORAN* (Ss. Cyril and Methodius University, matev@mt.net.mk)
MATEVEKSI, DUSKA (Ss. Cyril and Methodius University in Skopje, R. Macedonia)
Building the National Identity through the Religious Identity in R. Macedonia

After getting independence, in R. Macedonia the national sense of identity is followed by the religious sense of identity. The religion is classically sacral: "love all other nations as you love your own". We will emphasize that in fact a nation is an act of faith and believing. Through faith persons better understand characteristics of their own nation. Therefore in Macedonia, as a rule, representatives of all religious communities (follower of Bible, followers of Koran, follower of Imam, follower of Zoroaster, follower of Buddha) follow one faith (almost no exception each ethnic Macedonian is Orthodox, such as every ethnic Albanian is member of Islam). But, there are few cases when representatives of different ethnic communities follow the same faith. For example most of the ethnic Macedonians are Orthodox, but still there are Orthodox Macedonians who are Muslim. Typical examples for this are Torbeshi who are ethnic Macedonians who follow the Islam religion. But, in that moment the Macedonian state as a world institution took the leading role from MOC, as a sacral institution.
Subjective assessment of happiness maintains that happiness is a global and subjective measure of whether a person is happy or unhappy (Lyubomirsky and Lepper, 1999). Social support networks and perceived level of satisfaction from support networks contribute to happiness. The present study aimed at exploring relationship between subjective happiness and dimensions of social support (structural: number of persons and functional: level of satisfaction) of ageing respondents classified on the basis of working status and gender. The study was based on a sample of 139 respondents drawn from Jaipur City, (India) identified using snowball sampling, following clear inclusive and exclusive criteria. The respondents completed Subjective Happiness Scale (Lyubomirsky & Lepper, 1999) and short form of Social Support Questionnaire (Sarason et al 1987).

Results indicated that structural social support is positively and significantly related with subjective happiness ($r = 0.291$, $p<0.05$) for ageing males whereas functional social support is positively and significantly related with subjective happiness ($r = 0.427$, $p<0.01$) for ageing women. Hence, the importance of diverse support networks for ageing males and an enhanced level of perceived satisfaction for ageing women as related with subjective happiness is reflected. Subjective happiness is positively and significantly related with only functional social support ($r = -0.516$, $p<0.01$) for retired persons. However subjective happiness is unrelated with both the dimensions of socio support in case of pre-retired and post retired persons. Perceived level of satisfaction becomes critically important when people retire. Conversely, due to changes in family structure, death of spouse and loss of companionships; subjective happiness remains unrelated to social support in post retired years where as a sense of personal liberation and interest in personally meaningful leisure activities surface for both ageing men and women.

The Interplay Between CEDAW, the Brazilian Women's Movements, and Global Feminisms Agendas

In this paper we investigate how Brazilian women's participation in transnational feminist networks and the UN Conferences on Women and Brazil's ratification of CEDAW have profoundly shaped the two more recent waves of the Brazilian feminist movements: third wave of the 1980's and the ongoing fourth wave. Our paper presents a case study of the interplay of the national and transnational dimensions in shaping women's movements. The third wave of the Brazilian feminist movements encompasses the civic participation of Brazilian women, which is not only a strategy for change but also a way to participate in the transnational women's movement and Brazil's ratification of CEDAW in 1982, during the military dictatorship. The ongoing fourth wave of the Brazilian feminist movements has focused on the institutionalization of feminist demands through public policies for women; the creation of executive managerial organs for such policies at the national (the National Secretariat for Women's Rights) and localizing the global should be at the center of both feminist activism and scholarship.

Informal Support Networks and Female Career Continuity

Female Japanese workers who have chosen to play multiple roles, such as those of wife, mother, and paid professional, often experience difficulties in career continuity. Some research and theory suggest that public policies that promote gender equality, childcare, and nursing leaves have positive effects on the career continuity of working women. Nevertheless, the impact of informal support has not been empirically evaluated.

In this exploratory study, I focus on informal networks among female workers. Affirming the importance of supportive networks, I explore how they relate to female career continuity in Japan. In order to accomplish this objective, I collected interview data on female informal support networks from persons in charge of personal or gender issues in 22 Japanese companies or associations. Major findings are that these informal support networks have three principal functions: collecting and disseminating useful information on career development, offering...
emotional support in times of trouble, and providing role models for working women.

Given the countermultiples to the dismissal or resignation of female workers in recent years, these findings can be utilized to examine the effect of informal networks on working women, which, in turn, may improve the social status of female workers and gender equality in the workplaces in Japan.

Reconciling Work and Family: Do Japanese Fathers Take Advantage of Policies?

Japanese working parents today are entitled to various work-family-balance support measures such as parental leave, nursing leave for children, and shorter working hours. However, studies reveal that most working fathers in Japan fail to utilize such policies.

The primary purpose of this paper is to further explore the reasoning for Japanese fathers to reject or abstain from using the aforementioned workplace support measures. Furthermore, some critical factors including workplace culture, and the values and beliefs of Japanese fathers must be analyzed, in order to understand their reasoning for justifying their practices.

This study is part of a collaborative research project of work-life-balance led by B. Hobson and others in the European Union. The data was collected from face-to-face interviews, which were conducted in the Kansai area between April and November in 2010. There was a total 104 respondents, which included 51 women and 53 men. All of the respondents were dual-working parents with preschool aged children.

The results of this study showed a number of ways in which the fathers discussed their work-family-balance related practices. Among the 53 Japanese fathers, an estimated 40% of fathers worked more than 50 hours per week and a majority of them worked longer hours by “their own choice”. Moreover, in most cases, fathers were afraid of burdening their workplace by altering their work plans, due to family needs. Some fathers also had fears of harming their career by actively utilizing paid leave and child care policies. However, there were some fathers who chose to prioritize family over work. Reasons for this include: wives being distressed or child care needs. These fathers appeared to have more bargaining strength or the ability to overcome workplace critics.

The Issues Related to Care-Giving Conducted By Male in Japan

The issues related to care-giving conducted by male.

-Through the example of a husband and the son caregiver participating in the self-help group-

MATSUI: Yuka

Recently, the number of men caring for their wives or their parents has gradually been increasing in Japan.

In this study, I will first summarize current status and difficulties of male Japanese caregivers. Then, I pay attention to a meaning of the care experience of the male caregiver and survey care in Japan and a relationship of the gender.

Traditionally, family care has been thought of as a female role, so the existence of male caregiver has been largely overlooked. However, according to the latest investigation, one of three people of the family caregiver is a male.

Therefore this study interviewed it for a male caregiver and investigated it and investigated a meaning of their care experience.

As a result, I understood that a male caretaker faced various problems.

Their problem is difficulties with continuing work and doing housework, and the reduction of local relations, enclosure of the care, difficulty of talk of the problem.

So they had a risk of the abuse for the family.

And they got possible to arrest a self objectively by participating in the self-help group and evaded a risk of the abuse.

This study showed that a support function for them that a self-help group was apt to stand alone. This study explained that their problem is affected by a gender model.

And they experienced an identity crisis as the man through taking care of their family. However, there was the man who got new identity as the caregiver after having experienced an identity crisis in them.

The existence of such a male caregiver may reorganize care and relations of the gender.

MATSUMOTO, MIWAO* (The University of Tokyo, ghc03207@nifty.ne.jp)

Structural Disaster and Infinite Responsibility behind Institutionalized Forbearance

This paper attempts to elucidate the hidden social mechanisms of “structural disasters” involved in the Fukushima nuclear accident with a particular focus on the aspects of problems that go beyond the widespread dichotomous framework.
of perpetrators versus victims, from the viewpoint of the sociology of science and technology. In particular, the paper brings out the process through which double under-determination has influenced the formulation, implementation, and evaluation of public policies preceding and following the Fukushima accident.

Three points are made based on the analyses of the guidelines for the utilization of SPEEDI (The System for Prediction of Environment Emergency Dose Information), of the organizational structure of the Governmental Examination Committee on the Fukushima accident, and of the siting of facilities for the disposal of HLW (high-level radioactive waste). Firstly, the social mechanism by which “institutionalized forbearance” to secrecy causes serious damage to third parties without breaking laws or moral ethics is revealed. Secondly, the paper illustrates the way in which the organizational structure made up of both investigators and stakeholders tends to carry over structurally originated problems and reproduce them. Thirdly, the paper highlights the possibility that social decision-making, with a very long term horizon and high degree of uncertainty, can bring about infinite responsibility, and eventually lead to collective irresponsibility.

Based on the insight into the novel dimensions of these three social mechanisms, which have been difficult to understand by utilizing the framework of perpetrators versus victims and its variants, the paper argues for the importance of evaluating and allocating social responsibility to ex-ante expertise rather than ex-post expertise provided with hindsight. In conclusion, based on an ongoing project by the special committee on scientific integrity in emergency situation of the Science Council of Japan, a policy proposal to redesign institutional structures after “structural disasters” will be made.

Therefore, the study shows that different expression of even the similar words changes the rates of the item nonresponses and questions using abbreviations and non-familiar words may increase item nonresponses. On the other hand, it doesn’t find the strong associations between demographics (sex and age) and trust in nonprofit organizations except religious ones. From the results of multivariate analysis, the two tasks are performed by two types of religious organizations and voluntary organizations (volunteer and civil activities organizations). These findings are found commonly in each country. It implies measurability and comparability of trust in nonprofit organizations.

**Postrevisionalist Islam or Traumatic Resecularization? What Does Historicizing the Religio-Political Unity Offer in the Post-Khomeini Iranian Context?**

The postrevolutionary Iranian “Islamic revivalists” (who now call themselves “principlists”) still evolve an early twentieth-century event that—in their collective reconstruction of the past—crudelyrafted politics onto religion. A foreign-backed military coup d’état elevated an anti-Islamic modernizer to the position of power, enabling him to tragically crush the only voice that genuinely represented the anti-dictatorial and anti-colonial popular will. “Our religion is the essence of our politics, and our politics is the essence of our religion,” a saying attributed to “Martyr” Seyyed Hasan Modarres (d. 1937), the prominent Shi‘i mujtahid and long-term political opponent of Reza Khan, thus serves as the emotional (and formerly counter-) intuitive basis for the continued necessity of an Islamic theocratic state as a bulwark against secularizing forces inside and outside the country. Against this backdrop, religiously-minded postrevisionist reformers (known in Iran as “religious intellectuals”) who dare to suggest separation, in one way or another, of religion from politics run the risk of being labeled as “secularists.” It was not a mere coincidence, therefore, that both the December 2012 issue of the most liberal Tehran monthly Mehrnemeh and a June 2013 principlist political documentary featuring them adopted as their title “We are not secular,” a quote from prominent reformist-intellectual Saeed Hajarian.

After reviewing post-evoking claims made both for and against separating religion from politics and dynamic contentious interaction between the two opposing camps in Iran for the last two decades, this paper will reflect on two important questions. Is resecularization, be it generally conceived or analyzed in one national context, simply the reverse process of desecularization? Does historicizing secularities (and, for that matter, de-secularities) serve as means by which not only fresh reconstructions of collective memories are facilitated but also institutional reforms for accommodating pluralistic understandings of the religio-political unity may become possible?

**Use of Paradata in Non-Response Bias Adjustment: Application of Sequential Propensity Weighting on Dutch Reluctant Respondent Sample in the European Social Survey**

This paper explores the use of European Social Survey (ESS) Round 5 paradata Z-variables (eg. type of dwelling and neighborhood characteristics, and characteristics of contact procedure variables) to adjust survey estimates for non-response. By taking reluctant respondents - as opposed to cooperative respondents, as proxies for all types of non-respondents - this paper obtains calibrated propensity weights for all types of non-respondents - this paper obtains calibrated propensity weights for non-response weights in sequential steps. Two types of propensity scores (i.e. focus is on ‘contactability’ and ‘survey cooperation’) are obtained through logistic regression models and multiplied with each other in order to obtain nonresponse weights for reluctant respondents based on sub-group stratification methods. ESS Round 5 Dutch sample is used as a case study because of high number of reluctant respondents sample (N=460). This paper illustrates sequential steps to transform reluctant respondents sample that are representative of all types of non-respondents through sequential propensity weights. The effectiveness of propensity weights are studied through level of standardized bias, level of correlations between Z-R and Z-Y variables as well as effects of multiple regression models on attitudinal variables tested between unweighted and weighted samples. These evaluative items are also compared with the effects of post-stratification weights to make comparison between z-weights and c-weights (eg. age, gender, region). The paper addresses implications of data quality in paradata, fieldwork design on refusal conversion activities and use of reluctant respondent sample for non-response adjustments in cross-national research.
Deciding 'Quality' Surrounding Umbilical Cord Blood Treatments in Japan and the UK

Stem cell treatments, such as those derived from umbilical cord blood, are relatively novel in the UK and Japan compared to other countries, such as Spain and America. Hence, the policy and practices surrounding the treatments are still emerging (Brown et al., 2011), and as a result creating uncertainty in the decision-making of haematologists and oncologists in the UK and Japan. In particular, when do they deem an umbilical cord blood treatment suitable for a patient, and how do they choose between umbilical cord blood banks when more than one unit is available for a patient? In essence, how do they 'know' what constitutes a 'quality' cord blood sample?

These are important insights to be gained when the cost of a single cord blood sample can reach between £16,000 to £25,000. Factors such as where the cord blood treatments are carried out and by whom have been considered as influential by policy makers in determining the success of treatments. How such a move to establish 'clinical expertise' around cord blood treatments would impact upon perceptions of 'quality' cord blood in the two countries is significant as it challenges the notion that the success of cord blood treatments is determined by the inherent properties of the cord blood unit. Furthermore, a connection between cord blood collection and banking practices and the perceived 'transplant quality' of a cord blood unit for stem cell treatments is also emerging from recent policy discussions, due to the proposed 'best practice tariff' to reimburse hospitals for securing high quality collections.

Emerging findings from a three year project, funded by the Great Britain Sakawa Foundation, to explore through qualitative interviews how those working in Japanese and UK transplant centres perceive 'quality' in cord blood in a global context, and what factors influence their perceptions, will be presented.

Beyond the Skill Migration: Middle Class North-South Mobility in Asia

South mobility in Asia, based on empirical work among young Japanese migrant workers in Asian cities, including Shanghai, Hong Kong and Singapore.

In decades, the destinations of Japanese migrants have been gradually shifting from Western countries to Asian countries. This occurs in the economic transition or power-shift between Japan and other Asian countries. Young generation increasingly prefer economic opportunities in Asian global cities. They are not typical expatriates transferred from headquarters, nor project-based temporary professionals, but contract-based and locally hired workers moving individually. This represents a new trend of migration, which has emerged in the last decade. A skill migration system has formed in Hong Kong and transplanted to other areas and discuss the characteristics of the migrants. The phenomenon formed a market-based migration system arranged by staffing agencies. Now Japanese companies abroad have two types of Japanese workers; expatriates sent by the same company and locally hired contract workers positioned under the contract. The contract workers' career plans are often inconsistent with the actual achievements, since they are excluded from the companies’ promotion system. Consequently, many of them use their working experience and social networks acquired while abroad and find another career track with entrepreneurship. This shows a pattern that is distinct from career-based skill migration. Through these discussions, I propose a different perspective on the middle class migration in Asian context.

MATSUTANI, MINORI* (Kyoto University, minori.matsutani@gmail.com)

Identification for Career: Contemporary Young Japanese Diaspora in Asia

Most literature on contemporary Japanese diaspora has been focused on male expatriates and their families following the offshore transfer of Japanese companies. Under the popularization of international migration, however, the flow, period or style of migration and the social background of migrants are getting increasingly diverse. This paper focuses on a new type of young Japanese migrant workers in Shanghai, Hong Kong and Singapore.

They move individually and are locally hired, usually through staffing agencies. In most cases, they find positions under expatriates in Japanese companies abroad which leads them to be marginalized in Japanese communities. They speak local language and work with local people under the management of expatriates. Therefore their identification becomes more complicated when compared with expatriates, who are strongly embedded in Japanese companies and communities. In addition, their identification influences and is influenced by their choice of staying/moving/circulation. They are contract-based workers and can easily change their jobs and working/living place. It means their mobility is connected with their career planning. Considering these situations, they are drawn to 3 directions: localized, globalized and national under their working conditions and future plans. Localized and globalized identities are necessary for daily working and career building in abroad. Japanese has to be preserved for re-entering Japan labor market after return as well as for business communication with Japanese companies abroad. These identities coexist, conflict or are combined in each context.

What forms their diasporic identity, how does it change, and how do they try to control/fail to control it? Based on rich empirical work since 2009, this paper reveals the process of Japanese young diaspora's identification.

Industrial Heritage and Memory : A Case Of Miike Coal Mine

In recent decades a new gaze has appeared upon architectural remains of modern industry This gaze makes it possible to turn these remains into cultural heritage, or more precisely, industrial heritage. Architectures such as factory, dockyard and coal mine pit which used to be symbols of modernity has turned, after changes of economic structure, into symbols of degeneration of local towns which had depended on these industries. Industrial heritage is a way of revitalization favored by these towns.

Through the process of revitalization, the past of modern industry is reconstructed from the point of view of new perspective. Reconstructed industrial heritage assume public memory of the place. On the other hand, these remains used to be the places not only of labor, but also of conflicts and tragic accidents whose painful memories last long upon local people such as ex-workers and their families. It happens that local people have their own view about the past of the place different from the gaze of industrial heritage.

In this presentation I will discuss this cultural gap between industrial heritage and lived memory. How are modern industries' remains inherited through re-construction of the past? How local people remember the past of their labor, especially tragic moments? How the perception of the present heritage is different as a function of the the past experiences? I will adress these questions
through considering a case of Mike coal mine, which exists in Kyushu, western Japan.

**A National Park Becomes a Growth Machine: Transnational Environmental Politics In Southwest China**

This paper examines the Yunnan Great River Project (YGRP) (1998-2009) in Southwest China, a joint conservation project by the Nature Conservancy (TNC), a U.S. based conservation organization, and the Yunnan Provincial Government. The project was a vehicle for TNC to introduce a standardized model of protected area management to Northwest Yunnan, based on Yellowstone National Park in the U.S.

The study, based on archival research and interviews, has three main contributing areas. First, it sheds light on China's fragmented bureaucracy. Despite TNC's race to save one of the World's ecological hotspots within the project area, it became ensnared, not only in provincial bureaucratic politics, but also in relations between the central and provincial governments in China.

Secondly, the study reveals that global conservation discourses, such as ecological hotspots, may not necessarily create a common conservation goal among key stakeholders (e.g., local governments and people). They attached local meanings to global conservation discourses in order to advance their economic and/or cultural autonomy. In other words, the political, social, and cultural particularities of the ecological spaces in Northwest Yunnan challenged TNC's rationalized way of saving nature under globalization, and they influenced the organization to re-evaluate its conservation methods.

Thirdly, TNC's inability to build alliances with other stakeholders (i.e., provincial governmental agencies, local NGOs, and local intellectuals) weakened its position when an entrepreneurial local government adopted the national park model primarily to create an economic development scheme and turned the idea of a national park into its "Growth Machine" (Molotch 1976). The park ultimately undermined small local businesses and compromised TNC's wish to emphasize community participation.

**Comment/like/Retweet: Public Discussions of Economic Crisis News Information through Social Media and the Mobile Internet**

The rapid popularisation of social media services, and the even more current popularisation of mobile internet devices raises important questions about the everyday use of new media technologies and rapid changes in how individuals, everyday individuals use these new media technologies to access, discuss, share, and engage with current topics on the difficult state of our world, such as austerity, economic crisis, and financial policies that impact everyday inequalities. It is important to explore the everyday use of these new media technologies in order to learn more about how the public is engaging with challenging news topics through recent developments in new media.

Do users really engage with these devices and online interactions in a fleet- ing and less engaged manner, or does the ubiquity of the mobile internet afford greater engagement with news information? Does the algorithmic filtering of online news and information on issues that impact social inequalities like austerity and economic crisis.

**Knowledge in the Wild - from Mad Cows to Alzheimer's: How Knowledge Mobilization Works**

This paper presents analysis of interview data from a study of 'knowledge mobilization' as a social process. In doing so it contrasts concepts of 'knowledge transfer' with those of 'knowledge mobilization' which it sees as a non-linear and iterative process involving social organization, institutional cultures and human interactions. It is based on interviews with researchers from two major science labs who are investigating the way in which misfolded proteins (i.e. prions) produce spongiform illness in animals (e.g. Mad Cow Disease, BSE, Chronic Wasting Disease) and spongiform-like illnesses in humans (e.g. Cruyff-Jacob Disease. Alzheimer's Disease, ALS, Parkinson's Disease). The focus of this paper is not on the science per se, but on knowledge development and transition as social processes. On the one hand, it seeks to provide insight into the way that knowledge is developed and transmitted, as these processes are understood by the scientists who are directly involved in the process. On the other hand, it employs sociological perspectives related to networks, social capital, and new institutional analysis to provide a more systemic insight into the knowledge mobilization process.

**Academic Writing As A Contesting Territory for Women**

In this paper I present a discussion on the forces that come to play when talking about the production of knowledge in universities understood as international identities, particularly through the act of writing. I use women's interviews to explore on the meanings of academic writing today. These interviews have been performed to female professors from different disciplines in the Social Sciences and Humanities in one university in Chile. My argument is that contemporary ways to reason universities as corporate institutions have important effects on the confrontation of knowledge, subjectivities, and their relations. Discourses of internationalization of higher education that use institutional arrangements to promote specific practices to name themselves as successfully international, such as, international networks and circuits to publish academic work, designing and implementation of international collaborative research, high level indexed publications, etc., produce the idea that all these are the "natural" institutional outcomes and aspirations for professors. These institutional practices create the conditions for a new institutional developmentalism (Sidhu, 2007) where the re-configuration of international practices has taken the status of managerial tools.

Institutional cultures produced through these discourses have privileged the constitution of a disembodied academic subjectivity that requires subjects to narrate themselves with no reference to gendered, racialized, nationalized, and sexualized intensities. I explore on how this disembodiment is narrated and problematized by women through their acts of academic writing, particularly in disciplines related to Humanities and Social Sciences.

**L'accès Au Logement Des Jeunes Français : Pour Quelle Indépendance ?**

Les jeunes français doivent faire face à des difficultés d'intégration de plus en plus aigus dans tous les domaines de la vie sociale : accès au travail, dans des conditions stables et en rapport avec leur niveau de qualification, accès au logement, accès aux droits sociaux, etc. Ces difficultés en font la population la plus en butte à la vulnérabilité sociale et à la précarité.

De ce fait, les enjeux qui pèsent sur les politiques publiques de jeunesse apparaissent importants : les nécessités sont grandes de voir se développer des dispositifs sociaux favorisant l'autonomie des jeunes. Les politiques publiques sont construites non seulement pour aider les jeunes à se constituer, mais aussi à renforcer leurs capacités de résilience et de combat des déficiences sociales en cours.

Dans ce contexte, notre communication s'attaquera à analyser l'accès des jeunes au logement indépendant. Nous partons d'une première approche objective présentant les manières actuelles des jeunes de s'installer dans un logement. Les perspectives financières apparaissent comme un obstacle majeur à l'indeptendance. L'aide économique de tiers comme la famille et/ou des acteurs publics est souvent requise ; ce qui n'est pas sans créer de profondes inégalités sociales.

Cette première approche objective sera complétée par une entrée compréhensive qui abordera les liens subjectifs que les jeunes entretiennent avec le logement. Les jeunes apparaissent ancrés en différents lieux : le logement indépendant ; lieu d'apprentissage de l'autonomie ; la maison familiale ; vécue comme un lieu d'ancrage. La construction des espaces d'autonomie ne signifie pas absence de liens. L'analyse de la fonction de ces liens permet de requestionner la notion d'autonomie et de dépendance juvénile, autrement que sous un angle économique.

The PhD Degree and Weber’s Concepts of Rationality

The decision to pursue a PhD degree is attended by considerable uncertainty over career outcomes. This is becoming increasingly so, as the gap between the demand for full time academics in the university workforce and the supply of PhD recipients continues to widen in many countries. No longer does a PhD guarantee secure employment. Add to this the large amount of time and student fees invested in a PhD, and it raises the question of why would anyone undertake a PhD? Using Weber’s concept of rationality, the paper will argue that attention must be given to the substantive rationality that is involved in the decision to pursue a PhD. The PhD degree has a dual character: as an institutionally based course in which successfully producing an original contribution to a field can result in the award of a certificate that serves as a gateway into a career; and as a powerful social symbol which is associated with certain myths, values, status and aspirations that can be personally rewarding.

As higher institutions increasingly become subject to neoliberal trends that are transforming the way that PhDs are conceived and structured (such as the growing preference towards theses-by-publication over traditional monographs, alignment of research topics with institutional research priorities and a tightening of candidacy time limits), the relationship of substantive rationalities of PhD students to more formal rationalities of higher education institutions is becoming increasingly problematic. As pressures grow on PhD students to align their studies with institutional expectations and also those of a competitive career market, this paper will examine the ways in which students and institutions are negotiating the risks and uncertainties surrounding PhD degrees in light of the push and pull of multiple rationalities.

ICT and Local Development in Globalization

Abstract

In modern times, development is more or less interconnected with globalization. On the other hand, globalization processes are more or less interconnected with the use of ICT. The use of ICT is defined as the access in modern communicative systems, and as a result marks the “presence” or the “absence” of a specific area in the world map, and consequently the ability of this area to attract investments in multiple fields of entrepreneurship.

But what is globalization in analytical terms? Is it a system consisted of state entities which maintain their authority in the regulation of their internal affairs, or is it a system which functions autonomously, transcending states? This paper examines the possible answers to this crucial question up to a final conclusion. Further on, it depicts statistical data from all over the world, in an attempt to document the interconnection of the presence of ICT services in a certain area with the economic growth and the development of this specific area. Finally, it examines the problem of “exclusion” of certain areas from the world map of the economic transactions and the relevant processes of development, under the light of the arguments presented above.

Social Science Knowledge and Welfare Expertise – a Closely Interwoven Development

The development of the social sciences in the 19th and 20th century has produced knowledge about societies that informed other areas of social and political sciences. In this process, specific knowledge propositions have been chosen, others neglected, mostly depending on the actors and institutions that acted as carriers and recipients of this knowledge. The paper in hand addresses the question of how social science knowledge and its translation have contributed to the construction of welfare states, especially at their outset around 1900, especially at their outset around 1900, especially at their outset around 1900, especially at their outset around 1900. In this paper, I will analyze a twofold translation of knowledge: The first is how academic social science knowledge diffuses into policies: I will examine how the idea that society was a structured entity, that was put forward by early sociologists such as the Historical School of Economics in Germany, informed social policy experts. Social science knowledge contributed to the insight that the Social Question was induced by societal structures. If this was accepted as a novel insight state-administered social insurances could be justified and planned. The second translation happens between countries: Social policies that had proved useful could be translated to other countries, but the standing of the newly developing social sciences within these countries had a strong influence on how successful these translations were.

I will illustrate my theoretical considerations with examples about how different welfare knowledge propositions influenced the early set-up of state-administered social policies in Germany, Great Britain and the Netherlands (ca. 1870-1920). Thus I choose to compare two pionners of public social policies and one “welfare laggard”. I will analyse historical sources in order to analyse how text-based academic knowledge can be translated into policy expertise both within and between countries.
The Influence of Sociology on Establishing Social Hygiene in Germany (1890-1920)

In the course of the nineteenth century, epidemics and contagious diseases proved to be a considerably threat to society. Ideas to promote prophylactic medical care that was directed at larger collectives (instead of relying on a curative doctor-patient relationship) were put forward in Germany already in the 1850s. A professionalization of this expertise and an acknowledgement by public and political discourse however only started slowly in the 1890s, with a high phase in the Weimar Republic in the 1920s. Why was "Social Hygiene", as the new field of expertise soon was to be called, successful in exactly this period of time?

In my paper I propose that this acceptance of Social Hygiene can in part be attributed to the emergence of sociology in Germany. Sociology put forward ideas of a structured society, sometimes with analogies to organisms like the human body. Reinforced by processes of nationalization, this led to ideas of a societal body, or "Volkskörper". Medical experts could use these ideas in order to legitimise Social Hygiene as a new profession that led to paradigmatic changes in the fight against diseases: Social circumstances needed to be changed. New statistical methods hinted at the stratification of morbidity, therefore fighting germs was not sufficient, instead living and nutritional conditions needed to be ameliorated. Social Hygiene led to a multitude of academic publications, from 1920 onwards medical faculties established professorships in the field. However, as the proposed means were diffuse and hard to apply, the actual implementation of measures varied between cities, and was far away from being included in national legislation. Although the interpretative knowledge put forward by Social Hygienists proved to inform the contemporary debates, the actual application of sociological ideas in political and medical programmes remained incomplete.

Career Advancement for Women in the UK Military: Opportunities, Risks and Responses to Gain Acceptance

The number of females holding senior posts in the United Kingdom's military is around 1% compared to an average of around 30% in the rest of government. This paper reports on a study which sought to examine why the rate was so low using an entrepreneurial lens. As there is a paucity of research on female entrepreneurship in the public sectors and none in the UK military, this study helps to provide some fresh insights into an issue which to date appears to have been intractable.

Using entrepreneurial literature, a model was developed to research the potential barriers faced by female officers in the UK military when seeking promotion to the most senior ranks. The model was designed to examine the relationships between institutional and individual determinants in relation to promotional outcomes. These determinants included structure and agency, social capital, homophily, support and how women deploy a series of other strategies to accommodate institutional and network orientated logics and norms to gain promotion acceptability.

Semi-structured interviews were used to gather data from 48 female officers and a sample of 5 male officers over a four month period in 2013. Candidates were drawn from a stratified sample at the senior ranks. The overall research paradigm was critical realism. All interviews were recorded and transcribed and then analysed using Miles and Huberman qualitative methodology for coding and analysis of data.

The findings from these interviews demonstrated that the interplay between stress, the policy and played a considerable role in gaining promotion. Factors such as emotional support, conflict resolution, reputation and legitimacy also determined the contextual social capital perceived to be necessary for promotion by deeply embedded bespoke male networks.

The originality of this research is in the use of an entrepreneurial framework to examine promotion within a government agency.

Japan and Mexico As Global Players in the Horticultural World Market

Abstract: Horticultural trade reflects the major features of current globalization. The first one is the multi-polarization of the economic world, whereas especially three great centers are dominating: namely the USA, the European Union, and East Asia (China and Japan). The structure and trends of this trade can be explained by the Food Regime analytical approach, which states that during the Third Food Regime, which started in the mid-1980s, vegetables and fruits became the major components of food consumption in the countries of the world. In this context, both Mexico and Japan are playing an important role, Mexico as major exporter of fresh products and Japan as main buyer of these items. Mexico is located in the sphere of influence of the USA and Japan is the axis of the East Asian economic bloc. Mexican exports are depending strongly on the USA market and Japan's demand of fresh vegetables satisfied mostly by imports, particularly from USA and China.

At the same time, Mexican fresh vegetables are losing competitiveness in their principal market and the Japanese consumer is losing confidence on the safety of imported foods from China and USA. All these facts make clear both countries need to diversify their markets. Therefore it is necessary to explore the possibilities of enhancing the horticultural trade between Japan and Mexico, and also to analyze the Mexican experience as successful supplier of several fresh products to the Japanese market, for instance, mangos, avocados, melons, asparagus, kabocha pumpkins and others. At the same time it is a good moment for an evaluation of the Free Trade Agreement Mexico-Japan, started eight years ago.

Social Systems Form Simulation to Observation

The cognition-computing short circuit is still affecting both neuroscience and computer science today. Social systems theories, on the one hand, and agent-based simulations on the other have once more pinpointed the traditional socio-logical dualism between macro- and micro-sociology. However, the advent of 'Big Data' has paved the way to new techniques of investigation based on the study of new types of data, such as conversations taking place on popular websites, like Twitter and Facebook, traces left by our mobile devices or data generated by wearable sensors. Thanks to these techniques, we can go beyond simulation and observe the operation within the social "black box" in the same way that neuronal functional magnetic resonance imaging (fMRI) does as regards to the brain. This paper discusses the potential as well as the limitations of these new methods of sociological investigation and their spillover effects on the theoretical development of the discipline.

Increasing user's quality of life has become a central outcome for many leisure services. In the UK, policy expectations encouraging leisure services to improve user's quality of life have been explicitly pushed since 1999. Drawing on interdisciplinary empirical research in the fields of social policy, leisure and cultural studies, this paper presents an analytical approach to analysing the relationship to accommodate and quality of life. This paper draws on evidence from the cultural sector to highlight the potential impact of leisure workers on user's outcomes and compares UK policy to the experiences of those delivering services on the ground-level. The negotiation between policy and practice is particularly interesting due to the increasing policy shift taking place towards a more collaborative sector.
Global Unions, Local Power: Evaluating Labor Transnationalism from North America to the Global South

This paper explores recent campaigns led by global union federations and evaluates different strategies these institutions have employed. The central findings reveal a paradox. Though global unionism is typically concerned with creating parity and universal standards across borders, I show that the local context can either undermine or empower the intentions of global actors, creating varied and uneven results. The question posed here is simple: How can global unions build local power?

This research compares three global framework agreements (GFAs) in different national-industrial contexts in an effort to assess the varied ways they are “implemented” locally. I look at private security in South Africa, contract cleaning in India, and telecommunications in Brazil. GFAs have been studied from a variety of perspectives. The insight offered here is to view them as part of a long-term industrial strategy for national unions, or a component of what Marshall Ganz calls “strategic capacity.” This paper demonstrates how GFAs are used in different ways depending on local circumstances. In so doing, I focus on the local sphere as a bellwether for evaluating global unionism. The research is based on about 50 in-person interviews in nine countries, but specifically compares outcomes among unions in South Africa, India, Brazil, and the US.

The process of transnational collaboration promotes grassroots mobilization in South Africa, India, and Brazil. But it also signals a new role for national unions. The process of transnational unionism is the construction of local power in new ways depending on local circumstances. In so doing, I focus on the local sphere as a bellwether for evaluating global unionism. The research is based on about 50 in-person interviews in nine countries, but specifically compares outcomes among unions in South Africa, India, Brazil, and the US.

Comparing the Design and Implementation of IT Skill Standards in Britain and Japan: IT Human Resources, Institutional Innovation and Path Dependency

At the beginning of the twenty first century, government administrations in Britain and Japan pinned great hopes on IT for economic development but feared that the rapidity of technological developments frustrated the effective workings of labour markets, education and training to develop and deploy effective IT labour forces. The speed of technological change meant that employers, educators and IT professionals produced piecemeal solutions and lacked a common language to describe IT skills and guide employment, training, education, and careers. In Britain, the government sponsored the development of a matrix of IT functional areas and levels of responsibility, the Skills for the Information Age (SFA), within which tasks and skills could be appropriately described. This ‘one page framework’ stimulated Japanese administrators to sponsor an IT framework for Japan, the Information Technology Skill Standard (ITSS). At first sight, comparing the design of the two skill standards appears to be a case of IT policy transfer and institutional innovation in response to common technological challenges in IT skill formation. However, closer examination of the institutional innovations and the empowerment in the two countries underlines the importance of path dependency, for the innovations were mediated through distinctive institutional histories and cultures. Being locked into different institutional histories and resources does not mean that ‘learning from abroad’ cannot occur, but that policy transfer and institutional innovation will be heavily conditioned by the past and develop different forms and practices. Using official documents and interviews with key participants, the authors demonstrate the continuing importance of different British and Japanese institutional histories on the respective institutional linkages and ownership of the skill standards, the respective provisions for dissemination and updating the skill standards, the respective links of the skill standards to competency, examinations and qualifications, and the international dimensions of the two national skill standards.

Addressing Diversity Trends in Rural America

Background: The new trend in US immigration is an increase in the number of Hispanics, the largest minority population, into rural America. This growing trend in rural and ethnic diversity found in small and rural America is expected to increase in the future. This demographic change is highlighted by rural farming communities that are defined by migrant labor composed primarily of Hispanics. Most often this definition is one of supposed “decline in community.” This presentation proposes one strategy for integrating migrants into these communities in order to strengthen the community and to save them from putative decline. We focus on the differential HIV risks and access to HIV care and treatment of newcomers and long-timers. Migrants who have been in the community for 5 years or more (long-timers) have greater HIV risk behaviors (more risky sexual behavior and greater alcohol use) and have greater access to primary care. Newcomers (5 years or less) report lower HIV risk behaviors and have less access to primary care. Methods: This is an analysis of adapting an evidence-based health intervention utilizing a sociological theory. This discussion will show how community structures can be strengthened by incorporating the social networks of the growing Hispanic minority into the health care system. Fundamental Cause Theorists focus that access to health care resources will improve the health of disadvantaged migrant workers through strengthening social support within the networks, thereby reducing HIV sexual risk behaviors and excessive alcohol use. Results: Amigos Hacen Cambios, the proposed intervention, will assess migrant social networks for inclusion of newcomers and long-timers in order to take advantage of their strengths. The heterogeneity of the networks increases the probability of diffusion of the innovation or new ideas.

Institutional Ethnography and the “New Materialism”
In the introduction to their 2010 collection, New Materialisms: Ontology, Agency, and Politics, Diana Coole and Samantha Frost write of an increase in “scattered but insistent demands for more materialist analysis” (p. 2). While not seeking to “deny [the] rich materialist heritage” (p. 4) that informs their work and the work of others taking part in this scholarly conversation, Coole and Frost call for the development of “renewed materialisms” “up to the job of grasping and analyzing our ‘materially and discursively fast-changing world’” (p. 4). This paper examines these theoretical and analytic trends from the perspective of institutional ethnography. I approach this literature with a friendly curiosity and share my discoveries in terms of what it’s all about and what new materialists and IE materialists might have to say to each other.

Risk Perceptions and Risk Management in the Gas Pipeline Industry

Growing inequalities worldwide and within nation states, global financial crises, massive urban migration, austerity and shrinking public spheres – all contour aging as a macro, meso and micro process. As the coup d’etat in slow motion, as population aging has been termed, sweeps across all regions of the world, although in different ways, instances of previously hidden terrains are being revealed. Among these are the globalization of care, the effects of growing inequalities on risks to older people but also on youth and those in mid-life, and countervantageously the greater availability of potential paid caregivers. In this proposed talk, McGonigal draws on her extensive research on the policy implication of global aging, on her comparative research on life course aging in various countries in times of economic challenge, and her current research on transnational aging and care supply/demand.

Punishing Coaching: Japanese Educational Sports Clubs and the Normalisation of Coach Violence

At the beginning of 2013 two independent cases made the headlines of Japanese newspapers. The first case involved the suicide of a high school student who was allegedly triggered after he received several beatings from his basketball coach for failing to perform well enough. The second case involved fifteen female judoka, including competitors in the London Olympics, who filed a letter with the...
Japanese Olympic Committee complaining of violence by two coaches, including the head coach of the women's team. Both these cases caused a national debate about the practice of corporeal punishment (tai batsu) in sport in Japan.

This paper is based on the outcomes of focus groups that were conducted with students at ten universities from across Japan in 2013. In particular we examine the ways in which commercialized action is presented by coaches, accepting them as necessary forms of discipline and, in many cases interpreting such acts as indicative of caring coaching and kindness. Further, we consider the responses of students, which suggest that these forms of corporeal punishment are necessary in producing a uniquely Japanese form of identity. The complexity of the relationship between sport and education in Japan suggests that attempts to change the ways in which sports clubs operate, including coach/athlete relationships is problematic and may require major reconsideration of the role of sport in education.

MCDONALD, BRENT* (Victoria University, brent.mcdonald@vu.edu.au)

"If It Weren't for Rugby I'd be in Prison Now": Pacific Islanders, Rugby and the Production of (un)Natural Spaces

Drawing on research conducted with Pacific Island men, this paper considers the ways in which rugby becomes a legitimate space, both for the confirmation of Pacific Islanders’ identity and the demonstration of successful integration into 21st Century, multicultural Australia. However, in positioning neo-liberalism as the reengineering, rather than the deregulation, of the state, sports such as rugby enact considerable disciplinary capacity over the bodies of minority ethnicity. The disciplinary logic is underpinned by bio-racism and commodification inherent to the discourse of post-colonial Australia. The overrepresentation of the bodies of Pacific Island men in the rugby codes, in prisons, in security, and in manual labour, suggests the structuring effects of such discourse. Such effects shape the legitimacy of access to physical spaces and also to the range of agency that Pacific Islanders’ enact. Of specific interest to this paper are the ways in which spaces, and the means to occupy them, become naturalized. This naturalization serves to obscure the actual regulating and exploitative function of such spaces, instead positing them as exemplars of individualism and self-governance.

Agency and the Vulnerable Body

Sociological approaches to agency have largely been framed in terms of intention and strategy, considering the body to be an instrument of action. However, contemporary forms of collective action highlight the increasing importance of embodied experience and the senses, associated with bodies in place, mobility, and embodied publics. Such embodied experiences are not simply acts of claiming place, but experiences of displacement and vulnerability, evident in the embodiment of identity and modes of action where evocative experiences of art are more important than programmes and demands. These transformations are evident in the shift from the incorporating rhythms of the protest march to embodied grammars evident in occupations, from Tahrir Square to Takkis Square. This paper explores this transformation of action, as unity and collectivity give way to an ethical grammar grounded in displacement, vulnerability and embodying another self. The paper considers the implications for an embodied theory of agency, and the implications for the sociology of social movements as older models of identity-action give way to acting as embodiment.

From Indymedia to Anonymous: Agency, Public Spheres and Internet Action

The social sciences are polarised with regard to the internet and communicative action. Some authors see blogging and social media as a form of circulation characteristic of communicative capitalism, shaped by a fear of emptiness and an illusion of action. Others consider the internet to be structured in terms of openness and networking, and argue that such supposed technological qualities can 'reverse engineer' freedom. More nuanced forms of this technological optimism are evident in work on the emergence of horizontal, networks and openness widely repeated – themes central to many of the analyses of Indymedia, in particular by 'scholar activists'. What is striking in the period since is the decline of this kind of action, and the emergence of a quite different form of action evident in networks such as Anonymous. These are grounded in the hacker worlds, shaped by a culture of the ephemeral, the hidden and the revealed, with an ethic of lutz, the mask and the trickster. This action takes completely different forms from the ‘open deliberation’ attributed to internet ac-

Charisma and Subcultural Bureaucracy: Challenging Weber’s Ideal Typical Distinction

What role does charismatic authority play in the incultation of subcultures of Weberian bureaucratic practice within otherwise non-bureaucratic environments? My research investigates the conditions that support the emergence and flourishing of subcultural niches of administrative excellence, which are characterized by proto-bureaucratic practices uncommon in the broader administrative environment. Subcultural niches facilitate bureaucratic practice by concentrating scarce administrative resources—especially bureaucratically experienced and inclined personnel—and inciting transformative administrative practices. Using interview, observational and documentary data from cases in the Ghanaian state, including more than 100 interviews with civil servants and expert observers of the state, my research documents the critical importance of charismatic leadership in establishing niches of bureaucratic excellence. My research finds that charismatic leaders play pivotal roles in the early establishment of bureaucratic subcultures: their charisma and cultural competence at navigating social networks enables them to attract high quality personnel even in the absence of human capital scarcity. Such charismatic leaders strategically offer subordinates "high profile" work that connects them to ‘big men’ who are influential within the larger patronage culture. By strategically leveraging these social capital rewards, charismatic leaders can cultivate meritocracy and the corporatist ethos, elevating high quality human capital and focusing their efforts on achieving organizational goals, despite operating in low-resource environments with organizational challenges. In this sense, charismatic leaders bridge conventional patronage political cultures and the Weberian bureaucratic ethos. This suggests that, in contrast to Weber's ideal typical distinctions between charismatic and bureaucratic authority, charismatic authority may be a crucial sequential step in the transition from conventional to bureaucratic organization of power within state structures.

Cultural Entropy

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This paper 1) introduces the concept of cultural entropy, 2) sketches out the perspective it implies, and 3) discusses the centrality of materiality in such a perspective. Cultural entropy describes the process whereby the intended meanings and uses for a cultural object fracture into a chaos of alternative meanings, new practices, failed interactions and blatant disregard. If entropy broadly describes a tendency in cultural entropy is the tendency disorder at the level of meaning. While objects are often thought of as stable, durable, finished things, I argue (by drawing on ideas from anthropology and ANT/STS) that objects are inherently unstable, contingent, and incomplete because of their materiality. As such, in the long run, entropy is inevitable. This is especially true for objects--drawing on Goffman (1959), I argue that disruptions are much more likely when objects are thought of as person-to-person interactions because objects can't engage in "impression management." As such, it takes a great deal of cultural work to successfully communicate through objects and maintain a consistently clear resonant meaning over time.

Although any cultural object faces entropy, I find that entropy is most visible in objects that people intend to affect belief and behavior. These instrumental uses of objects are commonplace: health pamphlets, commercial advertisements, protest placards, political speeches and more. As the intended meanings and uses for these objects are knowable, so too are the moments when these objects fail to work according to plan. I build upon my work on the materiality of AIDS campaigns (McDonnell 2010) by broadening the set of material mechanisms that encourage entropy beyond discordant settings, displacement and decay to practices of translation and juxtaposition. Ultimately this work contributes to the growing field of materiality by specifying how material qualities of objects have independent effects, beyond falling back on the symbol-driven work of material culture studies.

MCFALL, ELIZABETH* (Open University, liz.mcfall@open.ac.uk)

Charisma on the Doorstep: The Role of Agents in the Industrial Assurance and Home Credit Markets

In Weber's typology, charismatic authority is distinguished from bureaucratic and traditional forms of authority because it derives from the exceptional, extraordinary or individual personality that thought to possess. Being ideal in opposition, charisma may seem to have nothing to do with bureaucracy but, ideal type generalisation does not exclude the blurring of elements in practice. As the twentieth century progressed the proliferation of organisational forms encouraged deviations in the ways that bureaucratic organisations incorporated charismatic forms of leadership in adapted forms. These developments haven't made bureaucratic organisations more like pure charismatic organisations, but the idea of charisma offers a way of explaining certain things that happen within bureaucratic organisations yet appear to have little to do with rationality or order.

This paper explores the ways charisma was bureaucratically organised within doorstep finance companies. One of the acknowledged goals of marketing is to 'qualify' products, that is, to equip them with qualities calculated to intensify consumer longings. For doorstep finance companies, agents offered the first available means of endorsing products with more than their face value. Agents began as a distribution device but the peculiar affordances of an orchestrated personal selling force meant they soon exceeded this role. Through agents, insurance and home credit companies acquired an adaptive, competitive and personal means of interaction that they could use to maintain a high level of marketing effort. This means of achieving high sales targets and driving sales was not limited to the doorsteps of customers but was applied to all forms of customer contact. It also reflects on the patterns of response of women's groups to equality activism.

MCGARRY, AIDAN* (University of Brighton, a.mcgarry@brighton.ac.uk)

Territoriality and Roma Nationalism in Europe

The Roma community is one of the most marginalized and persecuted minority groups in Europe. Facing hostile policies at home, the rise of right-wing populism, and widespread negative ascription of their collective group identity, Roma elite groups in Europe are beginning to collectively advocate and litigate on human rights for women and children. New Zealand, which holds the top fourth constitutional positions, Prime Minister, Governor General, Attorney General and Chief Justice, for a short period of time. Yet as feminist academic Prue Hyman(2010) notes, New Zealand has moved from a relatively aristocratic society to one of its most unequal in terms of earnings and income. The paper explores the recent mobilisation of feminist civil society and female-dominated trade unions who are beginning to collectively advocate and litigate on human rights for women such as equal pay. They are using international human rights treaties, such as the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), to harness their frustration, benchmark progress and hold the State party accountable for the implementation of women's human rights and their retrogression. The paper explores and analyses the re-wakening of women's civil society activism around social and economic rights in a nation with a strong self-regard for its international reputation for gender equality. It uses data collected from New Zealand's seven periodic reports to the Committee on the Elimination of Discrimination Against Women in relation to Article 11 of CEDAW relating to gender pay and assesses the State party's response to concluding observations and recommendations. It also reflects on the patterns of response of women's groups moving from complacency through frustration to mobilisation legally, politically and at the community level.

MCI NTYRE, JANET* (Flinders University, janet.mcintyre@flinders.edu.au)

The Challenges For Social and Environmental Justice Posed By The Global Panopticon, Penal States and Disappearing States In An Increasingly Vulnerable and Unequal World

Facing up to an Unequal World has praxis implications for sociologists. The most important challenges are understanding the interconnected social, economic and environmental problems pose an ‘existential risk’ to life as we know it. The environment of the problem and the range of inter related ways in which the challenge can be addressed requires not merely transcendibility and cross cultural capability when designing policy responses, but the will to grasp the nettle as to why some live at the expense of the majority in this generation and the next. The paper makes a plea for a different form of governance that weighs up the social, ecological and environmental indicators of wellbeing, in order to enable equitable distribution of resources and to ensure that some are not living at the expense of others and future generations of life. It moves beyond a critique to suggesting an alternative form of governance and democracy that spans communities of interest at a planetary level.

The starting point is to address the five areas of priority drawing on the cosmopolitan agenda of Danielle Archibugi as:

i) Control over the use of force;
ii) Acceptance of cultural diversity by ensuring internal sovereignty based on rules that enable freedom and diversity to the extent that the freedom and diversity of others is not determinate;
iii) Strengthening self-determination of people based on participatory democracy and the ‘absence of domination’ over others
iv) Monitoring based on democracy and governance;
v) Participatory management of the global commons as the fabric of life. Currently the role of the state in Western democracies acts as protector of national community? The question of national belonging and national identity is often addressed theoretically. Empirical studies, when conducted, tend to rely on data produced through surveys and apply quantitative methods. Both of these approaches fail to capture the meanings people themselves bring to the idea of nation and national belonging. Research into the social world informed by the epistemological position that there is no reality ‘out there’, independent of the shaping efforts of the mind, demands that one employs methods which access an inside view. In-depth interviewing is one such method. How, though, does the researcher’s person (his/her social locations as a raced, gendered, classed, etc. research instrument) affect access to participants or impact the data produced? I— a dark-skinned, native English-speaker living in Germany — interviewed Germans (German citizens) in a mid-sized city in Germany. The study participants were not aware of the investigator’s understandings of what makes one German. Rather than hinder access or curtail discussion, I found that my status as outsider spurred vigorous discussions on the notion of Germaness. My ‘otherness’ seemed not to have hampered free expression but, rather, may have even opened the door for persons who felt themselves marginalized to voice their views. In this paper, I look critically at the process and reflect on the peculiarity of the data produced through the interviews.

MCLAUGHLIN, HEATHER* (Oklahoma State University, heather.mclaughlin@okstate.edu)

Does It Pay to Play? Gender, High School Sport Participation, and Young Adult Attainment

Despite differences in the cultural meaning of sport for girls and boys, popular rhetoric implies that sport participation is always good for kids. Indeed, many youth sport organizations were built on the assumption that sport reinforces shared values—such as hard work, cooperation, leadership, and fair play—that help prepare youth for their future roles as engaged citizens. While there is ample evidence to suggest that sport positively affects educational attainment (Hartmann 2008), it is unclear whether such benefits extend beyond the college years to influence young Americans’ career trajectories or subsequent attainment. Evidence from a small number of empirical studies suggests that sport participants tend to report higher earnings, though the bulk of these studies focus exclusively on men. Those studies that do include women are often outdated, considering the influence of sport participation for U.S. women prior to the passage of Title IX of the Education Amendments in 1972 (which prohibited sex discrimination in education, including school-sponsored sports). Using longitudinal data from the Youth Development Study, this study explores how high school sport participation affects individual earnings and combined household income throughout young adulthood (ages 21 through 34). Multilevel mixed-effects regression models reveal that high school sport participation is positively associated with young adult attainment. This relationship is due, in part, to participants’ greater educational attainment: sport participants are more likely to enroll and graduate from college, which translates to greater earnings throughout young adulthood.

The study’s findings suggest that focusing on individual earnings alone does not fully capture the gendered effect of sport participation on attainment.

Gender and Cohort Differences in Work-Family Life Courses and Objective Markers of Health in Mid-Life: Evidence from the United Kingdom

The United Kingdom has seen dramatic changes in the nature of work and family roles related to the ongoing gender divisions of labour over the last forty years. Participation in paid work is now a fact of life for the majority of women, including those with family responsibilities; fathers are more involved in childcare; and family forms have become increasingly diverse. In addition, these processes of change are occurring within the context of, and may be partially driving, increasing socioeconomic inequality between households and between women. While these changes in the work and family lives of men and women are well-documented, their relationship with health and wellbeing remains unclear. This study uses the wealth of longitudinal data now available in Britain to describe gender & cohort differences in work-family life course sequences across the three national birth cohort studies in the UK: the National Survey of Health and Development 1946 birth cohort, the National Child Development Study 1958 birth cohort, and the 1970 Birth Cohort Study. Sequence analysis is used to derive life course work-family typologies. Evidence of increasing individualisation across cohorts and the potential emergence of ‘new’ typologies is investigated, as are early life predictors of work-family patterns. Finally, the study investigates relationships between work-family typologies and objective markers of health risk in the two
older cohorts. One of the objective health markers considered in this study in- 
flammation, a significant predictor of chronic diseases such as coronary heart 
disease and type II diabetes. Early results suggest that gender differences in em-
ployment histories remain fairly entrenched across cohorts, and that educational 
attainment has a stronger relationship with inflammation in mid-life than the sub-
sequent life course work and family trajectories it sets people on.

MCNAMARA, DENNIS* (Georgetown University, mcnamard@georgetown.edu)

Asian Developmental States: Innovation, Industry, and Investment in China and Japan

- This paper examines the transformation of Asian Capitalism tracking innovation policies in China and Japan. Chalmers Johnson’s seminal study of Japan (Boston University, RC02-63.3) and subsequent life course work and family trajectories it sets people on.

- China followed a different trajectory, but again with a prominent state role. This paper opens with plan and profile in national innovation systems (NIS) with attention to higher value-added exports. I then look to the role of major firms in both nations since enterprise plays the major role in R&D. In the third section of the paper, I turn to global ties with a contrast of foreign investment in the two nations, and the role of foreign firms in innovation systems.

- The reach of industrial policy evident in NIS efforts suggests three major differences in the state role. As might be expected, China’s party/state plays a far more directive role than that of the Japanese state. Secondly, the Chinese party/state continues to evolve, with curious discrepancies between central and regional governments. We find more continuity in central government policy in Japan, though with the years of economic stagnation. Thirdly, inward FDI plays a major role in China’s NIS, in contrast to Japan where outward FDI links them to innovation network in the U.S. and Europe.

MCSORLEY, KEVIN* (University of Portsmouth, kevin.mcscorley@port.ac.uk)

Visceral Militarism: Embodiment, Intensity and Experience

This paper provides a critical reconstruction of the notion of militarism that is particu-
larly attentive to how militarism is specifically embodied in specific corpore-
al dispositions, structures of feeling, bodily performances, and sensory practices that are located both within militaries and beyond. As such, it attempts to move beyond a cognitivist understanding of militarism in terms of an explicit system of militaristic attitudes, values and beliefs to trace a more embodied and affective genealogy of militarism that emphasizes the often unconscious, corporeal and sensory practices that are the foundation of what war-professional and strategic valorization is felt to be normal and desirable, through which militarism becomes assumed, and un-
examined, as an abstract social norm that may inhere within the deepest fibres of our bodily being (Shilling 2007: 13).

Drawing upon empirical analyses of contemporary phenomena ranging from the growth of British ‘Military Fitness’ as a popular leisure pursuit in the UK, the technologies of affective captivating of immersive military video-gaming, and the intimacies and intensities of helmetcam footage recorded by soldiers in the on-
going conflict in Afghanistan, the paper highlights multiple practices of corporeal and sensory militarization that travel beyond traditional sequestered sites of classical military discipline, reshaping the wider sensorium and bodily pedagogics and projects in numerous domains of everyday social life. As such, the analysis emphasizes how desires for neoliberal self-actualization, thrill and bodily trans-
formation increasingly articulate with wider military imperatives and corporeal practices that produce specific contemporary forms of embodied, voluntaristic and individuated militarism. The paper concludes by discussing the importance of locating these particular visceral militarisms with reference to shifts in the modes of embodiment, somatic apprehension of the world, and deterritorialised flows of affective experience associated with contemporary transformations in war-
fighting.

MEARS, ASHLEY* (Boston University, mears@bu.edu)

The Elite Potlatch: Gifts, Girls, and Distinction Among the Global VIP

As income and wealth concentration reach historic highs, sociological research on inequality has begun to focus on the social and cultural lives of the world’s “one percent.” This article presents rare ethnographic data on spending behaviors among the increasingly global elite and documents how the nouveau riche convert their economic capital into symbolic and social capital. Central to such conversations are the gift giving rituals and exchanges of women. Based on two years of observations at high-end nightclubs in the global VIP leisure circuit, as well as 70 interviews with club owners and guests, I document how gift giving is a central condition of conspicuous consumption among nightclubs, patrons, who distinguish amongst themselves through the display of beauty women and the display, wasting, and gifting of high-priced bottles of alcohol in ritualized potlatches. I develop the concept of ‘girl capital’ to describe women as a resource for status-seeking men. Club promoters work to accumulate and mobilize ‘girl capital’ through the circulation of gifts, perks, favors and intimacies to establish reciproc-
tious with the nouveaux riches. This paper situates these within the larger context of gender inequalities and uphold a traffic in women system: gifts to recruit women and women as gifts. This article also demonstrates how gifting practices are fund-
amental to stratification among elites. Lastly, this articleenders elite space by revealing the logics of gendered worth within a contemporary high-society arena, one which recognizes and rewards economic capital for men but bodily capital for women.

The Effects Of Divorce On Children From Life-Course and Family Systems Perspectives: Example Of Denizli In Turkey

Divorce has negative socio-economic and interpersonal consequences on adults/children consist of behavioral and emotional problems. They are more likely to divorce, more likely to marry at young ages, to report problems, perceived instability, conflict, lack of trust in their marriages. Many two-parent families do not offer a happy environment for children. Parental divorce may disrupt the life course, with lifelong consequences for children well-being/low socio-economic status and problems in interpersonal relationships. Compared with individuals who grew up with both parents, children of divorce have lower levels of education, occupational status, and income, higher levels of economic hardships more often marry young, divorce and remarry several times, find themselves in unhappy relationships, and mistrust people in general. However they do not have lower levels of social support in their life. These relations may vary according to age, minority status, sex, parental education, parental death and socio-economic status.

In our research, we indicate the effects of divorce on adults/children who live in Denizli. The sample was randomly selected from living with divorced parents in Denizli. The effects of divorce are determined according to the adult’s age, gen-
der, parental conflict, post-divorce family stability, parent-child relationships, ed-
ucation, socio-economic status. These variables are significant to understand the effects of divorce on children. We examine the association between child depression and childhood parental divorce using a representative sample of 35442 Deni-
zi (177 male and 177 female). Firstly, in our research, methodological issues are dis-

cussed and implications of the study are also discussed. Secondly, the findings are dis-

cussed within a the-oretical framework using family systems concepts and life-course theory’s argu-

ments. Results strongly support the our research hypothesis. Cultural differences and implications of the study are also discussed. Our research is supported by TUBITAK (The Scientific and Technological Research Council of Turkey). We thank to TUBITAK for supporting to our research project.

Transformation of Lifestyle and Leisure Activities of Tribals in Rajasthan (India)

Leisure is a complex phenomenon pervading every society. Leisure has meant different things to different people and the concept of leisure has changed with the times. Leisure and lifestyle experiences are culturally determined and each region has its own values and traditions. The study focuses on a significant social change and transformation of leisure activities and life style of tribals in Rajasthan (India). Modernization, globalization and urbanization lead not only to the growth of commercialism, but also transformed the leisure and lifestyle of tribals, hectic and busy. Group-oriented activities in the tribal region like Chaupal, circus, puppet shows and village fair in tribal area are about to ruin and are replaced by tea stalls, filmy songs and dances, cinema going, watching TV and satellite cable, use of mobile, etc. Traditional games like kho-kho, kabbadi, wrestling, gilli-danda, mardadhi playing cards and chaupad have been replaced by modern games like cricket and football. Family-oriented activities like folk songs, dances, music, during festivals and marriages are now restricted from week to one day activity and more within domestic sphere rather than public sphere. Artistic, religious (visiting temples and attending religious discourses or sermons) and cultural activities have been declining and are replaced by watching cinema, smoking, chewing tobacco etc.

In the present paper an attempt has been made to see the different forces of changes and their effect on leisure activities and lifestyle of tribals in Rajasthan and suggestions can be given to restore the traditional leisure activities and life style of tribals.

Keywords: leisure and lifestyle, Chaupal, Traditional games, family-oriented activities.

The Impact of Social Structures on Adolescents' Deviant Behaviors: The Study of 402 High-Risk Street Drug Users in Iran

Aims: This study investigates the social underlying factors which impact on substance abuse in Iran's society.

Method: A comprehensive social approach, a sociological analysis was conducted on the triple dimensions of social structure: institutional, relational and embodied structures which impact on individuals' behaviors by using the results of a secondary analysis of a survey carried out on 402 high-risk abandoned drug users in 2009 and plus evidence from some documentary findings of sociological studies to confirm the arguments about the impact of social structures on adolescents' deviant behaviors. The paper is drawn up on theories' Durkim, Giddens, Putnam and also the evidence related to the situations of social anomic and social capital exhaustion that illuminate the role of society institutional and relational structures on forming the embodied structure or the same actors' behavioral habits and skills in society.

Findings: The most effective factors of substance abuse were individual factors, bonding with unhealthy social networks, exhaustion of bonding social capital, and lack of social support. During the period of social transition, emergence of uprootedness in modern life and disorientation of social actors in a space of discontinuity of old social bonds creates a ontological insecurity that can lead to the confusion of social actors to organize their social world and to deal effectively with not-so-complicated realities of social life.

Conclusion: Substance abuse is acknowledged as a social deviance which is stemmed from weakness of institutional, relational and embodied social structures during the modern era. The findings indicate the necessity of prioritization of substance abuse prevention by using a comprehensive model which includes interventions, i.e. promoting an established social order by structural policies for improving social capital, emotional and social skills and social support for individuals in society.

Saving Electricity in Private Households: Results of a Field Trial with Smart Meter Based Feedback Systems and Innovative Electricity Tariffs in Germany

In response to the nuclear accident in Fukushima in 2011, the German government decided to withdraw from nuclear power. This turnaround accelerated the transition of the German electricity system from a fossil fuel and nuclear power dominated electricity system to a renewable energy dominated one. The national aim is to reach a share of renewable energy sources of 80% until 2050. However, the major disadvantage of power generation from renewable energy sources like wind or photovoltaic is that they are hard to predict and to control as the availability of these resources is unstable. The challenge is therefore to manage supply and demand of electricity efficiently. In order to meet this challenge, the development of an intelligent electricity grid ("smart grid") has started. In this smart grid private households should play a role as adaptive consumers who shift their electric consumption according to the electricity production (from periods with low production to periods with high production) and who save a significant amount of electricity.

Based on this development my research focuses on the following questions: How to enable private households to play this role as adaptive consumers? Is it possible to make electricity saving behaviours part of the household members' everyday routines? To what extent are feedback systems and variable electricity tariff models able to support overall electricity savings?

The results of a field trial on advanced electricity meter (smart meter) with 650 private households from April 2011 to May 2012 in Northern Germany will be presented. Three different types of feedback systems (including an iPod Touch based feedback application) and two different innovative and flexible electricity tariffs were tested. To answer the research questions, multivariate longitudinal analyses with regard to their effect on overall electricity consumption of the participating households were conducted.

Story Telling Debt in Trading: The Topos of Urban Public Space in Financial Crisis Narratives

A major challenge of narratively portraying the 2008 financial crisis consists in representing the debt and the multiple ways in which debt – as the underlying asset of divergent financial derivative instruments – is traded today. In particular, the representation of financial securitization, connecting private and public debt with mechanisms of financial market speculation, requires narrative techniques that make it possible to meaningfully interrelate a multiplicity of private and institutional actors, temporal and geographical coordinates, as well as political and technological influencing factors.

In view of this challenge, this paper explores various filmic and literary narratives that deal with the 2008 financial crisis and its far-reaching socio-economic impacts. In particular, the paper explores how urban public space is portrayed in such narratives. I argue that urban public space in popular cultural representations of this crisis features as a narrative instrument – a topos – that points out how both the individual and organizational risks upon which contemporary speculation draws are obscured due to strategies of financial abstraction and digital trading. However, as a critical gesture, the topoi of urban public space often only attempt to allude to the inequalities that are produced due to financial speculation, while largely leaving its concrete practices and instruments unquestioned.

My objects of analysis range from filmic and documentary crisis portrayals such as Inside Job (2010, Charles Ferguson), Wall Street: Money Never Sleeps (2010, Oliver Stone) and Margin Call (2011, J.C. Chandor) to fictional and non-fictional crisis literature such as A Week in December (2009, Sebastian Faulks) and The Big Short (2010, Michael Lewis).

This paper forms part of a research project that applies anthropological and socio-semiotic conceptualizations of myth to narratives of the 2008 financial crisis. The project explores how certain narratives act as both social and cognitive strategies of dealing with complex phenomena, and as means of ideological communication.

Dans Un Contexte De Crise économique: Tensions Sur L’emploi Et Sur Le Marché Immobilier. Quelles Conséquences Spatiales ?

Dans le cadre de la recherche ANR Transénergie, six sociologues ont entrepris deux enquêtes par entretiens semi-directifs dans les métropoles françaises de Lille et Lyon sur la classe populaire salariée stable (Bihrl, Pfeifferkorn, 2004) potentiellement affectée par les évolutions économiques des marchés de l’emploi et de l’immobilier.

La première enquête (40 entretiens) s’intéresse aux candidats à l’accession à la propriété. La seconde (30 entretiens) s’intéresse aux salariés travaillant dans des zones d’activités périphériques.

Notre contribution traite des conséquences spatiales de tensions combinées sur les marchés de l’emploi et immobilier et s’articule autour de quatre parties:

– En situation de crise économique, l’attitude la plus répandue est de s’agripper à l’emploi. Au nom de cette sécurité professionnelle, des projets familiaux sont au mieux différés, sinon abandonnés, y compris des divorces. Traiter des conséquences spatiales des évolutions récentes des marchés passe d’abord par en considérer les conséquences en terme d’immobilier.

– Les marges de manœuvre que contrôlent les salariés sont différentes selon qu’ils rapprochent l’emploi ou se rapprochent de l’emploi. Si la proximité domiciliaire travail définit largement l’attractivité de l’immobilier, elle n’est plus garantie. D’évidence, la proximité domiciliaire-travail devient privilège.

– Les difficultés que rencontrent certains ménages en période de crise pour accéder à la propriété ou à la location (dépôt de garantie) étant donné l’instabilité de leurs emplois, rendent plus complexe l’ajustement des localisations. L’instabilité professionnelle ou les fréquentes délocalisations d’entreprises aboutissent à ce sentiment que, du point de vue des navettes domicile-travail, tous les lieux se valent.

– Si la ville n’est pas cohérente (Korsu aili 2012) cela ne tient-il pas d’abord à la fonction urbaine ? Dans une ville multipolaire comme Lille, la possibilité de trouver un logement à distance raisonnable de l’emploi paraît satisfaisante, dans une métropole unipolaire comme Lyon, les difficultés à trouver une localisation satisfaisante sont plus grandes.

Aspects of Measuring National Identity: Insights from Online-Probing

Since 1995 the ISSP runs a module on National Identity. With increasing number of participating countries a need to test the data for cross-national comparability has become necessary. Besides data analytical approaches, cognitive interviewing has become a popular tool to uncover differences in item interpretation. Two studies conducting cognitive interviewing could already detect problematic items in the ISSP module for Austria (see Latcheva 2009, Fleiß et al. 2009). However, these studies focused on one country and problems of cross-national comparability may not have been found.

One way to assess the existence of cross-national comparability is the application of online-probing which implements probing techniques of cognitive interviewing within web surveys. The project “Optimizing Probing Procedures for Cross-National Web Surveys” already conducted a cognitive pretest and an online pretest in Germany and will run its international survey in Germany, US, Mexico, Spain and UK in January 2014. A variety of items from the ISSP module on National identity are being analyzed. The data from the project give a unique insight into interpretation differences across respondents in a cross-national perspective.

The presentation will present results of the item battery on specific national pride which has been shown to be particularly problematic in the previous studies. The following questions will be addressed: Which problems appear in a cross-national comparison of the data? Which time horizons, for example, do respondent from different countries apply when they judge their pride on their countries history? What do Mexicans understand under the term “social security system” and is this comparable to the definition given by German respondents? How comparable are the understandings of “fair and equal treatment” across countries? How can these outcomes be combined with current data analytic approaches? What recommendations can be derived from the existing data?

Brazilian Unionism and Global Union Networks: A Shortcut to the New Labor Internationalism?

Internationalization of trade unionism is not a new phenomenon. It is currently presented as a “new internationalism” as opposed to an “old” labor internationalism which has been related to well functioning social institutions and equality. On the other Russia is an example of low trust, weak institutions and inequalities. However there are clear differences between different social actors both in the Nordic countries and in Russia. In the paper we ask what is the role of social class in this respect? What kind of differences there are between social classes and trust? Can we find one Nordic model, or are there different models? What are the main differences between Russia and the Nordic countries? Our paper is based on 2010 European Social Survey data.

Festivals and Living History. Tourism in the Age of Euditainment

The festivals of living history are perhaps among the most interesting aspects of the new cultural tourism and the new tourist culture based on festivals. These innovative processes of individual and collective identity construction entail complex interaction between re-enactors, tourists and local community; strategies of tourism and territorial marketing; and new forms of exploitation of heritage. At the same time, however, we can single out some salient features of society and tourism in the late modernity: the consolidation of forms of leisure, tourism and cultural fruition intertwining education and entertainment; the increasing loss of historical knowledge; the growing need of territorial and historical authenticity; and the acceptance of new forms of relative authenticity.

The festivals of living history are effective instruments of governance and tourism development and can meet the needs of different types of tourism. However, in many contexts – as in the case of Italy - local authorities and scholars appear unable to take full advantage from the contribution of these activities and do not support them properly. Furthermore, the “seriatility” of the festivals devoted to lo- cal history or the new culture of slowness, as well as the inability to properly manage eatudainment, are stilling not only the potentiality of living history, but, more generally, of the whole tourist culture related to festivals.
Heritage and Sensory Tourism: The Long Way Beyond Post-Modernity

The increasing attention to the sensory and emotional aspects in tourism undoubtedly reflects the profound cultural transformations of late modernity and, in particular, in the societies most influenced by the Western consumption patterns. This attention involves - and at the same time reflects - a new concept of authenticity, of a hybrid and relative kind, more oriented to emotional and experiential aspects and less tied to contents and material aspects.

This change entails effects that appear to be particularly significant in the field of cultural and, even more, archaeological tourism: tactile and sensory museums, light and olfactory installations, practices of living history and experiential archaeology. These and other activities of consumption and leisure, aimed at recovering a supposed historical and territorial authenticity and characterized by forms of historical theming, are profoundly transforming our relationship with heritage and the past.

However, we are in a historical phase of possible cultural change, in which, both as a result of the financial crisis and because of the specific traits of the increasingly important Asian tourism, the current sensory, “liquid” and post-modern orientation could be overcome by a return of “solid” and material aspects.

With specific examples, this paper outlines some characteristics of the new cultural and archaeological post-modern tourism of sensory type, focusing on the relationship between edutainment, consumerism and the processes of identity construction, and tries to single out the possible developments of the current trends.

Cross-Border or out-of-country Voters? Citizenship and Elections Across the Frontier Between Brazil and Paraguay

Brazilians living in Paraguay are the largest immigrant group in that country and the second Brazilian population living abroad. Although Brazilian nationals are allowed to vote from abroad in homeland elections, those residents in Paraguay prefer not to be registered as out-of-country voters in favour to cross the frontier into Brazil to go to the polls on election days. Furthermore, the Paraguayan residents in Brazil do not cast their ballots in Paraguayan elections. In the frontier region, the cross-border ties have a far-reaching impact on the political life among emigrants and their descendants, and it takes a leading role in the construction of a citizenship which merges the local, the emigrant and the extraterritorial dimensions. The paper discusses how the electoral processes blur social categories such as resident and expatriate, analyses the cross-border political ties and the political participation of Brazilian and Paraguayan emigrants in local and national elections of both countries, and then examines the implications of the cross-border and the out-of-country voting in the construction of an extraterritorial citizenship in Brazil and Paraguay.

The Culture of Authenticity: An Empirical Study of University Students from Diverse Cultural Backgrounds

This paper is an empirical study of the influence of individuals’ cultural background on their different experiences of authenticity. Due to a lack of consensus in the definition of the concept, sociologists have only recently started to study authenticity in an empirical way. This paper tries to contribute to this new field for sociologists. It consists of a quantitative analysis of open-ended responses to Ralph Turner’s True-Self Method with 138 students from La Trobe University in 2013. It constitutes a partial replication of, and a complement to, another research study conducted by Turner at La Trobe forty years ago, in 1973. Today, La Trobe’s student body is more culturally diverse than it was at the time Turner did his study. And 25% are overseas-born students, most of them coming from Eastern societies backgrounds. This is an opportunity to capture experiences of authenticity of individuals from diverse cultural backgrounds and compare them. Building on the works of Ralph Turner and Ronald Ingehart on self-conception and values respectively, this paper establishes two cultural hypotheses that reflect the Eastern/ Western societies background. This is an opportunity to capture experiences of authenticity. Turner found no relationship between respondents’ cultural background and their experiences of authenticity. However, considering the more culturally diverse conditions of contemporary societies, cultural hypotheses seem to be worth exploring.

Drifters and Borinage: From the Filmic Subject to the Historical Subject

This communication analyzes two important films in the history of sociological films: Drifters (1929) from John Grierson and Misère au Borinage (1929) from Joris Ivens. The first show the herring fishing out of the coast of England, in the North Sea, as a struggle between men and boats against the difficulties of the rough sea on the way to find and catch the herring shoals. The second show the very arid and difficult life of the Belgian miners of Borinage, focusing on their working conditions that have lead to a major strike in 1933, after the worldwide crisis of 1929 in the USA.

Drifters show a very interesting process of overcoming the old artisanal fishing work by the introduction of the new methods from the industrial revolution by changing the animal driving force for the power of steam in an harmonic process between the “new” approach of a film like Nanook of the North. This new way of labor also makes this process acquire international dimensions showing the British Empire now as a huge commercial and industrial force. Borinage show that against the power of capitalism, that in the process of reproduction of capital also reproduces the miners in the worst living conditions despite his arduous work, the only solution is the organized working class that struggles against them with their most important weapon: stop using the force of labor and consequently stop making goods and profits.

So, if Drifters is remarkable as the first documentary film in history to put the working class in the central place as a film subject, Borinage is the first one to show the working class in the process to become a historical subject to change the world, like fiction has already made in Eisenstein’s Potemkin (1925).

MENEZES, PAULO* (University of São Paulo, paulomen@usp.br)

Is There a Difference Between a Sociological and an Anthropological Approach to Cinema?

This communication deals with the special construction of reality made by films which acquire significant epistemological interest when we are dealing with documentary cinema, where the confusion and the merge between the reality of
images and the exterior “reality” that the camera faces are more fragrant and undeniable, based on the theoretical assumptions made by Foucault in *What is an author?* and by Pierre Sorlin in *Sociologie du Cinéma*.

It discusses the documentary cinema by analyzing its relationships with the social knowledge possibilities they offer and the access to knowledge of the social reality it alludes. This analysis criticizes the positivist foundations that organizes the documentary films and the positivist watch that audience gives to them, fundamental for the miscalculation of a film as the “real” itself and not a construction about it, inquiring the epistemological potentialities of the kind of information those images suggest. So, if we can think that these films bring information about what is shown by its images and sounds, we can also think that they bring more information about the values, evaluations and hierarchies that institute the filmic narrative made by the film maker.

Finally, I interpret the film *Les Maîtres Fous*, by Jean Rouch, as a Discourse and not as a Documentary. This option force the analyst to catch an epistemological detour where the film is no longer seen as evidence of their stories but inquired in the fundamental concepts of its filmic narrative, dialectic units of form and content. The analysis point out the principles and elements imbricated in the options assumed by the director in order to constitute a filmic narrative discourse that should be seen as a general and natural truth about the “other” (a ritual) and not a discourse that alludes something else (the French colonial heritage).

**Authorship and Curatorship: The Active Face of the World Music’s Passive Work**

This is a research about Putumayo, a NY based label of World Music collections. On its own words, the label's work consists in organizing collection that gather music from “exotic places where the music originated” so the rest of the world could know about that culture “as it is”. But what we observed in the research activity is that the curatorship work of the label brings a strong authorship signature: the label isn't only (passively) exposing the cultures in their own native terms, but (actively) substantially constituting them based in its New Yorker grammar. In light of this, the article aims to show how passive and disinterested curatorship posts are also active and interested acts of authorship: world cultures are not merely being organized, but formed too. The one who selects, believing that can do it, is also the one that creates. In this way, the article lays on the mediation issue, aiming to analyze how intermediary instances, precisely because they see themselves as capable to live in this between poles, start escaping to this poles, constituting them more than making they dialogue. In general terms, this is a work about exotization practices of construction of the other that intends to start escaping to this reality they allude. This analysis criticizes the positivist foundations that organizes the documentary cinema by analyzing its relationships with the social knowledge possibilities they offer and the access to knowledge of the social reality it alludes. This analysis criticizes the positivist foundations that organizes the documentary films and the positivist watch that audience gives to them, fundamental for the miscalculation of a film as the “real” itself and not a construction about it, inquiring the epistemological potentialities of the kind of information those images suggest. So, if we can think that these films bring information about what is shown by its images and sounds, we can also think that they bring more information about the values, evaluations and hierarchies that institute the filmic narrative made by the film maker.

**Title of Paper: Multisided Violence and the State in the Lives of Guatemalan and Salvadoran Women**

This paper examines the root causes of violence in the lives of Guatemalan and Salvadoran women, who currently experience some of the worst levels of violence in the world in the form of feminicides (i.e., killings of women in which the state shares responsibility through omission or tolerance), as well as the state response to such cases. Both countries have recently created governmental offices and enacted a battery of laws to combat these crimes and both countries have ratified the 1994 Convention of Belém do Pará, Brazil, yet, levels of crimes against women have continued undiminished. Impunity is rampant and only a small fraction of these crimes have ever been prosecuted and an even smaller share result in convictions. And while a UN 2012 report places El Salvador's feminicide rate as the worst in the world, this country also has enacted a total ban on abortions, under any circumstances, even when the mother's life is in danger. Based on years of fieldwork in Guatemala and observations from El Salvador, I argue that these various forms of violence and despair are deeply connected and have roots in multilayered violence composed of structural, symbolic, political and everyday forms of violence. I move away from explanations that focus on individual acts of aggression against women (which for the countries I examine are often are couched in machismo) to focus on extrapersonal structures that create conditions that permit such acts. The persistence of multisided violenc may not cause the horrific crimes of feminicide to occur but, I reason, the intertwined nature of these various forms of violence paves the way for these more visible forms of violence to take place and also sustains conditions of impunity on the part of the governments.

**An Operational Framework for Addressing Socio-Political Environment of Disaster Risk Reduction-Oriented Spatial Planning**

Spatial planning plays a significant role in disaster risk reduction (DRR); UN Habitat has proposed methods and implementation strategies of spatial planning at local level in this context (UN Habitat 2011). However, DRR has only partially taken this into account in the development and the implementation of numerous spatial plans. Local level socio-political environment (SPE) plays a significant role in effective and functional spatial planning. Lack of good governance, incompetent and corrupt local institutions and corruption hinder the policy planning and implementation procedure, mostly in developing countries. This paper addresses particularly the need for a comprehensive understanding of the local socio-political conditions in context of DRR that hinder the planning process and implementation, using the developing countries examples: Mongolia Port City in Bangladesh and Medellín. Both of these cases suffer two common factors: Mongolia suffers from flash flooding in Medellín. The obvious differences between them (cultural environment, social structure, level of economic development, intensity of the natural hazards, city size etc.) are considered to define the SPE which may be common to different areas in the developing world. Our findings show that in the studied regions, spatial planning is not given enough importance in local level DRR planning. Its implementation is difficult because of lack of coordination and conflicting interests between different stakeholders and also external influence from development partners. The methodology applied in this paper to address the socio-political dimensions of planning procedure is applicable to other similar contexts and that will contribute to global DRR.

**Problems of Recognition Extremist Information on the Internet**

In recent years, there is an increase of extremist activities in different countries in the world. Terrorist organizations skillfully recruited new supporters. Internet is one way of attracting people to the organization of extremist activities. Information is placed on websites explicitly or implicitly calls to actions aimed at destabilizing the political situation in the country and poses a threat to the health and life of many people. Internet users are not always able to clearly define which kind of information they receive from different sites is really extremist information. In 2013, we conducted the research in a large industrial center of Yekaterinburg (Russia). The method of research is case-study. The aims are to examine

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
the problems of recognition of the materials that aimed at promoting extremism and to implement actions that destabilize the political situation in the country. 2000 respondents were interviewed. They are representatives of different social groups.

The study shows that 67% of people consider that extremist information provides different methods of manufacturing explosives. Using it, one can see people, who suggests ideas of how to use it. Thus, the groups of teenagers appear who are able to commit dangerous acts against law enforcement and private citizens. 57% of people believes that extremist information calls for the approval of the advantages of one nation over the other, 53% of respondents believes that extremist information means call for terrorist acts. In this case, 17% of school students and college students mention the difficulties in discerning which information is really extremist. 65% respondents expresses the need for training, especially young people in order to identify the information in the Internet which encourages extremism.

MERINO MARTINEZ, SUSANA* (National Autonomous University of Mexico, sus62164@unam.mx)

Local Development Agencies

LOCAL DEVELOPMENT AGENCIES

In order to fight the origins of generational poverty, the Mexican government has promoted the joint participation of the benefitted communities, fostering a culture of co-responsibility. The Social Development Ministry (SEDESOL) designed the Productive Options Program, the support modes are: Local Development Agencies; Integrating Funds; Mentor Networks, and the Joint Financing Fund. These Agencies focus on developing the skills and abilities of individuals, families, social groups and PÖs (producers' organizations) that live in areas classified as critical, such as rural zones in the rural milieu, which are marginalized and made up of settlements or towns of up to 14,999 inhabitants.

The purpose of this study is to analyze Local Development Agencies as social policy instruments to fight poverty from the micro-regional standpoint. The structure and legal framework of the Agencies in question correspond to that of a civil society organization, whose challenge is to foster micro-regional development. This model involved a cut in the budget for social policy and a reformulation of the objectives and scope thereof. From the mid-90's to date, programs to overcome poverty have become income transfer instruments to invest in human capital.

The neoliberal proposal set forth by Milton Friedman, crystallizes on how the State has to face the problem of poverty. That is, it aims to let society know how much it costs to support the poor. Through the Programs designed to alleviate poverty, the Mexican government assumes that the poor are ready and able to overcome the generational poverty status. However, the government is only investing in improving the labor force.

Magic in Social and Natural Worlds: Planting New and More Colorful Technologies in South Africa

Scientific knowledge and technological artifacts travel with experts from centers of knowledge production to the places where they are translated, over an uneven global terrain and amidst a social history of technological failures and coercive public policies. While global in their extent and consequences, however, techno-scientific facts are coercive public policies. While global in their extent and consequences, however, and co-constructed within specific socio-cultural circumstances and cultural conditions. As a consequence, accounting for a techno-scientific practice can only be made with regard to processes of local social and institutional transformation. Within a context of risk and uncertainty about water resources – real or perceived – South Africans are faced with a variety of technological options that will affect the nature of these arrangements. Focusing on a ‘disaster mitigation’ approach in a United Nations World Heritage Site in South Africa, I have positioned myself at the access points at which ‘experts’ and ‘lay people’ meet to discuss the “green economy”. Considering the various ways in which a “green technology” is conceptualized, I probe at the concept of ‘trust’ and how it mediates societies relationship with science and technology. In the process I ask: What makes an expert an expert? What empirical factors make-up and account for conceptual innovation? When does an object become a technology? When does it become a problem? And might the object of that problem offer any analytical and methodological tools that are interdisciplinary and area specific?

Indigenous Pathways in Social Research: Addressing Inequities

Part I

Indigenous populations live the issues of human rights violations as part of their legacy of colonialism. The ray of hope that emerges in relation to this experience is that indigenous researchers have successfully negotiated the Northern educational system without losing their indigenous cultural heritage. The indigenous researchers and their allies in this group of papers frame culturally responsive research to confront regimes that have restricted their rights in the past. The voices of indigenous researchers explore their pathways to social research and the use of research to address human rights in their communities. Shawn Wilson, a First Nations member of the Cree tribe, provides insights into how research can be used to address human rights through an indigenous lens in his presentation: Conducting the Ceremony of Research. exploring the sacredness of relationships in research with consequences for supporting human rights. The second presentation will be from Motheo Koitsiwe, a member of the Bathlhoko tribe from South Africa. His research in Indigenous Knowledge systems challenges the restrictive educational and governmental systems and supports the realization of human rights, not only in his tribal community, but more broadly in South Africa. The third presentation will be by Teresa Sorde, a research from Spain, who works with the indigenous Roman community by building their capacity to work as co-researchers to address issues related to the injustices experienced by Roma. The fourth presentation will be “Coloniality of Knowledge and Indigenous Researchers and Epistemologies” by Cesar Cisneros from Mexico; the second piece of the global dynamics of capitalism is discussed in relation to a knowledge divide that is associated with epistemic violence. Donna Mertens, a transformative researcher from the United States, will provide the final commentary in a presentation titled: Indigenous Researchers and Social Transformation.

MERVIÖ, MIKA* (Kibi International University, mmi@tintti.net)

While the Japanese state has used its power and financial resources without hesitation in some fields such as public construction it has conserved resources by making people face many social risks, such as most family-related risks and unemployment, the best way that they can. If people fall ill or face other individual problems Japanese society often has surprisingly little room for such values as social solidarity and compassion. On the other hand, there have been social practices that have served to soften the impact of Japanese practices, such as the strong emphasis on lifelong employment and relatively small wage differences among employees, especially among the elite salarymen (sarariman). The characteristics of the Japanese model of risk society are that the weak political leadership muddles along with the rest of the societies with globalisation and the workers of the society need to adjust to the changed realities the best way they can. On the one hand Japanese society has its cultural values emphasising the merits of social harmony and virtues of intersubjective practices. However, conflicts have always existed openly or been managed under the facade of

Social Capital, Organizations, and Disasters: Theoretical Insights from Four Communities

Social capital, especially among community organizations, is central to the US
Federal Emergency Management Agency's "Whole Community Approach" for
disaster resiliency, in which four of the six resiliency themes focus on social capital.
Organizational social capital benefits the individual organizations and produces
collective benefits for the whole network, including knowledge creation and sharing,
generating financial resources, and creating innovations (Cohen and Prusak 2001; Lesser 2000; Reagans and McEvily 2003). Further, it affects
efficiency and effectiveness important to social service and nongovernmental or-
ganizations (Brown et al. 2010). In disaster settings, social capital among emer-
gency management organizations fosters more efficient response (Kapdieu 2006; Kapcic et al. 2010; Varda et al. 2009).

Yet, social capital research on organizations in disasters focuses heavily on
emergency management agencies. Less research includes non-disaster response
organizations of networks for disaster situations (Boerfel, 2010). In disaster settings, social capital among emer-
gency organizations fosters more efficient response (Kapdieu 2006; Kapcic et al. 2010; Varda et al. 2009). In this paper, I describe theoretical insights for organizational theory and
disaster theory drawn from case study research on social capital among commu-
nity organizations in four communities. The case studies were all completed be-
tween 2012 and 2013 and include two communities that had recent disasters and two
communities that have not. Further, three are rural (populations less than 50,000) and one is a small urban area (population 270,000). Based on interviews with nonprofit, emergency management, religious, and social service organi-
zations, I discuss the benefits and difficulties of using social capital for community
disaster response and recovery. Disasters present both obstacles and opportuni-
ties for the survival and growth of community organizations. Further, I argue that how organizations interact in networks, including legal and mission-related
struggles, is key to understanding social capital for community disaster resilience.
My results address how the 'Whole Community' is practiced as well as contribute
to organizational theory about social capital's effect on organizational and community
outcomes.

MEYER, MICHELLE* (Texas A&M University, mmeyer@arch.tamu.edu)

The Family Burden of Disaster Assistance

One commonly proposed, but under-theorized, component of community di-
saster resilience is social capital. Social capital describes the resources available
through a social network that can be activated to affect the outcomes for the in-
dividual and family members and the entire network (Bourdieu 1985; Lin 1999). This concept
captures the interactive aspects of a community that imply a capacity to respond,
adapt, learn from a disaster, and effectively reorganize community life quickly
following an event (Cutter et al. 2008; Norris et al. 2008). Thus, social capital can be both a private and public good that generates resilience for individuals and families along with communities as a whole.

Using surveys and interviews with residents of two Florida counties, one rural
and one urban, I discuss disaster social capital and its role in families' resilience. I
apply a common social network measure—the name generator—to measure the
availability and source of disaster-specific resources in individuals' social net-
works. This network-based approach to disaster social capital shows the impor-
tance of family to disaster assistance. Individuals turn to family for nonfinancial assistance, and almost exclusively for financial assistance. This reliance on family
to disaster assistance. Individuals turn to family for all types of

use insurance or savings for financial needs. This result shows the increased pressure on low-income families to help each other “get by” during a disaster (Stack 1997). At the community level, my results indicate that privatized social capital may not result in outcomes for the entire community, instead following familial lines that are often racially and economically homogenous.

**Collective Action and Collective Actors in Fields: Some Ontological Clarification of a Recent Debate in Neo-Institutionalism**

The concept of “fields” has a lively history. Starting as one of the crucial concepts in Bourdieu’s theory, it became a foundational concept of sociological neo-institutionalism. Today, different attempts exist to transform it into a general concept of collective action (Hoffman 1999, Fligstein/McAdam 2012). This interesting development is, however, accompanied by some weaknesses: Currently, individuals and collectives, especially organizations, are analyzed symmetrically as actors within fields. Collectives are only described as fields nested within other fields. What is urgently needed is an elaboration on how individual and collective actors are constituted, and how they are related to individual ones.

We take the distinction between agency and actors immanent in theories of practice (especially in the work of Giddens 1984, even Latour 2005), as a point of departure to discuss this problem. Actors – individual as well as collective ones – are special constructions of western modernity (Luhmann 1980, Foucault 1984; Luhmann 1984, Meyer/Jefferson 2000). They are often confronted with the obligation to act consistently in line with different kinds of rationality, often stemming from different field-levels. Agency, in contrast, is the essential possibility to make a difference in the stream of daily activity (Giddens 1984: 9), which is grounded in mental control over bodily activities. Although agency and actors are often actualized in an intertwined form, they sometimes only occur in a loosely coupled way.

Following this conceptualization, we can offer a more complex and clarified picture of individuals and collectives. It allows for a clearer distinction between (a) the properties of individual and collective actors, and between (b) agency and attributed attribute. In addition, it allows (c) for a more elaborate description of how fields are nested within fields, for example how agency and actors are constituted by fields at the same time as they constitute them.

**Modern Times: How Organizational Time Structures Influence Society**

At the latest since Max Weber, we have known that organizations strongly shape modern life – and also time. Modern society has been described as organization society, in which organizations diffuse across every sector. Organizations can, and do, operate with different societal macro-logics that contribute towards operationalizing and implementing them: Enterprises strive for economic profit, media organizations disseminate information and schools educate. However, in doing this they use their own specific structures and procedures. Among them are time structures. We focus on such time structures such as projects, deadlines, timeframes, time routines and rhythms, and show that these are not necessarily compatible with the societal logics they address. As a consequence, organizations act as Procrustean bed regarding societal macro-logics. In the same way in which Procrustes “adjusts” people to the size of his bed, organizations impose their time structures on society.

As examples, we use the impacts organizations have on media and science. Media logic dictates that new information is provided continuously. However, editorial departments of television channels or newspapers need stable (temporal) routines. So, editorial departments often privilege the coverage of planned events like international conferences or sport events. As a consequence, organizational temporal structures play an important role by selecting news.

The logic of science implies that the time needed for research and scientific findings can hardly be defined in advance. However, organizations, such as universities, have to plan ahead. So they prioritize research proposals which can convincingly promise deadlines. In the social sciences for example, this gives an advantage to empirical surveys which – in comparison to theoretical analyses – can be more easily planned.

Based on organizational institutionalism and systems theory concepts, we develop a model which allows us to analyze the selective effects of organizational time structures on societal macro-logics.

**MICHAUD, JACINTHE** (York University (Glendon), jmichaud@yorku.ca)

**The Dilemma of Feminist ‘double Activism’ and the Pressure of Separatism**

Feminism shares boundaries with other political movements, often acting in synergy with many of them. The term “double activism,” coined by Italian feminists, describes the position of feminist activists who are simultaneously involved in political organizations of the left (parties, movements, unions) and feminist collectives. The act of moving across boundaries – between the left and feminism – came to light when this double allegiance was presented as conflicting loyalties in the 60s and 70s by feminists advocating a complete separation of their movements. Double activists who lived that experience, were criticized for not devoting their energies entirely to women and feminism; for not thinking and acting freely outside frames of reference controlled by masculine thought. The pressure felt was described as schizophrenia resulting from being engaged in two opposite worlds and not feeling whole in neither of them. This presentation is based on a comparative qualitative research between two types of feminisms which have never been compared before: Québécois (Canada) and Italian feminisms during the 60s and 70s. The paper intends to go beyond the Italian case dominated by the traditional and the New Left and beyond the 60s and 70s period by showing that double activism was – and still is – shedding light on the political evolution of the feminist movement. This is especially the case today, with the renewed synergy found between feminists and other political actors such as young queer, anti-authoritarian, anti-colonial and anti-racist political groups. The paper will focus on the complex consciousness of double activists; the existential aspect of presenting oneself as a member of a political group while helping to create feminist collectives; and the simultaneous activity of bringing social struggles within the frontiers of feminism while seeking to bring feminist principles and feminist struggles within leftist groups.
imposed in the 19th and 20th centuries while (re)producing indifference, and re-
sulting in violence. Today, the reality of pluralism makes this fiction of ‘sameness’ globally incred-
ible. Should a space which can bring back the current evolutions carried by the acceleration of globalisation exist, the best option would be the one that carries the re-
sistance against this process. In a situation that is characterised by the disqualification of the absolute and the passage of ‘sameness’ to plurality, there should be no surprise to the fact that we are witnessing some actions towards the reaffirmation of the absolute and of ‘sameness’.

To explore this problematic, this paper will draw on the paradoxical relations (and the successive reorganisation of these relations) maintained by the catholic church towards the nation. In an orientation to follow the sign of the times (if not to transform it, at least to inhabit it), religion and the nation are both categories which share with intimacy the avatars of legitimacy, that is the rebuilding (and the partial over-imposing) of complex dispositions to organise the religious. What it play around religion and the nation can only make sense when dealing with the contemporary redeployment of these devices.

MICHETTI, MIQUELI* (Fundação Getúlio Vargas, miquelimi@fgv.br)
The Isomorphism of Practices and Discourses Between the Corporate Realm and the World of Culture in the Flexible Capitalism

Culture plays a central role in the “flexible accumulation”, but does so as a “resource”, as a way of generating economic value. It is in this context that arise no-
tions bringing together seemingly antithetical terms, as “economy of culture” and “creative economy”. The study aims to show how this new “capitalism of spirit”, the world of culture seems to incorporate both practices and discourses from the new corporate world, which in its turn seems to feed on the cultural sphere. In this increasingly intricate intertwining between economy and culture, it seems to be an isomorphism between the practices of companies of the flexible capitalism and certain agencies of culture. Under the rhetoric of “organizational innovation”, these agencies replicate business models such as the networking, horizontal, anti-
hierarchical organization, based on crowdsourcing and / or crowdfunding, etc. In these new models of “cultural business”, content producers find themselves in precarious positions after the promise of easily monetize their creative capital, they experience temporary and outsourced contracts. As Max Weber teaches us, each form of capitalism needs a corresponding “spirit”, so that will be a discourse isomorphism between the world of flexible economy and the sphere of culture. The discourses about the non-separation between profes-
sional and personal life, between work and leisure that flexible capitalism took from counterculture is easily extended to current artistic and cultural activities because such ideas refer to the historical separation between art and work that founded the very category of "artist". Through the analysis of similar practices and discourses into the corporate world and in the cultural sphere, the study will show how the precariousness has been rhetorically transformed into flexibility and freedom and how, even under the rhetoric of altermodernism, culture in the flexible economy has contributed to the reproduction of an unequal world.

MICHON, PIOTR* (Poznan University of Economics, piotr.michon@ue.poznan.pl)
Parenthood, Well-Being Inequalities and Welfare State. Comparative Study of 20 European Countries

1. Income and wealth inequalities have represented a central issue of social policy analysis in the past. Nowadays the nature of inequalities and types of inequality are changing. The paper aims at analysing the inequalities in subjective well-being and its relations to life chances and key life course events determined by welfare state. The main questions asked in the pa-
der: Does the welfare state reduce inequalities in people's overall subjective well-being? Does the welfare state reduce inequalities in people's satisfac-
tion in various domains of life such as health or work-life balance?

2. The goal of the paper is to measure and compare, across European coun-
tries, inequalities in overall and domain specific subjective well-being (SWB) based on subjective indicators of well-being. Doing so allows for the evaluation of economic and demographic changes in societies and to provide information on well-being of different groups in the European societies. So the first question asked is of diagnostic nature: what are the inequalities of well-being of parents and non-parents among European countries? Are there cross-national differences in the level of inequalities in subjective well-being belonging to the vulnerable groups due to specific life course stages (parenthood, marital status)?

3. The paper considers the broadly defined cross national, comparative analy-
sis of contemporary family policy as well as gender regimes. The paper will assess if the cross-national differences in the level of inequalities in sub-
jective well-being of parents and non-parents can be related to the welfare state regimes or to specific policies.

The Effects of School Racial and SES Composition on K-12 Reading and Language Arts Outcomes: A Metaregression Analysis

Structural vulnerability theory proposes that educational outcomes emerge as organizational features of schools interact with students’ individual characteris-
tics. The organizational feature of interest in this paper is school racial, ethnic, and social class (SES) composition. This paper asks the following question: “Does school racial and SES composition affect individuals’ K-12 reading and language arts achievement?” To answer it, the authors conduct a metaregression of the US social science literature published in the last 20 years on the relationship between reading and language arts outcomes and the racial, ethnic, and SES composition of the K-12 schools students attend. The authors employ a two-level hierarchical linear model (HLM) to synthesize approximately 75 primary studies with 200 re-
gression effects. The tentative answer to this research question is a qualified yes; students attending schools with concentrations of disadvantaged racial minority and/or poor peers achieve less academic progress than their otherwise compara-
bles do. For more racially dominated or low poverty schools. Preliminary results indicate that attending a racially isolated disadvantaged minority school has a statistically significant negative effect on reading and language arts achieve-
ment. This relationship is moderated by the size of the sample in the primary study and by the way the independent variable (school racial/ethnic composition) was operationalized. Effects vary for different racial and ethnic minority groups and the effects are stronger in secondary compared to elementary grades. The emergence and widening of the race gaps as students move through the grades suggest that the association of racial and social class isolation with reading and language arts performance compounds over time, illustrating how school composi-
tion effects reflect the dynamics of structural vulnerability theory.

MICKELSON, ROSLYN* (University of North Carolina at Charlotte, RoslynMickelson@unc.edu)
The Role of Integrated Schooling in the Development of Social Cohesion in Multiethnic, Just, Democratic Societies

Schools play a crucial role in preparing children for their adult responsibili-
ties as workers, parents, friends, neighbors, and citizens. Increasingly, in the US and other multiethnic democracies this responsibility is complicated by the growing demographic diversity among students, a diversity fueled by international-
al migration. The central argument of this paper is that integrated schooling is a necessary, albeit insufficient, condition for developing the social cohesion that just, multiethnic democratic societies require to flourish. Using the United States as a strategic case study, the paper synthesizes the US educational, social, and behavioral science literatures on the effects of school and classroom racial, eth-
ic, and social class composition on short- and long-term academic and nonaca-
demic outcomes across the life course, with special attention paid to immigrant youth. The preponderance of the extant US literature on the topic links integrated schooling to improved academic and non-academic outcomes, and suggests in-
tegrated schooling is also a necessary, though, insufficient enabling condition for fostering civic engagement in multiethnic democratic societies. Ironically, despite this growing corpus of evidence, US schools are segregating by race, ethnicity, and/or social class. To be sure, because of international and internal migration trends, the nature of US school segregation has changed so that today it is much more ethnically complex than the Black-White or Brown-White binaries of the past. Nonetheless, studies indicate that today, as in the past, schools with concen-
trations of poor disadvantaged minority students generally fail to educate their students. The paper discusses the implications of its findings for 21st century ed-
ucation in the US and other multiethnic democratic societies (especially OECD countries) and that the opportunities that multiethnic diversity and international migration pose for delivering educational excellence and equity to all students.

Property, Patrimony and Territory: Autochthony and the Politics of Immigrant Place-Making in peri-Urban Kisumu, Kenya

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The rapid urbanization currently underway in cities of the global South is unfolding under conditions of limited capacity of the state and conventional market mechanisms to avail buildable land at a pace commensurate with population growth rates. In the Kenyan city of Kisumu, there has been a steady conversion of peri-urban agricultural areas into urban land, as residents seek alternative ways of meeting the rising demand for urban housing. These migratory flows and settlements have over time spawned unique spatial structures and power geometries on the urban fringe, as immigrants from the inner city and beyond buy land and settle among the indigenous population. This paper adopts class and autochthonous frameworks to unravel the socio-spatial transformations underway in peri-urban Kisumu. Using in-depth interviews, focus group discussions and ethnographic fieldwork, the paper analyzes the socio-spatial and political ramifications of land-buying and settlement on Kisian, an indigenous peasant community on the western outskirts of Kisumu. The paper reveals that immigrant-host relations are characterized by uneasy coexistence, features of cultural, class and social cleavages. The host community views the ‘immigrant invasion’ as an affront on their indigenous property rights, patrimony and territory—a development they blame for dwindling local fortunes and precarity of livelihoods, as traditional modes of subsistence are disrupted by the new socio-spatial order. Immigrant households have on the other hand devised elaborate socio-spatial strategies aimed at cementing their insertion into the emergent social and built environment. The paper analyzes these adaptive and defensive practices of immigrant households and situates their place-making practices in the broader urban morphogenesis over time. The study addresses vital questions of social inequality and structural power relations embedded in the production of urban space, together with the internal contradictions that typify the urban development process within rapidly transforming cities of the global South.

RC21-359.2

MIDHEME, EMANUEL* (University of Leuven, emanuel.midhem@asro.kuleuven.be)

The Mismatch Between Planning Practice and Actually Existing Urbanisms: Planning Responses to the Phenomenon of Street Trade in Kisumu, Kenya

Street trade has increasingly become an integral part of urban economies in Kenya following the onset of the structural adjustment programmes (SAPs) in the 1980s, and the proliferation of urban informalities. In many cities, especially on the other hand are urban residents seeking alternative livelihood opportunities in the wake of diminishing formal jobs. The aim of this paper is to unravel the conflicts that arise out of these two contradictory worldviews on the use of urban public space. Using in-depth interviews, focus group discussions, mapping and ethnographic fieldwork, the paper interrogates a range of planning responses to the phenomenon of street trade in Kisumu over the past few decades. By extension, the paper situates the politics and spatial practices that have since been devised by street traders to fight back state repression and marginalization and to stake out traders’ claims to urban public spaces. The central argument in the paper is that within a street trade and other forms of informal space production and use constitute the predominant mode of urbanism in contemporary Kisumu, official planning practice is still steeped in prescriptive ethos aimed at producing the ‘modern’ city. There is thus a mismatch between official planning policy and the practical realities of what Shatkin calls ‘actually existing urbanisms’. The paper contributes to current debates on inequality, informality, urban citizenship and the challenges of governance, particularly as they relate to contemporary planning practice and scholarship on rapidly urbanizing cities of the global South.

MIEG, HARALD A.* (Humboldt-Universitaet, harald.mieg@hu-berlin.de)

Weber’s Ethic of Responsibility As a Framework for Professional Ethics

Max Weber coined the term ethic of responsibility in his lecture on Politics as a Vocation in 1919. The ethic of responsibility demands to account for both the means and ends of one’s action. Weber advocated the ethic of responsibility with an ethic of “good attitude”: “there is an abysmal contrast between conduct that follows the maxim of an ethic of ultimate ends—which is, in religious terms, ‘The Christian does rightly and leaves the results with the Lord’—and conduct that follows the maxim of an ethic of responsibility, in which case one has to give an account of the foreseeable results of one’s action.” My paper discusses how Weber’s ethic of responsibility can be turned into a framework for professional ethics. Key bridging concepts are (i) personal/professional autonomy and (ii) the expected degree of performance of professional work (quality, effects, efficiency, invested expertise...). I will explicate how an ethic of responsibility “takes account of precisely the average deficiencies of people” and can therefore be linked to empirical social psychology. Redefining Weber’s ethic of responsibility as professional ethics clarifies some open conceptual issues both in Weber’s approach (justification, evaluation) and in professional ethics (e.g., personal autonomy vs. professional standards).

also one of the few analyses testing if social support actually increases during the transition to parenthood. It is assumed the family and non-family support affect differently mothers and fathers' well-being. Third, we analyze the evolution of family support across countries on various levels of development, for a period of almost 30 years. Multiple analyses of buffering effect of family and non-family networks, and the interplay of the two types of support remain understudied.

Our analysis fills this gap in several ways. First, we test if the support available from family and non-family networks actually increases after the transition to parenthood. Second, we test the hypothesis that family and non-family support alleviates the negative well-being consequences of early parenting. Third, we assume the family and non-family support affect differently mothers and fathers' well-being.

We use the Swiss Household Panel to observe a sufficient number of transitions to parenthood together with detailed information on support available from relatives, neighbours, close friends and colleagues. To control for selection effects, we use fixed effects (hypothesis 1) and difference-in-difference (hypothesis 2) models.

This is one of the few analyses explicitly testing with panel data the buffering effect of support from various sources during the transition to parenthood. It is also one of the few analyses testing if social support actually increases during the transition to parenthood, which so far is only a plausible assumption.

The Well-Being Gap Between the Married and the Never Married: Time Trends and Macro Processes

Growing divorce and falling marriage rates in contemporary societies suggest that the institution of marriage is in crisis. Indeed, analyses for United States suggest that the quality of marriages, as well as the well-being premium of married over the never married persons decreased over time (Amato et al., 2003, Corr et al., 2009, Glenn, 1991, Glenn and Weaver, 1988, Rogers and Amato, 2000, Waite, 2000).

This paper examines how the well-being gap between the married and the never married changed over time and it tests the hypothesis that this trend has been shaped by the changing socio-economic conditions. In particular, I focus on the hypothesis that the well-being gap narrowed because the level of economic specialization of spouses within marriage decreased. The idea that economic specialization builds the marriage premium has been formalized by Becker (1981) and is currently adopted in analyses of married couples (see, e.g. Stutzer and Frey, 2006).

I use data from the World Values Survey and the European Values Study for 87 countries on various levels of development, for a period of almost 30 years. Multilevel regression allows me to distinguish between the cross-country differences and the within-country differences across time.

Results show that the life satisfaction gap between the married and the never married decreased over time at a rate that could close the well-being gap between the married and the never married in about 25 years. The changes of economic specialization do not affect the well-being gap among women, and have a weak effect among men. Therefore the study does not support the hypothesis that the narrowing well-being gap between the married and the never married may be explained by lower level of economic specialization within marriage. This result is policy-relevant, as it shows that enhancing traditional gender arrangements may be inefficient way of improving conditions of married couples.

Women and Men As Providers of Informal Social Assistance: The Case of Lithuania

Viewed from configurational perspective, family is a complex set of personal ties and interdependencies that extend far beyond it's boundaries and include not only more distant kinship, but also friends (Widmer, 2010). Basing on this theoretical approach, the roles of women and men in the informal social support networks are explored in the paper. This makes a novelty of research, because most commonly gender differences in provision of informal care and assistance within a family of procreation and a family of orientation are discussed in a literature, leaving aside the commitments to the other persons.

The paper examines the peculiarities of informal mutual social support networks, focusing on the place of women and men - close relatives, distant kinship or friends / neighbours in these networks. Individual experiences in giving and receiving assistance are discussed and personal views regarding the expected potential providers of instrumental and emotional support (i.e., persons who would be asked and offered for a help in case of urgent need) are analysed from gender perspective, basing on complex Lithuanian data: (1) the results of the questionnaire survey carried out at the end of 2011- beginning of 2012 (a sample – 2000 respondents, representing national population born respectively in 1950-1955, 1960-1965, 1970-1975 and 1980-1985); (2) the findings of the in-depth interviews with 23 fathers (representing of the same birth cohorts), conducted in summer of 2012 in the six regions of Lithuania.

The investigations were accomplished in a frame of the four years research project “Trajectories of family models and social networks: intergenerational dimension”, funded by the European Social Fund (ESF).

and political). At the macro level, it will be taken into account two dimensions as well: a) cooperation and public goods (for example, environment care or taxes payment), and b) quality of government. We intend to show that happiness is positively associated with the capability of making decisions freely and with the sense of control of our lives; with the presence of interaction spheres, informal or for formalized, without social fragmentation and regulated by reciprocity patterns; and, with the perception that our lives are built on cooperation with others and with governments that listen to us and consider our demands.

Hospital Board Oversight of Quality and Patient Safety: A Narrative Review and Synthesis of Recent Empirical Research

Context: Recurring problems with patient safety have led to growing interest in helping hospitals’ governing bodies provide more effective oversight of the quality and safety of services. National directives and initiatives emphasize the importance of action by boards, but the empirical basis for informing effective hospital board oversight has yet to receive full and careful review.

Methods: This article presents a narrative review of empirical research to inform the debate about hospital board oversight of quality and patient safety. A systematic and comprehensive search identified 122 papers for detailed review. Much of the empirical work has appeared in the last ten years, is from the US, and employs cross-sectional survey methods.

Findings: Recent empirical studies linking board composition and processes with patient outcomes find clear differences between high- and low-performing hospitals, highlighting the importance of strong and committed leadership that prioritizes quality and safety and sets clear and measurable goals for improvement. Effective oversight is also associated with well-informed and skilled board members. External factors (such as regulatory regimes and the publication of performance data) might also have a role in influencing boards, but detailed empirical work here is scant.

Conclusions: Health policy debates recognize the important role of hospital boards in overseeing patient quality and safety, and a growing body of empirical research has sought to elucidate that role. This review finds a number of areas of guidance that have some empirical support, but it also exposes the relatively inchoate nature of the field. Greater theoretical and methodological development is required if we are to secure more evidence-informed governance systems and practices that can contribute to safer care.

Dark Shades of travel: Death Tourism with its Legal and Social Implications

The growing interest of dark tourism, namely death tourism, where the confrontation with grief and mortality is met with the expressed purpose of deranging travel that culminates in assistance to end one’s life is becoming more a central focus on the debates in the right to life arguments. This paper describes the emerging phenomenon of death tourism, to present briefly the social and legal aspects of assisted suicide in conjunction within the tourism industry. By employing digital media, the paper nonetheless examines the position of women in the chain as vectors of male property rights. The application of male-oriented customary law where inheritance is concerned, rather than the use of statutory legislation, was found to be the reality for the overwhelming majority of the participants in the study. The practical implications of this for safeguarding the property rights of women and their children is discussed.

Mō Tātou: Doing It for Ourselves. Developing Indigenous Māori and Pacific Marine Scientists in Aotearoa / New Zealand through Tīnorangatiranga (Self-Determination)

Persistent ethnic disparities in tertiary success have been experienced by indigenous and minority students globally, especially in the sciences, and more so at undergraduate level. Nevertheless, Te Rōpū Āwhina (Āwhina), a programme based on the Māori (indigenous people of Aotearoa / New Zealand) concept of wāhau (extended family) at Victoria University of Wellington (VUW), has substantially increased the number of Māori and Pacific undergraduate and postgraduate students in the science, engineering, architecture and design disciplines. The kaupapa (goal) of Āwhina is to produce Māori and Pacific scientists who contribute to Māori and Pacific community development and leadership. An important Āwhina initiative, the Āwhina VUCEL Incubator (AVI), is based at VUW’s Coastal Ecology Laboratory (VUCEL). The kaupapa of the AVI is to develop outstanding Māori and Pacific marine scientists capable of advancing scientific understanding and, critically, contributing to leadership and development in their communities in meaningful and significant ways. Māori and Pacific marine science capability is built through direct involvement in research that benefits those communities. Key aspects of our work and kaupapa are exemplified by two recent activities discussed in the presentation: (1) The Āwhina Summer Cyberspace event where

years 12 and 13 rangatihot (youth) from Ngāti Kahungunu and other iwi (tribes) and Āwhina local community clusters participated in hands-on activities including marine laboratory and field-based activities, and (2) a project developed by Ngāti Kahungunu Iwi Incorporated (NKII: the tribal entity for Ngāti Kahungunu) in partnership with the AVI, to increase Māori capability around marine resource management and provide pathways into marine science for Ngāti Kahungunu rangatihot. We describe the partnership approach taken to develop the project with NKII, evaluation of the Summer Cybrespace event, and research being undertaken to demonstrate that Āwhina and the AVI are having a positive influence on Māori and Pacific success in science-related disciplines.

New Fatherhood? Post-Separation Parenting Roles and Responsibilities In Australia

This paper addresses parenting roles, responsibilities and outcomes following marital separation in Australia (involving 15% of families with children). Recent research suggests a fathering paradox: although the proportion of lone fathers has increased in Australia over the past decades (now approx 2.2% of families with children) time use surveys show the level of involvement of fathers in everyday child care has changed very little. Despite fathers' general lack of 'hands on' parenting skills, ideological changes to the Australian Family Law Act in 2006 mandated post-separation 'shared parental responsibility', which has been widely interpreted by lawyers and parents as a basis for equal (SO-50) shared custody of children. However, in a 2009-10 qualitative study, entailing three, in-depth interviews found that gender inequalities in post-separation parenting responsibility leaves many mothers reliant upon welfare payments. This study included 'tone' fathers and mothers – 'primary time' parents whose children live with them most or all of the time – as well as parents sharing the care of children more equally.

The socio-political policy underpinning the Family Law changes assumed a degree of interaction and cooperation between separated parents predicated on a new construction of gender in 'doing family'. However, there is little empirical evidence to support this assumption, since (a) most separated mothers and fathers spectacularly fail to successfully negotiate parenting duties on a daily basis and (b) fathers appear more concerned with their own 'rights' while mothers shoulder a disproportionate burden of everyday 'responsibility' for children (even in 'equal shared care' situations where the children live half the time with each parent) – and this inequity mirrors the continuing greater levels of maternal responsibility within intact families. Such findings reinforce the disparity between stated attitudes of concerned fathers versus their actual behaviour.

Tourism Promotion and Disaster: Ethical Issues Faced in Promoting Tohoku Since March 2011

The series of disasters following the 2011 Tohoku earthquake severely affected Japan's ability to attract tourists. This has led to a government-directed international tourism campaign of unprecedented scale for Japan. While international tourist numbers quickly rebounded nationally in 2012, those to the disaster-hit areas remain low.

The primary cause of deflated tourist numbers in Tohoku seems to be fear of nuclear radiation. This concern was also central in Tokyo's recent successful bid to host the 2020 Olympics, and is likely to grow as the Olympics approach. Public and private institutions in Japan involved in tourism, along with guidebook publishers and others, face a serious ethical dilemma: How to promote foreign tourism to the disaster-hit areas while support their economic recovery while being open and informative about potential health and safety dangers.

This paper focuses on this ethically-charged dilemma through examining changes in discourse in international tourism promotion amongst these organizations. The appeal to support both Japan's and the disaster-region's recovery changes in discourses in international tourism promotion amongst these organizations. The appeal to support both Japan's and the disaster-region's recovery
tions and the re-drawing of boundaries in and between artistic movements. This paper explores the separation of political from cultural resistance as one such bifurcation among groups of musicians facing military dictatorship in Uruguay and Brazil during this period. Comparison of four musical movements sheds light on how repression transformed artistic trajectories in each country. Politically en-
gaged reactions to authoritarianism built on social movement participation and ideological commitment to produce music that could be used as a tool for sustain-
ning anti-authoritarian identities and supporting mobilization. Countercultural re-
actions attacked authoritarianism from a different angle, challenging established national identity by asserting foreign (often underground) identities thereby also threatening the cultural status quo.

The bifurcation of political and cultural responses to author-
tarianism produced distinct paths which diverged or converged depending on the institutional conditions in which artists carried out and disseminated their work. In some mediating contexts, competition between the two currents prevailed, producing politicalised and countercultural artists. In other environments, the two paths converged as artists collaborated to combine political and cultural responses to repression. These dynamics in turn shaped the cultural and political environment of resistance to authoritarianism, just as much as social movements and, sometimes, in the absence of openly manifest social movements. Building on this comparison, the author draws broader conclusions on the long-term impact of resistant art on the cultural, political and social land-
scape in which it develops.

From the Inner Workings of Innovation to Historical Accounts of Artistic Development

What mechanisms drive innovation in art? How does exploring this question incite broader understandings of the history of artistic movements? This paper examines the relationship between artistic innovation and mechanisms that repeat over time with each step in the development of an artistic trajectory. A look at the local, regional and national dynamics that impacted these movements reveals repeating mechanisms that both facilitate and limit innovation. The study of Brazilian artists and movements reveals processes relevant to the broader, historical development of artistic movements in Latin America. Methodologically, the focus on innovation in art worlds requires constant shifting among analytical levels in order to grasp transnational influences, the interactions of global and local actors, and the dynamic of change and transformation in art worlds. Adding a relational focus to this multi-level approach helps to unveil the channels through which artists and their movements develop. The study describes three stages in the evolution of art movements in Brazil over the 20th century. First, a concern with authenticity that led to explorations of ‘native’ Brazilian cultural heritage; second, a fragmented notion of national culture that built on mid-century populism; and third, the critical and grounded incorporation of diverse cultural elements within an international and, in some cases, global cultural sphere. The identification of mechanisms that repeat over time with each step in the development of an artis-
tic trajectory is a tool that may be applied beyond this case. These mechanisms shed light on widely recognized phenomena such as revivalism, nationalism, counterculture and political engagement in art. The paper demonstrates, both empirically and analytically, how it is possible through the study of innovation to build a broader narrative of the struggles through which artists and their audienc-
es build identities within national contexts.

The Socio-Spatial Polarization of Large Housing Estates in East German Shrinking Cities: A Governance Perspective

The paper investigates the influence of local government and planning practic-
es on the increasing social polarization of neighborhoods in large housing estates in shrinking East German cities.

Despite significant outmigration of middle-class families the housing estates did not experience a collective downgrading as predicted in the early 1990s af-
ter the reunification. Instead 20 years after there can be observed a small-scale patchwork pattern of stable and impoverished neighborhoods. The author ar-
tests to the uneven development is not only triggered by the demand-driven housing market in the shrinking cities and by segregation patterns caused by the GDR housing policy. Likewise this development is reinforced by specific planning and governance processes: (1) The Federal Government of Germany supports the development of sustainable urban structures in shrinking cities with large-
scale funding programs. The approval for funding is based on defining areas of preferred investment and areas of disinvestment and demolition. (2) There are a growing number of real estate investments in low-quality housing stocks. These private market actors often pursue investment and rental strategies that are con-
traindicated to the municipal development/ demolition plans. (3) Municipal social housing policies and the allocation of low-income renters by housing companies are spatially selective.

Hence, the author assumes that the small-scale social polarization in the hous-
ing estates is reinforced by conflicting investment strategies of public and private actors, by contrasting rental policies of public and private landlords and by the withdrawal of the municipalities regarding to socially stabilizing measures from areas of disinvestment and demolition. Apparently dealing with urban decline is highly restricted by the unequal distribution of power and resources to the actors, their divergent interests and the lack of incentives to cooperation. To develop these arguments the author analyses the case of the continuously shrinking East German city Cottbus.

Model Minority and Discrimination: Case of the Second Generation of Cambodians Refugees in France

It is said that immigrants and foreigners in France posed a problem of socio-political order in the middle of 1970s. While the Maghrebian immigrants have undergone the experience of discrimination and exclusion in French society, South-East Asians have been considered to be a ‘more cooperative’ or ‘silent’ group both in the in-
tegration process at the local resettlement and benefited from a warm welcome (Gilles 2000; Simon-Barouh 2003) . They have a conscience to take advantage of their positive image based on ethnic category. It is suggested that for French people, receiving Southeast Asian refugees provides an opportunity to justify the status of non-racist citizens (Roquejoffre 2009:118) . With this good reputa-
tion, they became a ‘model minority’ in France. As Asians have a fairly positive image compared to other immigrants, it is difficult to say that there is a feeling of hostility and racism against them (Gayral-Taming 2000) . However, the idea that Asian can be accepted because they are silent while other ethnic groups without such a personality could be rejected is itself a radicalized stereotype. In the con-
text of French society, the positioning of Southeast Asian refugees as ‘exceptional’ resulted from colonial history and the politics of compassion. But this exception-
ality risks generating racialised practices. Regarding Second generation, their ed-
ucational success in science and their typical choice for the sector of the commu-
nication industry has been noticed (Le Huu 1996 ; Meslin 2006 ; Masse 1996) . Are they really success in their schooling and professional career? It is doubtful if they
really benefit from their positive image in their living experience. By examining educational and occupational attainments of the second generation of Cambodians refugees in France, I will show aspects of discrimination encountered by them as a model minority. I use interviews collected from my field research conducted between 2010 and 2011 for this analysis.

How Is Multiculturalism Americanized and Japanized?

The idea of “multiculturalism” has spread globally and impacted on the ways of being “nation-state” since the 1970s when Canada and Australia enacted the official policies of multiculturalism. The United States is one of the earliest adapters of the idea to redefine its legacies of cultural diversity in the 1980s. Japan, one of the “weak” states in the strength of multiculturalism policies, modified it to a vision of “multicultural coexistence (tabunka kyousei)” for incorporating foreign residents in the 2000s. This paper compares how to accommodate multiculturalism as an image of national society in United States and Japan in entangled three layers: community legacies, national discourses, and global values. Both countries have had historical legacies to incorporate minorities at the level of the local communities. Today, the legacies have national dimensions redefine the relations with between multiculturalism and nationalism although the opponents usually attempt to define it as a threat to the national. The national modifications also depend on what extent people perceive it as a global value. The interconnection of the layers explains how public opinion is tolerant of them. Hence a part of the national image. The USA’s liberal modifications help to implant a multicultural ethic on its national image while Japan’s transnationalist interpretations fail to nationalize it. Based on analysis of governmental reports, public polls, and reactions from local communities and minorities, I will discuss the ways in which USA and Japan establish two versions of multiculturalism to adapt it in the different socio-cultural contexts in the era of global migration of idea.

Nationalism, Exclusivism, and Purism: An Analytical Description of National Identity in Mongolia

In recent years, Mongolia has witnessed the rise of ultra-nationalists and even neo-Nazis. Their campaigns ploy foreigner, especially Chinese and Koreans, as threats to the “purity” of the nation, and are often accompanied by vandalism and violence. Their target is not only limited to foreign people and enterprises but also to their local state that is framing the relations with foreigner, as well as sexual minorities, are typical examples of domestic scapegoats and objects of violence.

As ultra-nationalists and neo-Nazis themselves are very few in Mongolia, the problem is whether public opinion is tolerant of them. However, the results of the public opinion in Mongolia are conflicting. Some argue that nationalism and prejudice against foreigners is common in the country, and that exclusivists are gaining popularity, again the backdrop of public fear that Mongolia, the country with so small population, might be easily swallowed up by the massive influx of foreign people, investments, culture, and others. Meanwhile, others explain that these ultra-nationalist groups do not represent the majority of Mongolian people, and that their activities are still in the margins. Which is closer to reality? Resolving the contradiction and portraying an accurate picture of public opinion will help in forecasting the future of nationalism and exclusivism in the country.

This paper presents a study of issues on the national identity of ordinary Mongolians, such as exclusivism, national pride, and aspiration of “national purity.” Using data from cross-national public opinion surveys, the study examines Mongolian attitudes toward those issues, by comparing Mongolia with Asian societies and post-socialist ones. This study also explores correlations among these attitudes, as well as factors associated with them. Hence, the study aims to offer a non-European empirical viewpoint to the research of nationalism and national attitudes, as well as factors associated with them. Hence, the study aims to offer a non-European empirical viewpoint to the research of nationalism and national identity.

A New Stage In The Fragmentation Of Production: Economic and Social Implications For Development Countries

This paper deals with the implications on production activities, income distribution and institutional changes due to the significant changes taking place in the world. One of the more relevant characteristic of globalization in its productive and commercial aspect is the segmented organization of national and international production. A new feature of the present international division of labor is the participation of countries that opened recently to the world economy. This is the case of large countries such as China, India, countries of Eastern Europe, and Latin American ones, like Brazil, Mexico.

The incorporation of these new actors in the economic global stage gives way to deep concerns, analyses and debates on the evolution of the economic specialization of developed countries and the industrialization strategies which are open to emerging ones.

Emerging countries have their own concerns regarding segmentation and the new trade model as it implies a great dependence to the MNCs in terms of markets, technology and organization. The new strategies requires new regulations to modify the structure of specialization and reduce production in sectors with price competition. They need institutions and incentives for the creation of knowledge and innovation. Thus, this paper deals with the following questions. What institutional arrangements are needed in order to make possible the insertion of emerging countries in knowledge intensive activities with high value added? Are the implications concerning employment the same as those of the international trade of final products? Do the observed tendencies towards a more uneven distribution of income, in both developed and developing countries, arise from the interrelation of national labor markets? Does fragmentation increase the negative effects in the distribution of income? Which should be the new economic and social policies and the institutional changes?

Youth and Public Space in Hanoi, Vietnam

Since Vietnam began to integrate with the global economy and culture in the mid 1980s, public spaces have been greatly transformed. They have increasingly been privatized and commercialized, and become subject to surveillance and rules, mirroring the global trend. However, in Hanoi, a very dense capital with scarce public space, the consequences of this trend are not only a decline in public space but also an intensification and diversification of use of public space, including increasingly informal activities. These processes resulted in restricted access to the city’s largest public spaces, which are mostly fenced off and for which entry fee is charged. At the same time, the city witnesses an increasing use of smaller public spaces as squares. They have become heavily populated by urban youth because of their easy access (no fees or fences). The Vietnamese youth that grew up in the new era of globalization are today developing a new urban culture in the squares of Hanoi, manifested in skating, biking, rollerblading and street dancing.

Based on the results of 40 interviews with youth held on two squares in Hanoi – one located in the inner city, Lenin Square, the other one in a residential peri-urban area, Trung Hoa-Nhan Chinh – and 15 interviews with professional and institutional planners, this paper provides an understanding of the use of public space by urban youth and examines how they negotiate rules and restrictions and deal with other users. The paper aims to give an insight in the role of public space in the context of a new emerging urban youth culture in Vietnam, and in the dichotomy between tightness and looseness of control over public spaces.

Routines, Rhythms and the Mobilisation of Musical Practices

Despite the increasing interest in mobilities and cultural practices, the specific mobilities of musical practices have been sparsely addressed in the scholarly literature. This paper advances the notion of mobilisation of musical practices and its relationship with routines, rhythms and bodily gestures as a way to analyse the transportation of ways of making and experiencing music across networks of relatedness. The paper is addressed to explore and discuss this notion. Son jarocho is a musical practice originated in southeast Mexico and is believed to be product of the encounter of African, Nahuat and Spanish-Andalu traditions. It is nowadays reproduced, appropriated and re-created in various locations of Mexico and the United States, partly due to the migratory flows between these two countries. Practitioners have used son jarocho to elaborate discourses of authenticity and preservation of a regional musical heritage; however, it is currently also sustained, informed and reshaped by transnational linkages. I suggest that son jarocho is no longer confined to a bounded and coherent community or ethnic group (namely Mexicans, Jarochoes, Mexican-Americans or Chicanos), but constitutes a complex form of socially established activity in which repertoires of bodily gestures, rhythms and routines are reproduced, re-appropriated and recreated across transnational social fields.

MIRANDA, DANIEL* (Faculty of Social Sciences, P. Universidad Católica de Chile, damiranda@gmail.com)
Inequality in Students’ Citizenship Participation Across Countries

Citizenship participation is a key element to sustain and legitimate the democratic system. Although citizens are assumed to have similar rights, the empirical evidence suggests that participation is characteristic of those with higher socioeconomic background (Brady, et. al., 1995). Furthermore, these inequalities would have an intergenerational transmission (Verba, Burns & Schlozman, 2003): children with well-educated parents have the knowledge, skills and attitudes for participate in a more effective way. The main objective of this study is to analyze the individual and contextual (school and country) elements that can mitigate/strengthen the impact of the social background on student’s citizenship participation, guided by the following questions: To what extent students’ participation levels differ across countries? Are these differences related to contextual factors? Do contextual factors affect the link between students’ background and participation? The central hypothesis in this study is that country contextual economic indicators as well as democratic indicators influence both participation and the impact of background on participation. In particular, we expect that in countries with higher inequality indexes the influence of students’ school socioeconomic background on participation is stronger, reason why we pay special attention to Latin America, the region of the world with the high income inequality worldwide.

The present paper analyzes data from the International Civic and Citizenship Study 2009 (N=140,000, 38 countries). The main object of study is citizen participation, composed by two dimensions: present-future and civil-civic. Whereas civil participation refers to activities that involve interaction with the local communities; civic participation is conceived as related to formal institutions. Preliminary multilevel results show that the association between socioeconomic background and participation is strong and varies across countries, however shows different patterns depending on the kind of participation. Some country context dimension has an effect on the levels of participation. Comparison among regions will be discussed.

Abstracts are organized by first presenting author’s last name. * denotes a presenting author.
Transnational corporations have radically altered the urban landscape of many cities in India. They are housed in gleaming, well-maintained buildings with round the clock security. Within these workplaces, primarily middle class virtually mobile workers interact with clients and customers from North America, Europe and Australia.

This paper focuses on the workers who “service” India’s high-tech workplaces. Based on interviews with workers who provide security and housekeeping services we trace newly emerging patterns of gendered work. Traditionally female-dominated sectors, such as cleaning, have experienced a large influx of men as a result of the rhetoric of professionalism which is used to promote this work within foreign corporations. Men and women in cleaning make sense of the stigma associated with their jobs (in the context of both gender and caste expectations) while simultaneously stressing the technology-based, standards driven nature of their jobs. Similarly, men and women in security jobs highlight the militaristic precision demanded for their jobs while recognizing the low waged, unstable nature of their work in the context of subcontracting. In making these normative claims, workers define and inscribe new gendered rhetorics of masculinization and feminization. We argue that these rhetorics support the gendered segregations of these occupations, which are poorly paid precarious jobs for primarily male workers.

MISAWA, JIMPEI* (Rikkyo University, misawa@rikkyo.ac.jp)

Rethinking Pharmaceuticalisation from the View of Japanese Context

Medicalisation is a key concept in medical sociology, and is useful tool to capture social control by medical profession. Recently, however, scholars increasingly are focusing on the pharmaceutical aspects of medicalization. Pharmaceuticalisation is defined as the process by which social, behavioural or bodily conditions are treated in need of treatment, with medical drugs by doctors or patients (Abraham 2010). In recent years, although the concept of pharmaceuticalisation have been pervasive in some journals, the concept is still primarily a topic explored in scholarly terms. Indeed, according to Bell and Figert (2012), as of June 17, 2011, there were only seven thousands hits for “pharmaceuticalisation” in Google, and only seven for the topic of “pharmaceuticalisation” in Web of Science. However, there is a need for the concept of pharmaceuticalisation, because the empirical phenomena, which medicalization theory cannot adequately capture or explain, are increasing. Though discussion of the concept is increasingly developing in the sociology, the discussion in Japan is still scarce. In this report, by considering the reason for lack of the discussion in Japan, I aim to reconsider the concept of pharmaceuticalisation critically, and to explore the availability of the concept. One of the factors that pharmaceuticalisation is not general in Japan is universal health insurance system. Japanese people can receive the same medical care at anytime and anywhere by universal health insurance system. Therefore, we cannot imagine the impact of pharmaceuticals is foreseen. However, given that a lot of Japanese people use dietary supplements, pharmaceuticalisation might be affect individual health. Therefore, by using pharmaceuticalisation that is associated with individual healthisation and social system, it might be available to analyse social phenomena of pharmaceuticals better.

MISHRA, NIHARRANJAN* (Ramniranjan Jhunjhunwala College, avms@godrej.com)

Gender Inequality and Education for Women

Due to rapid population growth, poverty and politico-economic reasons, the number of illiterates is increasing continuously in the world. In most society's women have lower status, no access to education, less food and no health care. In contrast, girls are better off, mainly because of the activities of gender inequality. Girls receive more education than boys, they have better health, they are more likely to marry young, and they have better access to social services. However, in many places, girls are often simply not sent to school or drop out later, thus increasing the level of illiteracy among women. Those who live in semi literate families, there is no pressure on women to receive education. Even when the motivation is there, other obstacles are permanently present. Women have to perform so many roles that they do not find enough time for fulltime or even part time educational activities. Fatigue, frequent or early pregnancies, caring for children and families, agricultural and cultural activities and formal or informal employment, are among the many reasons for lack of time. Gender specific inequalities are reinforced by unequal access to education. Girls often are simply not sent to school or drop out later, thus increasing the level of illiteracy among women.

MISHRA, SHASHI* (Ramniranjan Jhunjhunwala College, avms@godrej.com)

Healthy Ageing, Happiness, Quality of Life for Rural Marginalized People and E- Health

Although tattooing is a new social phenomenon, coupled with new developments in psychoanalysis (Anzieu), it may radically advance the theory of self. The body-mind problem remains a philosophical problem because philosophy has not thematized the third party in the relationship, which both divides and unites them – the skin. The body-skin-mind problem thus provides a new starting point and philosophical platform for socio-psychological discussions of self.
“Health for all” is a Millennium Development Goal. Medical Science is developing by leaps and bounds. In India it has brought in more awareness, longevity and a number of other advantages. At the same time availability of health care in India is uneven and unequal. Healthy ageing and living simple but quality life is the right of all. But it is a distant dream.

This paper explores the nature of health care practices in India. While analyzing the issues concerning the health care, it tries to highlight the major concerns affecting health care in India. An attempt is made to provide an alternative to revitalize the provision of public health care infrastructure in the country.

Quality of life through good health is an essential resource that enables individuals, communities and nations to overcome poverty and develop their potential. Healthy ageing is prerequisite for progress and development. This paper will explore the relevance of equitable distribution of health care services to the poor and unreachable. It creates awareness about the new health care concept of telemedicine (E-Health) which can bring the best health care services to people of remote areas. Changing health and morbidity patterns in rural and urban areas are drawing global attention in recent years. Investing in hospitals with good infrastructure may not be much advisable in poor people of rural areas because of the lack of well qualified and experienced medical personnel. Also people find it too costly. The introduction of Information and Communication Technology in healthcare by some hospitals in India in the form of telemedicine is bringing about a revolution in the health care services. Research shows that such activities have tremendously helped the people of rural and remote areas of India who are not able to afford good healthcare facilities.

MISKOLCI, RICHARD* (Universidade Federal São Carlos, ufscar7@gmail.com)
San Francisco and The New Economy Of Desire

Based on extensive research and in an ethnographic incursion of seven months in San Francisco, this paper discusses the relations between new forms of work and leisure, the changing urban occupation, technology development and how they shape the search for love/sex partners. Despite the apparent universality of technology it is intrinsically connected to the cultures in which it is created. Because of the concentration of tech industries, start up companies and research centers, San Francisco and its region is a privileged site to explore the interconnections between economic changes, gentrifcation and the use of mobile digital media. Its local life also allows for a clearer comprehension of the rising of a new economy of desire marked by phemenona like the consolidation of the hook up culture, the decadence of monogamy and a rising new morality concerning love and sexual relations. Based on sexuality studies, sources on urban gentrifcation, and digital media investigations this paper aims to provide an initial analysis about the growing use of apps on mobile devices like smartphones and tablets in search of love and/or sexual partners. One of the main arguments is that this new economy of desire has also created a new sexual ethic and is changing moral patterns about monogamy and partnership.

From Agitation to Political Autonomy: Interlinks in Three Movements in a Northern Province of India

This paper attempts explore the impending continuities in people’s mobilization by identifying the inter-linkages in three contemporary movements in a northern province (Uttarakhand) of India. In an empirical study of the three movements; the movement against felling trees (chipko i.e. hugging trees), the movement against alcoholism (Sharab-bandi), and the movement for a separate hill state, it has been found that these movements are entwined in terms of issues, leadership, organizations and ideologies. The present paper highlights the role of the middle class in contributing to evolve and articulate the issue/demand of the protection of a customary right of the local populace into a demand of political autonomy and the right to self-development of a regional community. Secondly, the paper focuses on pathways of the growth of specialized organizations from a social movement to a political movement. Thirdly, the paper explains the nature and role of leadership and intelligentsia in creating and articulating symbols, discourse and narratives of a distinct identity. Furthermore, it also pinpoints the role of middle class youth in dissemination of partial and total ideologies and its role in creating and articulating symbols, discourse and narratives of a distinct identity. Finally, it also identifies the changing nature and role of leadership and intelligentsia in creating and articulating symbols, discourse and narratives of a distinct identity.

Net-Base Theory of Social Capital

The concept of social capital has been widely accepted; however its theoretical significance in sociology is not clear yet. In this paper, we propose a theoretical device in order to make this analogical concept the key to integrate relation-theoretic theories of social relation, social networks, and social structure) in sociology. Social capital is analogy, the aim of which is to capture such mechanism that is similar to capital accumulation process in social structure. Every element of social
structure and every relation-theory as well should have relation to this concept to some degree. As a rule it inevitably has multiple meanings; on the other hand, it should work as a hub by which various relation-theories are consistently connected to each other. In order to extract this unifying power, we introduce the ‘net-base.’ Net-base is a common attribute that provides a basis of social ties. Thus net-base implies a corresponding socio-centric network that consists of all the members who share it; moreover, configuration of various net-bases implies interrelationship between multiple socio-centric networks. We assume that accumulation of social capital is oriented by socio-centric networks embedded in social structure; then, net-base is an indicator in terms of which we can infer how network mechanisms in social structure condition the accumulation process of social capital. In making the inference we often need to access different type relation-theories, which will provide an opportunity of theory integration. Additionally, net-base is easily measurable by questionnaire on personal networks and group participation in ordinal individual-based survey. The paper aims to show that this methodology makes it possible to locate ‘social capital’ in the storage house of relation-theories and to empirically find valid inference in regard to network mechanisms of capital accumulation. More extendedly, it should have integrity with the rational choice research program of social capital proposed by Flap and Volker (2004).

The Prime Function of Intellectuals and New Conditions of Framing Social Imaginary

The paper aims to enrich the existing reflection on the political role of public intellectuals by exploring the impact of the changing nature of the political and intellectual spheres on their potential to connect with an audience. It argues that the significance of public intellectuals’ influence in the political arena is determined by their ability to imprint themselves on a wider social imaginary through personal networks and group participation in ordinal individual-based survey. The paper aims to show that this methodology makes it possible to locate ‘social capital’ in the storage house of relation-theories and to empirically find valid inference in regard to network mechanisms of capital accumulation. More extendedly, it should have integrity with the rational choice research program of social capital proposed by Flap and Volker (2004).

RC20-356.1

MISZTAL, BARBARA* (University of Leicester, bm50@le.ac.uk)
Trust and Modes of Cooperation

The paper asserts that presently – as a result of the growing importance of networks of interconnected relationships, the complexity of the system and the innovative use of knowledge as sources of productivity gains – there is an increasing demand for cooperation. The paper critically evaluates theories that assume that today’s society increasing depends on externally regulated behaviour, so not on trust, to sustain cooperation (Cook et al 2005) and theories that argue modern society deskills people from cooperative competence (Sennett 2012). It illustrates that although today’s society increasingly ensures their solution to the problem of cooperation by setting their foundations in formal rules, yet attempts to act in the spirit of rational formalism are always complemented by the practical importance of various informal, based on trust, non-hierarchical voluntarily negotiated forms of self-coordination. Moreover, many current processes increase the scope for not role-bound and role-obedient conducts and therefore facilitate trust based social encounters. At the same time, these trends, which lead to the loosening of formal hierarchies, de-conventionalisation of organized practices, tend to raise the base of the demand for trust, also create favourable conditions for trust abuse. In order to enhance cooperation, in the context of the growing level of education, expanding access to information, new digital technologies and the process of globalization, we should simultaneously rely on the both formal regulations and informal means, such as trust, to secure conditions for socially beneficial exchange. In order to foster a culture of cooperation in which all participants gain a measure of self-respect, autonomy and agency and in which there are neither winners nor losers, we need to search for ways of tuning the formal and informal means supporting social exchange.
issue as a problem of observation by different observers within a functionally differentiated society. The paper shall discuss the technological, economic and public opinion issues surrounding Japanese nuclear power, demonstrate how these are first-order observations of different observing social systems, and how Japan’s political system acts as a second-order observer of these observations. By understanding politics as the social system which acts to manage system expectation by introducing binding resolutions upon society (and thus deals in risky decision-making), the limits of Japanese political action when faced with technological risks on one hand and the desire to maintain Japan’s economic and strategic position on the other will be illustrated. This paper concludes that despite the risks of and public hostility towards nuclear power, the rationale of Abenomics and emerging strategic threats in East Asia leave Japan with little choice but to restart its reactors, a conclusion which is consistent with current Japanese nuclear policy.

role of mothers and academics in India, Brazil and South Africa and seeks to explore how strong traditions of family values in these cultures influence and impact women in the Academia. Some of the questions it seeks to address are as follows:

In what ways do women live these roles which are very demanding and challenging, also satisfying and fulfilling? What are women’s obstacles, what are their strengths? How do academic mothers do a different kind of academics, maybe or a different kind of mothering, so as to satisfy their aspirations from these two roles, two lives? What are their tensions, how do they resolve them, what kind of adaptations do women make? What kind of a philosophy on life and work do they have in the face of these conflicting roles simultaneously? The paper is based on in depth qualitative data that is deeply reflexive and drawn from 15 women Academicians in India.

MITSUI, SAYO* (RC46, s-mitsu@hosei.ac.jp)

Inclusion through Communication: Support Activities for the Learning-Disabled and Autistics in Tama, Tokyo

In Japan people are encouraged to include the disabled in such places as regular workplaces and schools as in some other countries. However, even now, one third of adults with learning disability and autism are placed in facilities for the mentally-handicapped, because many persons concerned do not altogether consent to the idea of inclusion as such, particularly when the learning-disabled and autistics inflict harm on things and people in the community.

This paper is based upon my research conducted in Tama District, the most populated suburban area in Tokyo, to see how those who attend on the learning-disabled and autistics in the district act in response when they are exposed to a variety of such harm in the community. The attendants are apt to assume that harmful doings by the learning-disabled and autistics are connected with what was done by others, including the attendants themselves. Thereupon, they attempt to unravel an un MCPED harmful doing in terms of the relationship of the learning-disabled and autistics with other persons, trying to see what caused each individual with learning disability and autism to turn to be harmful. This attempt leads to their attaching importance to painstaking communication with him/her as a measure to include him/her in the community.

I will discuss this way of dealing with the problem in the light of the concept of double contingency first advocated by Talcott Parsons and later modified by Niklas Luhmann, believing that it can empirically be applied.

Social Investment Strategy in Japan: A Failed Attempt?

A rapidly aging society with low birth rates, an increasing public distrust to the sustainability of the social security system, a high level of child poverty, and a high rate of suicide among the youth all suggest that Japan should embrace social investment strategy. A large gain in social benefits seems possible with the rethinking of an inter-generational redistribution. Yet, social investment strategy has been weak both in discourse and in practice. Although the Democratic Party of Japan (DPJ) government (2009-2012) pursued some policy innovation in the area of childcare and youth programs under the slogan of “children first,” a paradigm shift has failed to take place.

This paper asks why the adoption of social investment strategy is so limited in Japan despite the fact that its social and economic conditions should provide a fertile soil for such a strategy. We shall explore the political conditions which pre- vent the full-fledged development of the ideas and practices of social investment strategy. In so doing, we show how the dominant force of neoliberalism constitutes a stumbling block in policy innovation.

This paper will cover major policy changes in the realms of childcare policy (cash allowance and daycare), youth programs for job training and job seeking, and “career education” from the 2000s to the present day. Its main focus will be on the rightward shift of partisan dynamics, legacy of statism, and the persistence of traditional gender roles.

MIURA, NAKO* (Kanagawa Institute of Technology, miura@gen.kanagawa-it.ac.jp)

Social and Intellectual Antinomies of Information Technology

Information technology is progressing day by day, at a speed which exceeds our expectations. Therefore, the view about information technology is being torn into conflicting poles. There are some antinomies of various dimensions in today’s highly informative society.

At a socio-economic dimension, Big Data (and data-mining technology) is expected to rediscover the information marketplace as a new untouched field, and that it will produce industrial reorganization and activation, just like fossil fuel (and mining technology) accelerated the Industrial Revolution in the 20th century.
On the other hand, Big Data has been criticized for collecting all the action histories of people and reusing these as industrial resources, giving rise to the social movement opposed to excessive surveillance and marketing.

At an intellectual dimension, especially in the field of human science, the appearance of Big Data is expected to enable statistics technology and behavioral science to expand. It is anticipated that data mining technology and algorithm will give rise to an individual’s decision-making process. In this sense, prediction and behavior prediction will have a decisive role in social scientific research.

These social and intellectual antagonisms are homologous to the thought situation of the 1960s in France, the confrontation between objectivism and subjectivism, where Bourdieu elaborated his sociology and the concept of Habitus. Today’s antinomies of information technology could be considered by using Bourdieu’s sociological methods of overcoming dualism.

The Effects of Child Birth on Marital Satisfaction in Contemporary Japan

Marital satisfaction has been studied in family sociology all over the world. In Japan, many empirical findings regarding the determinants of marital satisfaction have also been accumulated. However, most prior researches in Japan have limited data quality because they use cross-sectional datasets or panel datasets without matching the family. Therefore, examining the relationship between child birth and marital satisfaction by longitudinal analysis would be important for Japan in an era of low birthrates and high rate of unmarried people.

We examine how child birth, years from marriage, amount of time of conversation with spouse, occupational career, and socio-economic status affect the levels of marital satisfaction. Separate from child birth and marital satisfaction, gender and child birth sex points are whether or not the finding that first birth just has an impact on marital satisfaction could be reproduced, and the interaction between gender and child birth effect could be shown.

Datasets from the National Family Research of Japan, 2008-2012 Panel Study (NFRJ-08PHEL) are utilized. Fixed effects regression models are applied to analyze that panel datasets.

Our analytical results show that the expected relationship between child birth and marital satisfaction. As the same with findings by prior research, first birth has negative effect on marital satisfaction while second or later birth child birth do not necessary affect. Then, we can observe the significant interaction effects between gender and first birth on marital satisfaction. Male respondents are more likely to decline their marital satisfaction by first birth rather than female respondents.

These findings indicate the necessity of detailed research on the changing of life, behavior and attitude by first child birth among Japanese men. We discuss the implication of gender difference in the fluctuation process of marital satisfaction.

The Formation Process of the “National Orthodoxy” Regime in Contemporary Russia

Through dramatic domestic and foreign changes over the Soviet Union’s extinction, Russia has historically reappeared on the world’s stage. Although contemporary Russian history does not have a firm unification principle, a “National Orthodoxy” regime is being formed. The “National Orthodoxy” corresponds to “the state religion” as the core element of national unification. Separate from the “private Orthodoxy” as a live faith, the “public Orthodoxy” emerged as a principle that unifies. The Russian Orthodox Church should unify with the people of Russia and is a political religious system where national unification is realized by the ideology. Under this regime, the value of the Orthodoxy applies to all the people of Russia.

The Russian Orthodox Church promotes a harmonious agreement between the Russian state and society. The Russian Orthodox Church has been revived in contemporary Russia. While the movement from the bottom known as the private side mixes with the policy from the top known as the government side, the “National Orthodoxy” regime formation process in Russia is promoted. In addition, it is observed that the “centralization of the Orthodoxy” assumes that the Orthodoxy is a unification principle. And at the same time, the “marginalization of the non-Orthodoxy” suppresses and removes religion except the Orthodoxy. In this country, dual structure exists separately while the various schools of religion in the private sphere overlap with “the National Orthodoxy” in the public sphere. The contemporary Russian national identity may say to be reconstructed, with the principle of unification known as the “the National Orthodoxy” regime at its core.

Doing Occidentalism through Mangaesque Convergence

This paper addresses contemporary Japan-Italy relations in the field of popular culture, and by the asymmetrical and mutually constitutive process of Occidentalism, Orientalism and self-Orientalism. In spite of the hegemonic and diversified impact of modern Occidentalism (F. Coronil 1996, K. Iwabuchi 2002), there is still no unified field of systematic academic investigation on the ‘West’ as a concept, which has become a kind of blind spot in the Humanities and Social Sciences (HST) field. Occidentalism still continues to be examined through a body of disconnected works on the one hand, or through methodological civilizationalism, nationalism and culturalism on the other (the West without quotation marks).

In this regard, modern Italy and Japan offer a heuristic alternative to the center/periphery model conventionally applied to Occidentalism, due to their ambivalent status of sharing a history both as orientalizing imperial powers, but also as orientalized exotic countries. Interestingly, in the last two decades, Italy has become the most loved foreign country in Japan among the whole young and female population (T. Miyake 2010), while Japan has witnessed a similar boom of popularity in Italy, thanks in particular to the Japanese anime and manga series that have the highest number of anime series broadcast on television outside Japan (M. Pellitteri 2008).

The diffusion of Japanese popular cultures in contemporary Italy will be investigated firstly, by situating it within the process of Occidentalism, which will be examined through a theoretical perspective inspired by relational, intersectional and positional sociology (M. Emirbayer 1997, P. Collins 2000, P. Bourdieu 1984). Secondly, this study will address more specifically the transmedial constellation of Japanese popular cultures (anime, manga, videogames, character design, etc.) by bringing together an aesthetic theory of the mangaesque (J. Berndt 2012) and a media theory of convergence culture (H. Jenkins 2006).

Differentiating Gender Roles Onstage: An Analysis of the Takarazuka Performance

The Takarazuka Revue Company is a unique musical company in Japan made up of only female performers. The performers are divided into male-role players and female-role players. Many foreign studies have examined the gender dimensions of the company. Adopting a feminist perspective, they have suggested that in the Takarazuka performance—especially with regard to the male-role players—reveals new possibilities for challenging traditional gender roles.

My examination, however, will show the opposite side and clarify how gender consciousness is reinforced through Takarazuka’s performances. Most studies on Takarazuka have focused on the male-role players and neglected the female-role players. In fact, the latter is more important from a gender perspective because the popularity of the male-role players can only be achieved based on the discrimination or marginalisation of female roles. In this study, I will analyse certain Takarazuka productions and show how the female-role players are treated onstage and offstage. Even on women-only stages, there is an unequal construction of gender. I will also discuss the audience's approval of gender hierarchy. The male-role players have far more fans; moreover, their fans seem to wield a kind of power over the female-role players. It should be emphasised that most fans are also women. This preference for the male-role players among female fans is reflected in the staging itself for commercial reasons. It might be said that the Takarazuka stage and its fans contribute to the underpinnings of Japanese society’s gender consciousness.

Musicology in Post-War Japan: German Influence and Social Context

Japan is famous for consuming Western classical music. Since the Meiji era, Japan has eagerly imported Western music and produced many musicians, orchestras, and concert halls. Today, the classical market is large, but it is much smaller than the market for popular music. Nevertheless, extensive studies of classical music have been conducted in Japan. This research will explore Japanese musicology in the late twentieth century through a case study of the department of musicology at the Tokyo University of the Arts, which has the longest tradition of musicology in Japan.

Japanese musical research was strongly influenced by German musicology, especially after the war. The primary interest has been in examining scores and historical documents related to the great German composers, such as J. S.
Bach and Beethoven, and analysing their compositions, as opposed to cultural studies or ethnomusicology. One of the most influential German musicologists was Carl Dahlhaus. His book The Idea of Absolute Music was widely read in the Japanese music world. This highlights the preference among Japanese researchers for instrumental music. From another point of view, however, Dahlhaus’s social and ideological background in post-Nazi Germany. As some researchers in the English-speaking world point out, Germany after the war needed to distinguish the ‘great German music’ from the country’s guilt and emphasise the autonomy and purity of music.

This study clarifies how this situation in Germany influenced Japanese research on music and music aesthetics. Further, it analyses the Japanese social context for the reception of Western classical music.

New Urban Childhoods: Globalisation, Socialisation and Urban Informality on Children in Ghana

Globalisation has fuelled rapid and unprecedented levels of urban expansion. The consequences of which for children’s socialisation have been profound. ‘Urbanisation without industrialisational’ is how Davis (2006) terms this process, as economic dislocation, widening inequalities and rapid social change have undermined the capacity of cities to meet the needs of their rapidly growing populations. Many cities and towns no longer equate with the ‘engines of growth and structural transformation’ (UN-HABITAT 2005, 2010) attributed to them by classical urban theory, but instead appear to be the cause and symptom of lasting economic and social decline. It is beyond the scope here that one aspect of this may be productively explored through the notion of ‘urban informal childhood’. Focusing specifically upon Ghana, the paper examines the growth of informal ways of working and living in urban areas and considers the implications of this for children and their socialisation. To do so it considers the experience of structural adjustment in Ghana – a ‘poster-child’ for globalised market led development strategies – and traces through its impact on urban development in terms of ‘informalisation’ (Meagher 1995) and its corollary the growth of ‘wageless life’ (Denning 2010). Particular attention is given to the implications of these developments for children as both dependent and independent agents and the impact of this on processes of socialisation. As structural adjustment finds a parallel in processes of domestic re-regulation, this paper argues that children’s value to their household is progressively being re-constituted. The consideration of the informal – activity outside the regulative ambit of the State (Harvey 2010) – is also pursued through attention to new forms of urban living. As urbanisation becomes increasingly synonymous with the development of ‘slums’ and illegal settlements, this paper considers the rise of informal urban childhood through inadequate housing, overcrowding and a lack of basic services for children.

The Sociology of Fatherhood and Consumption: Empirical Evidence from Soon-to-be-Parents in Japan

Japanese society has been undergoing tremendous transformations in recent years, none of them is the change in family organization and family life and in particular the role and identity of the father. This paper analyzes the most well-known example of this is the rise of the so-called ikumen: men who actively engage in child rearing. A government campaign launched in 2010 to encourage Japanese men to take a more active role in parenting is gathering momentum. Seminars aimed at men on how to develop parenting skills are now being held across the country and father figures who take time out of their work to spend time with their kids are currently being applauded in the media.

While Japanese fathers have been studied in the area of family sociology, research on recent changes in fatherhood in Japan and the ikumen in particular is still in its infancy. So far, no study has looked into the issue of consumer behavior of fathers in Japan and how consumption patterns change with fatherhood. Given the state-of-the field, we opted for an exploratory, qualitative research approach. After a pretest with one couple, we interviewed 12 expecting couples about their current situation based services provided, the key risk for terms of their life in general and their consumer life in particular. We first interviewed the soon-to-be parents separately first and then jointly together as well. All interviews were recorded and transcribed verbatim before being subjected to a qualitative content analysis.

Our findings reveal a mix of rational, goal-directed consumer behaviors in combination with the consumption of goods and services in relation to spiritual and superstitious beliefs grounded in Japanese religious traditions or folk culture. We also find gender role and generational differences when probing the social relationships between (expecting) mother and father and between father and his own father.

Institutionalization Among Older Adults in Japan

This study is to explore the risk factors affecting the possibility of institutionalization for the elders after the launch of the Long Term Care Insurance (LTCI) in Japan. Previous research shows that the level of informal caregiving, and caregiver’s capability, rather than the older adult’s declining function, were the key risk factors for institutionalization before the LTCI. The effect of LTCI services have shown to have been examined from both perspectives. The recent focus has been on risk for institutionalization. Using ordinal logistic regression, we analyze the claims data on LTCI service use in one city in Japan from 2000 to 2006. The preliminary results show that after the launch of LTCI, the caregiver’s preference for services is the significant risk factor for institutionalization, among other predictors related to risk of institutionalization, such as living arrangement, characteristics of both the care recipients and the caregivers. LTCI provides diverse home-based and institutional services for families and individuals, and in our claims data, those who utilized home-based services the most turn out to be the least likely to be institutionalized. And for the elders institutionalized the most, their primary caregivers had expressed their preferences for institutional care services at the time when applying for the LTCI services, and they utilized the least home-based services. Therefore, we gather some evidence that LTCI had provided sufficient home-based services to reduce the possibility of institutionalization due to lack of informal services. Despite the home-based services provided, the key risk for institutionalization is the primary caregivers’ preference—whether they prefer more involvement of LTCI services or not, and whether they prefer the services at home or in institutions. Therefore, we conclude that the LTCI services have a double-edged effect on family aging care, and the family has great influence on whether the older adult will be institutionalized or not.

Implications of Social Capital for Family Life: The Case of « Non-Statutory Parent »

My communication is on the subject of the « non- statutory parent, i.e. the person who, within a couple, fulfills the role of « parent » for a child not legally his or her own, but the offspring of his or her mate. The main results I will present is that the family’s environment of friends, and kin represents a social network that is quite significant in the upbringing of the child, beyond the nuclear family, the child’s educational paths are more diversified than what a child of the same age with parental rights would experience. The child is more included in the social life of the community and this is facilitated by the social networks that parents have, which in turn has implications on the child’s identity.
be with the child. This role is rooted in 5 structural dimensions that came to light in the course of the qualitative analysis: selectiveness of link choices versus their contingency; balanced mobilisation of the parental networks versus skewed emphasis on one or two SPs or NSPs network; presence of facilitating figures within the broader family circle; presence of individual networks within the network of friends of the child; and degree of embeddedness of close personal relationships within organised collective practices. The study present an analysis of the social capital of the family environment and its role in shaping, defining and fixing the obligations of the non-statutory parent, stemming from a will to consolidate and increase the parental role despite an unfavourable legal context. The study is based on a sample of twenty couples living in various family configurations, i.e. hetero and homosexual step-families with whom we carried out three successive rounds of in-depth interviews; first with both members of the couple in order to reconstitute their conjugal and parental history; then with the non-statutory parent, to collect information about his or her experience and strategies deployed to consolidate his or her status within the family and in relation with society in general; finally with the couple once again, with the goal of analysing the conjugal and family dynamics.

MODAK, MARIANNE* (Haute école travail social & la santé, marianne.modak@eesp.ch)

Inequalities Between Man and Women in Social Work

Inequalities between women and men stem from the assignment of the “care” work to women in Switzerland, in certain fields of social work male professionals are quite numerous, but these disparities are not reduced. They take a different form. My demonstration is based on a study by semi-structured interviews as well as direct observation carried out in various public social work services. The type and intensity with which social workers mobilize their emotional and relational skills within the framework of their professional practices denote two different ways of conceiving the place of “care”. “Care” is a stake in the context of the “active social state”, because social work is now evaluated in terms of its efficiency and productivity. Whilst this management orientation may be viewed positively as a way of heightening the visibility and value afforded to the profession, it may also place an undue emphasis on measurable professional acts versus professional attitudes and relational work– the latter being seen as non-measurable. Professionals are thus faced with the impossible challenge of balancing two alternatives, one being characterized by measurement and focused on efficiency, the other typified by unpredictability and immoderation constitutive of the nature of relational work. Our study shows that when confronted with this dilemma professionals who display typical feminine career patterns take it upon themselves to carry out “bad” care work that takes time and is largely invisible while professionals who exhibit typically male career patterns dispense the “good” care, which can be organized rationally, is measurable, and is thus considered more productive.

Emerging Society and Sociological Discourse in India

The sleepy, slow moving and traditional Indian society which has a historical past of several thousand years is undergoing through a process of rapid social change and unprecedented social transformations. The biggest change has been the emergence and strengthening of democracy. While people in several countries all over world are still struggling and clamouring for a democratic state and institutions, the Indian citizens are exercising their democratic rights strongly whenever occasion arises. The civil society in turn is also becoming stronger and empowerment of the marginalized sections of society such as women, tribals, dalits and the so called backward classes and communities is also taking place. Indian society moved from three percent “Hindu rate of growth” to eight percent in recent years, which was one of the highest in the world. This unprecedented economic growth not only led to the emergence of a massive middle class but also created lot of confidence in the masses about the capability and the strength of the Indian State as well as their own. However, this sudden economic growth and the consequent all round development while on the one hand raised all round prosperity and riches, it also led to the growth of inequality in society and to the marginalization of certain other groups which until recently did not felt marginalized. It is commonly said that while the rich are becoming richer, the poor are becoming poorer. Such a situation has also led to the increase of corruption in all walks of life. As such the Indian sociologists are facing several contradictory situations and are becoming conscious to focus their attention and to study the emerging phenomena and are trying to go beyond to what they have been studying for long and as such moving towards a new sociological discourse.

The Work – Family Interface Among Dutch Navy Personnel and Their Spouses

The Work – Family Interface Among Dutch Navy Personnel and Their Spouses. Perhaps even more than other military personnel, Navy personnel and their families face the challenges of managing frequent and often prolonged family separation. The increased tempo of operational tempo over the past several decades in combination with trends of downsizing and reconstructing (i.e., fewer human resources performing an increased number of tours) imply even more frequent separations, sometimes with little time in between. During sailing tours, communication with the home front is difficult and sometimes even impossible. The impact of these military demands on the family and of family factors on the readiness and retention of Navy personnel is scarce and nonexistent among Netherlands military personnel. We collected data among sailing Navy personnel and their spouses at home regarding various work and family experiences. This paper presentation presents the first results of this study.

The Middle Eastern Origins of Dictatorship and Democracy

How do we assess Arab Spring/Occupy almost 3 year later- the hopes for the emergence of popular democracy have now faded or have they? We might note that the traditional dynamics of the rise of democracy or dictatorship in West, contestations/alliances of various groups, esp landlords/peasants did/not really apply today. Most of the MENA countries were the legacies of anti-colonial struggles and struggles for independence and democratic self-government, but Enlightement ideals did not emerge. Contemporary conditions differ, 1) neoliberlal globalization has enabled the rise of a transnational capitalist class leading to economic growth-concentrated at the top, 2) there are growing classes and cadres of the discontented, educated precariat youth, (today’s lumpenproletariat and the disenfranchised peasants, wretched of the Earth), but 3) Today most people, even in developed countries have access to ICT/social media. To understand the “waves of democracy” and their receding tides, we need note, the movements took place quite rapidly and following the abdications or implosions of dictatorships, the only groups that were well organized were the various fundamentalists from Moslem Brotherhood to Enhada-which were ill equipped to shepherd a modern economy. But without having experience in actual gov- ernance as opposed to critics w/o power they did quite poorly. However dismiss the short term, and it may get worse, structural factors intersect, with changing subjectivities, embracing openness, equality, empathy and care, portend an optimistic forecast. However undemocratic the post Arab Spring governments may have been/are in practice, they were democratic in form and now there can be no going back to unellected “presidents for life”. Dictatorships now face growing the popular power of numbers of youth that challenge inequality, authoritarianism, corruption and corruption, and that promise a new post-constitution for individual characteristics (age, gender, level of education, type of employment).

The aim of this paper is therefore to go one step further by focusing on the differences which exist within the immigrant population, particularly in matters of education or who never attended school. Data from the ELIPA survey (Longitudinal education or who never attended school. Data from the ELIPA survey (Longitudinal survey on the integration of first-time immigrants) conducted on the 14,000 of 5,000 immigrants who arrived in France as adults, after completing their initial education or who never attended school. Data from the ELIPA survey (Longitudinal survey on the integration of first-time immigrants) conducted on the 14,000 signatories of the 2009 Reception and Integration Contract (CAI) undertaken in 2010, 2011 and 2013 will also be used.

Living Parental Home: Hopes and Constraints of Young People of Immigrant Background in France

Young adults of immigrant background live with their parents longer than those in the mainstream population (Moguéro, Santelli, 2010). The major- 
ty of young people from non-European immigrant backgrounds are from working 
class homes and often the poorest and most economically insecure segments of the 
working class (Frickey & Primon, 2002). Research in recent years has shown that 
unemployment rates are very high among young people from immigrant 
backgrounds. Preliminary research on South African backgrounds. Their disadvantage 
at the start of their adult lives partly explains why they defer moving out to live inde- 
pendently. Another factor is the cultural and subjective attitudes towards inde- 
pendent living that the young people share with their parents (Hamel et al., 2011). 

This paper examines the impact of social and family constraints on whether and 
when young people of immigrant background leave home. It first reviews the 
factors that encourage young people to defer their departure. It then looks at 
their projects for leaving home. While it is recognised that more flexible relations 
between parents and children make it easier to continue living together, the diffi- 
culty of finding a place to live is a major obstacle to several young people's entry into 
adult life. How do those most centrally concerned experience this prolonged family life? 
Do they want to leave and what prevents them from doing so?

Dysfunctional Schools: A Mentoring Framework

During transformation (1994 onwards), the South African government insti- 
tuted different interventions within Education as an attempt to redress learner 
achievement and throughput. However, various researchers and opinion lead- 
ers still view Education in South Africa as deficient as well as characterised by an increasing prevalence of dysfunctional schooling systems. Therefore, this research aimed to design a generic mentoring frame- 
work through which transformation within dysfunctional schooling systems can be facilitated. In order to achieve this, a micro-level analysis of schooling systems, 
using the functionalist perspective, specifically enabled through the contributions 
of Parsons and Merton was undertaken. In addition, insight gained from a broad 
range of literature and other secondary resources on mentoring, best practice 
and quality education was used to develop a number of premises. Based on these 
premises the generic mentoring framework can be adapted to enable a fit-for-

need towards the eco-tourism in the state so that the tourist potential can be optimally 
realised that too, on the sustainable basis.

Cultural Capital and Educational Inequality: a lesson from India

Cultural Capital and educational inequality: a lesson from India

Byasa Moharana, SAI Thakur and Shweta Choubey

Education is supposed to play a major role in bridging the gap between the 
and the have-nots through generating cultural capital. In case of third- 
world countries such as India, the quality of education that is provided to the poor has been grossly inadequate for the purpose. As a result the gap between the elite and the masses is increasing every passing decade. With liberalization of economy in India since 1990s, the new middle classes have emerged demanding better social welfare and education. In fact, the quality of education has suffered. 

While the elite depend on the private schools, the rural and the urban poor depend on the poor quality of education in government schools. In terms of content of the syllabus and the pedagogical methods adopted to teach them, schooling is not a pleasur- 
able experience for the children coming from disadvantaged backgrounds. Thus they drop out from the school or are poorly qualified to receive higher education.

While this is the dark reality, there is a ray of hope as some of the organiza- 
tions have stepped in to help tackle the situation primarily through alternative means of education. The new methods of teaching science and mathe- 
matics etc have helped the poor students to perform better in schools and get 
motivated for higher education. In fact, the program was adopted by one of the provincial governments in all schools, but later discontinued due to pressure from World Bank.

Analyzing field-based data, the authors argue that these methods, though not 
the only solution, are one potent way of providing an enabling platform for gen- 
eration of cultural capital for the rural and urban poor to compete with the elite 
students.

Key-words: Education and inequality, Cultural capital, alternative pedagogies, Education in India

Exploring the Socio-Economic Coordinates of Tourism: A Case of Kashmir

The state of Jammu & Kashmir being the abode of Himalayas represents an epitome of natural beauty and, hence, has emerged as one of the top most tourist resorts of the world. The tourism in states tourism sector in the form of nature, cultural , adventure , pilgrimage, leisure tourism etc. has attracted tourist of every nature irrespective of space as a result of which, this sector has been the mainstay of state's economy. Pertinently, all throughout the turbulence when the valley was reeling under the cycle of violence and when life virtually went into sabbatical, this sector especially through the pilgrimage tourism remained the only viable option with the people to relieve themselves from the imposed agonies. Further, in the absence of a well established private sector and given the fact that this sector has been the main agency of employ- 
gement generation, a complex sociology of tourism has shaped up in the state involv- ing administration, hoteliers, houseboat owners, etc. and the tourist. Unfortunately, the unscientific management and irrational interaction of the public with such tourist places has jeopardized their very delicacy which, in turn, immensely harmed the states otherwise rich diversity of flora and fauna. This has generated a need towards a proper organizational structure in order to sustainably harness the tourist potential in the state. In the absence of adequate infrastructure and specific and sound in- 
terventional measures at place, the state couldn't secure properly at many counts be 
that guest-host relationship, conforming to the environmental norms or drawing the 
expected dividend. This paper endeavors to explore the sociology of tourism in Kash- 
mir with a due focus on socio-economic dimensions of tourism besides highlighting the
MICRO Sociological Analysis Of Nationalism: The Fluidity Of Ethnic and Civic Identity In The Workplace, Malaysia

Ethno and civic nationalism are seen as dichotomous and a single track evolution. Studying the essence of nationalism in post colonial society may often show the dichotomous nature of nationalism. However the forces of development, modernisation and globalisation show that ethno nationalism might prevail but embracing civic behaviour might be the emerging nationalism. In global organizations, ethnicity is often regarded as static cultural container, and ethnic conflict as traditional but unusually stubborn impediment to modernization. Our main initial assumption in this research states that experienced acculturation is one of the main forces to shape identity formation at workplace. Being concurrently a cultural marker and an identity catalyst, taste is powerful vessel for identity shaping in our studied workplace. The findings of this study were based on empirical data collected between 2008 and 2010, via qualitative methods, from a specific empirical field: 5 star international-brand hotels in Kuala Lumpur, Malaysia. The data obtained within these luxury international hotels where transfer of knowledge and skills take a particularly direct and tangible form: food and beverage and kitchen. Empirical evidence presented here may qualify “the Hotel” as an “advanced social laboratory” for the study of ethnic relations. Focussing on social actors, this micro-sociological study shows that ethnic identity, belief and behaviour are not static but fluid. A specific organisational model such as “the Hotel” can help us redefine how we see ethnic differences, not as divisive, but as inclusive, when contingent forces at work trigger “cross-cutting ties” along group boundaries. Transforming these inter-ethnic differences in “the Hotel” may lead to the discovery of ethno nationalism embracing civic behaviour in the service industry.

Refugee Fathers: Negotiating Fatherhood during Resettlement

The rise of globalization, visible through the increase of international mobility and advances in communication and information technology, has had a significant impact on families. Currently, the analysis of globalisation has focused almost exclusively on the macro level impacts, especially on politics and economics. There has been a dearth of research focused on the micro level impacts on globalisation via refugees and forcibly-displaced families. However, much of the research examining refugee and forcibly displaced families has been predominantly focused on mothers and children, failing to incorporate fathers as important within the family system. This gap within the research is concerning due to the changing trends of family structure around the world. Across the globe, traditional gender roles are being challenged as fathers take a more active role within the family and mothers are working more outside of the household. The scant research that does examine fathers within the context of forced migration has found that fathers hold unique values and beliefs about fatherhood in relation to distinct aspirations they hold for their children, their interactions with their children, as well as how they negotiate their roles within the family in relation to their partner. Furthermore, many of these values and beliefs are put in flux due to post migration challenges, such as unemployment, lack of social supports, racism, social isolation, and role changes. The purpose of this paper is to critically review the existing literature on fatherhood within the context of forced migration and refugee resettlement, to discuss its limitations, and to bring forth the implications for future research and policy development.

Poverty Reduction Effect of the Taxation and Benefit Systems in Finland 1993-2013: Comparing the 1990s Depression and Post 2008 Recession

The poverty risk rate, measured as 60% of the median income, increased in Finland from 7 to 14 per cent between 1993 and 2008. The poverty risk rate increased even more in the late 1990s, when both benefits and income taxes were cut after the severe depression in early 1990s. The current (post 2008) recession has evoked very different social and fiscal policies compared to the 1990s and the recession has had a little impact on poverty risk rate so far.

We use microsimulation models for evaluating the impact of reforms on the poverty risk rate. Reforms in the late 1990s in the tax-benefit system are examined in comparing policies chosen in the 1990s depression and post 2008 recession. We have estimated the counterfactual poverty rates during 1993-2013 by using the SISU microsimulation model of Statistics Finland. Household disposable incomes are simulated for each year by using the same households but varying the taxation and benefit legislation according to the existing enactment.

The benefit cuts during the 1990s depression had a rather modest impact on poverty risk rates and the impact was nullified during 2000s by series of benefit raises. Even after 2008 there has been several increases in the basic benefits that have reduced the poverty risk rate. Changes in taxation had a considerably larger impact on the poverty reduction effect than changes in benefits. The poverty risk rate would be 2.5 percentage points lower if the tax legislation were the same in 2010 as it was in 1993. However, the level of benefits has decreased compared to the average income level. If the level of benefits would have remained at the same level compared to the average earnings in 2010 as in 1993, the poverty risk rate would be four percentage points lower in 2010.

The Evolution of Language-in-Education Policy in South Africa

During the apartheid era, South Africa’s language in education policy was ideologically driven by racism and the desire to suppress the indigenous languages of the majority of South Africans. The policy was fiercely resisted and led to unprecedented episodes of collective violence.

In post-apartheid South Africa, the language-in-education policy takes into account the socio-linguistic reality of South Africa’s multilingualism and bestows upon the individual the right to choose his or her own language of learning and teaching.

The political climate in South Africa underwent dramatic changes with the unbanning of political organizations in 1990. A new policy, emphasizing multi-lingualism, evolved. The sociolinguistic reality of multilingualism in South Africa was eventually recognised. The new Constitution of the Republic of South Africa (Act 108 of 1993), which was hammered out and forged by South Africans of all political persuasions, reflects the linguistic diversity of South Africans and recognises their right to exercise their freedom in choosing their own languages. Constitutional Principle XI provides that “The diversity of language and culture shall be acknowledged and protected, and conditions for their promotion shall be encouraged.”

In the presentation, I intend focusing attention on the apartheid language policy in schools in South Africa. The major thrust of the paper will be devoted to sketching the genesis and evolution of a new language policy for schools in post apartheid South Africa.

MOL, ARTHUR* (Wageningen University, arthur.mol@wur.nl)

The Declining Relevance of the Environmental Nation-State

The Environmental state is not a formal category, but a substantive one. It came up in the late 1960s/1970s, changed in character since then and we will have to see how long it will last and in what outlook. A historical analysis of the environmental state in the OECD region should distinguish at least five periods: until 1960 (near absence), 1960-1980 (establishment and institutionalization of the environmental state), 1980-1990 (state failure and neoliberalization debates; pressure), 1990s (redefinition and legitimation of environmental states internationally). Many scholars note that since the new Millennium a new period has emerged: the environmental state shows a growing irrelevance.

The claim of weakening environmental state institutions seems to be part of wider concerns of the positions of states versus markets under conditions of globalization. Quite some scholars claim that under neoliberal globalisation the strengthening of the power and influence of (global) market institutions came together with declining roles of political state institutions. But that is not clearly evident regarding all agendas, as the recent regaining influence of political institutions on global financial institutions. So, is there something special at stake with respect to environmental state institutions? Is the interpretation of the current waning role and position of environmental state authorities correct? If so, how can we explain this decreasing power and position of environmental state authorities and how is it related with our capacities to cope with environmental problems? And how do we normatively assess this decreasing impact of state authorities in mitigating environmental problems? These questions are central in this paper.

Assessing the Measurement of Science Knowledge in the Wellcome Monitor Surveys: An Item Factor Analysis

The Wellcome Trust Monitor Surveys (2009 and 2012) are fielded to two samples: adults (aged 16+), and young people (aged 14-18). The survey contains multiple items designed to assess science knowledge and engagement with bio-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
medicine. Analysis of the first Monitor Survey yielded a curvilinear relationship between age and high and low levels of scientific knowledge. High scorers were lowest among those aged 65 years and over. The proportion of high scorers for the middle age groups was around three in ten (of those aged 35-49 and 50-64). For low scorers, the reverse pattern holds true, and for young people, 14-16 year olds they were fewer than in 17-18 year olds. A possibility is that a given knowledge item has a different probability of generating a correct response from different age groups even if each age group has the same underlying level of knowledge. This study will evaluate the performance of the literacy items and the extent of any age-related bias. The results will feed into the design of the next wave of the survey but also speak more generally to the question of how to evaluate science knowledge in heterogeneous populations. I propose a single group IFA-IRT model to evaluate the performance of the items for a pooled sample of respondents, and a multigroup IFA-IRT model to identify the presence of differential item functioning (DIF) by age group. Briefly, the procedure is to fit a series of IFA models to the data, assessing the adequacy of fit for the scales within each subgroup. The second stage is to look at evidence for DIF/measurement non-invariance on any of the test items with a series of increasingly restrictive nested models. Finally, results from the multigroup analysis suggest that partial measurement invariance across age groups holds.

**Examing the “New Normal” and Inequality in the Housing Transitions of Young People in Canada**

In Canada, young people’s housing transitions have become increasingly protracted and are marked by lengthier periods of cohabitation with parents and returns to the family home. This has been occurring in a context where access to postsecondary education has widened but at the same been subjected to increasing tuition and housing costs in most large urban centres, and especially in some provinces. Most young adults in Canada today are therefore receiving considerable support from their families over the course of their housing trajectories and, arguably, this trend now constitutes the “new normal” in the transition to adulthood. However, young people from lower class backgrounds, those who leave home after high school, or who exit childhood welfare systems at the end of a period of care, often cannot count on parental support for housing, and experience much more problematic housing transitions. Our paper will first provide the context in which these housing transitions are occurring, by focusing on available statistical and quantitative data on youth housing transitions and the housing policy environment. The second part of the part of the paper will present qualitative data based on retrospective interviews with two sets of young people: street-involved youth and young adults enrolled in high school vocational training programs. Using a life-course approach, the paper will examine how these young people depend upon and interact with family, friends, communities, and other forms of support, and discuss how these types of housing trajectories contribute to the structuring of inequality over the course of the transition to adulthood.

**MOLITOR, VERENA** (University of Bielefeld, verena.molitor@uni-bielefeld.de)

**Included By Means of a Broadcasting Language? the Case of Language-Based Minority Construction through the German-Speaking Radio Shows in Poland**

The language of diaspora communities and minorities can be considered as a border-making instrument, as a mechanism of exclusion and inclusion (or rather of both simultaneously). The minority- or diaspora language media can as well function as means, instruments or mechanisms of border creation, border maintenance or inclusions. The paper deals with media offers for language minorities and especially the German-speaking minority in Poland, focusing on the German-Speaking radio shows in the Voivodships Silesia and Opole. In these regions two stations produce radio shows in German; the very availability of non-polish-speaking media is a transformation phenomenon. Due to the novelty of media offers in German language as well as to the fact, that those, who define themselves as "German minority" partly do not speak German because of the minority languages ban during the socialist period in Poland, the central question to be posed in this presentation arises: Which function does the German speaking radio have in the creation of borders, inclusions, exclusions, interties and belongings? My research concentrates not on the radio listeners but on how the radio stations by means of programme planning foster a regional identity, create a picture of the self and which role German as broadcasting language plays in these processes. I will demonstrate the integration function of the media and simultaneously its function within a diasporic consolidation, focusing on how the radio stations strive to create a collective identity among the German minority. I will demonstrate, how a strong belonging to the minority and tradition of the group is produced by these radios, while asking, how is it possible, if German is positioned as “mother tongue” which is “to be learned first”.

**MOLITOR, VERENA** (University of Bielefeld, verena.molitor@uni-bielefeld.de)

“Media Diasporas - Diasporic Media” - the Construction of Regional Identities through Radio Programmes

In this paper I will focus on minorities, not often described in the context of media research, namely minorities which result not from movement of people, but from shift of borders, here especially of the German speaking minority in Poland. The main focus in my research lies on the German-Speaking radio shows which are broadcasted in a border region in Poland, near the German and Czech border. The situation of the German media there is very interesting because it is a relatively new phenomenon that there are Radio and TV shows available in German. The minority language media were prohibited in Poland during the socialism period, and could be introduced during the transformation period first. Not being based on a continuous minority media traditions, these radios are free in creating the understanding of their mission and their belonging to a community of listeners or to construct their listeners. My research demonstrates how radio programmes represent a region in order to foster a regional or local identity and how they create a picture of the self and the others. The presentation demonstrates, how the contents and composition of the programmes describe boarders and a strong belonging to the own local group as well as to the traditions of the minority. The presentation demonstrates the integrational function of the radio and simultaneously its function within a diasporic consolidation, and hence focuses on challenges of minority radio stations with regard on both creating minority identities and belongings and representing a region or a local community.

**Cross-National Policies and Relative Household Income of Families with Children By Family Structure and Parental Education**

Focusing on an array of European and North American welfare states between 1985 and 2005, we consider how welfare state policies are related to households’ relative incomes, taking into account cross-national and temporal differences in income distributions. We consider work-family policies including public childcare and family leave generosity, tax progressivity, family allowance generosity, and levels of wage coordination. We also consider how two of the central factors that may be driving income inequality at the individual or household level – parental educational level and family structure – may be related to a household’s relative income. This research fills a gap in the literature because there are surprisingly few studies that examine inequality by both family structure and education, and even fewer that examine relative income cross-nationally and longitudinally. Our results suggest that structural vulnerability theory may provide a better test of structural vulnerability theory than previous studies because structural vulnerability is operationalized in both the independent (through cross-level interactions) and dependent variables. By creating a dependent variable that standardizes household income relative to societal-level income inequality, we are able to get at the very center of structural vulnerability.

**Rethinking the “Exploitation of Self-Realization” Model in Japan**

The purpose of this report is to examine the problem of the “exploitation of self-realization.” In recent years, it is said that young people increasingly seek self-realization in their work. Masahiro Abe has analyzed the problem based on his own experience as a provider of motorcycle delivery service, and Yuki Honda has called the same problem the “exploitation of ‘Yarigai’” (the word “Yarigai” refers to the pleasure derived from doing decent work). They point out that certain companies exploit young people who seek self-realization out of work. These days, such companies are called “black companies” and have become a serious social problem in Japan. However, when we examine national statistics and opinion research about work and employment, we find no evidence that the number of young people who seek self-realization in work has increased in the past ten years. Rather, ac-
cording to surveys by Japan Productivity Center, more and more company recruits claim that they want to work for a single company and do not want to change jobs. It is thus not accurate to say that young people today seek self-realization above all. This leads to the question of why the discourse of the “exploitation of self-realization” has become so popular in Japan even though the number of young people who seek self-realization in their work has not actually increased.

In conclusion, this report will bring to light how excessive globalization and the fluidization of employment have made many people feel unstable and unsure about the future. As a result, many people set a high value on stability and relief, rather than self-realization in work. Instead, national opinion surveys tell us that an increasing number of people seek work that allows them to make a "contribution to society." This viewpoint compels us to rethink the "exploitation of self-realization" model.

MONFORTE, PIERRÉ* (University of Leicester, pm260@le.ac.uk) Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany

Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany.

Since the 1980s, social movements' scholars recognize that emotions and collective identities are crucial for the construction of collective actions (Polletta and Jasper, 2001). The extensive literature on emotions and identities shows how these two dimensions interrelate and influence social movements' strategies, grievances, emergence, evolution, and impact.

Few authors have analysed these dimensions in contexts in which activists face processes of exclusion. This focus raises however important perspectives (Einwohner, 2006). In particular, it leads us to discuss the strategic dimension of the emotional and identity work done by activists. Moreover, it permits us to relate the analysis of emotions and collective identities with more general contextual dimensions.

In this paper, I propose to follow this perspective through the focus on a network active for the defence of asylum right in Germany: 'Caravan for the rights of refugees and migrants’. This network mobilizes against what is defined as a context of exclusion: the ‘residence obligation’ law, which strongly restricts the mobility and social inclusion of asylum-seekers and refugees living in Germany. Through the concept of ‘identity construction for emotional benefits’, I will show how activists strategically shape collective identities in order to trigger feelings of emancipation among asylum-seekers and refugees in the course of protest.

Two methods have been used in order to explore the construction and interrelation of emotions and collective identities in this network: an analysis of the documents that it published between 2000 and 2010, and a series of in-depth interviews undertaken in the German pro-asylum movement.

MONFORTE, PIERRÉ* (University of Leicester, pm260@le.ac.uk) The Symbolic Representation of Borders in the Protest Against 'Fortress Europe': The New Geographies and Strategies of the Movements for the Rights of Migrants

In the last two decades, the integration of member-states’ immigration and asylum policies at the European Union level has led to a process of transformation and delocalization of borders. In particular, the external dimension of these policies is related with the diffusion of borders across member-states and third countries territories. Consequently, the binary demarcation between the inside and outside of states’ territories is increasingly blurred, and the specific governmental practices and technologies that were once situated at the edges of territories can now be among asylum-seekers and refugees in the course of protest.

In this paper, I propose to explore the consequences of these evolutions on the social movements for the rights of migrants in Europe. Focusing on the symbolic dimension of protest events, I argue that the changing nature of European borders has influenced their organization and strategies. In particular, I show that, since the end of the 1990s, these movements have represented and used the border as a symbolic space in which new forms of protest are constructed. This analysis is based on the observation of a selection of European networks mobilizing for the rights of migrants. The evolution of the symbolic dimension of their protest since the end of the 1990s has been investigated through three complementary methods: protest-event analysis, frame analysis, and visual analysis.
moderate work (less than 20 hours a week) can actually help the student to acquire professional and soft (sense of responsibility, independence and self-improvement) skills; 2) is the result of spurious relations the negative effect of work on school success is actually result of differences in preexisting individual orientations and aspirations that make some students more inclined to pursue experience in the labor market than invest in school. This paper aims to analyze, first, the extent to which preexisting aspirations and orientations toward school and work can account for the observed negative effect of work on school performance in Brazil. Second, it examines, among workers, how work intensity is related to these outcomes. In order to achieve these goals, we draw upon data from the National High School Exit Exam (ENEM) and from the Minas Gerais State Household Sample Survey (P-AD-MG). These data sets combine information on school outcomes, family background, demographics, labor market situation, and orientations toward school and work. Results show that prior orientations and aspirations can predict actual labor market behavior and school outcomes, and account for part of the effect usually credited to work itself. Research on this issue in developing countries would benefit from incorporating fundamentals from social psychology to understand how inequalities are reproduced through orientations and aspirations.

MONTANARI, ARIANNA* (University of Rome, arianna.montanari@uniroma1.it)

Old and New Models of Federalism in Europe

The contradictory and complex unifying process of European Union does not seem to resemble the classic federal model, such as the United States, but rather refers to the historical legacy from the Holy Roman Empire as argued by Le Rider. The Holy Roman Empire, as it was defined by the Treaty of Peace of Westphalia, was a factor of stability, that while preventing to fall back into bloody wars, created a limited set of institutions allowed to control the imperial power.

In the same way the tragic experience of the II° World War was at the basis of the European Union as an antidote to possible future nationalists conflicts. The European unification process has been an element of law and peace, representing at the same time an old and new imperial model. According to Khanna European Union is one of three great empires, together with the United States of America and China, that are distributing among themselves the global resources and influence on the world. In his view the EU is by far the most popular and most successful empire in history because, instead of dominating, educates. Incentives for the Europeanisation - subsidies from Brussels, the workers mobility, the adoption of the euro - are too profitable to not be welcome. In this way the EU is expanding not by force, but thanks to the attractiveness it exerts on its neighbors.

The idea of Europe has led not only national level but also the local and regional authorities to research a direct relationship with the European Union institutions. In this way, the nation states have lost a significant portion of their power. At the moment in Europe there are states with limited sovereignty and increasing power and autonomy to regional and local administrations.

Post-Repatrion Careers of Japanese Knowledge Workers

A key element of the globalization of knowledge work involves the international transfer of executives. Yet despite the importance of this process, the repatriation of business people is still an under-researched area. The majority of existing research into the phenomenon is based on cross-sectional surveys and interviews of North American and European business people. The emphasis is typically on how to make the process more effective for companies, for instance, by improving failure rates, and largely assumes the existence of Anglo-Saxon style labour markets for the management of ‘talent’. Consequently, certain empirical and methodological issues remain unexplored. We don’t know what the repatriation experience in other nations, and more specifically, about their career perceptions post repatriation. This paper addresses this gap by looking two Japanese business people and asking how they make sense of their unfolding careers. To do this, this paper followed their unfolding careers and career perceptions after their return from assignments in North America, interviewing them over an extended time period (seventeen months and twenty four months respectively). The main finding of the research is that (these) Japanese repatriates do not have explicit and pre-planned career paths. Furthermore, this lack of a career path does not concern them. Instead, their careers are subject to a fuzzy career logic that depends on circumstances. Given the extensive literature on protean and boundaryless careers, as well as the ‘need’ for individuals to take charge of their own careers, this is a significant finding. The theoretical contribution of this research is the idea of fuzzy career logic, and the paper will show how it not only provides a current framework for understanding how Japanese repatriates navigate their careers, but also how it gives an important alternative to, and critique of, the view that careers should be planned in a strategic manner.

Active Ageing Research Trends and Population Policy in Iberoamerica: A Critical Review

The concept of active ageing is being used in recent decades as a line of research in ageing of population studies and as an instrument of public policy, especially since its adoption by the WHO to strengthen health, social participation and security for older people and the quality of their life. Despite the increasing use, defining active ageing is a complex task as it is related to various theories, constructed from multiple contents and their interactions, linked to other concepts used synonymously and sometimes interoperable (healthy, productive, successful ageing...) and operated following various strategies in both the scientific and public policy design.

The aim of this proposal is to conduct a critical review of the scientific literature on active ageing in relation to other forms of ageing (healthy, productive, successful) in the Iberoamerican settings and in the field of Social Sciences research, to delimit its use, contents, indicators and measurement instruments and the usefulness of its application in order to clarify the confusion to which it is subjected.

Policy Advisors and Scientists’ Mental Models Of Policy-Making: Validating An Elaboration Method

Policy development is characterized by connecting problems with viable and equitable solutions. Individuals’ mental models (cognitive structures that define reasoning, decision-making and behavior) influence how problems are defined and alternative solutions prioritized. We used qualitative (interviews and influence diagrams) and quantitative methods (self-report and repertory grids) to elicit senior policy advisors and scientists’ mental models of the role of scientific evidence in invasive species policy-making. Thematic analysis of the interviews revealed four mental model types which suggested that the majority of scientists supported evidence-based policy (risk management and scientific authority mental models), while policy advisors supported more community-oriented approaches to policy-making (political and community accessibility mental models). Network analysis of the influence diagrams supported these results: the majority of policy advisors believed the community was more influential and connected in the policy-making process than evidence; scientists believed evidence was more influential and connected. We triangulated these results with the qualitative data, which showed that the vast majority of policy advisors and scientists believed that policies should be at least 70% evidence-based, and all participants considered evidence to be more credible, and most considered it to be more effective, than input from the general community. For the policy advisors, these results contrasted with the qualitative results. One possible reason is that policy advisors’ mental models of the policy-making process were influenced by context, social norms and responsibility, revealing a difference between what they say (espoused mental model expressed through qualitative methods) and how they act (in-use mental model expressed through quantitative methods). Using appropriate methods to elicit and share mental models is critical in redressing complex environmental problems.

Framing Matters: Effective Framing and Movement Success

This article examines variations in framing among four different Korean women’s movement campaigns, only two of which succeeded. This study contributes to a more systematic understanding of the impact of framing on legislative outcomes by comparing successful and failed campaigns paired by the same issue area, as well as by overcoming methodological limitations of previous research built on single-case studies. Two cases deal with a family issue: The Abolition Campaign of the Family Headship System (succeeded) and the Revision Campaign of the Health Family Act (failed). The other two cases, the Legislative Campaign of the Anti-Sex Trafficking Act (succeeded) and the Revision Campaign for the Special Act on Sexual Violence (failed), are centered on the feminist idea of women’s rights to sexual autonomy. I analyze organizational documents of the Korean Women’s Association United, who led all of these four campaigns, in order to compare the effectiveness of framing in each campaign. My findings suggest that three qualities of frames were common in the successful campaigns. They are articulate frames, empirically credible frames, and de-radicalized frames. The two campaigns with desired outcomes included all three conditions for effective framing while the other two did not. Since these campaigns took place under the same contexts of political opportunity structure and resource mobilization capacity, I argue that my findings highlight the relative significance of framing in movement outcomes.

Position of Labor in US and Japanese Agrifood Cooperatives: A Class Analytic Perspective

Producer cooperatives emerged, in part, as a means of protecting the appropriation of surplus value from labor and often involved long struggles to institutionalize this economic form. Today, producer cooperatives constitute a significant component of the agricultural economies of most developed capitalist economies. Much work on cooperatives focuses on agent/principal problems or the tensions between producers and management in directing/controlling the cooperative. Given the historical origins of producer cooperatives in the concerns of labor, surprisingly less attention has been paid to the role of labor that ‘adds value’ to agricultural production in cooperative organizations. This paper raises theoretical questions concerning the class position of various actors in cooperative enterprises. We consider this issue in terms of farmer (production and marketing) cooperatives as well as (food) consumer cooperatives. We ask what possible forms of organization might be introduced to cooperatives to make cooperative labor more equal members of cooperative enterprises? We briefly examine these questions with respect to the historical development and current condition of cooperatives in the U.S. and Japan and call for a need to examine this question more systematically and comparatively from a larger international sample.

Agricultural Mindsets Across Social Networks in Four African Countries

Smallholder agriculture is coming under increasing pressure to intensify production practices for food security. Conservation agriculture (CA), involving the three principles of (1) minimum soil disturbance, (2) permanent vegetative cover, and (3) rotations or intercropping, has been identified as a sustainable way to do so. However, indigenous knowledge is not sufficient to support a transition...
to this new production system; nor is simply the introduction of new agricultural production norms and practices by a transforming agent (extension or NGO). Many observers note that conservation agriculture requires a change of mind-set for smallholder innovation to occur (Hobbs, 2007; Wall, 2007). Successful cases of CA development have also demonstrated the active engagement of a network of producers and their partners throughout the agricultural sector (Cougnonhour, 2003; Swenson and Moore, 2009). The fundamental agricultural development question is how to bridge the gap between these new mindsets and those of the ‘risk averse’ small farmer that has informed indigenous knowledge for generation. This has resulted in identity quandaries for many community that is flourishing under pressure. This research is based on ethnographic various groups, campaigns and coalitions which I will argue is proving effective in showing much resilience towards Islamophobia in the last decade, establishing able reconciling their Muslim identity with life in Britain. Muslims in Britain have say exists because Muslims refuse to ‘integrate’ is actually a factor in discouraging but, perhaps more crucially, from participating in institutions, out of fear of being outsider the effect that the pervasiveness of Islamophobia has on Muslims in Britain. I will also argue in this paper that despite Islamophobia, Muslims in Britain are by region (2) how do network relationships affect shared mindsets and (3) how does an actor's position and power within a network promote conservation agriculture perspectives?

**MOOREHEAD, ROBERT** (Ritsumeikan University, robertsm@fc.ritsumei.ac.jp)

*Am I Japanese, Peruvian, or Both? the Ethnic Identity Formation of Second-Generation Peruvian Youth in Japan*

Based on ongoing research, this presentation explores the ethnic identity formation of second-generation Peruvian high-school and college-age youth in Japan. It asks what ties, if any, does the second generation have with the two countries, and what is the nature of those ties? How do the youth interpret what it means to be Japanese and/or Peruvian in Japanese society? What role, if any, do the youth's parents' experiences in Japan play in shaping the youth's ethnic identity? The youth are completing in-depth interviews and taking photographs of elements of their everyday life that they define as particularly "Peruvian" or "Japanese." Preliminary findings indicate that the youth report a range of identities (Japanese, Peruvian, Japanese + Peruvian), but they struggle to articulate how being Peruvian is a part of their daily lives. Instead, a Peruvian identity is tied to expression in birthday cakes, Christmas dinners, and occasionally speaking Spanish. The youth plan to remain in Japan, including obtaining Japanese citizenship, with few diasporic ties to Peru. Several factors are encouraging their assimilation, including the declining presence of co-ethnic migrants, the lack of ethnic institutions in the community, the pressure to assimilate in Japanese schools, and the transition to high school and tertiary education, where immigrant youth attend school with few co-ethnics. Nevertheless, this weakening of a diasporic Peruvian identity to symbolic status is surprising, given that Japanese identity is popularly defined as homogeneous and monoethnic. Immigrant and mixed-race people in Japan are also racialized as gaigin (foreigners, outsiders). This has resulted in identity quandaries for many Nikkeijin migrants, including the immigrant parents of the second generation, weakening their sense of belonging in Japan and strengthen their national (Brazilian, Peruvian) or alternate ethnic identities (Nikkei, Okinawans).

**MOOSAVI, LEON** (UNIVERSITY OF LIVERPOOL, LEON.MOOSAVI@LIVERPOOL.AC.UK)

*Flourishing Under Pressure: Islamophobia, Resilience and Muslims In Britain*

Muslims in Britain encounter Islamophobia in politics, news media and everyday encounters. Since Muslims in Britain are racialised as non-white, the Islamophobia they face often simultaneously merges with racism. In this paper, I consider the effect that the pervasiveness of Islamophobia has on Muslims in Britain. I will argue that Muslims in Britain are often highly sensitive about the presence of Islamophobia in their community, and if they perceive any form of Islamophobia, they withdraw from it or change their behavior to avoid it. However, even though they might be labelled as ‘traitors’ by some, British Muslims not only typically declare themselves as loyal citizens, but they also observe various practical signs of being comfortable reconciling their Muslim identity with life in Britain. Muslims in Britain have shown much resilience towards Islamophobia in the last decade, establishing various groups, campaigns and coalitions which I will argue is proving effective in combatting Islamophobic rhetoric. While much still needs to be achieved in tackling Islamophobia, the successes that have been made, and the increasing stigma attached to being a Muslim in Britain as a term, will be argued to be a sign of a Muslim community that is flourishing under pressure. This research is based on ethnographic encounters with Muslims in Britain between 2008-2013.

**MORAGA CUBILLOS, MARCELA** (Pontifical Catholic University of Chile, memoraga@uc.cl)

**The Use of Tobacco and Marijuana with School Bonding: A Longitudinal Analysis from the Perspective of Social Control**

Comparative data from Latin American countries in 2006 locates Chile among the countries with the highest rates of tobacco consumption in the last month throughout various ages. Additionally, Chile has shown the highest rate of marijuana consumption within South America during the last decade, and consumption among Chilean students has grown in the last years related to an important decrease in risk perception on marijuana use. This research analyzes the pattern taken by the relation between school bonding and the involvement with behaviors that usually are considered as risky, like substances use, from a perspective based on social control applied specifically in the Chilean context. The previous descriptive analysis shows: i) an increasing prevalence of truancy as students get older, ii) a reduction of students happiness in school, iii) a decrease in the importance of good grades, and iv) reducing the importance that students connect to the generation of positive opinion on teachers. Besides, truancy more than duplicates the odds of tobacco and marijuana consumption in the upcoming years. While the students happiness in school, the importance of good grades and the relevance assigned by students in the generation of a good impression on teachers reduce the odds.

The analysis was based on a panel data from a longitudinal study of tobacco, alcohol and drugs throughout school populations, made by The Pontifical Catholic University. They collected information from variables related to family, school, parents, and substance use of Chilean students in seventh grade during 2008 (N=4.387) from townships with a population over 30,000 across the metropolitan region. The students were annually re-interviewed until 2011.

**MORALES, ANA** (University of Manchester, ana.morales@postgrad.manchester.ac.uk)

**The Effects of Socio-Economic Background and Parental Involvement on Children’s Early Cognitive Development: The Case of Chile**

Children's development has been demonstrated to be an important factor in later life outcomes. Studies have also shown that income and parenting style, variables that have been associated with cognitive development scores, negatively impact children's cognitive skills at earlier stages of life. Using data from the First Longitudinal Survey of Early Childhood (ELPI in Spanish), this study implements regression models to estimate the effect that socio-economic conditions and parental involvement have on the scores obtained by Chilean children aged between 36 and 60 months in the Spanish version of the Peabody Picture and Vocabulary test, also controlling for parents’ and children’s characteristics as well as geographical location of the household.

Results show that parental involvement, which is a threefold indicator composed by positive parenting, parental stimulation and ineffective parenting, does make a significant difference, where positive parenting and parental stimulation are positively associated with the cognitive development scores, while ineffective parenting is negatively associated with the scores. On the other hand, results show that cognitive development scores are significantly higher for children living in the wealthiest households with respect to those in the poorest ones. Furthermore, income can moderate the effect of parental involvement, where a high level of positive parenting has a stronger positive impact on poor children, while the negative impact of ineffective parenting is stronger on children from the higher quintiles, and finally, parental stimulation has a stronger impact on the wealthier children.

From these results, it is possible to assert that parental involvement has the potential to contribute to reduce the gap in the cognitive skills achieved by children according to the level of income of the households they live in, which can be of particular relevance for reducing the inequality-related gap in later life outcomes.

Emergent Multi-Cultural Identities and Practices of Immigrants: Toward the Recognition of Yet Another Integration Trajectory

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Steven Vertovec will relate the conditions of super-diversity of present-day urban spaces which affect migrants' positioning in the host society, their social milieus that cross-cut ethnicities, and cross-cultural social relations.

Ewa Morawska will reconsider the premises informing our concepts/theories of immigrant integration challenged by a new phenomenon of the continuous exodus of returnees of migration of travellers seeking self-development and exciting adventure.

Thomas Faist will reflect on the role of class, ethnicity, religion, and sexual orientation in structuring inequalities in present-day multicultural societies characterized by cross-cutting identities and practices of their members, and its implications for integration/assimilation theories.

Peter Kivisto will attempt to interconnect three concepts which have informed theories of immigrant integration/assimilation: that of pluralism which informed the earliest (American) conceptualizations, the notion of ethnic options/optional ethnicity which emerged in the second half of the past century, and the recent idea of cosmopolitan canopy.

New Factors of Social Differentiation in Local Rural Communities

The paper addresses the social consequences of proliferation of innovation practices in local rural communities. Particular attention is paid to the susceptibility of different rural social groups to mastering innovations in the fields of production, consumption, and leisure and to the impact of proliferation of information and computer technologies on social differentiation processes.

The paper is based on the results of the sociological surveys of the processes of proliferation of and familiarization with innovation practices in local rural communities conducted by the Institute of Agrarian Problems of the Russian Academy of Sciences in one of the Russian regions (Saratov’s oblast) in 2010-2011 with personal involvement of the author.

Despite the remaining differences between the city and the countryside in terms of availability of modern opportunities and technology, rural residents are increasingly active in mastering innovation goods and practices. The advance- ment of modern technology per se does not cause the existing differences to blur, but, on the contrary, gives rise to new forms of differentiation, notably to "digital inequality" not only between the city and the countryside, but inside local rural communities as well.

The analysis of the empirical data allowed:
- to identify the features of propagation of individual innovative practices, high-tech goods and services in local rural communities;
- to identify the principal social groups, differentiated by frequency of use of innovation practices in the fields of production, consumption and leisure;
- to make a comparative analysis of the quantitative and qualitative characteristics of these groups, their life and work strategies;
- to propose ways to provide equal access to the new knowledge and skills required for mastering new technologies to different social strata and groups of rural population.

Disambiguating and Re-Conceptualizing Social Investment

Since the late 1990s, ‘social investment’ has appeared in the policy discourse of international and European organisations, as well as on the policy agenda of several governments across Europe and elsewhere. As a strategy that aims to combat social risks while enhancing economic performance, the social investment strategy, and its possible pitfalls.

Political satire programs on television are experiencing a small boom in democratic societies. One of its themes is the economic crisis star, centered in ridiculing not only the protagonists but also in their victims, explaining what were the causes and what could be the ways to tackle the crisis. Through humor, these programs reach millions of viewers, presenting serious issues of political commu-

The aim of this paper is to analyze the effects of such programs on the public to know whether these programs are fundamentally comic dimension or can have a formative role and public mobilization. Analyzing data from studies that have been made in some countries to measure the impact of such programs, and presenting the results of a survey conducted in Spain, one of the countries hardest hit by the economic crisis in Western Europe, this paper will try to test the possible impact of such programs on public opinion.

Explaining Women’s Employment Patterns in the Local Context: The Role of Education and Local Care Policies in Terrassa (Spain)

Empirical research into the factors determining female employment has given rise to a lot of interpretations regarding the cultural, institutional and individual effects on women’s employment patterns across different local contexts and among different groups of women (Steiber and Haas, 2012). In this regard, some studies have thrown doubt on whether institutional and cultural factors have the same effect on women’s employment patterns in different contexts (Ringler, 2004).

In the context of challenges posed by different work-family arrangements, using a multidimensional approach and as part of the European FLOWS FP7 research project, this paper examines variations across different groups of women in the way that contextual factors shape their labour supply. In particular, we propose to analyze from a qualitative methodological perspective how women’s education partly explains differential patterns with respect to employment, work-family balance, and access to family help in the city of Terrassa (Spain). The analysis is based on information drawn from focus groups with different categories of women. Qualitative analysis is supplemented by the results of a survey conducted locally providing evidence of the relationship between educational and work-family balance and informal care. The initial hypothesis is that women’s employment patterns over the family life course are closely linked to preferences regarding jobs and the family, with education and the local care system playing a key role as both a mediating and differentiating factor in the formation of these preferences and values.

International Couples Shaping Migration to Japan

The Japanese are living longer and having fewer children than any other industrialized nation in the world. Immigration is seen as the key long-term solution to a shrinking tax base and a shortage of workers. Despite the reluctance of the Japanese to allow a large number of foreigners into the country, immigrants have been integrating into Japan via international marriages for decades. Whether arriving before WWII or for love dating back to 1600, these couples are important because they represent the most intimate relationship possibility and are an indicator of social distance and integration, both in how the couples cope and how other Japanese view these couples. I interviewed 40 individuals involved in international marriages in a rural area of Japan (Joetsu, Niigata). I transcribed the interviews and coded them using a computer software program called Dedoose. I analyzed the data using the guidelines of grounded theory, namely coding and memo-writing. I focused on the differences and similarities between those international couples who married for love (typically Western males and Japanese females) and those that were arranged (typically Japanese males and Southeast Asian females). There are important differences between the race and gender of these two types of couples, as well as the reasons for why they chose to marry a Japanese national and live in Japan. On the other hand, there are many similarities between these couples when it comes to having to adjust to living in a new culture, learn Japanese, raise children, and deal with extended family members. These similarities and differences offer a unique and intimate window into how the Japanese view foreigners living in Japan.
The boundaries that groups like the Minutemen construct not only leave a record of how these boundaries were constructed, but also a view of what these boundaries will look like in the future. The literal and symbolic meanings attributed to the U.S.-Mexico border were the motivating factor for Utah citizens to go to the border as Minutemen and to establish the Utah Minuteman Project (UMP). We used fieldnotes and interviews with 20 members of the UMP and found that the importance of the literal border gradually faded as the group expanded to include members who had not gone to the border and shifted to symbolic boundaries within the state of Utah as issues centered on crime and employment. In spite of the unifying identity surrounding the literal and symbolic U.S.-Mexico border, individual members of the UMP constructed symbolic boundaries using the following boundary markers: legal status (illegal vs. legal), nationalism (American vs. un-American), culture (English vs. Spanish), and race (white vs. Latino). The legal status boundary is the most salient boundary among the UMP, and became the key symbolic boundary that all other boundaries are measured against. We found that a wide variety of members conflate legal status with nationality, culture, and race, whereas other members maintain clear distinctions between these symbolic boundaries. In the end, this calls into question the social boundary that defines the group they are fighting against as the symbolic boundary that defines the social boundary.

Religion, Organ Donation and Disparities in Transplantation Among Minority Ethnic Groups in the UK

With a high rate of end stage renal failure and a low rate of deceased organ donation, unmet need for kidney transplantation among Black and South Asian populations in the UK is disproportionately high, with these groups comprising 26% of the active kidney transplantation waiting list. None of the main religious groups in the UK formally prohibits organ donation. Faith-related barriers have however been linked in previous research with a reluctance to donate organs, although there is little detailed knowledge regarding specific ethnic/faith groups. This study explored influences on donation among minority ethnic groups as part of a wider effort to address the inequality of opportunity to receive transplantation services.

This presentation examines the Eurocentric social movement theories from contexts of the genealogies of decolonization, demilitarization and anti-development movements on Okinawa Island. Okinawa has its history of the marginality

MORI, CHIKAKO* (Hitotsubashi University, c.mori@rhit-u.ac.jp)

Transformation of Public Housing Policy and Its Impacts on the Residents in Japanese Suburbs

A lot of critical debates relating to Japanese suburb (ageing, juvenile delinquency, absence of local identity, etc.) have not made inroads into the myth of a homogeneous and stable space populated by non-foreign residents from the middle classes. However, with installation of the “precariat”, driven out of the city center by gentrification on one hand, and with transformation of Japanese public housing policy on the other hand, a new face of the suburbs appears: public housing for insecure populations (old people living alone, handicapped people, single-parent households) or semi-public housing hired by companies for their temporary workers including precarious foreigners make it a space of exclusion characterized by a heterogeneous and insidious range of “wasted lives” (Bauman, 2003) is concentrated. It is a very-known fact that territorial fixation is one of the major difficulties for the people of segregated districts, who are not able to “escape” from there (Wacquant, 2007). But that should not make one forget another difficulty: that is the difficulty of not being able to stay in one place, by having to be constantly moving. Because staying in one place also means setting down (establishing a family, sending one’s children to school, having regular dealings with neighbors as a member of the local society, possibility of borrowing money from banks, etc). On the basis of a survey in the Tokyo suburb area, this paper examines the impact of those changes on (semi) public housing residents, especially where they go and how their lives are changed by their movements.

MORI, IPPEI* (The University of Tokyo, chatchan77@gmail.com)

Correcting Errors without Undermining Students’ Individuality in the Classroom

Classroom education is an institutional interaction meant to transmit the knowledge considered “right” by our society to children. However, recently in Japanese schools, emphasis has been placed on respecting students’ “individuality.” How are educational interactions organized to accomplish this seemingly incompatible task? We intend to answer this question in the paper.

We analyze video data of a lesson on national language in a Japanese first-grade elementary school classroom from the viewpoint of ethnomethodology and conversation analysis. We focus on the organization of “correction” and “repair” in conversation. Correction is applied to errors of utterance, and repair, to inaudibility or incomprehensibility of utterance. According to Douglas Macbeth, correction and repair often cooperate in classroom interaction.

Based on the above, we can rephrase our initial question as follows. As teachers must teach “right” knowledge, they must correct students’ “wrong” knowledge. However, this correction threatens to undermine students’ individuality. How can teachers organize the process of correction so as to avoid this undermining as much as possible?

The results of our analysis are summarized as follows. In the analyzed video data, a student read out his imaginary story. There were two errors in the story. However, the teacher corrected these errors without undermining the student’s individuality: on the one hand, by conducting “repair” with use of a preference for affirmative answer (=implicit correction) instead of explicit correction and, on the other hand, by configuring a cooperation of correction and repair in the order of “repair-applause-correction.”
as a quasi-colonial part of Empire of Japan from 1879, under the occupation of the US Forces from 1945 to 1972, and the continuous concentration of the military bases until the present. Facing on the situation above, the people in Okinawa have been seeking to relativize their ontology and change themselves through the external connections of social movements over the world.

Capitalism and Militarism after the WW2, lead by the US, had a significant influence not merely to Okinawa, but also East Asian countries, and the subjectification of Asian people. As Sakai Naoki (2008, Kibo to Kenpo, Ibusnsha) clarifies that the regime of the Post-WW2 imaginary space of Japanese people was the inter-absolute feminist and affirmative for their family lives.

In contrast, in recent Japan, the advent of an aging society combined with a low birthrate has had a serious impact on the whole public education system, making it more important to consider educational policies from the aspect of population problems. Especially, in aging rural areas, the number of abandoned schools is rapidly increasing due to depopulation, and there are heated debates on the regional gap in educational opportunities between urban areas and rural areas. Thus, one of the most urgent problems in rural Japan is to design new forms of community-based school systems by focusing on the local communities, as the closed nature of the public education system has faced criticism in the context of ‘neo-liberalism’. Within these global contexts, the Japanese government began prompting a new system of community-based schools named the School Management Council System in 2004. This school council system is extremely different from the existing public school system in that the citizens’ participation into school management is definitely institutionalized.

In this paper, we will examine how the new school systems are turned into advantages and traditional patterns relied on in pursuit of new objectives.
The main findings revealed that children needed to negotiate their safety in the context of family violence and post separation. Key to this was whether the child had agency to negotiate their safety, which was dependent on four interrelated factors. These factors will be presented to explain the ‘Model of Children’s Agency’. Informed by the model, implications for policy, practice and further research will be considered.

MORRIS, BRIGIT* (University of New South Wales, brigitmorriss@yahoo.com.au)

Moving Through Space

Spaces in urban geography are rich with signs and symbols related to nation- al as well as personal narratives. Artists who construct public art installations in sites symbolizing hegemonic power and cultural identities are able to rework or reclaim the meanings attached to these spaces.

I am interested in artists who engage in performative, site-specific installations that aim to recreate historical or contemporary political events in a symbolic way. I will argue that by reframing the meaning of significant sites using artistic devices of affect and temporality, installation artists are in a unique position to critically analyse political and social questions which ‘trouble’ our society.

I will examine two case studies. The first is Gregor Schneider’s 2007 work, 21 Beach Cells. This installation involved a series of interactive metal prison cages, symbolizing Guantanamo Bay. The installation was placed on Bondi Beach in Sydney. At the time, the Australian Government supported the US government’s actions of detaining enemy non-combatants. Bondi Beach symbolizes the free and egalitarian spirit of Australian national identity – a jarring vision with the landscape of the Guantanamo prison. The second work is Doris Salcedo’s 2007 work, 6 y 7 Noviembre. Salcedo installed a sculpture over the Palace of Justice building in Bogotá’s capital city. The work remembered the events of 6 to 7 November 1985 when militiam stormed that very building – the High Court of Colombia.

Salcedo and Schneider reclaim these meaningful sites to create affect between artist and viewer, between citizen and nation. The implicit value of these locations facilitates a conversational or reflexive relationship with the viewer where the past is effective to the present. This dialogical relationship makes the viewer complicit in both the artwork and the subject matter it addresses. Therein lies the transformative power of the artwork.

MORRISON, IAN A* (The American University in Cairo, imorrison@aucegypt.edu)

Secularism and the Foundations of Pluralism: The Crisis of Reasonable Accommodation in Québec

In recent decades Québec, like many other Western states, has been a site of debate regarding the limits of pluralism and freedom of religion. In Québec, these debates have emerged within the context of a restructuring of the nature of na- tion and citizenship. Since the early 1990s, the Québec state has undertaken a project of the construction of a citoyenneté québécoise, seen as the culmination of a transformation of the boundaries of the Québec nation that began with the Quiet Revolution of the 1960s, marked by the shift from an ethnic to a civic con- ception of the nation. The dechristianization and secularisation of national identity in Québec is presented as an expansion of the boundaries of the nation and an opening towards otherness.

Yet, contemporary Québec has also been described as the site of a ‘crisis’ relat- ed to the measures adopted to promote this conception of such a nation. Of par- ticular focus have been the practices of ‘reasonable accommodation’ for religious practices. Opposition to such measures are made on the basis of two arguments. The first suggests the need to narrow the scope of pluralism in order to protect universal values, and secularism itself. As such, it posits the paradoxical need to limit pluralism in order to protect pluralism. In doing so, it appeals to the need to protect the universal (as host body) from the particular (as contaminant). The second argues the need to protect ‘national values’ from the dilutive and assimilatory forces of relativism and multiculturalism. As such, it demands protection of the particular (as host body) from the universal (as contaminant).

The proposed paper examines the manner in which these two seemingly oppo- sitional arguments can be present within a common discourse that problematizes the presence of certain religious subjects and practices within the public sphere in Québec.

Modern Moraldities? Children and Social Change in Vietnam

This paper explores the effects of modernity on children’s lives and on their aspirations in Vietnam. It draws on qualitative research undertaken with children and their parents as part of Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper explores how social, political and economic changes are affecting social realities, moralities and norms, especially in relation to intergenerational relationships between grand- parents/parents, and children. For example, there is clearly a rapid process of marketization taking place, with consumer durables like refrigerators and internet becoming widely available. At the same time children describe clearly the centrality of family relationships, and especially reciprocity in the form of caring for parents, siblings, grandparents, and an expectation of filial duty by parents. Three sets of values are colliding, (a) there is a combination of Confucian notions of filial duty combined with Communist values relating to the importance of reciprocity in relationships, yet (b) there is State-led concern about ‘social evils’ affecting children and youth by parents (while these are nearly universal, they seem particularly marked in Vietnam) and (c) new technologies that are perceived bringing risks to children and young people. Children themselves are aware of shifting moralities. They perceive there to be corruption among adults – some teachers, and employers - and express concern about unfairness and injustice. The paper explores whether there are ‘new’ moralities emerging, and describes how parents and children are managing these processes.

MORRISON, VIRGINIA* (University of Oxford, virginia.morrow@geh.ox.ac.uk)

‘I Have to Help and Improve Their Life’: Young People’s ‘Transitions’ in Ethiopia and Andhra Pradesh, India

This paper explores the lives of young people growing up in Andhra Pradesh, India, and Ethiopia, drawing on data from Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper explores the ways in which boundaries between childhood, youth and adulthood are blurred, by exploring young people’s past and present experiences of school and work, and their anticipated futures. The paper uses descriptive statistics to show trends in leaving school, and then draws on qualitative longitudinal research from a series of case studies to explore children’s experiences of leaving school and work. The paper argues that many of the assumptions underpinning international policy discourse that conceptualise early school leaving as ‘dropping out’ fail to engage with the realities of young people’s lives in rural areas that experience numerous economic and environmental ‘shocks’. Gender, poverty, and other social differences combine with a strong sense of obligation to parents and wider family to conform young people’s choices and trajectories. The paper questions the utility of the concept of transition and suggest that it must be used critically and not simply imposed on contexts that are in a process of rapid social change and economic development, but that are generating powerful inequalities that mean that some groups of young people are ‘left behind’.

Beyond the Respondent-Interviewer Interaction: Exploring the Performance of a Self-Administered Life-History Calendar

Life-history calendar (LHC) methods have been increasingly used in surveys in the last two decades. There is indeed a general consensus on the fact that the highly structured but flexible approach of the LHC facilitates the memory of past events. Respondent’s past experiences provide a context for retrieval of autobiographical memories and they are used as anchoring points and time landmarks for respondents. However, studies using self-ad- ministered LHC on youth sex behavior argued that LHC can be used also in self-administered modes reducing social desirability bias.

In this study we present data from two surveys conducted in Switzerland (the Swiss Household Panel pilot study and the Family timeM study) between 2011 and 2013. Results show that self-administered LHC could produce equally valid data in terms of completeness (measured with five indicators: number of resi- dential moves, number of intimate partners, number of children, number of jobs, and number of years of unemployment) than interviewer-respondent interactive interviewing. Moreover, self-administered LHC transmitted by mail data had even
higher levels of internal coherence than self-administered LHC completed during face-to-face interviews. We argue that improvements in the layout (i.e., graphical visualization) of the LHC, as well as an increasing popularity of life calendar model in social media, may have increased in recent years the accuracy and feasibility of self-administered LHC for data collection.

Three Generational Continuity In Achievement Orientations: New Evidence From The U.S. Youth Development Study

Growing inequality in families has prompted great interest in the intergenerational transmission of advantage. Guided by three complementary theoretical perspectives, we examine the continuity of achievement orientations across three generations. The first posits that contemporaneous parental orientations and attainments influence children. Children of more highly educated parents receive more parental encouragement and observe successful parental role models. A second approach posits that prior parental pathways matter for children. Earlier parental behavior may also provide a model of more or less successful action, and impacts children indirectly through parental attainments. A third “selection model” posits that parents’ stable traits, observed during adolescence, influence parents’ pathways, their attainments, and children’s orientations.

The Youth Development Study followed a cohort of over 1,000 Generation 2 youth from age 14-15 (1988) to age 37-38 (2011), and also surveyed their G1 parents (during G2’s adolescence) and G22 of their G3 children age11-21 (2009-2011). An SEM model, based on 384 G1, G2, and G3 triads, provides a three-generational assessment of the transmission of achievement orientations. Confirming the first perspective, contemporaneous parental educational expectations were strong predictors of both G2’s and G3’s orientations toward academic achievement during adolescence (self-perceptions as intelligent, a good reader, and having high ability in school). Providing evidence for the second approach, a high agency G2 parental pathway (with high aspirations, career certainty and active job search, age 18-30) strongly influenced G2’s educational attainment and entirely mediated the effects of G1’s expectations and G2’s academic orientation in adolescence on G2’s achievement. Finally, supporting the third perspective, G2’s academic orientation during adolescence significantly predicted G2’s expectation for the G3 child more than 20 years later. The G2 parent’s orientation, measured during adolescence, thus indirectly influenced G3 orientations. This analysis supports Conger and Dogan’s (2007) integrative model of intergenerational transmission, including both selection and socialization processes.

What’s Another Word for “Ruling Relations”?: Translating IE into Applied Research in Medicine

This presentation highlights the work of using institutional ethnography (IE) in applied health research. I illustrate how my IE study on fetal alcohol spectrum disorder (FASD) both facilitated and complicated the process of knowledge translation (KT). I will discuss this in the context of KT with diverse audiences including community stakeholders, government policy and decision makers, and academics in medicine. It is the work of research to control and limit the amount of data to collect and analyze in order to keep a study focused. Applied health research also commonly includes KT plans to strategically engage target audiences with meaningful research findings. As an applied health researcher, I considered each primary audience as I decided how and what data to analyze as well as how the findings would be disseminated.

The purpose of this IE study was to examine how institutional supports and services are activated and coordinated around youth with an FASD diagnosis. My study included two Canadian communities – one remote Aboriginal community and the other an urban provincial capital. In each setting, three distinct interview sets were interviewed: 1) caregivers of children with an FASD diagnosis; 2) front line workers from healthcare, child welfare, education and social services with direct involvement in the lives of children with an FASD diagnosis; and 3) policy and decision makers who manage the interviewed frontline staff. In addition to interview, I collected and analyzed clinical and service-related forms, training manuals, policies and assessments. This large volume of data required focused and prioritization in order to produce results that meet the expectations of my main target audiences: community, government, and academics. I argue that the utility of IE in applied research is only as strong as the ability of the researcher to “speak IE” in a language that can be understood.

RC08-153.3

MOSEBAN-NATANSON, SEBASTIEN* (Paris Sorbonne University Abu Dhabi, sebastien.natanson@psuad.ac.ae)

The Forgotten One of the Triad: Why Did Rene Worms, and Not Emile Durkheim or Gabriel Tarde, Fail?

Rene Worms (1870-1926) was a brilliant young philosopher who entered sociology at the beginning of the 20th century. He was trained by a great university professor and high civil servant. His first contribution was institutional, with the creation of the first French academic journal dedicated to sociology (the Revue Internationale de Sociologie in 1893), one of the first monographic series (Bibliothèque de sociologie internationale) and national and international organizations (Institut International de Sociologie, Société de sociologie des générations). He gathered dozens of intellectuals around these different initiatives. Theoretically, he was at first a strong advocate of organicism, even if he was very open to other theories and currents in his journal and his collection. Very few academic works have been published about this author, considering he played a minor in the history of French sociology. Without totally rejecting this assertion, this communication will try to reassess his role in the development of the discipline, and to provide with explanations of his failure and of his forgotten memory. We will focus on several factors such as his will to internationalize the discipline while it was still very weak nationally, or the consequences of his theoretical choice. We shall also insist on the paradoxes of the Durkheimian writing for the history of the French sociology.

MOSKALEWICZ, JACEK* (Institute of Psychiatry and Neurology, moskalew@ipin.edu.pl) SIEROSLAWSKI, JANUSZ (Institute of psychiatry and neurology) Transformation of Drug Policy in Poland: From Complete Depenalisation of Drug Possession to Its Absolute Criminalization

Last three decades witnessed crucial transitions in Poland towards market economy and multi-party system. This process severely affected all spheres of life, including drug consumption and public policy in that area. Definition of drugs and drug use in the 1990s white and new worlds as well as growing poverty and social exclusion demanded moral justification. A number of social problems have suddenly become moral issues, subject of vivid moral debates and accusations in fight for moral supremacy. In result, legal provisions had to be introduced to symbolise new moral order. In 1997 drug possession was penalised. A number of drug-related crimes sky-rocketed from several thousand prior to the depenalisation to eighty thousand ten years later. In a decade, several hundred thousand, mostly young people underwent legal prosecution, most of them got convicted in criminal registers which reduces their prospects in the labour market. Despite softening of the drug laws in recent years, criminalisation of drug possession widened a generation gap and excluded significant proportion of the young generation labelling them as criminal deviants.

The Micro-Politics of Poverty and Inequality: Implications for the Real “Hidden Abode of Production” in South Africa

Almost two decades since South Africa celebrated its political freedom; unemployment, poverty and inequality remain undeniably high. The dominant narrative by most South Africans is “awukho umsebenzi” and “asinamali” – there is no work and we do not have money. South Africa’s transition to democracy in 1994 was thus flawed, as it did not bring about economic emancipation for the majority of its people. More than three in every ten South Africans are unemployed. Neoliberal policies and the welfare system, aimed at addressing economic failures of the apartheid state, have had limited success.

High levels of unemployment and inequality that followed South Africa’s entry into the global economy have shifted the focus of survival and economic activity from the factory to the household. In the absence of an effective welfare state, the poor have retreated to the household and adopted diverse livelihood activities. Contrary to views held by traditional economics, households are not just places of consumption and leisure but significant places of production and the provision of
and insecurity, as well as what the limits of community are in these conditions and notions of belonging. Particular focus is on residents living in the perspectives of residents living in the inner-city and the ways in which they practices and methods utilised to achieve these aims. Of particular interest is the examines the relationship between urban and social regeneration as well as the security in the area as well as foster a sense of community. This presentation environment, particularly through the provision of low-income and social housing. It has been described by academics as a 'vacuum of belong

Mental health care professionals are under pressure – both from their own organisations and professions and from external legislation and policy – to collaborate. This article reports the views of collaboration held by influential mental health care professionals who participated in strategic collaboration councils. Semi-structured interviews were conducted with 31 participants in three groups: personal ombudsmen and managers of social care and health care. The participants presented generally homogeneous opinions of collaboration, although they differed in outlook: the personal ombudsmen maintained an operational perspective, while the care managers had a more strategic focus. All participants saw collaboration as necessary to a functioning organisation. They joined the collaboration councils expecting to form interprofessional relations that would lead to greater efficiency, better knowledge of other organisations, and professional support. The participants’ adherence to a positive norm, together with further institutional pressures, contributed to homogeneity in the participants’ responses. All guardians of their points of view while collaborating in networks adhering to a social norm. Strategic collaboration was thus both means and end.

MOSSELLON, AIDAN* (University College London, aidan.mosselson.11@ucl.ac.uk)

Communities in Transition: Security, Policing, Appropriation and the Formation of Community in Inner-City Johannesburg

Johannesburg's inner-city was once an area notorious for crime, grime and urban and social decay. It has been described by academics as a 'vacuum of belonging' (Gotz and Simone 2003) and a hyper-ghetto, home to prostitutes, drug dealers, diseased street children, criminals and their victims (Murray 2011). In recent years, however, there have been considerable efforts to regenerate the urban environment, particularly through the provision of low-income and social housing. These attempts at physical regeneration have coincided with efforts to enhance security in the area as well as foster a sense of community. This presentation examines the relationship between urban and social regeneration as well as the practices and methods utilised to achieve these aims. Of particular interest is the relationship between physical and social space and how this structures social relationships and notions of belonging. Furthermore, it explores the ways in which community is formed in a context of urban transition, insecurity and hyper-diversity. Utilising the framework developed by Henri Lefebvre (1991), it examines the perspectives of residents living in the inner-city and the ways in which they are able to or prevented from exercising their spatial imaginations and abilities to appropriate spaces in the inner-city and the effects this has on the formation of community and notions of belonging. Particular focus is on residents living in social and low-income housing's perspectives about what community, security, appropriation and belonging mean in a situation of urban transition, social decay and insecurity, as well as what the limits of community are in these conditions and how these boundaries are drawn and reproduced.

MOTCHAM, CASIMIR RAJ* (National University of Ireland, cassidrb@gmail.com)

Youth Policy in Ireland and India: A Comparative Study

Contemporary policy discourse about youth is frequently trapped in the dichotomous paradigm of simplistically portraying them as either ‘a problem’ or a ‘human resource’. This broadly applies both in Europe and in Asia. However, while significant comparative research on youth, youth work and youth policies has been conducted within Europe, there has been little research which compares the European and Asian contexts, and there is none to date specifically comparing Ireland and India. Based on recently completed PhD research, his paper explores and compares the youth policies of Ireland and India through the analytical lens of Gough’s (2008) ‘five Is’: industrialization, institutions, institutions, ideas and international environment. It examines the major ‘factors and actors’ that have influenced the historical development of youth policies in both countries and situates these in their broader regional contexts.

There are many obvious differences between India and Ireland in terms of location, demography, culture(s) and other economic and social factors. However, there are also significant connections between them, stemming not least from their common colonial experiences, meaning there are important parallels in political culture and public administration. The voluntary sector and its relationship with government agencies hugely influence policy making in both countries (the principle of ‘subsidiarity’ in Ireland can be fruitfully compared with that of ‘Panchayati Raj’ in India). In India, however, there is no forum for NGOs and the government to come together whereas ‘social partnership’ has been central to Irish social policy. In both countries most youth have little or no opportunity to participate in making decisions that affect their lives. Many are not aware of their own rights, or the policies and programmes that affect them. New policy initiatives are underway in both countries, however, which hold out the possibility of redressing this.

Gender Differences in Reactions to Coming out: The Reaction of Mothers of Non-Heterosexual Children and Their Roles

In a heteronormative society, disclosing one’s non-heterosexuality to others can be very stressful, but it can be heightened considerably when coming out to one’s parents. On the other hand, parents to whom a child has disclosed their non-heterosexuality also struggle with feelings of inability to accept their own non-heterosexual child. Coming out thus causes a “family crisis” (Williamson 1998), because family members have to reconstruct a family model which was previously based on heterosexuality. Yet what does “family crisis” mean to the parents of a non-heterosexual child? Previous research on parents’ reactions to coming out in the West have shown that mothers and fathers react differently; mothers are found out to be more likely to react positively, and feel less guilt and responsibility than fathers (Ben-Ari 1995). Moreover a parent tends to be more accepting of a non-heterosexual child of the same gender than that of the opposite gender (Ibid). However, what are the reasons for these differences? Moreover, can the same be observed in the case of Japan?

This paper explores how gender influences a parent’s reaction to coming out in Japan and other social settings. In particular, it discusses how mothers assume gender roles in coping with their children’s disclosure of non-heterosexuality. Data gathered since December 2012 from interviews with family members of non-heterosexuals and observation research at a support group for family members. The

Sociologists and Believers: Alliances and Protectorates in Brazil

In Brazil, probably more so than in other countries, sociologists often hold the Comtean opinion that Sociology stands to religion as the positive stands to the theological. As secularization, and the "holy alliance" of social scientists and cultivists, the former often imposing on the latter a kind and subtle theoretical protectorate. Such alliances also exist, in greater or lesser degree, with the Catholic Church (especially with the sectors linked to the theology of liberation) and with the historical Protestant churches. Highly emblematic of this tendency are the graduate programs in "sciences of religion" that have sprouted all over the country and in which social scientists (who often claim to be believers) and believers (who are at times social scientists) engage in dialogue. Contrariwise, there is in the country a process of open, so far only verbal, warfare between social scientists (again of the highest reputation) and the Pentecostal and other religious fundamental communities as authoritative and intolerant of all forms of individual diversity.

Contentious Politics and the Global South

Referring to new challenges in the study of contemporary social movements, Tarrow claims that "To the extent to which we have allowed the examples of civil Western movements from 1960s to shape our models, we will not be able to understand them" (2011). The author refers to ethnic wars and terrorist movements, in particular Islamist groups; other movements from the Global South rarely appear as empirical applications of the framework Contentious Politics, but never in the role of challenging it to revisions like Islamists. The thesis of a movement society in two trends, a more contained in the "West", and a more transgressive in the "Rest", leaves out many issues around which movements in the Latin America have been contending.

However, attempts to explain the particularities of Latin American social movements have led to the development of specific theories, treating the region as sui generis (Costa 2010). Thus, in the analytical openness and systematic character of the framework on Contentious Politics lie its main virtues: it invites for dialogue and results in a collective process of knowledge construction. It has a serious limitation for that purpose, as Bringel (2011) objects: instead of its claimed epistemological turn, "Contentious Politics" is an ontological movement, a change in what to study (action and structure, relational dynamics by mechanisms and processes). A specific local turn is yet to come, by the incorporation of epistemologies from the Global South.

This paper attempts to contribute to this challenge, based on claims raised by Latin American scholars and movements, organized in five elements: the spatial ones, the directional, in which they are expected to be more accountable for family affairs. Yet interestingly, these gender roles also influence mothers to overcome the "family crisis."
realities is always something we reach with language (that is socially constructed) – how could we do things to each other without words? Do we need an autonomous sociology of language? Or should we try to persuade the sociologists that all sociology is inevitably a sociology of language (in the same way, for Labov all linguistics is necessarily social)?

Homogenous or Not?

Abstract: This research contributes to the debate on Japanese media homogeneity by demonstrating that anti-nuclear editorials exhibit more diversity than homogeneity overall for the period from 1954-1970. Several observers have noted that Japanese newspapers contain a diversity of editorial positions along progressive-conservative and universalist-particularist continua, and that Japanese news coverage of the anniversaries of the bombings of Hiroshima and Nagasaki is ritualistic and avoids controversy. 53 memorial editorials appearing from 1954-1970 in the Asahi, Yomiuri, Nikkei and Sankei newspapers are surveyed and coded for indicators of progressive-conservative and universalist-particularist continua, with the Asahi the most progressive and universalistic of the four publications surveyed. While relative unanimity of opposition to the bombings is found, the analysis indicates that this homogeneity was opposed for a variety of motives which could be characterized as either universalistic or particularistic. Further differentiation is observed on contextual issue positions such as aid for hibakusha, United States accountability in the bombings, and the influence of the domestic communist and socialist parties on the anti-nuclear movement.

The Efficiency of Exclusion: Gated Communities, Informality and Social Mobilization in Mexico City

This paper analyzes the double-edged meaning of informality at the intersection of urban inequalities, landed property, and power in urban Latin America. Our study of the Zona Poniente in the fragmented western periphery of Mexico City allows us to identify situations of social interaction in which the narrative use of informality is central to social and cultural distinction. We find that the standard story – and normatively disparaging construction – of urban informality exercised by marginalized urban poor people must be complemented by an analysis of upper class elite practices, particularly in private-sector real estate development. The real estate development industry occupies a critical place, materially and symbolically, in structuring the urbanization in which wealthy property interests employ the attribute of informality to stave off “Third World” settlements and enable a “First World” lifestyle in gated communities. In the discourses and practices of neighborhood organizations, public planning authorities and real estate developers the referent “informality” takes on defensive and exclusionary functions and serves as referent for social mobilization against the perceived informality of the local elite. Fieldwork in this peripheral, fragmented and contrasting area provides insights into the link between informality and confinement on various levels. Firstly, the self-enclosing of the urban elite in “gated communities” is a result of informal modes of negotiation between public authorities, neighborhood organizations and real estate developers. Secondly, the spread of such First-World urbanism has negative effects on social and physical mobility of the dis-enfranchised urban population living in deprived islands surrounded by the defensive walls of gated communities. Thirdly, our fieldwork allowed us to identify diverse types of inter-urban development structures required to focus on samples drawn from this universe. Consequently, this paper also describes the construction of such samples by presenting an exemplary analysis of the European Values Study (EVS) 2008. Among others, this survey contains a political self-evaluation on a left-right scale, which is used in the example for the construction of relational arcs of conflict and consensus: dyads of persons with both a leftists or both a rightist political orientation are linked by a relation of political consensus. Other dyads with very different positions on the left-right continuum are similarly linked by relations representing political conflict. Hence, by this exemplary analysis it will be possible to assess, how much different income groups (classes) are politically polarized and how much consensus there is within each of these groups.

Segregation Of Roma Children In The Czech Educational System

One of the most serious forms of discrimination in the CR is the discrimination against Roma children in primary education. Despite conclusions by the ECHR from 2007 in the case of D.H. vs. CR, which stated that there was discrimination and a violation of the right to education of the Roma children by placing them into so-called special (currently called practical) schools, a third, and in some municipalities even one third of Roma children in the CR have been placed in such schools. The Concept of Roma Integration adopted by the Czech government also includes the removal of obstacles in regard to Roma children’s education and the aim to abolish segregation in education. One part of this is making changes to the work of pedagogical and psychological centers (which have to diagnose a child with disorders in order for it to be placed in a special school) in terms of improving their diagnostic methods and their work with socially disadvantaged children. In April 2010, the Czech Ombudsman concluded that the disproportionally high number of Roma children who are placed in such schools based on recommendations of the school counselling institutions, without being diagnosed with mental disorders, is indirectly discriminatory. Due to the segregation of Roma in education, the CR is continuously criticised by international institutions but, despite this, no efficient regulation has been adopted to remove this type of discrimination. By analyzing governmental policies, the psychological tests, which recommend a child to be placed in a special school, and by examining Roma organisations, this paper seeks to change the discriminatory practice. I hope to explain in this paper how it is possible in the EU context to carry on with detrimental and costly policy of exclusion of some...
of the Czech citizens from the education process and what are the main consequences of such approach.

MUIR, KRISTY* (University of New South Wales, kmuir@unsw.edu.au)

Perceiving, Managing and Negotiating Risky Behaviours from Adolescence to Early Adulthood

Young people's transitions from adolescence to adulthood are individualized, risk taking is normalized, and individual choices, behaviours and actions can have significant implications for future social and economic outcomes (Beck, 1992; Giddens, 1991). Yet young people's choices and behaviours are also set within and influenced by their peers, families and communities (Bronfenbrenner, 1986, 1977). While previous research has examined risk taking behaviours of young people and the influences and drivers of these, we have a limited current understanding of how, why and under what circumstances young people from different family, community and economic contexts negotiate and make decisions about risky behaviours and who and what they draw on to make these decisions. Based on an Australian Research Council grant, this paper uses Australian Bureau of Statistics data and interviews with 70 young people from different social, economic and community contexts across Australia to understand how young people define, perceive, manage and experience risk taking behaviours and the supports and resources they draw on in making their decisions. Using an ecological framework, this paper aims to identify areas of support at the kitchen, community and policy tables that may assist young people in negotiating risk as they move through adolescence to early adulthood.

Losing Control in Western Canada: Private Equity Firms and Land Purchases

My paper will investigate the changing nature of land ownership in Western Canada. This is occurring largely because of the activities of Canadian private equity firms in purchasing vast tracts of farmland as investment properties, and the deteriorating environmental and social conditions of the rural population as their lives are affected by it. These are striking developments that affect diverse stakeholders from farmers, as well as corporations, their definitions could collide when those of the latter relate to identification of time and place and those of the former relate to profit and exploitation. Is it the case that the cultural, spiritual and social importance of land to individuals is often ignored when the value of land is determined? Is it the case that the cultural, spiritual and social importance of land to individuals is often ignored when the value of land is determined? Is it the case that the cultural, spiritual and social importance of land to individuals is often ignored when the value of land is determined? Is it the case that the cultural, spiritual and social importance of land to individuals is often ignored when the value of land is determined? Is it the case that the cultural, spiritual and social importance of land to individuals is often ignored when the value of land is determined?

The Democratic Deficit: The Rise of Private Agri-Food Standards in the Global South

The past few decades have seen a tremendous expansion of private authority in global governance. No exception, the agri-food industry has become increasingly privatized in its ownership and governance. Illustrative of this point has been the declining authority of public international bodies such as the UN’s Codex Alimentarius in the governance of agriculture. These developments are the result of a normative shift from government to governance. Such trends have proven particularly hard hitting on agriculture in the Global South, where numerous experts have documented, for example, the impacts of cash-crops for export, land grabs and agricultural speculation on the most disadvantaged. My presentation will examine the development of agricultural standard setting and certification as a case study of private agricultural governance. Using GlobalGAP, a blueprint for business standard setting body, the paper has two purposes. The first is to use private certification and standards to highlight the very real and harmful impacts private regulatory developments are having on poor agricultural suppliers in the global South. This will be done predominantly from a governance perspective. The second is to explain the broad-based shift toward a preference for private governance that has occurred within agricultural governance over the last few decades. In particular, I will examine the ideas and logic of neoliberalism and globalization frequently used to justify this shift. By addressing the impact private regulatory standards have had on suppliers in the global South the presentation will also indirectly focus on a number of theoretical questions revolving around globalization and global governance. These include questions regarding the arrival of new political actors as key regulators of global industries; the role of the state and public regulation in agricultural global governance; and the ability of private actors to govern in the interests in mind of the broader public and the disadvantaged, in particular.

Cross-Border Marriage: Tale from Haryana, India

A significant social consequence of the skewed sex ratio is the marriage squeeze in some regions of India, like Haryana which receives its brides from various eastern states of the country and also from Bangladesh. Hanayavits of higher caste and class refuse to acknowledge existence of any such practice publicly as they consider it demeaning of their esteem and collective identity. On one hand, scenario reflects the dynamics of continuity of such marriages with different classes and denominations. On the other hand, the entrenched mechanism pushes the women in Bangladesh, who are on the socio-economic fringes of their country, to come out as brides. It is interesting to note the changes that surface in the cultural matrix of Haryana society due to such marriages. The present study attempts to examine the social, demographic and economic factors responsible for continuity of such a process over time. The paper also deliberates on the strategies of adaptation and building resistance to the stigmatized images, by the children of these marriages. There is a palpable anxiety of the upper class and upper caste men over the stereotypical images of migrant brides and their children as ‘inferior others’. These women are facing a situation of paradoxical hypergamy as they are getting married to men of low status and therefore their status is further low in society. Resource allocation for improving their political, economic and social life in Haryana society needs active citizenry. Unless their cause is taken up by the upper sections of Haryana society, such marriage cannot be expected to be reimagined by way of state induced policies and citizenship rights. The need for policy recommendation towards the protection of these migrant women and their children has been deliberated briefly in this paper.

Between State and Market – Non-Profit Housing Organisations in Four National Contexts

This paper presents the results of an international collaborative study of non-profit housing involving researchers in four countries using a common methodology to engage the leaders of non-profit organisations themselves in the research process. The paper draws on earlier work on the hybridisation of social housing provision (Mullins, Czischke and van Bortel 2013) and the competing logics of state, market and third sector. It uses a modified Delphi methodology to collect information from leaders of non-profit housing organisations in four countries about how their organisations are negotiating these hybrid influences on their practice and operations. This method involves collation of responses to scaled surveys from panels of 15-20 organisations in each country, playing back the results to the participants and follow up depth interviews to explore and interpret the meanings of their responses.

Local Construction of Global Standards: How Gender Diversity Has Become Corporate Social Responsibility in Japan

After decades of reluctance and resistance, Japanese firms have recently begun to embrace the cause of workplace gender diversity as part of their response to the emerging global standards of corporate citizenship. We examine how gender diversity has been locally constructed as an urgent CSR issue for Japanese
First, because of its high unemployment level, well above those of other countries in the OECD. Secondly, because of the strong incidence of the temporal rate, with levels close to 30% since the first Labor Reform in 1984, and third, for the extraordinary inflow of migrants in the first decade of the XXI century, representing a foreign population of 3.6% in 2000 to 14% only ten years later. This paper aims to examine to what extent nationality influences the risk of job loss among the most precarious workers, in particular those with a temporary contract. This study seeks to test the assimilation thesis in a segmented labor market during a recessionary economic period. To do this, panel data from the Spanish Labor Force Survey (2008-2010) are used. Analyses based on logistic regressions show that some differences in the socio-demographic profile contribute to understand the initial disadvantage of immigrants. However, controlling for education, time of residence in the host country and tenure does not fully explain the gap between groups. Only after taking into account professional status (occupational level and sector), we can understand their disadvantage since the collapse of the economy. The results of this study show that immigrants are harmed twice. First, by their greater propensity to hold fixed-term contracts; and second, and above all, because the nature of their temporal contracts is associated with activities related to low-skilled jobs and seasonal work, typical in sectors like construction, agriculture and tourism. It seems that the precariousness faced by foreigners is chronic rather than a step towards more stable jobs.

The Impact of Unemployment on Temporary Workers. Why Foreigners Are Most Vulnerable during the Great Recession?

The current economic crisis is having a strong impact on the whole society in all developed countries, but especially on vulnerable groups such as immigrants. The case of Spain is unique and at the same time remarkable for three reasons.

This paper has the goal of discussing how the political project of Japan, based on its ideology of homogeneity, alienates the Japanese youth, limiting their individualization processes to, instead, focus on a single model of Japaneseess. Through some narratives examined, the Japanese youth showed to be sensing a lack of possibility to fit in society. When analyzing the societal structure in Japan, the rigidity of its job-hunting system, the curriculum of homogeneity and individuality suppression that begin in the school and echoes in society, the rigid gender roles presented in the classrooms and companies; the culture of permanent availability to the company, all become apparent as the sources of the lack of belonging perception amongst the youth. Since there is a lack of imaginable structural change, the youth produce narratives of escaping this hegemonic Japan, adopting strategies of marginality (NEET, Freeter, and some counter-hegemonic sub-cultures); or even strategies of actual escape (prioritizing non-Japanese firms to work, or seeking for opportunities to live abroad.) This paper, thus, argues that these strategies come from a feeling of alienation and purposelessness, leading to the hegemonic Japanese society. However, through the study of the phenomenon of Visual Kei, narratives of individualization and subjectivity can be composed and professed, both by language as well as by behavior and appearance. Through Visual Kei, it is argued, Japanese youth find a way to resist the opposition of their individuality in the name of the group mentality and the ideology of harmony that causes a lack between what the youth is made to achieve, and the impossibility of fitting this commodified life with no appeal to individuality. However, such communities of resistance bring forth new cases of alienation and normativity that operates in addition to the ones from everyday life.

The Effect of the Great Recession on out-Migration Self-Selection of the Foreign-Born

The scientific literature on the permanence of immigrants in host countries has faced the empirical challenge of measurement and characterization. Along this line, research on the impact of self-selection is crucial for a better understanding of international migration and assimilation process in the host countries. In this paper we present a comprehensive empirical analysis on the (re-)migration of foreigners in Spain. Using panel data from the Spanish Labor Force Survey we explore the relationship between out-migration patterns and the labor market situation. We focus our analysis on the self-selection process of out-migration and its change with the economic downturn. To model out-migration patterns we estimate a detailed event history analysis. Our findings confirm results from previous studies. Preliminary analyses reveal that the likelihood of leaving the host country is strongly determined by family configurations and the labor market situation of household members. Those who are unemployed have a higher probability of outmigrating, especially when other incomes are absent in the household. The findings also show differences with respect to national origin, sex, and education levels. More specifically, foreigners who have less than secondary education, and the less successful foreigners (in terms of labor outcomes) have a higher probability of leaving the country. Surprisingly, its intensity is weaker during the Great Recession than during the expansive economic period.

The Effect of Economic Crises on Work Orientations Among European Countries

An extensive body of research in social sciences has analyzed the change of values in developed societies, assuming that as populations experience higher levels of wealth and security there will be a shift in their goals to show an increasing preference for self-actualization views in detriment of the expressive work orientations, it will be expected a relative decrease of extrinsic work orientations -those related to external aspects of work and based on the notion that work is mainly a means of obtaining instrumental resources- in favor of intrinsic work orientations -those linked to working tasks and based on the supposition that work in itself is an enriching experience that allows one to enhance their personal development and self-expression-.

The current context of economic crisis has brought up a new scenario that could alter the direction of the predicted change in work orientations, producing a return to the instrumental views in detriment of the expressive work orientations, as a response to the uncertain and risky labor conditions.

The aim of this paper is to compare work orientations in several European countries in two moments of time, analyzing the differences among countries as well as the evolution of work orientations in order to test the impact of the economic crisis on such evolution. Data analysis will consider the impact of the economic crisis on work orientations at a double level aggregated and individual, and will be based on relevant data from the European Social Survey (2004 and 2010).

In this paper we explore the influence of linguistic inequality on the vitality of two related Otomapan languages spoken in Mexico, Chichimeco Jonaz and Tlahuica, both of which are endangered languages being displaced by Spanish.

First, we compare the similarities and differences in the social, geographical and historical contexts of the two languages. Then we apply an international criteria found in the UNESCO Vitality Index which determines degree of linguistic vitality in order to analyze and compare the use of Chichimeco Jonaz and Tlahuica. Finally, the role of language ideology as shaped by Mexican political economies and their institutions is touched upon. How changes in language policy have influenced language maintenance and shift is also discussed.

Japanese Food: An Analysis Of Culture Through The Values Derived From Attributes

The Japanese culture has expanded its horizons in many countries and regions. In special, Brazil, where the Japanese immigrants Represents the second biggest Japanese descendant group out of Japan, its values and habits have an important presence in Brazilian territory. One of the important aspects of this culture is the Japanese food. The latent values cause consumers to recognize products that lead them to achieve their goals and desired end states. Thirty in-depth interviews with consumers of Japanese food were made between the months of November 2012 and April 2013.

The ladder technique is applied, using personal interviews, with questions that express the goal in a game of links between perceptive elements. This technique is based on the implications glimpsed in the Theory of MEWC, with the central concept of 'ladder', exploring three levels: attributes, values and consequences. This technique provided the construction of an implication matrix and the hierarchical value map, to confirm the main elements of such behavior. The survey results showed, among consumers, values such as openness, exciting life, satisfaction, pleasure, happiness, self-esteem and affectionation, relationship and friendship. These values suggest an alignment with the Japanese culture mainly happiness, affection and friendship relationship.

Local Policing in the Global City: Community Safety Development in Tokyo

In large Global Cities, the 'command centres' of the global economy, most aspects of everyday life are subject to surveillance. Forms of Neoliberal urbanism have spread public space video surveillance, homogenized theme-park malls, gated private apartment blocks suburbs and exclusionary policies towards urban others: the homeless, undocumented migrants and so on. I have labeled this as a globalizing form of technocratic surveillance, however in previous work on Tokyo, one of the preeminent global cities, I have argued that in the Japanese capital, particularly in a large traditional outcaste population, and two middle-class suburban areas. It analyzes the different community-based initiatives that have emerged in each area, their compatibility with and connections to central police initiatives, and considers what combination of local or global forces are the predominant drivers in emerging crime prevention policies and practices.
There Are Few Cases Around Here: Structural Problems of the Japanese Nuclear Compensation Scheme

The Fukushima Daiichi Nuclear Power Plant accident resulted in mass evacuations and a contamination of wide areas. As a result, 1.5 million people are assumed to have legal claims against Tokyo Electric Power Company (TEPCO). The Nuclear Compensation Act provides a settlement procedure (ADR) based on guidelines issued by an ad hoc administrative committee to be set up after an accident. In other words, the law envisages that such an administrative procedure of paying ‘damages’ would apply to victims of a nuclear accident. However, the scheme of the law has not worked as well as the law expected. As the law did not provide how damages should be paid in case a total amount of damages would surpass the expected amount, guidelines for payment have been issued piecemeal. Moreover, the guidelines have been challenged even in settlement procedures. The nuclear ADR was initially designed for an out of court procedure against the backdrop of the extremely small lawyer population. However, the nuclear ADR has been operated as a rational settlement procedure rather than a procedure of traditional style of compromise, which requires lawyers’ involvement to handle cases. The Japanese society has grown to require legal intervention in handling mass claims but the existing structure of the legal system is unable to provide necessary amount of legal services to victims of the nuclear disaster.

Effect Of Men’s Educational Attainment On Their Fertility

We are interested whether the effects of men’s educational attainment on their fertility diminished over time across welfare regimes and by partnership types. Some research questions will be under study: What is the effect of educational attainment of men on their fertility? Is it different for men in consensual unions and in direct marriages? In which national context men’s fertility level specific to consensual union may be close to the total fertility rate of married fathers. Our hypothesis is that, in gender egalitarian societies, with more similar gender equality across welfare-state institutions, the total fertility of men (and women) depend less on their educational attainment but more on the type of union patterns. In more traditional societies the effect of education on male fertility is more important, despite the fact that is often the opposite of what it is for women.

GGS data for available countries will be used to compute duration-based total union specific fertility rates in the spirit of parity-progression ratios developed by Hoem and Muresan (2011) and to analyse life-time fertility determinants. The following variables will be included in the analyses: family background, gender, age, social background, partnership status, parental status, educational enrollment, educational attainment, calendar year, etc.

Knowledge Workers’ Subjectivities. Precarisation and Transitions of Young Highly Qualified

Over the past decades, many EU member States have registered a large raise in the use of temporary employment. Young people are far more likely than other groups to be employed in precarious jobs, independently from their education and social background. The precarious and invisible face of the contemporary knowledge workers can be used to gain insight into contemporary environmental problems like climate change.
Position of Women in Sociology or Female Founders in Sociology

Sister’s founders in sociology as a coin term are formed by Mary Jo Deegan, in order to explain, demarginalisation of female stream sociological theory. Even though there are more than 52 women considered to be founders of sociology, they are still not recognized in sociology, especially in Bosnian and Herzegovina. Aristotle’s distinction between male/female, according to authorship Shipley, represents the key moment to ideological foundation of the women exclusion from academia and public life, because their identification with natural and irrational. Results of Wars, global ecological movements, and movements for the rights of the minorities were joined together in creation of significant subversion and counterpart of male stream patriarchal ordained theories in eco feminine movement. Many The women and nature in male stream theories are considered to be the insignificant Other, formed as counterpart for male principal which is culture, reasoning and activity. Logic of domination versus its objection, imperialism, colonialism, patriarchy and European West racism must be rendered with the logic of nurturing as the prevailing concept of successful bioregional cooperation and interpersonal relationships, pacification and peace agreements. Key terms: logic of dominance, logic of care, malestream / femalestream, independent man vs. independent women, Aristotle’s misogyny.

NGOs and New Trajectories of Engagement and Youth Power in the Occupied Palestinian Territory

Youth civic and political engagements are not distinct or separated from each other, and in many cases they overlap and interlink, they result in diversity of youth engagement forms. Youth organizations play an important role in the occupied Palestinian territory (oPt) in terms of being a recourse, catalyst, and supporter for youth engagement, whether civic or political. As youth organizations were trying to cope with changes of sociopolitical context in the oPt, they reinforced different trajectories of engagement than the ones that existed within the Palestinian society between the 70’s, 80’s, and early 90’s. The organization’s type (Social movement organization, politically affiliated organization, youth development organization) is a vital factor in deciding how the organization dealt with changes in the context and the frame and trajectory of engagement reinforced.

This paper aims at understanding the change in the trajectory of engagement in the oPt; how does it differ from the trajectory of the engagement that took place between the 70’s and early 90’s; how does this change impact youth power and position in the oPt; How do different types of organizations provide different strategies, forms, of youth engagement?

Sexual Violence and the Issue of Comfort Women in Contemporary Japan

The “comfort” women, in reality sexual slaves for the Japanese military during the Asia-Pacific War, demand but have yet to obtain an official apology from the Japanese government. Rather, their demands have been met with insulting reactions from right wingers, including influential politicians, whose main reasoning is: 1) Those women were not forced but were licensed prostitutes; 2) it is a kind of universalism that soldiers of many nations have perpetrated wartime violations of the dignity of women; and 3) therefore Japan’s issue of comfort women is not peculiar in the history of mankind, so it is not necessary for Japan alone to apologize. This reasoning is not a relic of a bygone era, but sounds familiar and even resonates with current ‘rape myths’ and rape culture in Japanese society which encourage male sexual aggression and support violence against women. Regrettably, tolerance of sexual violence against women penetrates even the law. Consequently, CEDAW, in its 2009 Concluding Observations, urged Japan to revise and change for the better the sections of the Penal Code on sexual crimes against women (Paragraph 33-34, CEDAW/C/JPN/CO/6, 7 August 2009). The Government did not address this point in its response issued in August 2011. Furthermore, in recent years the Supreme Court of Japan has overruled several judgments by the lower courts in rape cases, usually deciding that the victim’s witness was not reliable.

My paper will examine in detail the connection between the reactionary response to the issue of comfort women and the reluctance to uphold women’s rights in cases of sexual crimes, and will discuss the deeply rooted misogyny in Japanese society.

Comparative Process-Oriented Research Using Social Media and Historical Text

Process-oriented methodologies place a strong emphasis on linking theory with empirical methods. However, in the digital age, this can sometimes be difficult to do. For example, much of our social lives increasingly occur online and we leave behind an enormous digital footprint. These data can be understood through a variety of empirical methods. The same can be said about the digital archiving of historical data. However, it is all too tempting to study these data without a clear theoretical framework. This paper seeks to understand partiality and perspectivity within comparative, historically-mediated empirical methods. This paper uses two empirical data sources: one contemporary (Twitter) and the other, historical (Google Books ‘n-gram’ data) to make an argument that we can use process-oriented theory to link empirical research and theory. It argues that process-oriented perspectives help bring notions of figuration into the interlock network, the point that the group G500 firms that are connected to each other through the transnational interlock network exhibit political unity comparable to that of the U.S. capitalist class.

Tweets As Democratizing or Reinforcing Existing Inequalities?

Social media platforms including Facebook, Twitter, and Tumblr, etc. have become more ubiquitous. Sociology is well-positioned to explore the power and influence of social media economically, politically, and socially. This paper is particularly interested in gauging the value of the Twitter community and whether tweets can be a democratizing force or usually reproducing current social hierarchies and inequalities. The social media website Twitter has been prominent in associating with a diverse set of political movements in the recent past, such as the ‘Arab Spring’. This paper begins by presenting a review of the literature regarding Twitter and social inequalities. It uses tweet data from June-July 2013 to classify sentiments which are associated with agency and lack of agency to draw macro-conclusions of whether aggregated tweets can be seen as generally empowering or not as an overall corpus of text. The paper provides an empirical answer to Twitter’s role in influencing global inequalities, a claim often made in popular media. The paper ultimately concludes that though there are limitations in automated sentiment analysis, interesting patterns of perceived agency against inequality do emerge.

Interlocking Directorates and Transnational Corporate Political Unity

The extent of a dominant transnational capitalist class hinges on whether members of the global business community tend to act in a unified manner. Research on corporate political behavior within a national context indicates that formalized ties in the business community, such as those formed by interlocking boards of directors, function to facilitate unified political behavior by the corporate elite. However, due to differing national identities and class interests within the global business community, the effect of transnational interlocks on political unity is unclear.

Combining data on political contributions to U.S. candidates with information on board of director interlocks among the 500 largest corporations in the world between 2000 and 2006, I test the effect of transnational interlocks on business cohesion. I find that the more connected two firms are through the transnational interlock network, the more unified their political donation patterns are. In addition, I find evidence that suggests that a transnational class-wide rationality is becoming more prevalent in the interlock network, to the point that the group G500 firms that are connected to each other through the transnational interlock network exhibit political unity comparable to that of the U.S. capitalist class.

Language Shift and Maintenance of Tamil Language in the Malaysian Multilingual Context

The prevailing multilingual situation of Malaysia reflects the gradual shift in the use of minority languages like Tamil, both in formal and informal domains of language use. The issue is several fold for language shift to take place language maintenance, and one such is the existing power that goes with language(s). How far language attitudes, linguistic views and power based policies will foster the use of concerned languages for the benefit of society at large is indeed a challenge and seems to be a question mark. The Malaysian Tamil society is gradually shifting in languages like English and Bahasa Malaysia as media of instruction to achieve education needs in different disciplines of knowledge, considering the modern economic-scientific and technological – occupational-de minations. Therefore, I propose a new approach to these models.

The Malaysian Multilingual Context

Language Shift and Maintenance of Tamil Language in the Malaysian Multilingual Context

Changing consumer behaviour is increasingly recognized as a key aspect of the shift to more sustainable societies. However, insights into how this may be achieved at the large scale remain few. This paper contributes to debates on how to stimulate pro-environmental behaviour change, with a case study of the adoption of low temperature laundry in the UK. The case is particularly interesting because the innovation, which requires consumers to alter their behaviour, has been promoted by detergent manufacturers, via existing products. The processes underpinning the change in practice are explored from the perspective of both producers and consumers. A multi-method approach is adopted, drawing data from interviews with households, actors across the laundry industry and a large-scale survey of consumer laundry habits. While efforts to stimulate uptake of low temperature laundry have met with a degree of success, the paper argues that adoption is constrained by the meanings embedded in existing laundry practic es, particularly links between temperature, cleanliness and hygiene. The analysis draws on Callon’s (2002) idea of ‘qualification’ which conceptualizes the dynamic, interactive process through which products are attributed meaning within a market environment. Attention to processes of qualification highlights the role of firms in shaping consumer practices, enriching practice-based accounts of consumer lifestyles which privilege consumers as the main actors in the creation of shared meanings. Conclusions are drawn with respect to the role of firms in shap ing pathways for change in consumer practices, through their role in shaping the ‘qualities’ of goods.

Contesting Chinese Capitalism

As the developmentalist goal of catching-up with the West is gradually achieved, will China’s political economy begin to gradually converge on an Anglo-Saxon (neoliberal) variety of capitalism? Or, in contrast, will the ‘China Model’ of combining a capitalist market economy with a Leninist Party-state continue to prosper in coming decades?

This article argues that to understand the prospects for the future of Chinese capitalism, we need a deeper understanding of the impact of public intellectuals, academics and think tanks in the ongoing ideational battle to define China’s na tional development strategy in the 21st century.

Based on analysis of original empirical data – in the form of interviews with 24 highly influential Chinese public intellectuals – this article contributes a typology of four different hegemonic visions for China’s future: First, the ‘neoliberal’ vision which proposes to further liberalize China’s economy, and reduce state ownership, whilst retaining the current authoritarian political system. Second, the ‘authoritarian socialist’ vision which also eschews parliamentary democracy, but insists on state-led capitalism as the key funding mechanism for building a paternalist welfare-state from above. Third, the ‘liberal democrat’ vision which combines a faith in markets and a distaste for state own-
ership with a call for parliamentary democracy. Fourth, the ‘democratic socialist’ vision which sets as its goal a political-economic model which is based on both egalitarianism and constitutionalism.

It is concluded that all of the four visions enjoy sufficient support among different social classes and interest groups to stand a realistic chance of becoming dominant in shaping Chinese capitalism over the next decades: While the two first visions describe a current split within the Party-state elite, the two latter visions represent two different political-ideological shapes for a potential counter-hegemonic social movement from below.

A Transnational Movement In Local Context – The Occupy Movement In Germany

The Occupy movement was a global phenomenon. After the advent of Occupy Wall Street (OWS) occupy camps mushroomed to other, in particular western capitalist states. The starting point of our own empirical research was the question, who participated in the Occupy movement. In our contribution we would like to present findings from an online survey of the Occupy movement in Germany. Carried out in autumn 2012 the study is based on more than 1000 voluntary participants (activist and sympathizers) of Occupy – it was announced through the channels of the occupy movement, Facebook and Twitter.

In our analysis we differentiate between three different groups: (a) Campers, the core activists of Occupy, (b) activists, who have been active in the camps and participated at demonstrations, etc. and (c) sympathizers, who have a predominately positive attitude towards the movement, shared links, etc. but didn't participate in physical actions. We present empirical results for these subgroups about their class/labour market position, their financial situation, their education degree, their (material and post-material) values, their attitudes towards work and society and their forms of critique of the financial crisis. We present both a narrative analysis of the development of Occupy in Germany and an analysis of the political, social, temporal, and spatial aspects. This includes an overview of the specific frames of actions and a field analysis of other groups involved in the protest, media coverage and the advent of “Blockupy”, a broader alliance of left wing groups, trade unions and Occupy activists. Thus we analyze the German Occupy movement in two ways: Firstly, we compare it to the empirical results of the OWS-research by Milkman et al. (2012). Secondly, we compare it to the social and political patterns of other recent social movements in Germany.

Reinterpreting the Relation Between Motherhood and Paid Work: Second Generation Women in Norway

A pertinent question in contemporary Europe is whether the children of immigrants will reproduce the so-called traditional gender arrangements and ideals of the migrant generation, which often include strong expectations that women should prioritise family obligations over the pursuit of paid work. This article analyses the cultural and moral understandings at stake in second-generation women’s reflections on and practices of combining motherhood and paid work, and explores the space for negotiating such understandings in the family. The study is based on in-depth interviews with second-generation women born to Pakistani immigrants in Norway, and interviews with some of their husbands. The findings show that the moral understandings and practices of the parent generation are not merely passed on to the second generation; rather they are challenged and reinterpreted in ways that support mothers’ participation in paid work. The article argues that this change is facilitated by the cultural and institutional context that the Norwegian welfare state represents.

Music As Youth Culture: Case Study in Japan

The objective of this report is to discuss how Japanese young people relate to music based on “A Generational Comparison Survey on the Lifestyle of Urban Residents and Their Sense of Awareness,” a survey of young people (age 15–29) and middle-aged people (age 30–49) conducted by the Japan Youth Study Group in 2012.

Globally, circumstances surrounding music have drastically changed since the advent of the Internet, continuing to push compact disc sales down. This fact is often interpreted as young people’s trend away from enjoying music in Japan, where many people believe that music is something for young people. The survey results indeed show such a trend. However, our data indicate that this trend away from enjoying music is observed not only among young people, but that it is particularly pronounced among middle-aged people. Therefore, I suggest that as people age, they tend to enjoy music less.
Obviously, many young people are interested in music. However, it is not their level of interest in music but the length of time they spend with music that has the largest impact on their musical behavior. This is supported by the fact that Japanese young people are often willing to use music as a communication tool.

Focusing on this fact, this report discusses what music is all about for young people and how young people relate to music — how music affects their everyday lives, self-consciousness, and relationships with friends.

Poverty and Mental Illness in People Excluded from the Labor Market in Japan

The unemployment rate in Japan remains at around 5%, with the proportion of the long-term unemployed higher than in other OECD countries. Our objective is to examine whether and to what extent labor market exclusion is associated with poverty and mental health, using data from the 2004, 2007, and 2010 Comprehensive Survey of Living Conditions. First, we categorized jobless people as “job-seekers,” “jobless people who have a desire to work, but do not seek a job,” and “jobless people who do not desire to work.” Then, we compared the economic and health conditions of jobless people to those of working people.

The main findings are: first, the proportion of “jobless people who have a desire to work” increased from 2004 to 2010. Compared to job-seekers or working people, these jobless people tended to be single men and married women. Meanwhile, jobless men and women had a desire to work if they were younger and had smaller savings. Second, in 2010, male “jobless people who do not not desire to work” were mostly likely poor or suffering from a mental illness. For women, however, “job-seekers” and “jobless people who have a desire to work” were more likely than those in other categories to be poor or suffering from a mental illness.

In conclusion, we found that being jobless may increase the probability of poverty and mental illness, even if employment is not being sought. Furthermore, we speculated that even if men neither search for jobs nor have a desire to work, they are not necessarily satisfied with their lives as jobless, and therefore they might be socially excluded. However, this is not true for women as Japanese society is based on a strong male-breadwinner model. Therefore, the meaning of being jobless differs for men and women.

Political Coverage of Japanese Newspapers in Brazil

Today in Brazil, there are several presses written in foreign languages directed to immigrant communities which appeared in the history of the immigrants. Which characteristics are present in those minority's medias? This work focuses on explaining activity of Japanese newspapers in Brazil, which are written in Japanese for the Japanese immigrant community and published in São Paulo, the most important city of Japanese immigration in Brazil. Generally, these ethnic medias for minority community have tendency to seek and keep traditional values and culture. However, it is interesting that these Japanese newspapers in Brazil report not only culture events or education's subjects, but also frequently political subjects. In the political subject, they report especially activity of Japanese descendant politics from the Japanese immigrant community. This work tries to describe the political coverage of the two Japanese newspapers, Nikkey Shim bun and São Paulo Shim bun, and to analyze that comparing with immigration's history and context of Japanese descendant's advance in the Brazilian politics. Qualitative content analysis was adapted to analyze the articles. We conclude that during the electoral campaigns, these newspapers represented some subjects with a favorable way to Japanese descendant candidates and showed guidance to vote on them by the journalistic persuasion, especially guiding the readers to concentrate their votes on some specific candidates to elect them with enough votes.

What Is Social about the Network?: An Analysis of the Application Program Interfaces of Popular Websites

API (Application Program Interface) is the method of continuous asynchronous sourcing of data between various applications. It facilitates exchange of data between the ‘networked/ networking’ society. The promise of communications technology among other things is the democracy, and the user-defined nature of interaction of players constructed by it. But the use of ‘bubble’ (Pariser, 2011) produced in the human-computer interaction to fashion online activities alerts us to a bias in the nature of such interactions while enforcement of technologies like unique identity based governance systems further complicates the digital divide bringing up the question of equality.

This paper is based on the analysis of API codes and its mechanisms, offered by Google, Facebook, Twitter and YouTube. The analysis looks into the nature of the ‘bubble’ generated in order to define the character of the network. This is in a bid to argue that the randomness promised by it is being reined in order to create patterns of interaction that are arbitrary and unequal compounding the problems experienced in infrastructural access and the lack of ‘cultural’ capital.

Technology is best analysed in technological terms in order to arrive at an understanding of its sociological dimensions. Such orientation is politically necessary to make apparent the hardwiring of inequality in the era of big data.

Costs for Survival

The necessary cost to continue the life increase year by year. It is said a baby was in Japanese assume a debt 7 month one's back just now. A fact is not able to pay to survival cost have not the method unless everybody depend on pitiful death or the help of others with obvious reasons of not income. Our viewpoint has, now a day, a nation must guarantees because of the system is organized by a nation, if the guarantee is not, everybody dies fields or only lives by personal responsibility. Nowadays, almost everybody are aware of the nation is not without persons. For the nation is considering the social-welfare that only taxes increase is able to reform.

We examine the cost for survival. This paper continues The 86th Japan-Sociological-Society-Meeting, 2013 in Japan present. We know already cannot adopt finding employment, when companies are not more than initial incomes. Furthermore, we understand the same everything compensation as Expenditures = (welfare, pension, public-works, public-employee-salary, subsidy: childcare-allowance), for Incomes = (bonds, taxes, contribution, monetary-easing). The cost for survival includes expensive structure of various taxes. Why does the cost for survival occur? Who have costs carry on theirs back else way to pay? Can they not pay costs by service and contribution to the society? Our study picks up a 15 villages’ example simulation to answer that question modeled on Japan where a mayor live and a staff who order public works, a youth and an old on welfare, grant a pension and three children. A bank employs president and a clerk. A company employs top and a worker. We understand and that the cost for survival increase according to the nation's expenditure and income up as various taxes. Our conclusion is that the best situation on the cost for survival lightens the burden.

Transformation of Labor Market and Legitimacy of Income Inequality in Japan

Many advanced countries have witnessed a growth of economic inequality in the age of economic globalization. However, economic inequality is not always regarded unfair. Historical and institutional contexts in each country frame citizens’ perceptions about to what extent and among which social groups economic inequality is regarded as legitimate. If citizens consider it legitimate, such economic inequality is likely to be reproduced. Therefore, transformation of labor market caused by economic globalization has grown inequality between different social groups to different extent according to how each country has legitimated economic inequality historically and institutionally.

The present research focuses on a Japanese case and investigates what inequality Japanese people regard as fair and how it relates to Japanese historical and institutional contexts. Japanese welfare-employment regime has supported citizen’s life differently according to one’s industry, firm size, and gender. We examine how this condition relates to Japanese perceptions about fair income gap

* denotes a presenting author. Abstracts are organized by first presenting author's last name.

683
by analyzing what determines "what amount of income people think that they should earn." To be more specific we investigate whether actual income gaps between social groups such as gender, those with different educational levels, occupations and employment status, are reflected by Japanese perceptions of 'just income gap' between these groups. As a result, we find that gaps of perceived appropriate income between different employment statuses and between different firm sizes are larger than actual income gap between these groups. Furthermore, employment status and firm size play more, or at least equally, important roles than occupation. It shows that Japanese people assume disproportional distribution of income according to firm sizes and employment status is more legitimate than one according to human capital.

NAGLA, MADHU* (M.D. University, bnagla@yahoo.com)
Leisure and Mental Health: Sociological Study Of Women Experiencing Leisure During Their Mental Illness

This paper reports the findings from interviews with 194 mentally ill women who are seeking treatment in government hospital, Gurgaon in Haryana State, India. The respondents were questioned about their participation in leisure activities, and also about the overall experience of leisure activities. The results show that the respondents believed that leisure is not a part of their routine activity and hence they do not get benefits of leisure in their mental and physical health. Further, respondents reported that leisure activities gives feeling of physical and mental health and also provides experience of pleasure and freedom. It is argued that, contrary to the notion that leisure helps in maintaining good physical and mental health, doctors do not insist on participation in leisure activities. It is concluded that leisure and mental health are all embedded in the surrounding social contexts and, indeed, that leisure activities in general are intrinsically entwined with their broader cultural and structural context.

When Poverty Alleviation Perpetuates Inequality. Struggles of the Poor in Johannesburg Post-1994

Although the institutions of apartheid began to be dismantled in 1994, South Africa still bears the scars of inequality and poverty it etched so deeply along the fissures of race, class and gender. Although the African National Congress (ANC) government has committed itself to eradicating poverty and ensuring "a better life for all", it has also embraced an approach to macro-economic policy largely neoliberal in character that has resulted in the enforcement of the duty to pay for basic utilities (especially water and electricity). Between 1999 and 2006 in Johannesburg residents in several of its townships (including Soweto, Alexandra and Orange Farm) came together in protests and formed social movements to demand that the municipality put an end to its experimentation with different forms of punishment and prevention of non-payment for the consumption of water and electricity (from cut-offs to prepaid meters). In these struggles, residents identified largely as poor people and demanded that the municipality acknowledge their inability to pay due to being unemployed or indigent by other means. Growing from illegal reconnections and mass marches and picketings, to include legal interventions and a constitutional court case, these struggles resulted in in-depth interviews with older renters in the private rental market and in public/social housing and a quantitative analysis of socio-economic household and individual data from the Household, Income and Labour Dynamics in Australia (HILDA) survey. The study focuses on the relationship between the cost of the accommodation, security of tenure, type and quality of accommodation, location and demographics of the neighbourhood and financial stress, income manageability, physical and mental health and subjective well-being. The results highlight the central role housing security and cost play in ameliorating or exacerbating the well-being of older tenants and their ability to lead a decent and valued life. The older public housing tenants because their rent is fixed at 25 per cent of their income and their security of tenure is guaranteed are able to lead a decent life and their subjective well-being is high. However, the subjective well-being of older private renters is generally poor. This is mainly due to their negligible security of tenure and the high cost of their accommodation.

A Labor Time Bomb? Workers’ Unrest in the Automobile Industry in India

In the Suzuki-owned Maruti-Manesar automobile plant in Gurgaon near New Delhi, in 2011, striking workers immolated a human resource manager. These migrant workers, who were employed informally in the formal industrial sector, demanded the right to represent themselves through independent unions. The insurgency has been one among a series of protests in the automobile sector in India, starting with the contract workers strike at the Honda plant in 2009. In Pricol, an auto part plant of the Toyota in Coimbatore, and in the Graziano Transmission unit at Greater Noida, the vice-president and CEO were killed by agitated workers. Bloomberg news termed these protests as evidence to a ticking labor time bomb. In this paper, I examine how far these protests signify the resurgence of labor unrests in India. The strikes were remarkable for the show of collectivism, use of disruption and violence, and demands that pertained to the workers as a whole. They implied a move from conventional union-based articulation by formally employed workers, to new demands for independent unions by migrant laborers. These protests were organically linked to production and socialization processes in the factories. India’s workers’ campaigns inspired by transnational imperatives. However, these protests, especially the disruption and violence involved, were indicative of a shrinking of the democratic space for struggle in India, which were equally evident in the rising number of disputes in the industrial environment. They occurred in companies owned by foreign owners, who have less supportive networks to sabotage and suppress them, compared to local owners. Finally, these protests were cellular in nature, rarely extending beyond the factories to become industry wide associations and coalitions.

Further, respondents reported that leisure activities gives feeling of physical and mental health and also provides experience of pleasure and freedom. It is argued that, contrary to the notion that leisure helps in maintaining good physical and mental health, doctors do not insist on participation in leisure activities. It is concluded that leisure and mental health are all embedded in the surrounding social contexts and, indeed, that leisure activities in general are intrinsically entwined with their broader cultural and structural context.

When Poverty Alleviation Perpetuates Inequality. Struggles of the Poor in Johannesburg Post-1994

Although the institutions of apartheid began to be dismantled in 1994, South Africa still bears the scars of inequality and poverty it etched so deeply along the fissures of race, class and gender. Although the African National Congress (ANC) government has committed itself to eradicating poverty and ensuring “a better life for all”, it has also embraced an approach to macro-economic policy largely neoliberal in character that has resulted in the enforcement of the duty to pay for basic utilities (especially water and electricity). Between 1999 and 2006 in Johannesburg residents in several of its townships (including Soweto, Alexandra and Orange Farm) came together in protests and formed social movements to demand that the municipality put an end to its experimentation with different forms of punishment and prevention of non-payment for the consumption of water and electricity (from cut-offs to prepaid meters). In these struggles, residents identified largely as poor people and demanded that the municipality acknowledge their inability to pay due to being unemployed or indigent by other means. Growing from illegal reconnections and mass marches and picketings, to include legal interventions and a constitutional court case, these struggles resulted in in-depth interviews with older renters in the private rental market and in public/social housing and a quantitative analysis of socio-economic household and individual data from the Household, Income and Labour Dynamics in Australia (HILDA) survey. The study focuses on the relationship between the cost of the accommodation, security of tenure, type and quality of accommodation, location and demographics of the neighbourhood and financial stress, income manageability, physical and mental health and subjective well-being. The results highlight the central role housing security and cost play in ameliorating or exacerbating the well-being of older tenants and their ability to lead a decent and valued life. The older public housing tenants because their rent is fixed at 25 per cent of their income and their security of tenure is guaranteed are able to lead a decent life and their subjective well-being is high. However, the subjective well-being of older private renters is generally poor. This is mainly due to their negligible security of tenure and the high cost of their accommodation.

A Labor Time Bomb? Workers’ Unrest in the Automobile Industry in India

In the Suzuki-owned Maruti-Manesar automobile plant in Gurgaon near New Delhi, in 2011, striking workers immolated a human resource manager. These migrant workers, who were employed informally in the formal industrial sector, demanded the right to represent themselves through independent unions. The insurgency has been one among a series of protests in the automobile sector in India, starting with the contract workers strike at the Honda plant in 2009. In Pricol, an auto part plant of the Toyota in Coimbatore, and in the Graziano Transmission unit at Greater Noida, the vice-president and CEO were killed by agitated workers. Bloomberg news termed these protests as evidence to a ticking labor time bomb. In this paper, I examine how far these protests signify the resurgence of labor unrests in India. The strikes were remarkable for the show of collectivism, use of disruption and violence, and demands that pertained to the workers as a whole. They implied a move from conventional union-based articulation by formally employed workers, to new demands for independent unions by migrant laborers. These protests were organically linked to production and socialization processes in the factories. India’s workers’ campaigns inspired by transnational imperatives. However, these protests, especially the disruption and violence involved, were indicative of a shrinking of the democratic space for struggle in India, which were equally evident in the rising number of disputes in the industrial environment. They occurred in companies owned by foreign owners, who have less supportive networks to sabotage and suppress them, compared to local owners. Finally, these protests were cellular in nature, rarely extending beyond the factories to become industry wide associations and coalitions.
From Analysis of Ijime (Bullying) in Japanese Schools to Reforming Psycho-Social Orders

In this paper, we examine ijime (bullying) in Japanese schools and, so doing, propose hypotheses about the basis of wholesome civil society. Japanese (especially middle) school adopts the extreme groupism, which forces all people involved to live a highly controlled collective life in a totalitarian and closed environment. It denies not only the civil liberty but also the civil society order that ensures the liberty outside of it. This provides us with the functional equivalent of Philip Zimbardo’s experiment in which he analyzes how human beings are transformed, and what reality and psycho-social order are generated among members under certain conditions, though this kind of experiment is now prohibited from an ethical viewpoint of research. Bullying can be observed in almost any school in the world but the Japanese bullying, ijime, deserves close examinations for those particular conditions that Japanese schools force on the students. Many cases of ijime can be ascribed to the psycho-social order imposed on the students’ everyday life in the classroom. Examining the psycho-social mechanisms that accompany the order above, we can abstract the basic theories about violent and persecutory psycho-social properties of human beings (e.g. various psycho-social explanatory models, ecological models of psycho-social orders, and combination of them with evolutionary theories), which are potentially applicable to various types of violent and persecutory phenomena among human beings. We can expect several outcomes of this study: (1) Psycho-social analysis of and countermeasures against bullying in school; (2) Several findings about psycho-social orders where dense interactions within groups bring about inner changes of individuals, which leads to violent and persecutory psycho-social orders—these processes loop spirally; (3) Based on the aforementioned outcomes, a framework for countermeasures against violence and persecution from domestic violence to everyday life in the classroom. Examining the psycho-social mechanisms that accompany the order above, we can abstract the basic theories about violent and persecutory psycho-social properties of human beings (e.g. various psycho-social explanatory models, ecological models of psycho-social orders, and combination of them with evolutionary theories), which are potentially applicable to various types of violent and persecutory phenomena among human beings. The Knowledge Production By the Community Against Inequality of Development Assistance Programs; The Case Study of Mangrove Forests Conservation Activities in the Republic of Guinea

This study analyses that inequality in the project on mangrove ecosystem conservation programs and its result. The mangrove ecosystem is established only in the limited area and is one of valuable one to support biological diversity. The Guinean mangrove forest has the value as “an economic forest” producing firewood. Therefore it is important natural resources supporting the everyday life of coast inhabitants. The mangrove in Guinea is used mainly for salt manufacturing of seawater boiling-style and smoked fish. However the mangrove ecosystem is easy to catch the pressure of the development. So it is weaker than other forest ecosystem, and the sudden destruction is reported. Based on such values, wave of conservation and the mangrove activity flockes from the foreign country as the urgent matter.

However, most of these activities or programs entails inequality. The target selection is based on the frame of the donor agents. In other words, the donor agents usually choose communities in an area where achieve their goal easier. To overcome, some communities make every effort to receive the benefit of the program without noticing the attitude of pre-established harmony of donor agents. So, does local community that is off a target accept the inequality like this? The question to the answer is to illuminate that the local community has the power to replace process of such inequality with process of growth. This case study would like to evaluate adaptability of local community and conclude possibility of the community-based environmental conservation activities.

Positive/Negative on Leisure: From the Perspective of the Difference of Enjoyment and Pleasure

This presentation aims to examine positive/negative on leisure we participate in. In the examination, we helpfully apply flow theory described mainly by Csikszentmihalyi. he has found out the significance of Instrinsicly Reward leading to Enjoyment as the case. Further, the case study examined the case studies such as rock climbing everyday work. This study distinguishes the positive from the negate, applying critically flow theory. The main issue is the difference of Enjoyment and Pleasure. According to Csikszentmihalyi, enjoyment is useful for the growth of self. Pleasures useful just for keeping the order of self, it exists just on time. On the one side we have examined the former studies which focus on leisure from the perspective of consumption, we can take positive parts in leisure. But we demand Pleasure when we regard leisure as consumption. On the other side, we have examined the former studies which focus on leisure from the perspective of the growth of self, we can take positive parts in leisure. So is the chance which we create Enjoyment.

It is the meaningful that we have found out the difference of two meanings of positive, which differ the case we regard leisure as the growth of self from the case we regard it as consumption. That is to say, on the one side, it is the chance of the working off the energy that we take positive parts in leisure regarded as consumption. On the other side, it is the chance growing self that we take positive parts in leisure creating Enjoyment.

Effects of Wives’ Relative Resources on Husbands’ Gender Role Attitudes Among Dual-Earner Families

This study examines how in Japan, husbands’ gender role attitudes among dual-earner couples with children are associated with their wives’ relative resources, namely, their employment status, and educational levels. Japanese men have more traditional gender ideologies compared with their American counterparts. However, gender ideologies among Japanese men are becoming non-traditional. Previous studies reported the threat hypothesis, in which husbands among dual-earner couples insist traditional gender role attitudes when wives’ economic contribution to the family income exceeds theirs. This paper reports the result of a questionnaire survey conducted in February 2011 on 342 dual-earner Japanese husbands who had children less than 12 years of age.

Two results are obtained through path analysis. First, when wives’ educational levels or managerial posts are higher, wives’ incomes will be higher. The wives’ higher income is associated with the husbands’ more egalitarian gender role attitudes. However, the wives’ educational levels or managerial posts are not directly associated with the husbands’ gender role attitudes. Japanese husbands may tend to hold egalitarian gender ideologies when they hold lower breadwinner roles, and their wives have a higher economic status. In this regard, the threat hypothesis is not supported, whereas the benefit hypothesis is supported. In addition, the husbands may not care about their wives’ social positions, in terms of educational levels and managerial posts. Therefore, Japanese husbands’ gender role attitudes concern their wives’ provider roles within the family, but not with their wives’ social roles in public. Second, it is speculated that the smaller the difference between husbands’ incomes and their wives’ incomes, the lower the level of husbands’ tendency to adopt traditional gender role attitudes.

Solution To Problem Of Free Rider Through Division Of Production and Sanction

The meta norm (Axelrod 1986, Yamagishi 1990) is one of solutions to the problem of free rider. The meta norm requires all persons to be engaged in a production and a sanction at the same time. However, it seems impossible for a person to play both roles because one is different from the other as a professional job. So we suppose the division of roles meaning that a person can't play both roles, and examined whether the division can solve the problem of free rider. So in ACH, we introduce two kinds of players. One is a sender who doesn't engage in a production (that is, he/she doesn't pay a production cost), focuses on a sanction against a free rider with a sanction cost, and is presented a payoff by the other role. We call the player the "guardian." The other is a player who focuses on a production of collective goods with a production cost, doesn't engage in a sanction against a free rider (that is, he/she doesn't pay a sanction cost), and presents a payoff to a guardian. We call the player the "tributary." With a guardian and a tributary in addition to a free rider, we executed evolutionary simulations to examine whether a guardian can exclude a free rider and a guardian and a tributary work together for mutual benefit. As a result, we found that the division of roles had established and the coalition could exclude a free rider. Especially, it is found that guardians account for up to the same rate of a society as a presented payoff divided by a total production, which reminds us of a kind of tax rate.

Cosmopolitanism, Nationalism, and Colonialism: The Manchurian Motion Picture Corporation and The Production Of My Nightingale (1943)

This paper contributes to emerging studies on cosmopolitanism by presenting a sociological, historical-institutional analysis of the production (and, to a lesser extent, reception) of an arguably "cosmopolitan" film, My Nightingale (Watashino no uguisu, dir. Shimazu Yasujiro, 1943), produced at the height of Japan's ethnic-nationalist period during the Second World War. I ask the following three research questions. First, what aspects, if any, of the film text can be considered to entail cosmopolitanism? Secondly, whether, how, and why could the possibly cosmopolitan aspects of the film text emerge under the existence of ethnic-nationalist policies, institutions, attitudes, and behavior existing in the Japanese colonial empire? Thirdly, what implications does this case study have on the ongoing debates on cosmopolitanism, nationalism, and political space? By providing answers to these questions, I argue that an ahistorical, normative call for cosmopolitanism may hinder our grasp of the possibility that some forms of claim to cosmopolitanism entail a rationality of narrow ethnocentric nationalism. As a historical hindsight, it is easy to dismiss Manchuria's slogan of gozoku kyōwa (heavenly place of virtuous rule) as simply political propaganda. But it may also be the case that this apparently cosmopolitan justification might have strengthened the degree of repressionist and discrimination of the Japanese colonial rule in Manchuria. In other words, I contend that the case study of the Manchurian Motion Picture Corporation and the production of My Nightingale suggests a possible coexistence of cosmopolitanism, nationalism, and colonialism.

The Challenge of Supporting People Suffering Ambiguous Loss: An MPS Case Study

This presentation examines the challenge of supporting people suffering ambiguous loss. "The theory of ambiguous loss" was introduced by Pauline Boss to define the sort of unclear loss that defies closure, such as having a family member go missing during a natural disaster and caring for a loved one with dementia. Boss provides detailed strategies for professional therapists to treat people suffering ambiguous loss, but does not sufficiently explain how supporters with key information should negotiate these delicate situations. In order to evaluate this aspect of ambiguous loss, I observed and analyzed the activities of the Missing Person Search Support Association of Japan (MPS), a non-profit organization dedicated to helping families search for their relatives who suddenly disappeared. Families in these situations experience ambiguous loss, as they do not know if their loved ones are dead or alive.

My analysis shows that MPS volunteers have to provide mental and emotional support to the families of missing persons while assisting with search efforts. The volunteers listen to families' anxieties about their relatives' safety almost every day. They primarily try to be sympathetic and receptive to the families' narratives of loss, like a strategy Boss recommends. However, sometimes they must impose upon or contradict these narratives when they obtain new information during their search. In these situations, they struggle with the decision to inform the families that their loved ones will likely never return to them, despite their hopes to the contrary.

This case study illustrates that clarifying ambiguous situations often conflicts with mental care goals when supporting persons suffering ambiguous loss.

The Meanings of Childhood Mental Health Problems and Children Behaviour: A Comparative Study Between Brazil (Santos) and France (Paris 19ème)

Epidemiological studies developed in the last 10 years, mainly in the Western countries, indicate a global trend of an increasing number of mental health problems in children and adolescents, as confirmed by epidemiological studies conducted also in Brazil and France. To understand the phenomenon in these countries, the study had as objective to understand the meanings of mental problems and children's behavior from a sociocultural perspective, by analyzing children's experiences beyond adults' discourse, namely of health professionals and children's parents.

The research was based on the ethnographic method and took as its starting point the experiences of children with mental health problems who receive care from health services. The fieldwork was carried out in two mental health services: the Child Mental Health Service of the Northwestern zone (SCV), in Santos, Brazil; and the Medical and Psychological Centre of Flandre (CMP Flandre), in Paris (19ème), France. To apprehend the different meanings of childhood mental health problems in these contexts, in-depth interviews were made with health professionals of both services and with the children's parents. The discourses about the problems and complaints concerning the children's behaviour were analysed and grouped by categories to allow the identification of similarities and differences among the adults' discourses, as well a comparison between the two services.

Adults relate childhood mental health problems to children's behaviours that they consider as strange, disruptive or disturbing, as observed at home and mainly in the school. The analysis of the different meanings of childhood mental health problems in these countries point to the interpretation between mental problems and children's behaviour in a common sense, which solutions are sought in mental health services. We observe a displacement of children's life problems towards mental health field, which makes it possible the solution to general children's behaviour.

Logic behind Life Reconstruction in the Mt. Unzen-Fugen Eruption Disaster

Areas that sustain damage in a natural disaster are forced to choose between restoring the original area and relocating to another area in order to reconstruct residents' lives. At the same time, SABO plan (erosion and sediment control) are undertaken in damaged areas in preparation for another disaster. In the initial stage of minimization of disaster loss, people unite and undertake one direction in order to defend their life. However, in the life reconstruction stage, individual issues emerge such as family structure, livelihood, economic conditions, and disabilities in degree of damage, making it difficult for the whole community to keep in step.

Following the establishment of the Basic Act on Disaster Control Measures, the Mt. Unzen-Fugen eruption disaster was the first disaster to establish a hazard area in a residential area. This report focuses on the villages that fell within the SABO dam site under the plan to prevent expansion of eruption damage to central city. People in these damaged area faces two major issues. One was that the village was divided up into areas included in the SABO dam and areas that were not. The other was that the villages included in the SABO dam had to make the difficult decision to dissolve their community and vacate their homes. People consented to these unacceptable terms at an early stage because people feared prolonging a decision would cause a delay in the construction and result in a man-made disaster.

Furthermore, villages were against moving to reclaimed land on the coast provided to them by the government. Concerned with the reconstruction of their way of life, they found their own land for relocation. This report seeks to clarify requirements for life reconstruction in this area pertaining to the issue of having to relocate due to disaster prevention projects.

Involvement in Tourism and Bodily Changes: Long Braided Hair and Beaded Neck of the Pastoral Samburu

The body of the pastoral Samburu of northern Kenya is in the process of re-organizing under the tourism contest their beaded adornments or their "traditional" appearances become commoditized. In this presentation I will introduce examples of heavily beaded neck, long braided hair, and holed earlobes, etc., which have played significant role to indicate the persons' social and ritual status, are now drastically changing in their meanings. I indicate the process that the interaction with the tourists, for example, makes people redefine their body parts and manipulate their ethnic or personal identity.

Factors for Regional Variation in Japanese Fertility

How do people decide whether to raise children? This research examines the factors inherent in the very existence of the family: what explains family formation decisions? In particular, I seek to explain the considerable regional differences that exist in family formation, within the context of the falling birth rate in Japan. I analyze the influence of various contributory factors such as the differential economic costs, that is, the variance in the actual costs of raising child and also in the economic benefits available. I will also examine the factors which cannot be simply attributed to the economic costs and benefits, such as regional pressure of convevors - the factor of which is taken for granted on family formation - how such reinforcement systems vary regionally, and how such conventions are reinforced. I mainly analyze data gathered by the cabinet office: Research on Child-rearing Environment in Urban and Rural Areas.

Regional Variation of Gender Stratification Among Japanese Lawyers

This presentation focuses on regional variation of gender stratification among Japanese lawyers. In terms of specializations, Japanese female lawyers seem to be bifurcated in a way. A large number of Japanese female lawyers engage in family law in solo practice or smaller firms than their male equivalent, while an increasing number of female lawyers work for large scale international law firms, engaging in corporate law. Such bifurcation is related to regional differences. For instance, international law firms are only located in major metropolitan areas, and therefore job opportunities for such firms are limited to those who practice in such area. Moreover, traditional gender values are stronger in non-metropolitan areas, and it may affect and limit specialization for female lawyers. On the other hand, the relative shortage of lawyers in non-metropolitan areas could lead to better advantages for female lawyers in finding jobs in those areas. Thus, this presentation sets out to statistically examine regional variation of gender stratification among Japanese lawyers. The index of gender stratification to be used includes specializations, current firm sizes, positions, and income. The data to be used is lawyer's census (Keizai Kiban Chosa) conducted by Japan Federation of Bar Associations in 2010.

Social Resources and Accessibility to Care: A Case Study of Patients with Disabilities in Tanzania

In Tanzania, which is one of the low income countries, governmental organizations (GOs) and non-governmental organizations (NGOs) have put more and more emphasis on the rights of people with disabilities (PWD) after 2000s. The National Policy on Disability 2004 and the Persons with Disabilities Act 2010 have put in force, and surveys on PWD are conducted in 2002 and 2012 Census. In 2008, the government carried out the first comprehensive survey on disability in the country. According to the survey, 7.8% of the population aged 7 and above have some form of activity limitation.

However, there is no actual service provided by GOs for PWD. Some PWD get information about the services provided by NGOs and can access to the services, but others may not. The accessibility is dependent to the social resources which PWD have. Social resources include the social network, the physical environment around PWD, and the economic situation of the persons themselves or their care givers. It is apparent that there are many factors cause inequalities in accessibility to care.

The applicant is going to consider what kind of social resources are important to get care in the Tanzania mainland context. The applicant puts the focus especially on the importance of the social network, because in Tanzania mainland people rely on the social network to move and can gather money from the network. The social network gives chance to PWD for changing situations around them such as the physical environment and the economic circumstances on a temporary basis. The data used in this presentation will be documents on GOs/NGOs’ activities for PWD, and findings from on-site observation and interviews in PWD in Dar es Salaam and Dodoma, which the applicant has conducted in 2013.

NAKAZAWA, WATARU* (Osaka University, wnakazawa@hrs.osaka-u.ac.jp)

Impact of the Long Recession on Japanese Careers

The aim of this presentation is to examine the effect of the long recession on Japanese careers. After the Lehman economic crisis of 2008, many social scientists discussed the changes that took place in the Japanese labor market and the problems of unstable employment. The smooth transition from school to work has been one of the unique characteristics of the Japanese labor market. However, the number of young people who could not follow the typical career path increased, and it has become more difficult to obtain regular jobs. Additionally, opportunities for regular jobs are said to be unevenly distributed on the basis of educational backgrounds. Many social scientists focused on the lifetime employment system, and they presupposed that continuing in the same workplace was a better option rather than frequently changing jobs. However, the present condition of the labor market appears to be anything but simple. Today, if persons with high educational backgrounds change jobs often, they might still be able to get another regular job easily. On the other hand, even if those with lower educational backgrounds continue in their jobs as nonstandard workers, they may not be considered as regular workers. The role of mental care (easier than going to hospital) is necessary in Japanese society, and this kind of place playing a role is called “mama” and this kind of place is called a “snack bar.”

Capital and Self-identified Social Stratum

In Korea, the gap between the poor and the rich has become a serious social problem since the economic crisis of 1997. Income disparity has been equalized until 1997, but income disparity has taken sudden turn for the worse after the economic crisis. The previous studies on social impact of economic crisis include polarization of social stratum, appearance of the new poor population, expansion of irregular workers, popularization of unemployment and dissolution of family, disappearance of social relations etc. How the economic crisis has deepened the social gap in Korean society? The social crisis has directly linked economic troubles after economic crisis. The economic troubles often make people withdraw from social relations and underestimate one’s socioeconomic status, and by extension they affect negatively the hope for the future. The purpose of this paper examines the negative effects of economic deprivation on social capital. Furthermore we explore the economic deprivation and reduced social capital has negative influence on self-identified social stratum, life satisfaction and optimism for one’s future.

Distributive Equity in Waste Disposable Facilities Siting and the Perception of Necessity: In-Ward-Waste-Disposal-Principle in the 23 Wards of Tokyo

What affects the realization of an idea of distributive equity in the siting of waste disposal facilities? This study shows how the realization of an idea of distributive equity in waste management of Tokyo, In-Ward-Waste-Disposal, was significantly influenced by the degree of the perceived necessity for more incinerators. The siting of waste disposal facilities often faces conflicts with neighbors due to the negative impacts on a host community. Distributive equity is one of the most crucial aspects in these conflicts as the facility siting brings the sense of unfairness to those who are told to accept them. In the 23 wards of Tokyo, how to redress inequity in the distribution of waste disposal facilities has been one of the biggest concerns in waste management. In the early 1970s, In-Ward-Waste-Disposal, which meant that waste of a ward should be disposed of within the ward, was adopted as a significant principle in waste management and translated into One-Ward-Incinerator-Principle. However, this idea of distributive equity was not completely realized and abandoned in 2003. By comparing the four periods between 1971 and 2003, this study argues that the progress of One-Ward-One-Incinerator depended on how much more incineration capacity was assumed to be necessary given the estimated amount of waste in the future. The incinerators siting to realize In-Ward-Waste-Disposal was facilitated when the urgent necessity to build more incinerators was perceived by the government under the rapid economic growth and the dominant influence of Incinerationism as the policy paradigm in waste management, while the siting became stagnant when the urgent necessity was eased as the economy became sluggish and the influence of Incinerationism was undermined by the emergence of Sustainable Waste Management as the new paradigm. When the necessity was denied, In-Ward-Waste-Disposal was abandoned and the attempt to find another way to redress inequality began.

Social Gap in Korea: The Effects of Economic Deprivation on Social Capital and Self-identified Social Stratum

In Korea, the gap between the poor and the rich has become a serious social problem since the economic crisis of 1997. Income disparity has been equalized until 1997, but income disparity has taken sudden turn for the worse after the economic crisis. The previous studies on social impact of economic crisis include polarization of social stratum, appearance of the new poor population, expansion of irregular workers, popularization of unemployment and dissolution of family, disappearance of social relations etc. How the economic crisis has deepened the social gap in Korean society? The social crisis has directly linked economic troubles after economic crisis. The economic troubles often make people withdraw from social relations and underestimate one’s socioeconomic status, and by extension they affect negatively the hope for the future. The purpose of this paper examines the negative effects of economic deprivation on social capital. Furthermore we explore the economic deprivation and reduced social capital has negative influence on self-identified social stratum, life satisfaction and optimism for one’s future.

NAM, SANG-HUI* (Chernowitz University, sang-hui.nam@soziologie.tu-chemnitz.de)
Chance and Risk of Qualitative Interview Methods in an International Comparison

The study aims to identify problems in conducting and interpreting qualitative interviews in an international comparison and present some solutions. With the help of new communication technology and increasing cross-border mobility, qualitative interviews enjoy favorable basic conditions. Methodological innovations and quality criteria lag still behind. Since foreign language and alien culture come into play, qualitative interviewees need native speakers as interviewers or translators and, in the same vein, insiders as cooperation partners and co-interpreters. To study strategies that intervention of natives needs more reflection. Researchers should know in which context an insider is situated with regard to age, gender, classification, and social position in his or her own country. In addition, there are usually interest conflicts, perspective differences, trust or mistrust, power distance, and pre-knowledge between two countries. In the light of that, thorough pre-research for cross-border interview interventions is of great importance. In my study small experiments with interviews about “civil society” with German and Korean interviewees will be conducted. Questions about “global civil society,” “global values,” and “global discourse” will be asked first with insider’s intervention and secondly without. By comparing the two settings, results will show how intervention of an insider works in a qualitative interview and how to reduce one-sidedness, distortion, or misunderstandings.

“Viet Kieu” or Overseas Vietnamese and the Future of Viet Nam: The Case of Viet Kieu Association in Thailand

The Socialist Republic of Viet Nam (SRV) or Viet Nam is one of the countries on the Indochina Peninsula in Southeast Asia which had many times faced severe circumstance caused by colonization. However, Viet Nam finally surmounted all difficulties and has been gradually developed by great help of its own people, particularly overseas Vietnamese, including those who have already returned and who are still abroad. “Viet Kieu” or overseas Vietnamese has a long history closely linked to the protection and construction of Viet Nam. Approximately, there are 4 million “Viet Kieu” or overseas Vietnamese currently living, working and studying around the world. “Viet Kieu” is playing an important role in preserving Vietnamese language, national culture, tradition and knowledge outside the country, contributing to Viet Nam’s economic growth as well as development the foreign relations of Viet Nam.

The study aims to analyze role of “Viet Kieu” community, particularly in Thailand, in strengthening overseas Vietnamese regime and making great contribution back to the country. The study further highlights view of the Viet Nam State about “Viet Kieu”, including its distinct policy on nationality management towards these populations, to create favorable conditions for them with a view to integrating them into the Viet Nam society, in strengthening overseas Vietnamese regime and making great contributions to Viet Nam’s economic growth as well as developing foreign relations of Viet Nam.

Governance As an Emergent Compromise: Access to State Service Delivery in an Islamabad Squatter Settlement

Compromise between the formalizing imperatives of modernization and local-grounded informal networks can provide the basis for stable governance in the cities of the global south. This paper examines urban governance in Pakistan as seen through the experiences of an Islamabad squatter settlement accessing electricity supply through the state-run electricity utility. After a crackdown on illegal connections, community leaders negotiated a compromise with the utility leading to the installation of two official electricity meters for 600 households, with billing and individual connections handled by a committee of residents established for this purpose. Some households in the squatter settlement did secure individual contracts for service delivery, only to retreat to the communal arrangement when they found that formal contracts could also be used to reinforce patterns of exploitation and inequality rather than simply securing their rights of access and claim-making. The emergent pattern of governance – more stable than its predecessors – is one of compromises between formal contracts and the lived reality of an Islamabad squatter settlement. These local struggles with modernization are echoed at the policy level as well, where the state has retreated from market-orien-

ted institutional reforms in the electricity sector to a more straightforwardly hierarchical set of relationships among state organizations.

Empleo De La Tecnología Para Enseñar Matemáticas En Ciencias Sociales

Nuestra labor diaria consiste en enseñar matemáticas a los alumnos de las licenciaturas que se ofrecen en la División de Ciencias Sociales y Humanidades (DCSH) de la Universidad Autónoma Metropolitana plantel Xochimilco (UAM-X). La enseñanza de las matemáticas, por sí misma, tropieza con obstáculos que se ven incrementados cuando los estudiantes a los que se les trata de instruir pertenecen a un área, supuestamente, alejada de ellas.

En la DCSH cada grupo es atendido por tres profesores con distinta formación que trabajan coordinadamente, integrando las diferentes disciplinas que intervienen en el núcleo del aula de un tema eje; es el especialista en matemáticas, quien se topa con más dificultades para lograr la integración de su materia al resto del material.

Esta compleja situación problematiza el proceso de enseñanza y nos conduce a modificar las estrategias apoyándonos en la tecnología para disminuir esta aversión de los estudiantes y mejorar los resultados, haciendo la clase accesible, divertida e interesante.

Para garantizar un buen logro en el proceso enseñanza aprendizaje se considera importante tomar en cuenta el estilo utilizado por cada estudiante para aprender, muchas veces, ni él mismo es consciente de su existencia, por lo que hacer énfasis sobre ella es un primer paso hacia la ética de estudio, pues el descitante puede empezar a aprender si conoce lo que requiere para lograrlo.

En este trabajo se propone un método de enseñanza acorde con los principios conceptuales de la UAM-X, compatible con las actividades fundamentales del sistema modular, que incluye entre sus características:

• Apoyo en la intuición
• Apoyo en lo real y actual
• Utilización de herramientas tecnológicas
• Conciencia de la importancia de la motivación
• Adquisición de los procesos típicos del pensamiento matemático a través del aprendizaje activo
• Enseñanza a través de la solución de problemas
• Balance entre el rigor y la aplicación

Hacking the Body: Body Enhancement and the Construction of the Envisioned Future

This paper concerns the movement defined as “Body Hacktivism”, whose goal is to unite hacking, body modification and activism. The body hacking is a current whose enthusiasts are found in different places in Europe and the Americas, and are connected through a network. The voluntary and experimental approach of the “Body Hacktivism” has as extension the creation of new devices that can be added and interacted with the body. For instance, the implant of R.F.I.D. microchips under human skin, subcutaneous magnetic implants which take the form of metal pieces whose main interest is to react to waves and electromagnetic fields, replacement of skin parts by titanium plates that can be used as a receptor for various components, and also the explorations of sexuality by the creation of virtual and physical reality convergence in the metaverse. These artists’ experience and their mise en scène of the self in the context of body modification is usually accompanied of a political discourse, that claims the individual’s right to his/her own body. The existence of these discourses has decisive power in forming and unifying conceptions of the future body, excluding and including possibilities. If for the body hackers the future exists first in imagination, their next step is the willingness to make it real through experiments, opening the possibility to make their futuristic dreams become reality. Our line of thinking reconceptualizes “body” in terms of assemblages, relations, practices and distributes agency and knowledge across heterogeneous materials. The Body Hacktivism is actively challenging long-held normative beliefs about what bodies do, what they should look like and how they should behave. They are not only pushing the boundaries of their own bodies, but are explicitly challenging the very definition of nature, culture, and technology.

Nigerian Agricultural Transformation Agenda: Conceptual Plausibility, Infrastructural Vulnerabilities and Disturbing Auguries

Agriculture in Nigeria has performed below its vast potentials of yielding an acceptable living standard for the ordinary farmer in a globalized world. The sector was the mainstay of the economy before the exploitation of crude oil. The discovery of the latter led to total neglect of the sector which continues to make significant contribution to world production of several commodities. Agriculture in Nigeria is characterized by smallholdings, low technology, little value addition and mass production. Government efforts to intervene in the past have been hampered by monumental corruption among other factors. Recently, the government introduced a blueprint to develop agriculture in the country christened ‘Agricultural Transformation Agenda’ which seeks to transform agriculture from a traditional habit to modern business. The paper examines the concept behind the model vis-a-vis the infrastructural and institutional foundations required for the programme to deliver sustainable impacts. The paper concludes that the thinking behind the policy is sound but its workability may be compromised by the poor physical and social infrastructure, and dysfunctional institutional framework that could stunt the programme's implementation. The paper concludes by observing some disturbing signals associated with the policy.

The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM)

The German Panel Analysis of Intimate Relationships and Family Dynamics (PAIRFAM) is a multidisciplinary, long-term research program that is yielding rich data for the longitudinal study of family and living arrangements in Germany. Its main focus is on partnership processes and quality, parenthood decision making and fertility, parenting and child development, and intergenerational exchanges. A number of issues from other domains of life such as education, work, income, housing, health, religiosity, leisure activities, and network embeddedness are included as well.

The PAIRFAM survey started in 2008 with a nationwide random sample of more than 12,000 anchor respondents in the three cohorts born between 1991-93, 1981-83, and 1971-73. Respondents (“anchors”), partners, (step)parents, and children above age 8 are interviewed. The program with the implemented multi-actor design is scheduled to run for a total of 14 waves with annually conducted interviews. Thus, we will be able to cover the most important family formation stages from age 15 up to age 50. The German Family Panel PAIRFAM provides a rich data infrastructure on a wide range of family related topics allowing researchers to analyze private living arrangements as they develop over time and in explicit consideration of the mutual interdependencies of relevant family members. Great efforts are being made by the project team to release fully prepared and documented data from the current survey wave as early as possible to the international and interdisciplinary scientific community. The scientific use file with data from the first five waves is published in spring 2014.

The presentation will (a) explain the scope and the design of the German family Panel PAIRFAM, (b) demonstrate its potential for analysis with examples, and (c) provide information on how to access the data.

DUBOST, CLAIRE-LISE (ENSAE)

Corporate Interlocks and the Specificities of Indian Capitalism

This paper aims at studying the interlocking directorates among Indian firms as a way to better understand the specificities of Indian capitalism. It draws on a study of interlocks among the top 250 companies of the NSE in 2000 and 2012. It also compares indices of centralization, compactness, density, etc. with those of similar-size networks in other countries in order to evaluate the specificity of the structure of the Indian corporate network and to locate it within a comparative perspective.

This paper more particularly intends to bring a contribution to the embeddedness theory. Drawing on existing socio-historic studies, one could argue that the Indian capitalist system distinguishes itself by five characteristics: 1° A very recent liberalization that makes it a newcomer in the game of free-market economy; 2° The importance of State owned companies (PSUs); 3° A long and lasting tradition of conglomerates among business groups; 4° The importance of family ties among Indian groups; 5° The importance of caste in business networks.

We thus propose 5 hypotheses to assess the impact of these specificities on Indian corporate networks:
1° The 1991 liberalization policies had an impact on the shape and density of networks.
2° Networks are still very much shaped by the stakes the State has in PSU companies.
3° Companies belonging to a business group are likely to be more connected to other companies than independent companies.
4° Connections between firms are likely to be structured by caste and family networks.
5° The density of corporate networks in India is likely to be both relatively low due to the recent liberalization of the country and to show pockets of strong density on the basis of business group, regional, family and caste ties (overall low density of connections but a high number of multiple connections held by specific actors).
Prevent or Cure – the New Philosophy of Health Care

Prevent or Cure – the New Philosophy of Health Care

Health care systems evolve at the same time in many different ways: in area of developing technologies, the development of the medical knowledge, because of demographic changes and particularly - aging of the society. This induces modifications of the priorities of the health policy, new methods of organization and more complex funding mechanisms. Individual components of the health care system: illness, basic health care, hospital care have different contribution into the health care systems of different countries. The worlds growing awareness that for keeping and improving the population health the governments must create effective and efficient health system leads to the effective illness prevention. It shouldn’t be expected that the health effects and economical efficiency of the health care system will improve, without appropriate expenditures on actions which delay or prevent illness, and also allow early diagnosis and effective (usually cheaper) treatment.

In the first part of the paper there will be discussed issues connected with modern health conceptions which create the fundamentals of the approach to the illness prevention as well as the arguments for the state engagement into health care. Health care is the specific public goods. This induces the choice of criteria, used by policy makers, to allocate public sources. The second part will present characteristics of the prevention actions, rules of the program creations and its place in the health care systems. The crucial significance is to specify the determinant of the changes of the health benefits structures financed from the public means. The last part of this elaboration, based on gathered empirical data, will discussed experiences of the selected European countries on prevention of the selected illnesses, indicating the links between expenditures and the effects of the prevention activities.
similarly across socioeconomic and gender groups. To do this we use data from the English Longitudinal Study of Ageing, which allow us to examine overlapping frailty trajectories for different age cohorts.

**Financialization and (Global) Class**

The concept of financialization has become a prominent issue in sociology and political economy. As a multi-dimensional phenomenon it affects different levels and social spheres - from the macroeconomic level to states, firms, households and individuals. While most explanations focus on the macroeconomic deregulations since the mid-1970s, its cultural aspects and the actors propagating it remain often under-explored. Our contribution represents an attempt of a cultural approach towards the issue of financialization. We interpret the process of financialization as the assertion of a global “market culture”, emanating from symbolic struggles between social actors over economic valuations. Thereby we aim at highlighting the role of social actors and cultural narratives in economic transformations. We ask whether the global phenomenon of financialization can be attributed to the formation of a “global financial class”.

**Defence and Security Policies in the EU: From Decision Making to Political Culture**

What is the contribution made by the armed forces during and in relation to security operations, both in international contexts and to protect public order and homeland security? Based on the assessment of the contribution and skills currently at the disposal of the armed forces, we have identified possible areas of further use of the military force in security contexts. In the international arena, thanks to the growing use of instruments for civil and military cooperation, the military is involved in crisis management, conflict prevention and peace-building processes. As concerns internal security, the involvement of the military - and the use of their logistic assets - is increasingly common in response to threats such as terrorism, environmental disasters, protection of critical infrastructure and other emergency situations which the country has to deal with. This trend is also confirmed by the involvement of military forces in European “Security Research” activities, sponsored by the Commission with the objective of developing technological capabilities, tools and methodologies in “civil” security. The research was conducted through: the consultation of political, institutional and regulatory sources (at national, EU and NATO levels), the academic and scientific literature, the media; qualitative interviews with experts in the field.

Education As a Key to Tackle Inequalities in Shrinking Cities. Examples from East Germany

In East Germany political and economic transformation after 1990 led to demographic change, massive loss of jobs and high levels of out-migration. Just like in many shrinking cities around the world (see Mallach/Brachman 2013 for US or Foll 2012 for France) outmigration was mainly driven by: predominantly talented and skilled people left for better prospects, less qualified and less mobile parts of the population remained. The same migration pattern can be observed on a micro-level. The most fragile parts of the population with lowest educational background are left behind in the least attractive neighbourhoods.

In Germany this poses a problem for the future because statistics show that poorly educated parents tend to have poorly qualified children. Bonjte and Musterd (2012) have pointed out, that if there is a shortage of well qualified people in a shrinking city, it becomes less attractive for companies and investors, which may cause more people to leave.

Some cities in Germany have realised that a shrinking society cannot afford a poorly qualified younger generation that is unable to keep or attract businesses and pay the pensions of an aging population. Theses shrinking cities regard investment in education as a key to survival and a key to tackle inequalities. The city Bernburg shall be presented to show how the challenge can be met. In 2005 it had 50% less children than in 1990. 20% of them did not complete school. In consequence Bernburg thoroughly reformed the educational landscape and developed new schooling concepts. Approaches from other German cities that focus on identity building and link education strategies to urban regeneration, may be presented to complete the picture.

Could it be a positive effect of shrinkage, that more emphasis is put on a just educational system? This argument shall be put forward for discussion.

JS-26.12
NELLE, ANJA* (Leibniz Inst Regional Development, NelleA@irs-net.de)

The Influence of Housing Policies on Urban Fragmentation in Large Brazilian Cities

Urban fragmentation is one of the most important characteristics of the recent urban development in Latin America (Coy 2010, Maricato 2011, Pereira/Hidalgo 2008). Typical causes are impacts of globalisation on job markets. The emergence of residential fragments is related to the building of gated communities for high-income households as well as the provision of housing for the poor by informal markets (Abramo 2009). The housing deficit in the urbanized areas of Brazil amounts to approx. 5.6 million units, of which almost 90 per cent belong to the target group of social housing (households with less than three minimum wages). Do the strategies for intervention developed by the government for reducing housing deficit help to dissolve residential fragments? Or do urban development and housing policies and/or their execution lead to the emergence of low-income Fragments?

The research project of which the concept and first findings of a case study in Fortaleza shall be presented, aims to investigate the influence of housing policies and their implementation on urban fragmentation in Brazil. The study includes the analysis of public interventions in the realm of social housing (new housing estates and regeneration of existing squatted areas) and the influence of development plans and interventions on socio-spatial structures. The objective of the study is to discover which prerequisites assist housing policies’ implementation to counteract urban fragmentation and which parameters (i.e. value of lots, decision-making-structures) or/and original specifications (planning-procedures, restrictions of guidelines for funding) provoke them to fail. The causes are to be examined to broaden the understanding of urban developments’ and housing policies’ potentials to better the attendance of intense urbanisation-processes observed internationally.

NELSON, GLORIA LUZ M.* (University of the Philippines Los Baños, glmnelson2001@yahoo.com.hk)

Effects of Work Related Factors to the Schooling, Health and Recreation of Filipino Children

Children in the labor force are a social phenomenon that has become link with the third world countries. The Philippines is one country in the developing regions where there are many children who are productively earning. The survey was conducted nationwide to collect data on the demographic and socio-economic characteristics of working children ages 5 to 17. In 1995 and 2001. Four response variables (present attendance in school, dropping out from school, effect of work on schooling and reasons for dropping that characterize education status of working children were modeled. Results in 1995 and in 2001 show that the nature of employment, working days per week, normal working hours per day and doing heavy physical work affect school attendance. Factors affecting schooling in 2001 are activity during free time, and status of employment. The number of working days and hours per week, increases, the odds of dropping out from school also increases. Factors that help a child to stay in school are engagement in less permanent job, “boss” is a relative, less exhausting work and does not require heavy physical exertion, less activities that the child do during his free time as well as when he is unpaid worker. The health of working children is affected most when they work in the industries of production and in labor intensive services. Results show that children working in 1995 and 2001 in long hours of work affect their recreation as well as work that provides little illumination. Children working in farming, fishing, and mining have less free time than those children working in other industries. However, regardless where the child works it reduces the playing time since in some cases sleeping is preferred than playing.

JS-41.4
NELSON, GLORIA LUZ M.* (University of the Philippines Los Baños, glmnelson2001@yahoo.com.hk)

Globalization and Philippine Labor Migration Phenomenon

Globalization and labor migration from the Philippines accelerated almost at the same time. Three revolutions contributed to Filipino labor migration phenomenon: communication technology, economic integration and widening demographic divide between developed and developing regions. As of December 2010, more than 9 million Filipino workers are found working in more than 140 countries with Hong kong, Qatar and Singapore as the three major destinations of “global Filipino”. Using data in 2000, 2005 and 2010 from the Philippine Overseas Employment Administration (POEA), it was found that the host region of Filipino workers are Middle East and Asia. The nature of occupations of the Filipino labor migrants has changed from production related work in 2000 to service work in 2010. Due to this change in the nature of occupation, females more than males predominate the Filipino labor migrants in the last decade. This study supports the World System theory that peripheral countries like the Philippines supplies the labor demands of the core regions. The annual remittances of Filipino labor migrants has kept the Philippine economy afloat and are now regarded as “heroes”. Due to the failure of the Philippine government to provide job opportunities for its growing labor force population and in spite of the social cost to the families left behind, the Filipinos will search for jobs outside of the country. Thus, labor migration from the Philippines is a global phenomenon for as long as there are market demands for Filipino labor.

Family Policy and Child Poverty in Global Perspective

During the past decades, family policies have often been expanded when other parts of the welfare state have been subject to retrenchment. However, research on affluent countries shows that these developments have been far from unilinear. Instead family policy diverged cross-nationally, both in content and scope. Consequences for child well-being have also been varied. Typically, variations in child-poverty among affluent countries are frequently attributed to differences in broad welfare state regimes; leaving unexplored the ‘black box’ of program specific rich population live in four-fifths of the world’s population: low- and middle-income countries – additionally including higher proportions of children than most affluent countries. This paper extends the comparative analysis of links between family policy institutions and child poverty to include both high- and middle-income countries in transition. We thus initiate a debate on the role of social policy in reducing child poverty on a more global stage. A multilevel regression approach is used to investigate the role of different family policy dimensions in reducing the incidence of poverty among families with pre-school children. We use household income data on 38 countries from the Cross-National Data Center in Luxembourg (Lux) and new family policy indicators from the Social Policy Indicator Database (SPIN). Results indicate somewhat different associations between policy and poverty in high- and middle-income countries. Policies promoting female labour force participation have the greatest poverty reducing effects in high-income countries. In middle-income countries, the general level of support appears to be
most important. The reasons for these differences are discussed in the paper, and ventures for further research are outlined.

Just Generational Welfare Contracts and Poverty

Citizens in affluent countries face a great number of social and economic risks, from birth until the very end of their lives. Many of these risks are associated with specific phases of the human life cycle when the earnings potential of households decreases. How are these age-related poverty risks linked to the often "implicit" generational welfare contracts that are embedded with social policy-making? Such generational welfare contracts may seem just in their institutional design if rights for income protection are equally distributed across age groups. We argue, however, that a generational contract cannot be considered to satisfy important demands of fairness if it fails to substantially reduce poverty among citizens in different phases of life. In this paper we link the idea of generational welfare contracts to poverty outcomes in 18 affluent countries. We combine new comparative data on social rights from the Social Policy Indicator Database (SPIN) and micro-level income data from the Luxembourg Income Study (LIS). For some countries we have income data stretching from the 1960s until 2010, something that provides possibilities to analyze long term trends in policy developments and outcomes. The empirical analyses show that there is considerable degree of correspondence between the design of generational welfare contracts and age related poverty risks, particularly in terms of financial vulnerability. Higher welfare state generosity for a particular age related social risk is generally linked to less poverty in the specific target group.

Conditional Cash Transfers: A Social Investment Instrument in Times of Economic Crisis and Austerity?

Conditional cash transfers receive recognition as a way to address poverty within present and future generations while also promoting economic growth by investing in human capital. Such policies have been used extensively across Latin America and are now being promoted as part of the European Union’s “Social Investment Package”. We assess and compare these policies in Latin America and in Europe. Specifically, we question whether they can be considered social investment policies and, in doing so, illuminate the various factors that condition the success of such policies. We draw particular attention to the need for policy approaches that influence the life-course perspective and the risk of ‘politicizing crowding out’ in the European context. Finally, we elaborate on the implications of a uniform trend in the passage of these policies, the timing of their implementation in the aftermath of economic crisis.

Living with Uncertainty, Struggling with Possibility: A Study on Radiation Effects from the Perspective of Atomic Bomb Survivors

This paper will examine the reality of radiation effects from the point of view of Atomic Bomb survivors. Radiation is a unique material which people cannot see, smell, and feel the touch of. But it can be harmful for human body. Today, especially since the horrific accident of Fukushima nuclear power plants in 2011, radiation and its effects on human have become a focal point in Japan and the world. Historically speaking, the issue of radiation and its effects have been studied predominantly in medical and physical fields. However, a study on narratives and life-stories of people exposed to radiation shows different aspects of this issue. First, in addition to the health effects from radiation and its effects are often socially constructed through their interactions with medical and scientific knowledge. In this paper, I will explore the complex relationships between radiation, people, and science, through the narratives and life-stories of Atomic Bomb survivors from Hiroshima. This paper will consist of three parts. First, I will briefly describe medical and scientific knowledge about the physical effects of radiation on human body. Second, by drawing on the survivors’ life-stories and narratives, I will illustrate how they have suffered from and struggled with their anxiety and distress, caused by the uncertainty of radiation. Lastly, I will examine how the survivors’ reality of radiation and scientific knowledge affect with each other.

Addressing the topic of ‘Smart Cities’ at University: New Challenges for Sociology?

In recent years, a growing number of urban policy makers are tackling the issue of sustainability with an increasing use of ICTs. In this sense, projects implementing advanced prototypes, systems in Information and Communication Technologies refer to the topic of ‘Smart Cities’. This rhetoric leads to questioning their interactions with institutions of higher education, especially since the “World Symposium on Sustainable Development at Universities” (WSSD-U-2012). The paper aims at exploring the on-going relationships between urban sustainability, ‘smart devices’ and academic actors. To what extent do these interactions contribute to bridging the perceived gap between science and society? What transformation do they induce in university practices? If a new social contract with scientists is announced, how does it redefine the role of sociologists?

Firstly, a review of existing literature and experiments will examine the varying inclusions of smart technologies in universities with an eye to sustainable development. Our participatory observation in the “Green Campus Summit” (Puducherry, April 2013) also takes part in this international state of art. There will be a particular focus on the implications and possibilities for sociology to develop this field of research. Then, it will be analyzed from an empirical viewpoint. In this regard, the second part will deepen our sociological action research on the project “Smart Campus” carried out by the University of Versailles Saint-Quentin. Making use of innovative methodologies and covering a smart grid that enables the campuses to produce renewable energy and to optimize its uses for sustainable living and transportation, this case study is proving to be of particular interest.

In the light of an international overview and local insights, we will finally discuss the challenges of trans-disciplinary collaboration for sociology at the meso-level where university participates in Smart Cities.

Women's Health and Healthcare Accessibility: A Study Among Kuki Indigenous Group in India

Understanding women’s health is often limited in the context of women’s child bearing functions which only reflects a fragmented view of women’s health and women’s bodies. It almost neglects the socio cultural matrix in which women’s health development such as the milieu of poverty, patriarchy, and other life stresses. Similar is the case with the Kuki women, indigenous group in India, whose health concerns are compromised with several confounding factors such as poverty, overwork, and social inequality. The conceptual framework of this paper is within the social model of health theory embracing the context of health and illness beyond the biological model. The barrier to attain maximum utilization of healthcare by the Kuki women is the result of the interplay of many factors whereby the socio-economic, religious, cultural factors are being considered in the study. The main objective of it is to dwell on these underlying issues that pertain to women’s health reflecting on Kuki women. The paper also attempts to explore the prevalent healthcare services and its limitations to women’s health care needs. One fifty women were selected for the study through systematic random sampling. The method of study is exploratory in nature and the source of data collection is based on observation and interviews. While both men and women suffer the consequences of an inequitable system and mal-distribution of resources, evidently unequal burdens of domestic labor, discrimination in the allocation of household resources, constraints on women’s capacity to determine their own sexuality and procreativity, inequalities in waged work and political power. The paper contests that the improvement in the economic, political, cultural, and educational and health status of Kuki women will contribute to improvements and elevation in the life conditions of the society in large.

Family Practice and Family Structure – Do Policies Matter?

In most Western countries the family is subject to major changes: marriage and fertility is on the decline, cohabitation and divorces rates are soaring and the share of childless and childfree persons increases. Most countries have developed a bunch of policies to cope with these trends. Two major strategies can be observed: First, governments try to go against the tide and safeguard traditional marriages and the conjugal families, or, second, adjust introduce social and family policies to prevent negative consequences for the emerging alternative families.
However, little is known what the effect of such policies is: Do policies which fa-avour the traditional marriage family increase marriage rates and stability of marriage families? Do policies with a focus on single parents, patch-work families etc accelerate the trend to more instable family relations? Do social policies as an alternative to family security increase cohabitation and divorce rates? The analysis is based on official national statistics for OECD countries and covers the time span from 1980 to 2010. The analysis shows that social policies and family policies such as child care services provide alternatives to the traditional marriage families and family at all. Such measure increase cohabitation rates and divorce rates while fertility rates decrease. A generous and benevolent welfare state seems to provide alternatives to the traditional marriage families. Marriage is no more a precondition to avoid or escape poverty. Social security and family policies have lowered the material necessity to enter marriage, and increased the opportunity to exit unpleasant family constellations.

Family Support and Quality of Life: Structured Ambivalence As Bridging Concept Between the Individual and the State

The relation between family support and the welfare state as providers of support has been extensively researched in Europe. Most studies thereby focus on the quantitative dimensions, e.g. who provides how much support to whom. Existing research is descriptive in nature and rarely based on a sound theoretical frame. A qualitative dimension that might contribute to the theoretical frame, however, receives little attention, e.g. what are the motives for providing support to one's kin, and what is the effect of providing support on one's quality of life? Using the Survey of Health, Ageing and Retirement in Europe data with 16 European countries, differences in the effects of family support on the quality of life of people aged 50+ are analysed by applying hierarchical linear models with random effects and cross-level interactions.

The concept of structured ambivalence as a link between micro (individual behaviour) and macro (cultural and institutional context) is used to explain these differences. Structured ambivalence is thereby defined as discrepancy between individual behaviour and contextual factors and assumed to reduce quality of life. Our findings show that support providers’ quality of life is not only shaped by individual circumstances, but by cultural norms and social policies. Structural ambivalence lowers QoL, e.g. when family members do not live up to prevailing family expectations and obligations. Doing so, we provide a fruitful application of structured ambivalence as theoretical concept as well as new insights in the relation between social policies, individual action and quality of life.

Can Teacher’s Gender Explain The Growing ‘Boy Crisis’ In Educational Attainment?

Gender inequalities in education have seen much change, with females gaining advantages over males in ways that have not been anticipated just two decades ago. At the same time, the share of female teachers has grown in almost all countries of the western world. There is an ongoing, contentious debate on whether this growing “feminization” of the educational system, in particular at the lower levels, can account for the growing educational disadvantage of males. In this talk, I review the literature on the “feminization of teaching” argument and present findings from two empirical large-scale studies conducted in German elementary schools which allow me to identify the effect of having a same-sex teacher for different scholastic outcomes (gender-blind) test scores and more subjective teacher’s grades) and across different subjects (Reading, Literacy, Mathematics, and Science). My findings suggest that the popular call for more male teachers in primary school is not the key to tackle the growing disadvantage of boys.

The Validity Of Response Latency Measurement In CatI Surveys

There is agreement among researchers that the measurement of raw response times from surveys requires a treatment for baseline speed of respondents and interviewers. There remains disagreement about the appropriate procedure to transform raw response times to response latency and there is no study that evaluates the different approaches with regards to their potential measurement error, which may have an affect on modeling and causal inference. This article fills this gap by examining the measurement validity of different ways raw response times measured by interviewers. We apply a Multitrait-Multimethod approach to examine four different operationalizations for response latencies and their relationship to attitude accessibility and indicators of response quality. We conclude with remarks about the levels of validity and potential biases when latencies are used as independent variables.

NEUMANN, ROBERT* (Technische Universität Dresden, robert.neumann@tu-dresden.de)

Trustworthiness As Rational Belief or Unconditional Propensity to Trust – Evidence from a Telephone Survey

While research on trust and trusting behavior is abundant, less attention has been paid to the study of trustworthiness itself. This seems to be at least a bit surprising, especially with regards to the theoretical claims about trustworthiness as „the crucial variable“ (Hardin 2001) for understanding and explaining cooperation based on trust. While several authors share the definition of trustworthiness as a belief, a probability assessment or an expectancy of Person A about Person B to do X, distinct measurement approaches exist depending on the mode of data collection (survey vs. experimental approach) and strategic outset of the study (one-shot vs. sequential games). This study offers a systematic approach, which can be derived depending on whether one treats trustworthiness as incentive
based or as an unconditional propensity to exhibit trustworthiness. Hypotheses were tested with pooled data from two CATI survey (n=706) conducted in Germany in June 2012 and January 2013. Using the techniques of both response latency measurement and Cox regression models we are able to conclude that measurement of trustworthiness either lack convergent validity or are subject to theoretical deficiencies. Consequences for future research are discussed.

**Worth a Thousand Words: Conducted Energy Devices, New Media Events, and The Public Eye**

Between April 2003 and November 2008, 26 men died in Canada during events where a conductive energy device (CED) was deployed on them. The death of Robert Dziekanski, a Polish immigrant, in 2007 at the Vancouver International Airport, was recorded on a mobile phone and its footage subsequently uploaded to the popular video site YouTube. The video, which documented Royal Canadian Mounted Police (RCMP) officers deploying a CED on Dziekanski, was viewed by thousands of citizens of the world and expanded its footprint beyond the Internet as traditional media organizations incorporated it into their coverage of the event. Unlike previous CED-related deaths, the recording of the Dziekanski death was an integral piece of the event’s anatomy and granted members of the mass public, as scrutinizers if not legitimate bystanders, entry into how it unfolded. Following Fiske (1996), we treat the recording, its dissemination via the Internet and broader news media, and its mass consumption as a ‘new media event’—one that amplified and articulated competing narratives of risk. We synthesize the work of Beck (1992), Giddens (1991; 1990), Hall et al. (1978), and Lupton (1999) and others in our examination of the YouTube video of Dziekanski’s death and over 400 reports in three major Canadian newspapers, the Globe and Mail, the Toronto Star, and the National Post. Using a broad critical approach, we assess how groups like the RCMP, government officials, and the general public made sense of the recording. The recording’s electronic nature, we argue, complicated an ‘open-shut’ case narrative commonly articulated by law enforcement officials when describing how they respond to and neutralize threats to the public. The existence of the recording allowed for competing assessments of threat and harm while altering the credibility of the police as sole purveyors of risk assessment.

**Mainland Chinese Sex Workers in Hong Kong: Multiple Forms of Inequality Both in their Past and the Present**

Purpose: This research aims to understand the lives and views of sex workers from Mainland China working in Hong Kong.

Design: This research appropriates the theoretical tools of Pierre Bourdieu and uses an ethnographic approach to explore the issue Hong Kong, including expert interviews, interviews with sex workers, participant observation and field documents.

Findings: Results point to gender inequality and various other forms of oppression weaving together to form the past and current experiences of sex workers in Hong Kong from a Mainland Chinese background.

**Explaining Pathways to Party Activism: Case Studies of Hong Kong Young Adults**

Young people in many advanced industrial countries are unwilling to join political parties. The situation in the Hong Kong Special Administrative Region of China is even worse as it is a semi-democracy where political parties are relatively underdeveloped and legally prohibited from winning governing power through election. Despite these conditions, there are still a small number of young people choosing to join and take active part in political parties. The aim of this paper is to improve our understanding of how some young people come to get involved in political party activism. Qualitative life history interviews with 23 young active members from five major political parties in Hong Kong were carried out to explore this phenomenon. Based on a preliminary analysis of the interview data, I single out four distinct paths to party membership, namely 1) the socialization path, 2) the critical experience path, 3) the occupational path, and 4) the social network path. Informants taking the first two paths tended to initially get involved in party activism for political reasons, while those taking the last two tended to get involved for non-political reasons. Theoretical and practical implications of the findings will be discussed.

**Fighting Against Youth Unemployment: The Hong Kong Experience**

N GAI (Dr.)
Adjunct Professor & Senior College Tutor
Shaw College & Department of Social Work
The Chinese University of Hong Kong

In Hong Kong, the high youth unemployment rate due to the rising uncertainty and volatility of global economy and financial crisis since the late 1990s has driven the Government and various sectors to commit themselves to enforce a series of remedial policies and services to alleviate the problem of youth joblessness and to get youth into jobs and work training. The concrete plan targeting at unemployed youth includes two major categories: First, several pre-employment training programs such as Youth Pre-employment Training program, Project Yi Jin, Youth Work Experience and Training Scheme, and Hong Kong Young Ambassador Scheme, and second, temporary employment opportunities such as Special Job Attachment Program, Program Assistant, Peer Counselors, and Summer Student Hiers. This paper examines issues relating to those policies and training programs aiming at fighting against youth unemployment and proposes plausible solutions to remedy and improve the present policies and practices in dealing with the problems. The proposed measures are: 1) formulating a long-term youth employment policy to provide youth with appropriate training in occupational knowledge and skills; 2) setting up a centralized system to strengthen the information and communication network of the territory’s labor market in order to facilitate youth to seek employment resources and assistance; 3) building up closer collaboration between the voluntary service sector and the business sector in order to look for more pre-employment training opportunities, chances of temporary employment, full-time job possibilities, community participation and financial support; and 4) using multiple methods to fight against youth unemployment.

**Enhancing Employability Through Youth Training Schemes? The Experiences Of Non-Engaged Young People In Hong Kong**

The process of globalization, the rate of technological change, the convergence of information and communication technologies, and major changes in government policies are leading to the development of a ‘weightless’ economy, to rapid changes in technologies and skills, to declining benefits of formal education and high mobility in the labor market, and to increasingly fluid social structures. The large number of young people who are neither in education, employment, or training (NEETs) becomes a serious challenge for many countries, and Hong Kong is no exception.

Purpose: This paper aims to examine how these young people are being systematically propelled to the edges of the labor market. With a qualitative research design, the study explores the experiences of young people who are not engaged in education, employment, or training (NEETs) in Hong Kong.

Methodology: The study used a qualitative research design, with data collected through in-depth interviews with a diverse sample of young people who are not engaged in education, employment, or training (NEETs) in Hong Kong. A total of 20 interviews were conducted, with participants ranging in age from 16 to 24 years old.

Findings: The findings revealed that young people who are not engaged in education, employment, or training (NEETs) face a variety of challenges, including lack of knowledge and skills, limited access to information and resources, and lack of support and guidance. The study also highlighted the importance of early intervention and support to help young people transition into productive careers.

Conclusion: The study concludes that policies and programs aimed at enhancing employability through youth training schemes should be designed to provide individualized support and guidance to young people who are not engaged in education, employment, or training (NEETs) in Hong Kong. The study also highlights the importance of collaboration between government, education, and training institutions to address the challenges faced by young people who are not engaged in education, employment, or training (NEETs) in Hong Kong.
For Our Children's Future: Inequalities in Rural Development in Vietnam

The previous literature on Vietnam's growing urban landscape shows a great deal of rapid change in Vietnam. The 1986 Đổi Mới initiative set up by the central government to promote rural development and urbanization has been a notable feature of the Vietnam model of development. This program had opened up private businesses which incentivized rural communities to urbanize in an effort to modernize Vietnam. These cases of rapid urbanization seem to widen the economic gap of a population over time. Although some people are able to enjoy the benefits which come with urbanization, many are still left in impoverished conditions. These glaring differences in lifestyle and the distribution of wealth which were once reduced by strong government policies are now being superseded by transnational businesses. This structural gap formed by larger movements in globalization, I imagine would create similar differences in personal perception of the world. Differences in experience in this national effort, changes how individuals understand their own identity, their responsibility to the land, and their sense of security for the future. This research is ground on a 1080 rural households surveyed through an East West Center, National Science Foundation funded research on Avian Influenza and coupled Anthropogenic systems. My findings show that there are key differences in how traditional, transitional and modern farming communities are affected by and understand rural development. Particularly interesting findings include significant perception differences found between the men and the women surveyed. I predict that the cognitive differences of Vietnamese citizens would not simply be due to differences in resources or education; however, a gradual process in which cultural practices becomes embedded in everyday behavior.

Self-Employment in Tourism Business Among Japanese Expatriates in Bali, Indonesia

Migration and Tourism
Self-employment in Tourism Business among Japanese Expatriates in Bali, Indonesia

Ni Nenga Suartini

This study aims to identify the characteristics and motivations of Japanese expatriates establishing their tourism business in Bali, and its impact to local community. Bali as one of the most famous international tourist destination, the number of foreign tourists to Bali is increasing every year. Japan is one of the top five nationalities visiting to Bali and the number of Japanese settlers in Bali is also increasing. As a result of this, there has been increase in the visible presence of Japanese entrepreneurs, particularly in tourism areas. This study is based on fieldwork with a qualitative research approach. Entrepreneurial activity among Japanese expatriates community is studied in four tourism areas in Bali, such as Jimbaran, Nusa Dua, Uluwatu, and Tabanan. The result of this study showed that: 1) The primary reason for migrating to Bali was amenity factors such as tropical climate, myriad of traditional and uniqueness of Balinese culture, natural landscape, and slow pace of life. This also means for them to escape from drudgery of city living in the country of origin; 2) Tourism experience influenced their decision to migrate and kinds of enterprises established in Bali; 3) High involvement of women in self-employment; 4) They recognize the business chance of their area after settling; 5) To maintain a peaceful lifestyle is a higher priority than to extend their business. Entrepreneurial activities among Japanese expatriates community in Bali make a significant contribution towards tourism development, supports local effort for job creations, and deepen mutual understanding between Japanese expatriates and local community.

China's old-age pension scheme originates from the nation's 1951 labor insurance regulation. It was primarily for people unable to participate in the workforce because of age or disability and provided for old-age, disability and survivor benefits. Prior to China's 1978 reform and door-opening, employees of government and state enterprises were entitled to receive pension without paying into the system. Since 1978, the market economy has undergone rapid growth and at the same time the pension scheme has undergone rapid reform. We will take a brief look at how the pension scheme was reformed and how the scheme is currently organized as a result of the reform. In this context we'll examine how it is affecting people in reality. Based on surveys supported by Grants-in-Aid for Scientific Research from the Japanese Government conducted in two urban and three rural areas from 2008-2011 we'll look first at the present living conditions of seniors comparing urban and rural settings as well as regional differences. Second, we'll look at a survey of the pension system in four major cities with a survey of the elderly populations and compare the results of the system and actual reality for workers. Finally, we'll suggest ideas for how existing issues could be resolved.

NIELSEN, NIELS JUL* (University of Copenhagen, nnielsen@hum.ku.dk)

Migratory Work/Family-Practices On a Precarious Labor Market

This presentation discusses the complexity of migrant lives with regard to the way they travel and make use of border-crossing activities, the diverse conditions they face on the working sites, and the way they structure their family relations and (endeavor to) achieve accountability and stability within their forlorn life planning. This session's three thematic lines hence are in very fine accordance with the way I approach my investigation.

My current research concerns mainly Polish construction workers who are commuting between Poland and Denmark in order to improve their life conditions. Following the collapse of the Soviet Union many Eastern Europeans during the 1990s began to work (illegally) in Western Europe utilizing the tremendous gap in wages between the two former totally divided economies. Following the 2004 EU enlargement workers from the former Eastern bloc obtained legal access to the entirety of the EU labour market. In Denmark some 50,000 mainly Polish workers are working primarily in construction, farming, cleaning and other low-wage sectors. I follow groups of construction workers at work sites and in their families (in Denmark as well as Poland), in order to understand the complex relationships between migrant work and family life. Since I regard it paramount to understand this bottom-up outlook also in a more overall perspective, my material concurrently consists of interviews with representatives from organizations in Denmark as well as Poland and moreover with politicians on both national and EU level.

In other words – relating to the two poles of scholarly stand mentioned in the session abstract – I am interested in strategies and mechanisms of migratory knowledge (and everyday life as a whole), but regard it equally essential to understand how this is reproducible and must be understood as an element in maintaining societal cohesion.
Neighbourhood Effects on Migrant Youth's Educational Commitments, an Enquiry into Personality Differences

In the neighbourhood effects literature, the socialisation mechanism is usually investigated by looking at the association between neighbourhood characteristics and educational attainment. The step in between, that adolescents actually internalise educational norms held by residents, is often assumed. We attempt to fill this gap by looking at how educational commitments are influenced by neighbourhood characteristics. We investigate this process for migrant youth, a group that lags behind in educational attainment compared to native youth, and might therefore be particularly vulnerable to neighbourhood effects. To test our hypothesis we used longitudinal panel data with five waves (N=4179), combined with fixed-effects models which control for a large portion of potential selection bias. These models have an advantage over naïve OLS models in that they predict the effect of change in neighbourhood characteristics on change in educational commitment, and therefore offer a more dynamic approach to modelling neighbour- hood effects. Our results show that living in neighbourhoods with higher proportions of immigrants increases the educational commitments of migrant youth compared to living in neighbourhoods with lower proportions. Besides, we find that adolescents with a resilient personality experience less influence of the neighbourhood context on educational commitments than do adolescents with other personalities.

RC31-541.6

POLISH IDENTITY AS ENTRANCE TICKET AND BARRIER ON AN ALTERED LABOUR MARKET

Taking its point of departure in current research on Polish migrant workers in Denmark, this presentation will discuss ways to understand how and why different intersections come to have diverse impacts according to the contexts they are taking place within.

Different identities – such as ethnic, national, religious – have had a very limited importance at the Scandinavian labour market through most of the 20th Century. The labour movement and the workers’ unions possessed immense influence on the labour supply and were able to prevent uncontrolled influx of workers and maintain union membership as the only prerequisite for employment. Thus the few emigrating workers became internalised in the existing union system and worked on general conditions.

Following the collapse of the Eastern bloc and the success of a neoliberal political and economical regime this order of the day has fundamentally altered. A consequence of this is a major revitalisation of ethnicity as a marker of specific abilities.

The presentation outlines how ethnicity at one point has become a means to get access to the national labour market in the host country, in this case because a certain Polish work ethos is claimed (and, notably, for a lower wage). At the same time however, this opportunity can be a barrier of being regarded in an ordinary part on that same market. As a consequence the whole social organization around the migrant workers is impacted of the circumstances, not least the prospective family life.

On the basis of fieldwork among Polish workers on Danish construction sites, representatives from unions and employer organizations in both Denmark and Poland, politicians on national and EU level, the presentation discusses how migrants cope by under these circumstances and how the challenges can be tackled within a national and supranational framework.

Neighbourhood Socialisation of Youth’s Employability, the Moderating Role of Personality

Youth growing up in disadvantaged neighbourhoods are more likely to be exposed to unemployment in their local area than youth in more affluent neighbourhoods. In disadvantaged neighbourhoods, youth may adopt more negative attitudes towards work, which subsequently may lead to higher unemployment chances. In the literature studies often only test the relationship between the neighbourhood context and occupational outcomes, neglecting the step in between. In an attempt to cover the whole socialisation process, besides unemployment, we look at how the neighbourhood shapes work commitments as well. Additionally, because some youth may be better able to cope with environmental stressors than others, we test whether adolescents with different personality types are affected differently by the neighbourhood. An influential typology of personality distinguishes three types: resilient, overcontrollers, and undercontrollers. Resilients respond relatively more adaptively and flexibly to situational demands, while both overcontrollers and undercontrollers are relatively inflexible. We hypothesise therefore that resilient that are less likely to be affected by exposure to neighbourhood disadvantage than overcontrollers and undercontrollers. To test our hypotheses, we used panel data (N=203) with longitudinal information on adolescents from age 16 through 25. The findings show, contrary to our expectations, that overcontrollers’ and undercontrollers’ work commitments are positively influenced by longer exposure to neighbourhood disadvantage. Resilients’ work commitments are not influenced. In turn, work commitments do not affect the likelihood for unemployment, suggesting that adolescents’ unemployment is unlikely to be, and is not socialised by the neighbourhood context. Furthermore, undercontrollers’ work commitments and unemployment and overcontrollers’ work commitments are influenced by the neighbourhood, while resilient remain unaffected. This finding is in line with the idea that resilient are better able to cope with environmental demands, while overcontrollers and undercontrollers are more likely to be affected by their environment.
came part of the EU. They have experienced more negative images after Poland joined the EU while their situation should have improved with the change in legal status. They narrate about their position in Dutch society, the changes they have seen, and the stereotypes they have to face. They confirm that ‘tolerance’ is no longer a key component of Dutch society, and tell about the social and economic barriers they face.

Their migration experiences and their encounters with Dutch society reveal a complex image. Coincidence, doubt and hard work are main characteristics of their histories. The in-depth interviews reveal that there was little thought of long-term planning and that choices were made rather haphazardly.

*Space, Time and Symbol in Urban Indonesian Schoolboy Gangs*

This paper uses theories of honour and masculinity to look at the phenomenon of male youth fighting in the urban space of two cities in Central Java, Indonesia. The masculine habitus of lower middle class Javanese schoolboys is referenced in local collective violence. Acknowledging the long history of heroic warfare and factionalism in Java, the data point to the pleasurable sense of oneself as a kind of warrior fighting with a band of brothers on specified ‘battlefields’ in the city. Four points emerge from the analysis. First, peer fighting is a temporally-bounded activity that ends with the school-to-work transition, thus bearing out Messerschmidt’s (1993) argument about the conditional and compensatory nature of collective masculinity. Second, school plays an important role in amplifying peer conflicts and honour disputes. Third, getting a girlfriend demands the expression of a different kind of masculine habitus from that operationalized in peer fighting. Finally, Muslim schoolboy youth squads (penggizados) are intense formations for the construction of warrior masculinities, employing theologically-informed imagery in battles with boys from secular-and Christian schools. The spaces of battle are identified with names that anchor them to the global Islamist struggle.

*Using Local Cultural Forms To Talk To Youth In The Global South*

This paper uses material from two research projects, one in Fiji and the other in Java, Indonesia, to discuss the value of using local cultural forms of group talking to engage youth in everyday situations. First, although the convention of talanoa as a decolonising methodology has become popular in the Pacific, talanoa refers to storytelling. In Fiji the kind of talking which is closest to a focus group discussion is *veivosaki-yaga*, which in Fijian literary parlance means ‘worthwhile discussion or conversation’. The term *veivosaki* connotes a natural sense of conversation and dialogue rather than storytelling. *Yaga* literally means ‘useful or worthwhile’. By engaging in *veivosaki*, indigenous Fijian participants are tuned in to a form of communal dialogue that demands their serious consideration and response. It is therefore useful for discussing a range of issues with young Fijians concerned about their future. Second, the cultural convention of *nongkrong* (sitting around or walking around with friends talking) has started to be recognised by some Indonesian youth researchers as a productive method for gathering data from young people for whom *nongkrong* is their preferred leisure practice with age peers. *Nongkrong* is extraordinarily difficult to translate. It is culturally distinctive, but nothing much really happens. In some ways it is like *talanoa* research in that the silences may be as meaningful as the comments. None of these cultural forms of group talking matches the rigid definition of focus group discussions (FGDs) typically offered by western books on research methodology, yet they are far more culturally appropriate to the everyday lives of young people in these two countries.

*Discovering Ideological Codes in the Professional Work of Daycare Personnel*

During the last decades there has been a tremendous growth in the enrolment rate in daycare centers in Norway to the extent that 96% of all children attend daycare centers before they reach school age. Thus, daycare has become an important socialization arena, supplementary to parents, and a place where the demarcation line between ‘the private’ and ‘the public’ is rendered indistinct. The private becomes public when problems associated with the private sphere, for example behavioral disorder, child neglect etc., become a public responsibility. Simultaneously the public is private when normative understandings of what is expected and accepted are transformed into public standards and definitions of ‘the good’ contributing to inform and shape parental socialization goals and practices, and the daycare personnel’s appreciation of parental practices and their gaze on the children. Alongside the increase in daycare centers there has been a demand for increased professionalization of the sector, which in general is dominated by personnel lacking formal education. Important in this respect is early intervention: the obligation of daycare personnel to intervene when a child does not develop adequately or has a worrying home environment. The development of standardized tools aimed at mapping children’s cognitive and emotional skills are increasingly being introduced to sort out children who are in need of extra concern. However, daycare personnel report to rely on their own embodied sensitivity in regard to concern for children. In this intersection between standardization and personal ‘stomach feeling’, some distinct ideological codes come into play. What constitutes ‘normality’? Is normality absolute, or are there different definitions for different children? And how is normality and abnormality (not) spoken of? The paper addresses these questions in relation to the concepts of ideological codes and ‘ruling relations’.

*The Practice of Control in Risk Activities*

In this paper I would like to challenge the dominating understanding of voluntary risk-taking as activities with a focus on risk (Lyng). Instead I am arguing for a shift in focus from risk to control, which is the outcome of a successful interaction with risk. Based on ethnographic fieldwork on climbing and scuba diving, I analyse the practice of control as what Foucault calls a “technology of the self”. With this understanding of control, participation in risk activities are understood as practicing a dominating ideal in the post welfare era, where the individual is increasingly supposed to be responsible and in control of his/her own life (Simon).

*Legalizing Internet Piracy through State-Invented Religion? A Case Study of the Swedish State’s Acknowledgement of the Missionary Church of Kopimism As Religion*

In 2011 the Swedish Kammarkollegiet, the oldest public authority in Sweden, acknowledged The Missionary Church of Kopimism (Det missionerande kopimismamfundet) as a faith based community (trossamfund). The Church is built on the idea that copying and the spreading of information is an ethical right. As a registered faith based community the Church qualifies as an organized and by the state approved religion, as such it is protected by Swedish constitutional law where it is stated that freedom of religion is absolute. Regardless of the sincerity of its creators, does this mean that the Church has found a way to legalized piracy for its members? If so, what future implications could this case have? The overarching question we would like to ask in this article is how the category religio enables the state apparatus to produce legitimate and illegitimate subject positions and what the consequences of this production are in relation to power and ideology.

*Network of Support Centers for Gender Equality in Greek Armed Forces*

The paper presents the analysis of data from a research project for gender equality in Greek armed forces. The legal framework of gender equality in armed forces as well as the operation of the network of support centers under the funding of the European project “Artemis – Equal” will be presented.

The specific goals of these support centers were: the recording of inequality problems which take place in the armed forces, the provision of the information of interested parties about legislation and the official procedures in order to face the problems, the information about similar cases and good practices and finally the most important goal is Psychological, legal and Social support.

*A Discourse on Transnational Crisis of Legitimation*

Historically, instances of transnational interactions between dominant and subordinate societies, through the instrumentality of the political state, had been anchored on particularistic vested interests that may quite often be of asymmetrical advantage, or may not necessarily be of mutual...
benefits. It is argued that transnational socio-political, economic, cultural, military expressions of hegemony (or pervasive domination) are invariably in tandem with the particularistic vested interests of dominant forces of imperialism. By the same token, parties (i.e., societies/political states) in situations of subordination suffer deficits, as a consequence of their vested interests being determined due to exigencies of unequal exchange. However, imperialist forces of hegemony are quite often challenged, as expressed by counter-hegemony or crisis of legitimation, in reponse to conflictual vested interests. Pursuance and propagation of multi-lateral vested interests are quite than established mutually by transnational hegemonic blocs, irrespective of potential or actual resistance. Hence, the enduring widespread global instances of legitimation crisis, which may be construed (or mis-construed) as acts of “terrorism”.

Temporary Transnational Migrants from East Asia to Japan As Unskilled Foreign Workers and Methodological Transnationalism in the Age of Globalization

The objective of our presentation is to show the juncture between the sociological concepts on transnationalism and people’s practices while referring to the temporary transnational migrants in Japan. In contemporary Japan since the 1990s, a large number of unskilled foreign workers (=trainees) from East Asian countries have been introduced to the urban and rural areas as temporary labors under the foreign trainees’ system. We focus on these trainees, called ‘Kenshusi/ Jisshusei,’ at agricultural villages as well as the fishery manufactures in fishing villages, severely damaged by the Great East Japan Earthquake and Tsunami in 2011.

Based on the field research, we will discuss a sociological concept named ‘methodological transnationalism,’ in parallel to ‘actual transnationalism’ and ‘ideal transnationalism.’ While recalling ‘methodological cosmopolitanism’ and ‘critique on ‘methodological nationalism’ by U. Beck, we will examine the meso-level perspective between methodological cosmopolitanism and methodological nationalism. In the present situation of North East Asia where nationalism and political tensions are continuously rising, the meso-level perspective in methodology is required to invoke the global social theory to transnationalism. This is also a standpoint that associates with a critical viewpoint against the traditional perspective of sociology.

Another concept we discuss here is the ‘mediators,’ a proximate concept to the G. Simmel’s. However, we took further analysis on the concept and categorized them according to the level: from informal/sympathetic type up to formal/businesslike type. We particularly pay attention to the ‘bridge-type mediators,’ regarding as inevitable actors in transnational interactions.

Based on the discussions above, we will examine an implication on conceptions of the nation-state and (civil) society as the most decisive points in sociology. It is the conception ‘society beyond a nation-state’ along with the perspective of methodological transnationalism, that is also required to contemporary/future sociology.

Concepts of “Bonds” and “Romantic Love” in Japanese Women’s Culture--the Representation of the Contemporary Japanese Male Idols

The purpose of this paper is to consider the representation of Japanese male idols, one of the largest genres in Japanese popular culture aimed at women, and characteristic of larger recent women’s culture that it is part of. Specifically, through an analysis of articles (text and images) in female oriented magazine media, I will clarify how the image of male idols is constructed by the media. By building on this analysis, I will expand further on the concepts of “bonds” and “romantic love” in recent Japanese women’s culture.

Until recently, Japanese male idols, like those from ‘Johnny’s Entertainment’ were ascribed with the role of the ideal love partner for Japanese women. However, in recent media dealing with male idol groups popular in the 2000s, strong friendship and relationships of mutual trust between the members of the group are represented frequently. “The every day of idols, including events at school and communication with friends or family are depicted, and many of them are shown in physical contact and conversation are made to look like expressions of homosexuality. Situations that consist of silly tomfoolery and play by these idols are usually referred to as “Wachawacha-kan.” What is important here is that the existence of female fans is not represented at all in the discourse of these articles.

In other words, male idols is represented as “ideal love partner” for women, but at the same time as someone who could not possibly ever enter into a heterosexual relationship with the reader of these media. In the social background of this peculiar development, links can be made with “yaoi” culture (female made and oriented fiction on romantic and sexual relationships between men) in Japan, as well as changes of heterosexual values. In this way, I consider characteristics of recent Japanese woman culture through magazine media.

Polyvalent Meaning of Community Wind Power Movements: Comparing with Anti-Nuclear Movements in Japan

After the nuclear disaster in Fukushima, the opposite opinion to nuclear power plants and the expectation for renewable energy are growing in Japan. Because the electric supply is monopolized by major electric power companies, people cannot choose the company which sells electric power. Furthermore, the electric power companies are trying to carry out re-operation of nuclear power plants and to keep the exclusive structure of an electric supply. Therefore, the number of citizens who protest against the monopoly has increased, and people who desire to abolish the nuclear power plants, hope for the expansion of renewable energy. Therefore it’s said that these renewable energy movements are connected with “anti-nuclear” movements. Those who support the anti-nuclear movements construct the dominant discourse –“anti-nuclear”, by relating various points at issue with anti-nuclear after Fukushima disaster. However, does the strategy of anti-nuclear movements have the backing of public opinion?

This report aims to clarify this question by answering why the community wind power movements become popular in Japan, using data of investors for the community wind power. The community wind power movement has started from ten years before, 12 sets of wind power have already worked now. The results are following: The participants in early community wind power movements were those who had joined in the anti-nuclear movement. As the number of the investors increased, their social attitudes become wide, and they have various motivation for the investigation, not only environmental consciousness but the commitment to windmill and the expectation for a dividend. If the administration of community wind power emphasizes the anti-nuclear too much, the number of the participants in a renewable energy enterprise will decrease. This result shows that it’s significant for sustainment of social movement. When anti-nuclear participants have various motivations, and the renewable energy movements related with “anti-nuclear” is too simplified.

Re-Entering the Labor Market after Childbirth Among Japanese Women

This study explores the women’s working career after childbirth in Japan. Many Japanese women quit working around the time of their first childbirth, and re-enter the labor market when their children get somewhat older. This study focuses on the process of re-entering the labor market. Some previous research already investigated on the issue. However, most of them only focus on the getting a job for the first time after childbirth. This study further explores what happens in women’s career after they get job for the first time after childbirth, because it seems that many women experience the changes of their employment status even after re-entering the labor market. Data used in this study is Japanese Panel Survey of Consumers (JPS). This study uses data collected from 1993 to 2008. Those women who had their first childbirth during above observation period, and did not working in the year of their first childbirth are selected to describe the working career after childbirth and analyze the determinants of it. Results of Cox regression model show that university graduates are less likely to get a job compared to those who completed high school, however, it seems that husband’s income is more influential than education on whether a woman gets a job or stay out of labor force. Then, focusing on those who started their first job after childbirth as non-standard employees, their working career afterward is analyzed. The results imply that those who graduated from university are more likely to change their employment status compared to those who have high school diploma. Based on these results, Japanese labor market structure and the difficulties of women’s career development there will be discussed.
Politics of Science Online: Discursive Negotiation of Risk and Uncertainty Regarding Radiation Contamination

As the details of nuclear accident in 2011 unfold, many Japanese were forced into the world of scientific jargons that might determine their life. Some believed the scientific assessment of “no immediate hazard,” others alerted the danger of both short- and long-term harm of radiation contamination. As Beck (1992) notes that “the sources of danger are no longer ignorance but knowledge” (p183), the knowledge itself confused their understanding of radiation and political stance. While the national discourse was seemingly splitting into two “dangerous” and “safe” camps, there have attempted to assess the risk themselves by negotiating their ideas about safety, health, and lives through various discussions in mass, print, and online media. Especially the open discussions in the social media, whose popularity is tied to the activities in the triple disaster (Slater, Nishimura and Kindstrand 2012), is an important sites where laypeople’s experience, knowledge, and logic come into contact and negotiations.

This paper attempts to illustrate how popular epidemiology (Brown 1987, 1997; Murphy 2006; Novotny 1994) and scientific knowledge about radiation contamination is negotiated in Japanese online discursive space. I compare and contrast two major rhetorics: one that is skeptical of, and another that claims immediate harm of radiation. I center my analysis to those on Twitter, due to its open architecture and ability to identify individual participants. My aim is to explore the different ways in which participants of online discussion are making sense of the situation, from their living space, food, water to their health, family, job, etc. Furthermore, I look at the debate around a model Taroko Taro, an activist politician who was elected to Upper House in 2013 by centering his campaign around an anti-nuclear policy, and how such online discursive space may have ramification to the transformation of political in Japanese society.

NISIC, NATASCHA* (Universitaet Hamburg, natascha.nisic@wiso.uni-hamburg.de)

“With a Little Help from Outside” – “Outsourcing” of Domestic Work in Germany

Unpaid household labor and the provision of care within families present an important determinant for individual and collective welfare. However, in the past decades and due to demographic changes and household structures, unpaid household labor has changed a lot. In particular, the increase of dual-earner couples and demographic shifts challenge traditional arrangements of paid and unpaid labor within the household. Households are thus increasingly confronted with the decision whether to produce these commodities by themselves or to buy services on the market. While common explanations emphasize the relevance of time and labor costs for such make-or-buy decisions, empirical results call for further explanations. From a sociological point of view the relationship between supplier and the household contains many issues which generate trust problems. Moreover, the outsourcing of household services is embedded in a normative framework about family and gender, affecting the choice of what and how to outsource specific tasks. Although time pressures of households are increasingly relevant, the topic has so far been understudied. Especially in Germany there is little empirical evidence about the outsourcing behavior of households. The paper thus analyzes the determinants of outsourcing decisions of households in Germany. The analysis is based on the waves 1992-2013 of the German Socio-economic Panel (SOEP) applying panel data methods. Theoretically the analysis draws upon new home economics, family sociology and economic sociology. The article gives insight into the decision-making process and structures for housing and household members.

Mobility Decisions of Dual-Career Couples- New Evidence on the “Co-Location” Problem

Working couples in general face a “co-location problem”. Since it is unlikely that both partners will find their individually best job offer at the same geographic location, at least one partner will have to make concessions when joint locational decisions are made. Skipping research on regional mobility of couples has shown that it is mostly women who make these concessions and who suffer disadvantages with respect to career opportunities. A common framework for explaining such gendered outcomes has been proposed by Mincer who assumes that a joint labor market will occur if the gains of one partner outweigh the losses of the other partner. Since women are (still) mostly in the role of secondary earners, their losses can be outweighed more easily. However, with the rise in women’s employment participation the potential for couples co-location problem has grown, especially for the higher educated with more specialized careers. One implication of the Mincer model would be, that in particular dual-career couples should be significantly more mobile than other couple types. However, recent research is less consistent on this topic, suggesting that dual-career couples are even more mobile than other couples. This contribution aims to explain these contradicting findings and to shed more light on the mobility decisions of dual-career couples by analyzing more thoroughly the circumstances of such migration. In particular it tries to combine mobility research with regional sociology and economics which emphasizes the relevance of regional opportunity structures, especially those of urban labor markets. Theoretically an extension of the Mincer Model is proposed by referring to a bargaining model of household decisions. The empirical analysis is based on panel data analysis of the German Socio Economic Panel, waves 1992-2011. The paper also gives insight into recent developments in urban settlement and the changing social structure of large metropolitan areas.

Institutionalizing ‘living Heritage’: Ecomuseum Development In Rural China

In 1997, China established its first ecomuseum as a new cultural strategy to safeguard ‘living heritage’ and develop local cultural economies. China has since experienced a wave of ecomuseum projects across the country, developed as ‘museums without walls’ encompassing the entire cultural landscape of a locality with a mission to involve the local population in the interpretation, management and protection of their cultural heritage. The ecomuseum marks an urgent need to address the pressures of modernization on the retention of local cultural traditions and a recent focus of heritage and museum work on intangible heritage preservation. With the establishment of ecomuseum projects in rural ethnic minority regions, local populations have become agents of tourism, experiencing a form of tourism that aims to integrate them and their ‘living heritage’ as objects and subjects of a modernizing China. In this paper, I offer an ethnographic perspective on the unfolding of the first ecomuseum project in Guangxi in the Yao village of Huaili. Given the emphasis of the project on a community-based approach to safeguard ‘living tradition’ and promote rural development, I examine how the process of ecomuseum development not only changes the rural locality itself but also the local community’s view of its heritage and ability to control it. Particular attention is paid to understanding how the ecomuseum and the intangible heritage discourse impact the local community and shape its self-identity. The project’s emphasis on multiple forms of imagination and authentication of heritage come into play through the ecomuseum contact space.

Blurring Work-Home Boundaries and Their Impact of Work-Home Conflict and Enhancement

Recently, growing interest has been turned toward the inherent boundaries between the work and home domains and how these boundaries are created. There have been discussions surrounding the increasing permeability of these boundaries and even their disintegration. Recent research on regional mobility of couples has shown that for these tendencies an increased flexibility in the hours and place of work (e.g., teleworking from home), causing work and home to become more intertwined. Other contributing factors include modern technical conveniences, such as the Internet and mobile phones, which make it possible to work and be reached by others almost anywhere and at any time. In light of the increasing disintegration of work-home boundaries, the question arises as to its consequences. Do blurring boundaries lead to more conflicts or do they have a positive impact? Data for this study were collected through an online survey among employees in the e- and nanotechnology sector (n=321, response rates between 65% and 95.5%). Work-home/ work-home work-enhancement and work conflict was measured using the four scales of the Survey Work-Home Interactions—Nijmegen (SWING) questionnaire (Geurts et al., 2005). The extend of a blurred work-home boundary was measured with 6 items focused on the work to non-work permeability (e.g., “I am also available during my leisure time for work concerns (e.g. via cell phone)”). A structural equation modeling (SEM) analysis was applied. Work to nonwork permeability showed a positive association with work-life conflict, but no significant effect on life-work conflict and the both- enhancement scales. We finally discuss the implications of these results.

Ambiguities in Discontinuing Medication: How General Practitioners Make Sense of Discontinuation and Their Strategies for Reducing Ambiguity

This paper will examine how general practitioners (GPs) deal with ambiguity in order to perform medication discontinuation. I examine the case of statins as it is a strongly recommended drug for reducing the risk of cardiovascular disease, however there several possible complications with taking the drug such as side effects, drug-drug interactions and lack of effect because of old age. Discontinuing the drug is therefore not a straightforward task, rather it involves a great deal of ambiguity. I draw on interviews and observations of Danish GPs and document analysis of two independent drug recommendation bodies in Denmark, I analyzed GPs’ strategies for dealing with three important problems related to discontinuation: 1) assessing the validity of patient reported side effects as a reason to discontinue; 2) discontinuing a hospital specialist’s prescription; 3) assessing the likelihood of a positive outcome after discontinuation. Drawing on sense-making theory, I outline the strategies a GP may use for dealing with ambiguity and selecting alternatives with regards to patients drug prescription. I show how these strategies are shaped by professional qualities, including: terrain of responsibility (who’s responsibility is it to discontinue), prioritizing ability (how comfortable is the GP prioritizing from a long list of medications), shared communication with patients (how two way is the communication) and discontinuation confidence (are GPs willing to trial discontinuation without the promise of a positive outcome). I conclude with recommendations for how to support appropriate discontinuation in primary care, including: updating guidelines to explicitly acknowledge multimorbidity in patients and the importance of medication prioritizing, creating discontinuation alliances for GPs, e.g. with clinical pharmacists and gerontologists, and developing positive metaphors for ‘discontinuing medication’ to enable better communication with patients, e.g. drug holiday or medication prunining.

NOACK, CONSTANZETHE (Heinrich-Heine-University Dusseldorf, noack@phil.hhu.de)

"Everyday knowledge" is constructed in the mass media by debating or interweaving cultural knowledge and common knowledge. It can be assumed that individuals act and identify themselves on the basis of this knowledge which is nevertheless continuously socially constructed. Drawing from approaches of the sociology of knowledge, I would like to present preliminary findings of my PhD research focusing on the construction of knowledge of masculinity in media products. Since my methodology is based on the "discourse analysis as well as sociology of knowledge", my paper is dealing with the issue of how knowledge is produced in non-fiction publications. By revealing the process of knowledge construction, I am going to analyze the role of the social actors, the subjective positioning and the given social positions as important aspects. The outcomes of social upheaval or crisis knowledge and the broadening of the social knowledge pool could be the key to adapt and form alternative ways of living, given of course there is “new everyday knowledge” and not only repetition of long established knowledge. Therefore the question arises how knowledge, which has the potential to form and distribute new “everyday knowledge”, is being produced by the media.

Taking up the discourse around a media buzzword such as soshoku danshi (grass eating or herbivore men) - describing young men who are said to shy away from women, and by doing so seem to uphold another form of masculinity – will help to understand whether and how these media products are distributing socially important topics to the public. Furthermore, I am concerned with the process in which academic and everyday knowledge is forming a part of the knowledge stock of Japanese society and in which ways mass media is taking up the role to form “new everyday knowledge”.

Comparative Research on Contemporary Youth Social Movements: The Case of the Genid Project

The year 2011 has witnessed the emergence of new types of social movements, transnational in scope but especially intense in the Mediterranean area, one of which precipitating factors has been the leading role of the new generations and the urban middle classes. The year began with the so-called ‘Arab spring’, continued with the ‘#spanishrevolution’ of 15-M, the Chilean students protests, riots in some English working class suburbs, the ‘Occupy Movement in the United States and ended–at least till date– with riots in Turkey and Brasil. The antecedents date back to the ‘anti-globalization’ movement emerged in Seattle in 1999 and in Porto Alegre after 2001, the revolt of the French ‘banlieues’ in autumn 2005 and the Greek mobilization in winter 2008, coinciding with the start of the international financial crisis. This paper presents the results of a research project funded: The Indignant Generation. Space, culture and power in the youth movement of 2011 [GENID]. While it is early to assess the impact of such movements, it seems evident that they respond to a new cycle of social protests, which manifest in public space (both in the squares of cities and in the Net).The project aims to shed light on the nature, causes and recent drift of such movements, taking the Spanish Indignant Generation as a case of reference and comparing it with the mobilizations in four Mediterranean countries (Portugal, Italy, Greece, Egypt), and other territories where there was also mobilizations (England, USA, Chile, Brazil). Although it is based on ongoing ethnographic research, their orientation is primarily theoretical. The main
objective of this communication is to present the GENIND project and its major results. It discusses the convergent and divergent elements of such movements, its innovative aspects and its continuities with previous movements and their local and global impact on youth and society.

Geographies of the European Spring: The Case of #Spanishrevolution

Along the week prior to the past local and regional elections in Spain celebrated on 22nd May 2011, many Spanish citizens took several places to protest against the government and denounce political corruption and national economic situation that are deteriorating democracy in Spain. Immersed in a strong economic uncertainty mainly marked by a great lack of individual as collective future, the eternal Two Spains have bumped into themselves. This paper will show how the so-called #Spanishrevolution of the present history of Spain which the urban, modern and young Spain has raised their voice against the rural, traditional, pure, old Spain. Mainly based on a sub-regional scale analysis of the #Spanishrevolution, this paper will show how the young, urban, modern Spain openly expresses that it is not willing to keep on badly surviving in the city while the rural Spain continues to lie in their country houses without showing any sign of entrepreneurship, awaiting the arrival public subsidies mainly funded by the European Commission as well as its Spanish wealthiest sisters regions. The Northern Spain has said enough to the South. Rather than showing a Hegelian spirit of the people, the #Spanishrevolution is a cry for the modernization of Spain.

Le Travail Migrant Temporaire Au cœur De La Dynamique De Centrifugation De L'emploi Vers Les Marchés Périphériques Du Travail: Une Perspective Canadienne

La communication (qui se fera en anglais) présentera trois exemples de programmes mis en place par le gouvernement canadien et favorisant l'essor de ce que nous appelons le travail migrant en régime dérogatoire sur les marchés périphériques du travail: 1) les travailleurs agricoles saisonniers migrants embauchés dans le cadre du Programme des travailleurs agricoles saisonniers (PTAS); 2) les aides domestiques migrantes embauchées dans le cadre du Programme des aides familiaux résidants (PFR); 3) les travailleurs migrants temporaires dits «non qualifiés» embauchés dans le cadre du Volet des professions peu spécialisées.

Partant d’une analyse de l’évolution de ces programmes, il s’agira donc de bien mettre en relief, au-delà du fait que les travailleurs migrants temporaires jouent le rôle d’une «armée de réserve», que les programmes de travail migrant en régime dérogatoire agissent comme une interface entre le cadre national et international afin de faire jouer la concurrence entre les travailleurs dans des marchés qui ne sont pas — pour toutes sortes de raisons — «externalisables», tout en préservant l’un des plus grand paradoxes du «libéralisme réellement existant» qui fait de la liberté de circulation pleine et entière, l’apanage exclusif des biens et services, non des travailleurs. De manière à établir la cohérence d’une politique du travail visant en premier lieu la mise en concurrence des travailleurs, l’analyse montrera comment des termes historiques ont également été instrumentalisés lors de la récente réforme de l’assurance-emploi au Canada. Nous mettrons ainsi en relief l’instrumentalisation non seulement en termes d’exploitation de cette main-d’œuvre au rabais, mais, plus encore, aux fins d’une stratégie d’éclatement d’un régime de travail de type universeliste. Ultimement, nous montrerons que le travail migrant temporaire est le cul-de-sac d’une dynamique de précarisation par la centrifugation de l’emploi vers les marchés périphériques du travail.

Organizing Female Workers In The Informal Sector: A Case Study Of Learn-Dharavi

Labour flexibility is a hallmark of a new economic model marked by the rise of informal and precarious work. Given this structural transformation, many scholars have invited unions to organize the unorganized “at the rough ends of the labour markets” (Heery and Adler, 2004) because it is from this engagement that new forms of unionism will emerge (Murray, 2004). India is no exception. The NCEUS have shown that the economic liberalization process of the 1990s have trigger a ‘jobs’ centrifugation dynamic” that pushed employment towards peripheral labour markets. Since then, Indian scholars have also stressed the importance of unions to refocus on the “organizing model” and invest these segments (Bhowmik, 2005; Agarwala, 2008).

It is in this spirit that LEARN-Dharavi, an NGO, has successfully launched organizing drives aiming to stir collective action involving women working in the slums of Mumbai. Building on our previous research in the shipbreaking industry (Nagarkar, 2013) and empirical data collected through interviews with representatives of LEARN-Dharavi (local leaders and female workers/members involved in different ‘industries’ i.e. domestic services, canteen workers, embroidery, garment industry, street vending), the paper will present the result of a case study conducted in 2011-13 using the analytical framework developed by Comeau (2005). It will first examine elements of contextualization regarding the state’s role in the development and “regulation” of the informal economic activities, then present the struggle’s chronology and discuss practices, strategies and demands put forward by the different grassroots unions that emerged from LEARN’s actions. Finally, it will take a look at the “raising issues” in order to highlight the gap between discourses and practices and identify the difficulties facing traditionally organized labour when seeking to transform itself in order to meet the needs of the so-called informal workers.”

Organized Reaction to Experiences of Stigmatization: The Identity Politics of a Muslim Organization in Switzerland

The success of the Anti-Minaret Referendum of 2009 in Switzerland was due to a long, intensive campaign of the far right political parties. However, the pre-referendum campaigns highlighted the signal effect of the legislation as a means to contain the “Islamic threat” in Switzerland, many Muslim organizations regarded the campaign as a concerted effort to stigmatize Islam and discriminate Muslims.

This perception motivates a group of young Muslims to institutionalize their efforts in countering the anti-Islam activities of the far right. Thus, in 2009, the Islamic Central Council Switzerland (ICCS) was founded.

The current study investigates the identity politics of ICCS as well as its strategy to cope with what its members regard as a “conspiracy” of the far right political circles to “subjugate” the Muslim population.

The paper draws on in-depth interviews with active members of ICCS as well as on data collected through participatory observation of the public events of the association.

It is argued that ICCS, very much inspired by identity politics of other minority groups, strives for what Jürgen Link (1999) would call “production of normality” – namely the recognition of Islam as a “normal” religion equal to Christian and Jewish communities.

The paper also highlights the following strategy of ICCS: Whereas the far right clearly tries to eliminate the visibility of Islam in the public spaces, the ICCS activists try not only to publicly observe an orthodox Islam, but also to propagate it. It is finally argued that the dialectics of stigmatization and provocation seems to serve the xenophobic agenda of the far right much more than the ICCS strategy of establishing the normalcy of Islam in Switzerland.

The study is a part of a larger project funded by The Swiss National Science Foundation investigating the narrative identities of Muslims active in voluntary associations.

Post 3.11 Movements in Japan: A Mental Map Approach

In this presentation, we attempt to clarify the nature of antinuclear movements in Japan after March 11, 2011, from the viewpoint of participants’ mentality. On March 11, 2011, a big earthquake and a gigantic tsunami hit the northern part of Japan. The tsunami also paralysed the emergency power system of the nuclear power plant in Fukushima, causing power plant explosions. The nuclear accident and subsequent radioactive contamination send a majority of Japanese people in fear and anxieties.

“March 11 (3.11)” ignited a volume of civil actions. Day in and day out, one spontaneous action was followed by another. The movement also spread out geographically, so that residents in different localities have witnessed protest actions taking place successively.

Resurgence of protest actions has prompted researchers to inquire into the nature of the post 3.11 antinuclear movements in Japan. With only few exceptions, however, studies have focused on objectively observable events and other morphological features to understand today’s movement. This practice leaves us with little understanding about cultural and mental aspects of the movement.

In this presentation, we focus on participants’ mental aspects to characterize today’s antinuclear movements in Japan. Using handouts and written materials, we extract meanings campaign participants subjectively attribute to the nuclear events.
explosions and their subsequent act for denuclearization. We try to reconstruct a web of meanings existant in the 2012 campaign, also identifying central meanings and important subsets of meanings. We employ a comparative design, comparing the 2012 campaign against the 1954 campaign, to highlight important features and characteristics of the movement today.

Our major finding is that, while 1954 movement dominantly drew its significa-
tion from collective memory of Hiroshima and Nagasaki and risk on food safety, post 3.11 movement was strongly driven by motherhood mentality to protect a child and a concern over local environmental protection.

Social Movement Transformations in the 20th Century: Japanese Experience

In this presentation we investigate causes and conditions of social movement change in the post-World War II Japan. Social movements in Japan have experienced tremendous transformations after the World War II. Starting with the movement surge in the 1950s, Japan witnessed a sharp rise in popular protest in the early 60s, culminating in the peak in late 60s. After a sharp decline in the early 70s, the entire civil action has stayed relatively modest since then. Japan also witnessed huge transformations in repertoires of contention. In the 1950s, Japan saw a rise in labor movements, along with anti-capitalist, student, and environmental movements in 1960s.

Why did Japan, as non-western democracy, experience such a huge transforma-
tion in social movements after the World War II? Big shifts in quantity and quality of social movements have been recorded in some other countries. In such cases they often experience huge structural transformations. The Japanese case, with no structural change during the latter half of 20th century, does not allow us to lay out the same explanation. Also the shift is not toward a “social movement society.” Japan seems to have become a society content with what they have.

We employ both qualitative and quantitative methods to investigate into the causes and conditions for social movement change in the post WWII Japan. Quantitatively we use event data analysis to identify changes in volume and categories. Qualitatively we look for cognitive change that involve shift in values and percep-
tions toward social movements.

Our finding is that change in international politics along with growing global civil society had to do with the change in social movements in Japan. Also past experience of the 60s may have had a negative effect on the perceptions and motives of the later generations to give rise to social movements.

Routines As Competency, New Medical Routines for Hybrid Health Care Professionalism

Organizing health care services increasingly encompasses hybrid forms of medical professionalism. Relations between managers and medical professionals become less binary and oppositional; organizational forms become less perform-
ance-based and less strictly managerial; medical professionalism itself becomes more organizational. In this paper we focus on the latter trend, as most studies on hybrid professionalism tend to focus on the other two. The rise of “organizing professionalism” (i.e. medical professionalism that includes organizational and man-
agerial capabilities) is usually approached in terms of new competencies. The rise of “professionalism” (i.e. medical professionalism that includes organizational and man-
gerial capabilities) is usually approached in terms of new competencies. New

Higher Education of Women Between Heterogeneous Logics: Gender-Equality and Scientific Excellence As Conflicting Requirements in University System

At present the German university system is undergoing a number of reforms to improve its models of teaching and research. Equality politics have a high priority in the German higher education sector. Gender equality in the higher education sector is still unrealized. Despite the fact that now equal numbers of men and women start studying, there is a big drop out of women in higher level of education systems, known as the “glass ceiling effect”. Because of that, equality politics also have take into regard later stages of university education, namely the doctoral and postdoctoral phase. This contribution is based on a scientific study from 2012, which analyses the benefits of the new measures to promote women within the junior researcher program of a scientific cluster, measures created as part of a new governmental funding policy. The German “Excellence Initiative” is one of the most important initiatives in higher education reform to strengthen international competitiveness and high-quality research. New incentives were created for universities to take into account both scientific and equality policy requirements, in order to reduce the well-known problems of women in this phase. By analysing the situation with the theoretical framework of Neoinstitutionalism, it can be shown that gender equality and scientific excellence are two different logics that came into conflict with each other. These measures partially lead to paradoxical consequences for the careers of women through the constantly changing interplay between hetero-
geneous environmental requirements and organizational structures. Instead of better support for women, new obstructions appeared in their careers. These un-
foreseen consequences arise out of conflicting institutional logics and were never intended by any of the institutional actors involved.

The “Invisible Hand” of Oppression - Symbolic Violence in the Precarisation of the German Labour Market
When we think about oppression and global inequality, we also have to ask why it is that many underprivileged groups suffer from oppression without any real resistance? With the analytical framework of Bourdieu's theory of practice I will argue that any theory that draws on the concept of intersectionality has to take into regard the symbolic dimension of society in which social practice takes place and that causes the reproduction of social structures of domination. Symbolic violence, this "gentile violence [...] invisible to victims" (Bourdieu 2001, 1-2), is the key to understand how oppression reproduces and legitimatises itself. It contributes both to the recognition of oppression and at the same time to the misrecognition of its arbitrariness.

This contribution deals with the precarisation of labor in contemporary Germany. This field is mainly structured by race, class and gender. Women, immigrants, disabled persons and lower classes are disproportionately affected by adverse working conditions, lack of job security and lower payments, and are furthermore badly integrated into the social security system.

I want to argue that the precarisation of labor and life is a new form of symbolic violence, which affects different groups in different ways for the purpose of labor exploitation. This process cannot be understood solely by looking at economic constraints or pure violence. Deterioration of working conditions is legitimised by the apparent naturalness and inevitability of economic development.

To theorize the different axes of oppression in the field of precarious work, I will consider not only different categories of inequality but also the very processes of categorisation through labour. Taking into account this symbolic dimension of oppression in society may lead to a better understanding of its invertebrate persistence.

NORSTEDT, MARIA* (University of Lund, Maria.Norstedt@soc.lu.se)

The main question I will address in my paper is: what does the use of institutional ethnography help me see analytically that I would have risked not seeing with other methodological glasses? In order to discuss this, I will draw on and exemplify with my first analysis of the empirical material from an on-going workplace study about hidden disabilities and working life. In this moment I am in the process of doing this analysis. The study takes its starting in the experiences and work knowledge of individuals with hidden disabilities in order to understand individual, interactional and institutional aspects of importance for people with hidden disabilities when they decide to tell – or not to tell – others in the workplace. While discourse analysis is a relevant methodological approach in a study about people with hidden disabilities I argue that institutional ethnography (IE) through its focus on institutional practices and the relational understanding of their material consequences in workplaces and on every day experiences. Discourse analysis could stay at the level of representation, not showing what people actually do with discourses and thereby risking seeing neither agency nor material practices. IE enables an understanding of how marginalization works in individual, interactional and institutional practices in workplaces and of how the everyday life and agency of persons with hidden disabilities are impacted by these practices. Another advantage is that IE does not accept an ontological divide between individual and structure and an analysis based in IE thus can provide an answer to the long influenced paradox among disable philosophers: how to theoretically understand disability as a consequence of inequality/social structures without neglecting individuals' bodily experiences of living with a disability. This is also something I will discuss in the paper with the help of my empirical data.

NORKUS, ZENONAS* (Vilnius University, zenonas.norkus@ffsu.lt)

Moving up and Down in the Capitalist World System: A Qualitative Comparative Analysis of Patterns in Post-Communist Transformation

The relation of Communist world to capitalist World System (WS) is disputed subject, opinions including the views of USSR as semi-periphery power in the capitalist WS, as residual empire resisting integration into WS, parallel World anti-Sys-

tem etc. Its breakdown was fuelled by promises of anti-communist counter-elites and broad populations of joining the core of WS in few years after re-introduction of free market and liberal democracy. After 20 years, analysts describe history of former communist countries in the 20th century as "detour from periphery to semi-periphery, and from semi-periphery to periphery". After two decades of post-communist transformation, most of them remained or returned to the positions where they were before Communism, some moved down from the semi-periphery to periphery, and only few managed to upgrade their world-systemic position. According to the tran-

sitional wisdom, economic (shock therapy) or political (revolutionary removal of Communist) factors are decisive for the early success of post-communist transformation. The author argues that neither economic nor politological expla-

nations are sufficient to account for changes in the world-systemic position of former communist states (including China and Vietnam), and highlights the importance of cultural differences described in terms of four orientations (continu-

uation, adaptation and innovative) of social imaginary and social action on the eve of post-communist transformation. This argument is tested by qualitative comparative analysis of patterns in post-communist transformation.

What Makes Fathers Involved? Exploring the Relationship Between Paid Work and Childcare

Although fathers' roles have been adapting over the last three decades, their involvement in childcare and domestic work. However, the relative impact of fathers' and mothers' employment on paternal involvement in childcare is unclear, and little is known about the longer term impact, that is, whether the way parents' organise their work and childcare arrangements in the first year of the child's life impacts on paternal involvement as the child grows up.

This paper, based on work by Norman, Elliot and Fagan (Community Work and Family, forthcoming), investigates some of the tensions between employment and a father's involved caregiver role. We open with a review of the qualitative and quantitative results from previous studies concerning father's contributions to childcare, focusing on the facilitative influences of supportive paternal leave policies and other reconciliation measures have played in some countries. Then we focus on employed couples to explore the association that mothers' and fathers' employment hours have with paternal involvement when their child is aged three. Multivariate analysis using the UK's Millennium Cohort Study reveals it is the mothers' employment hours when the child is aged three that has the largest association with paternal involvement in childcare at this stage in the child's life, independent of what hours the father works. Furthermore, both parent's employment hours when the child was nine months old have a longitudinal influence on paternal involvement when the child reaches three, but it is the hours a mother works when the child was aged nine months that has the stronger association with paternal involvement at age three. This suggests mothers' work schedules are more important for fostering paternal involvement in both the immediate and longer term.

What Makes Fathers Involved? Exploring the Relationship Between Paid Work and Childcare

Although fathers' roles have been adapting over the last three decades, financial provisioning remains the essence of "good" fathering and the work schedules associated with fathers' employment is a key factor that shapes the involvement in childcare and domestic work. However, the relative impact of fathers' and mothers' employment on paternal involvement in childcare is unclear, and little is known about the longer term impact, that is, whether the way parents' organise their work and childcare arrangements in the first year of the child's life impacts on paternal involvement as the child grows up.

This paper, based on work by Norman, Elliot and Fagan (Community Work and Family, forthcoming), investigates some of the tensions between employment and a father's involved caregiver role. We open with a review of the qualitative and quantitative results from previous studies concerning father's contributions to childcare, focusing on the facilitative influences of supportive paternal leave policies and other reconciliation measures have played in some countries. Then we focus on employed couples to explore the association that mothers' and fathers' employment hours have with paternal involvement when their child is aged three. Multivariate analysis using the UK's Millennium Cohort Study reveals it is
Labeling political enemies as terrorists became the new trend in the new millennium. It has not only become the cornerstone of discourse surrounding US foreign policy, but also a rhetorical tool employed by authoritarian dictators (such as Gaddafi during the Libyan crisis, and Assad during the Syrian civil war) in maintaining their grip on power.

It is argued that the threat of terrorism is successful in garnering public support for military intervention and authoritarian practices precisely because it plays on public fears and anxieties concerning anomie and unpredictable violence. The construction of a terrorist threat reinforces the authority of the State to ensure security and public safety, even sanctioning extreme measures (such as torture, intrusive surveillance and the outlawing of public gatherings) that would normally be viewed as antithetical to the humanistic principles of liberty, justice and tolerance. However, these measures are justified on the basis that terrorism is ‘evil’ and therefore requires a ‘means justifies ends’ rationale where humanitarian ideals are cloaked in the ultimate concern. ‘Terrorist’ groups, meanwhile, also cast their activities in terms of humanitarian and religious responses to oppression and aggressive foreign policy, even as they reject certain humanist principles and modernization as forms of Western imperialism.

By examining speeches and writings from key political figures, it will be shown how humanism and religion merge in the political discourse surrounding terrorism in ways that indicate uncertainty and/or duplicity over the moral foundations of contemporary political action and State power. Do such tendencies reflect differences associated with an emerging post-secularist humanism, or are they a Machiavellian bricolage of ambivalent and contradictory rhetorical elements? The answer is relevant to understanding to what extent the enculturation of humanitarian ideals can serve to arrest the violence surrounding terrorism.

**Woman Leader, Woman Employee and Ethical Organizational Culture in High and Low Gender Gap Index Contexts**

Considering widely reported differences among countries in terms of innovation development levels, achievements in such fields as gender equality, organizational responsibility and other alike implementations (especially comparing American, African and European, North-South-East-European, Post-soviet-socialist countries), the paper focuses on women’s and men’s status in modern organizations. More specifically, the paper concentrates on perceptions of women leaders and organizational climate in the organizations working in such societies as Finland (Northern country) and Lithuania (East European post-soviet country).

Quantitative data were collected by a web-based survey in Finland (2011) and Lithuania (2013, still under process). In this study, indicators of 2 scales are in the focus of empirical analysis: the Corporate Ethical Virtues scale of 58 items comprising eight dimensions of organizational virtues: clarity, congruency of management, management; manageability, transparency, discusssibility and sanctionability; the leadership practices scale of 7 items, depicting the ethical dimension of organizational culture, etc. in a comparative perspective. The analysis will be repeated at the end of 2013 after data collection process will be finished in Lithuania.

NOVIKOVA, NATALIA* (University of Tsukuba, novikovanatv@gmail.com)

**Post-Disaster Literacy of a Japanese Local Community**

More than two years have passed since the Fukushima Dai’ichi Nuclear Power Plant accident of March 11, 2011. The first phase after the accident, “collective moral confusion” (Petryna, 2013), suggested that the existing system will over- come the crisis, safety, yet evolved into feelings of desperation and disorientation about actual risk. An escalated sense of the unknown and unexpected fostered a flow of voluntarism and participation in local decision-making processes. Engaged in the process of information sharing, consensus-building, and mobilizing their resources and connections, local activists have been trying to influence local government decision-making.

This paper examines the process by which the Fukushima accident has been dealt with in radiation-contaminated communities, yielding insights into local government responses to the nuclear accident and probing whether government-citizen relations have been altered in the aftermath of such a disaster. Through
fieldwork undertaken in 2013 in Abiko City, Chiba Prefecture, this paper traces the nexus of the community-NGO-government relationship, focusing on the after-effects of the Fukushima Daiichi Nuclear Plant accident. Utilizing civil society concepts and the expanding role of civil society in governance, we argue that civil society in a post-disaster community is an arena in which new ideas concerning governance are formulated and citizens’ civic education is carried out. What is more, this paper provides what Charles Tilly called the “repertoire of collective action,” in which people engage in modern post-Fukushima modes of political protest. While observing how people from a radiation-contaminated community have overcome some risk-perception problems, this research gives insight on the modern Japanese capacity to deal with unpredictable human-made accidents, extending previously known scenarios of post-disaster management.

NOVIKOVA, SVETLANA* (The Institute of the Social and Political Researches of the Russian Academy of Sciences, s_novikova60@mail.ru)

Characteristics of Becoming Sociology in Russia

Russian sociological thought XIX - early XX centuries was closely associated with the ideas of Russian philosophy and literature. The becoming of sociology in Russia was initiated in the framework of social journalism. The first sociological articles were published in the periodical press as a “Notes of the Fatherland,” “Business,” “Knowledge”. One of the founders of Russian sociology N.I. Kareev highly appreciated journalistic contribution to the development of sociology, noting that the “Notes of the Fatherland” was the first in the Russian sub-faculty, which has participated in the creation of generation of sociologists.

In the West the institutionalization of sociology, sociological deployment of higher education took place earlier than in Russia. Recognition of sociology at the state level in Russia was only after the February Revolution of 1917 largely due to P.A. Sorokin. The first sub-faculty of sociology was established in 1919 at the general education faculty of 2nd Petrograd State University. Only in 1916 was an attempt to create a “Russian Sociological Society name M.M. Kovalevsky”.

The Russian government prevented the development of sociology. The desire to prove with the help of positivism, Marxism or another theories led to unreasonable politicization of Russian sociology. On this occasion P.A. Sorokin said: “In Russia the concept of the social sciences for sociology were: prison, exile and hard labour. Disinterested search for truth and the presentation of the results of this search were impossible”. Therefore, the hallmark of Russian sociology was its oppositional political preconception. Probably for this reason Russian sociology was prohibited in 1929-1958 and officially named as pseudoscience.

Emotional Work During Biographical Research: A Researcher's Personal Reflection: Researcher’s Experience (ongoing biographical research projects)

Social research are entangled in experience of researchers, who are emotionally affected by the work that they do. Particularly In qualitative research researchers’ engagement could influencing on the resulting of data. Since during the biographical interview facing many difficult situations. So it is in my case. In my biographical research with veterans I am often in difficult emotional situation. I am going to refer how I manage with this problem and provoke methodological discussion in that field. Biographical interviews required hard emotional work of researchers. Therefore in my paper I take a distinctly approach to provide a personal account of my experiences of doing emotional work while conducting my postdoctoral fieldwork. To add context, my research focuses on the biographical interviews with the polish former soldier of the military operations in Iraq and Afghanistan. In my research I define this social category as veterans because respondents identify themselves as such, too. Thus, through collecting stories, the research seeks to explore experiences and understandings of former soldiers wounded and injured in mission abroad, both in terms of these constructions, and the ways in which personal managers negotiate them. My paper focus on two ways of biographical research reflections. Firstly, on the considerable emotional challenges encountered during the research process and the ways in which these were managed through both successful and unsuccessful coping strategies. Secondly, I detail the ways in which my identity and biography impacted upon this emotional work and my relationships with participants. In order to embody such discussions I use excerpts from my own research diary and quotes from participants. Conclusions in my paper concern to the ways in which we, as the community of researchers, can do more to share our research experiences with each other for the benefit of ourselves and our work.

NOWAK, RAPHAËL* (Griffith Centre for Cultural Research, raph.nowak@gmail.com)

Locating the Materiality of Music Artefacts

This paper aims to reinstate issues of materiality within the study of music consumption. While music sociologists usually focus on notions of taste, mediation or repertoires of preferences, the materiality of music artefacts are often neglected in the studies on music consumption. From the iconicity of vinyl discs, the hapticity of iPods, to the aesthetic features of posters, artefacts play a major role in how individuals develop and maintain a relationship with their favorite musics, artists and genres. The material interactions between audiences and music artefacts are aesthetic and embody their preferences in return.

In the digital age of music consumption, there is an increasing trend towards the fragmentation of modes of music consumption. Music audiences are driven towards the use of different material artefacts to surround themselves with music throughout everyday life. Henceforth, artefacts relate music to different forms of interactions and associate it with everyday activities.

In this paper, I argue that both fields of sociology of music and of material studies need to be intertwined to effectively account within researches of music consumption. By doing so, it becomes possible to uncover the meaning of differentiated types of music consumption and look at forms of aestheticization of everyday life through music and the objects that embody it.

Reconstructing Processes of Risk Awareness/Regional Development at Tsunami Disaster: The Case of Otsuchi-Town before and after the Great East Japan Earthquake

In this report, I explain how regional developments changed people’s risk awareness and could add to the damage of disasters. I adopt a case study about Otsuchi-Town (Iwate-Prefecture), which was particularly heavily damaged by the 2011 tsunami disaster in The Great East Japan Earthquake, and where regional developments in the waterfront were strongly prompted before disaster. Before disaster, reclamation of the waterfront and the location of houses, factories, and tall coastal levees for protecting them in the reclamation areas were the main ways of the regional development, because this area had less flatland when industrial conversion occurred and population increased. Otsuchi-town had been damaged by tsunami disasters historically and old inhabitants had the awareness that living in this area was risky (eg. “My house is located at altitude but the 1st floor was flooded.”). But in the process of regional development, this risk awareness changed (eg. “My house has been flooded but now tall levees will protect me. At the worst, I should evacuate to the 2nd floor”).

In the emergency evacuation phase, because big factories were located within a confined geographical area, evacuees rushed to a particular refuge and evacuation routes to the refuge were crowded. People with the converted risk awareness previously described failed to evacuate to the refuge. Now, in the reconstructing phase, for less flatland, in the local governmental reconstructing plan, many of the places of work must be relocated in the waterfront and many of the houses must move to around the mountain. Currently, people are concerned about the risk of landslides.

Conclusion: In the process before and after disaster, regional development changed risk awareness and added to the damage. It’s important to note that developments or ideas that generally reduce risks (levees, lessons learned from past disasters, moving to around the mountain) can add to the damage or bring on new risks.

Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women's Life Trajectory: Views from the United States and Japan

Title: Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women's Life Trajectory: Views from the United States and Japan

One of the most significant worldwide transformations in education over the past several decades has been the drastic increase in women’s access to colleges and universities. However, the narrowing gender gap in higher education does not necessarily mean that gender inequalities in various spheres of society are narrowing simultaneously.

This presentation, first, examines comparable data from the United States and Japan, concerning the following questions: How has women’s higher education enrollment changed over time in the context of higher education system development...
Presentation of the research results concerning mental representation of physical space and territorial behaviours of socially excluded people, carried out with the use of visual methods.

Human territories illustrate the interdependent nature of the exchange between the man and the environment. Territories provide order and stability, as well as enable "mapping" of such types of behaviour as expressed in specific places. In this way, they help us plan and organize our daily lives. Territorial behaviours understood as such have been the subject matter of my research, the results of which will be discussed in hereby presentation. The research aimed to identify the relationship between occupation of a certain space and the way of schematization of space, and, on the other hand, it served the purpose of recognition the relationship between knowledge about the environment and territorial behaviours. It sought to answer the question: how do the people who are experiencing social exclusion – either having a house or homeless – shape their knowledge about the environment? How can physical space be treated as a social distance? The mobile method – photo walk, which was used in the study, provided visual material for the analysis of territorial behaviours, and completed descriptive and graphic material obtained through space mapping, projective methods, in-depth interviews and surveys. In the presentation I will draw attention to the way physical space resonates with its ideas and the way of creating its own territories, which are a stage where social interactions are implemented. The ways of perception and organization of the space and the use and creation of its sociopolitical and sociocultural character, by which it acquires the regulatory role for interpersonal relations and relationships, will be visualized as well.

Single Motherhood and Anti-Social Behaviour Outcome in Children

Family disruption through divorce and separation is increasingly becoming a common phenomenon in many sub-Saharan African countries. A few studies have documented the trend, patterns, determinants and effects, yet, much of the effect on children has not been as well documented as in the more developed countries. In particular, the effect of family disruption on children's involvement in anti-social behaviours has remained largely speculative. This study aimed to contribute to literature on the relationship between single motherhood and children outcome in sub-Saharan Africa using data obtained from Nigeria. Although official census record shows that crude divorce rate in Nigeria was 5.5 per 1000 population and 13.4 for ever married population in 2006, there are indications from the media and public opinion that the incidence of marital disruption through separation and divorce in the country is higher. This paper utilized a survey of 249 randomly selected inmates of prisons in Osun State, Nigeria to examine the effect of single motherhood on children's involvement in anti-social behaviour. The major research question was: are children of single mothers more likely to be involved in crime than children in intact homes? The mean age of the respondents was 29 years (sd = 7.8). Of the 237 inmates who responded to the question on mother's marital status, 60% had mothers currently in a union, 18% were from homes disrupted by divorce or separation and 22% had mothers who were widowed. Preliminary analysis showed that mother's marital status was significantly related to involvement in any type of crime and the odds of being involved in stealing or armed robbery, violence-related offences and other forms of crime was higher for inmates whose mothers were divorced or separated than for those whose mothers were currently married or widowed. Increasing education and high-wage opportunities for women is recommended.

Socio-Demographic Factors Affecting Women's Fertility Preferences in Nigeria

This paper examined socio-demographic factors associated with fertility preferences of women in Nigeria. Women of reproductive age in the country prefer more children than men and women's preferred family size is close to children ever born for women aged 40-49. The country's population is currently estimated at 174m, with the current 2.8% rate of natural increase and Total Fertility Rate of 5.7, Nigeria will be the third most populous country in the world by 2050. The overall aim of this study was to contribute to research for more effective fertility-related policies and programmes in the country. Socio-demographic factors examined as independent variables were age, marital status, education, religion, household's size and number of children, level of autonomy measured by the individual's control over household decisions, number of respondent's siblings, number of respondent's co-wives, age at first birth, and age at first marriage. Dependent variable was reproductive preference measured by a single indicator - ideal number of children. Result of multinomial regression analysis showed that the odds of pre-
ferring 6 or more children significantly declined with decreasing age, rising edu-
cation, non-Catholic Christian affiliation and husband's desire for less children. Higher autonomy significantly increased the likelihood of wanting less than 6 or more children, having or not having siblings and co-wives were not significantly related to reproductive preference for 5 instead of 6 or more children. Age at first birth and age at childlessness significantly raised the likelihood of preferring 5 or more children instead of five. High fertility in a country like Nigeria is rooted in cultural beliefs about children and number, pre-natal control measures should be target-
more at women's attitude to large family. If Nigerian women's reproductive preferences decline, overall fertility level in the country will also decline.

The Extent of Socio-Economic Factors and Its Influence in Mental Health Condition of the Sixth Batch EPA Nurse and Care Worker Candidates

The migration of skilled workers such as health care workers has been inex-
tricably linked with globalization process. Although migration can be a stressful event for migrants (Stillman et.al, 2006), people migrate to improve their well-
being through an expansion of economic and social opportunities. This research
aimed to figure out the extent of socio-economic background and its influence in
mental health status of the sixth batch EPA nurse and care worker candidates.

A six-pages long questionnaire has been distributed to 42 nurse and 106 care
worker candidates, during pre-departure orientation. Questionnaire contains of:
socio demographics background (education, age, gender, education degree, socio
economic status), degree of preparation to migrate, degree of knowledge about Japan,
Japan's health care system, satisfaction with pre-departure Japanese language training
program, motivation to go to Japan and number of social sup-
port. The General Health Questionnaire (hereafter ‘GHQ’) was used as a marker of
mental health status of the respondents. The result of this study indicated that the 6th batch EPA candidates indicated healthier mental health in care workers than in nurses (p<0.05), being younger (p<0.05), being economically difficult to survive in Indonesia (p<0.05), being unemployed at the time they applied for the program (p<0.05), having better degree of
knowledge about Japan (p<0.001) and having larger number of social support
(p<0.001). While language proficiency, satisfaction with pre-departure Japanese
language training and degree of preparation to go to Japan, had no significant correlate with GHQ scores.

One can assume that the mental health status of the 6th batch EPA candidates mostly influenced by socio-economic status of the candidates prior to the depar-
ture to Japan. It can be noted also that sufficient number of information, as well as social support must be provided for maintaining a good mental health status before leaving for Japan.

Politics of Representation of the Workers' Movements in Indonesia

The paper will discuss the politics of representation of union and different cat-
egories of its constituency in the post authoritarian Indonesia. Amidst the pres-
sure of labor market liberalisation that erodes the union power in the workplace,
unions start to develop the strategy of community unionism and tries to play a
broader political role through local electoral politics. The purpose of such experi-
ment is aimed for mobilizing broader support to increase union political bargain-
ing position in front of the state and employers. The union includes other local so-
cial groups such as urban poor, informal workers, and peasants as new categories
of constituency. Consequently the integration of workers and the non-workers
into union constituency results in increasing heterogeneity of the consti-
ituency. Workers are not a homogeneous category, let alone the non-workers
groups. While the union is mobilizing the constituency, groups within constitu-
ency are actually still fragmented within their partial identities and interests. The
relations between them and the union are vulnerable to contestation. This condi-
tion creates vulnerabilities within the body of constituency. This paper will show the interplay between the strategic homogenization and the heterogeneous real-
ties. It will provide critical insights into the way the power relations within the process of mobilization is dealing with the problems of representation gap. On the other hand, it will also
look at how the labour process as well as external social context influence the
dynamics. The discussion in the paper is based on a case of study on a workers'
movement in one industrial city in the province of Central Java, Indonesia.

Becoming “Cosmopolitan Japanese”: How Japanese Adolescents Employ Transnational Experiences for Their Empowerment

Reflecting the imperatives of the global economy, both the Japanese government
and private companies have recently begun stressing the need to raise
‘global talent’, especially placing value on English and various other transnational
competences. At the local level, such global forces have led overseas Japanese
middle-class families to adopt transnational education strategies, which enable
them to accumulate what is called ‘global cultural capital’ (Kim 2011; Waters et al. 2006; Weenink 2008)—English skills and cosmopolitan sociability particularly, at the
same time preserving children's Japanese language and cultural attitudes (Nuk-
aga 2013). However, the question remains as to how these children are incorpo-
rated into the US host society and how they readapt to the Japanese society when
they finally return home. Based on interviews with Japanese adolescents who had
stayed in the US with their parents since their childhoods and later decided to
return or actually returned to Japan for university, this study examines how they
perceive and employ their transnational experiences to integrate both in the
US and Japan. Acquiring transnational habitus, a double consciousness that
analyzes aspects of both life 'here' and 'there', these adolescents are capable of
assessing the value of their global cultural capital and “Japaneseness” in the US
and Japan respectively. Although feeling a sense of marginalization in both soci-
eties, they show a strong preference to become fully bilingual and bicultural
by keeping their feet in both societies. Such strategy leads these ‘cosmopolitan
Japanese’ adolescents to choose a job that transcends national boundaries and
allow them to stay connected to two or more countries.

Let Go and Remember. Collective Memories and Narratives of Mass Violence in Finland

Due to its inexplicable and inconceivable nature, mass violence causes a con-
siderable sense of insecurity, the impacts of which are felt far from the center of
the incidents. They extend out to touch those who are indirectly affected, and
even people who are not personally disrupted by the events. Bystanders to these
incidents are involved in the complex process of making sense of violence and
death through collective memorialization practices and narratives recounting the
incidents. These practices provide a sense of community while also being a source
of conflict. Should the community remember and memorialize the incident, or try
to put it out of their minds and move on?

In this presentation I explore the bystander experience in two school shooting
incidents in Finland that occurred in 2007 and 2008. The analysis is based on qual-
itative interviews with residents of the targeted communities – people who vicar-
iously experienced the shootings. The presentation is especially focused on how
these bystanders formed memories of the incidents and recounted their personal
experiences in the interviews. To understand how the bystander experience is
constructed through collective practices, I examine the collective narratives, rec-
collections, and emotions shared in everyday interaction and the media. Public
memorialization, such as attending vigils and contributing to spontaneous memo-
rials, is identified as a defining feature in the bystander experience.

From International Professional To Caregiver In Rural America

In 2002 my father asked me to care of my mother as he was going blind. This
meant I give up professional activities for specialized UN agencies and become a
full-time caregiver. Within two weeks, I moved from an Asian city of 13 million to
a rural community with 8,000 residents. As I traveled from east to west, I entered
a community where I never lived and where I knew no one. A new socio-culture

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This discussion is based on more than a decade of participant-observation in a rural community with 8,000 residents and fifty churches. At the beginning of the decade, the author became a resident exclusively engaged in the full-time care of elderly parents. During the decade, a dramatic increase in overt hostility towards the rural elderly was observed and documented as a new culture was emerging to replace respect for the elderly with three main agents: predators, parasites and ambulance chasers.

This paper discusses variations among these agents as they accomplish their objective of financial exploitation of the elderly. The predator waits for an opportunity to exploit the elderly by profiting from their limited ability to defend themselves. Older children form a major predator group, along with those associated with assisted living and nursing homes. For parasites, economic survival flows from exploiting the elderly through provision of services and products that they no longer able to access or acquire without assistance. Children and grandchildren increasingly operate as parasites. Observation suggests parasites at least double their profit from work for the elderly relative to other age groups. So the parasites operate from local shops and businesses or as attorneys engaged in servicing the elderly, with financial gain being similarly disproportionate as their primary objective. Medicare beneficiaries are often primary targets of parasites. Ambulance chasers may be engaged in provision of health care as well as entrepreneurs who offer people released from the hospital with assistance in selling everything they own, including their home; when met with resistance, phone calls to parasites in social services often facilitates the acquisition of a power of attorney for this final stage of asset appropriation. It concludes with observations suggesting 50 churches serving 8,000 are financially viable with these agents.
**A New Analysis of Claims to Identity and Belonging: The Importance of Knowledge within Australian Native Title Claims**

Within Australia success in native title cases for Indigenous peoples has come to be heavily based upon the ability of Indigenous groups to establish ongoing connection to land by presenting proof of the continuity of their identity and cultural practices since colonization. This paper explores the processes through which these claims of identity and belonging are made, and challenged, within Australian legal processes. It seeks to extend previous work examining what is creating the difficulties that prevent Australian Indigenous peoples from articulating and presenting their culture and identities in such a way that can be understood within the non-indigenous courtroom. Specifically, this paper will present a sociology of knowledge that enables new insight into these issues by bringing processes that underlie the legitimation of knowledge to the forefront. It will be demonstrated that engagement with the sociology of knowledge can be used to uncover the structural relations that inhibit Indigenous voices within native title claims. In order to do this the Australian Yorta Yorta native title case will be explored in depth using this approach. In particular the paper will deconstruct the arguments that led to the judgment that ‘the tide of history had ‘washed away’ the traditional laws, customs and culture of the Yorta Yorta people in direct opposition to their own claims’. Through this analysis it will be shown that it was not simply the content of the knowledge itself that affected the final judgment, but a disconnect between two different understandings of the basis upon which knowledge may be considered ‘legitimate’. Finally, it will be argued that the sociology of knowledge can be extremely useful in analyzing the ways in which different groups of people present their identity and senses of belonging, as well as the ways in which these claims are received by others.

**Towards a Theoretical Model for the Reproduction of and Change in Gender Inequality in Higher Educational Institutions**

This paper identifies key elements facilitating/ inhibiting the reproduction of gendered inequality in the professoriate and senior management in higher education. Gender is seen as a social institution (Yancey Martin, 2004) and a multi-level phenomenon (Wharton, 2012; Risman, 2004). It is reflected in the societal allocation of power and resources; in state policies; in gendered organisational cultures, narratives and structures; in interactional stereotypes and perceptions and in gendered selves. Its multi-layered character can potentially exacerbate the difficulty of initiating change. However, in specific contexts, change at any of these levels may consciously or inadvertently affect change at other levels (Walby, 1990).

Cross national structures are a particularly important potential source of change since gender inequality inhibits economic growth (OECD, 2012; EU, 2012). At national level, the salience of gender issues varies. There is an underlying tension in the fact that women are disproportionately represented among knowledge workers, but are under-represented in those disciplines that underlie the origins of science and medicine. This has important consequences for the gendered inequality in the professoriate and senior management in higher education. Understanding this requires a model that can explain the reproduction of gender inequality in higher education. This model is based upon the concept of a system of systems and grounded in the sociology of knowledge.

The framework will be located in a cross national study of senior management, focusing particularly on Irish universities, and including a case study of one university where the proportion of women at professorial level increased from zero to 34 per cent over a 15 year period (O’Connor, 2011a & b).

**The Street Politics Of The 3.11 Disaster**

In the weeks and months after the Tohoku disaster on March 11, 2011, tens of thousands of people took to the streets in Japan to protest and voice their concerns about the government’s role in exacerbating the crisis. Of particular focus within these protests were the perceived mishandling of the Fukushima Daiichi nuclear accident, and the broader dangers associated with relying on nuclear energy. These protests were significant since they were some of the largest street protest to occur in Japan since the 1960s and 1970s when hundreds of thousands took to the streets of Tokyo to oppose the revisions of the US-Japan Security Treaty (AMPO). How should scholars, therefore, interpret and explain the recent anti-nuclear street protests within a broader perspective on popular forms of political dissent in Japan? What can these protests tell us about the nature of civil society in Japan? How did such a catastrophic event affect civil society groups already engaged in different social struggles? In an effort to help answer these questions, this paper approaches these questions ethnographically from the perspectives of different Japanese activists that were organizing public protests around irregular employment and growing economic inequalities before the disaster. What role did these groups play in the post-3.11 protests? How did they shape the street politics of the 3.11 crisis? Conversely, how did the crisis shape their politics?
The post-3/11 demonstrations against nuclear power have been regarded as a sensational development in Japan, where disruptive protest movements had been conspicuously absent since the 1970s. In contrast, I argue that collective public protests have been part of the repertoire of urban activists since the early 1990s, albeit rarely noticed by the larger public.

One prominent activist network is the group Shirōto no Ran in Tokyo, who have been at the forefront of a number of protest movements from the early 2000s in Japan, e.g. the Freeter-movement or protests against urban regeneration and restrictive legislations. Not a pronounced environmentalist group, they nevertheless emerge as the main organizers of the early 2011 anti-nuclear demonstrations, utilizing their network and long-rehearsed creative protest repertoires. Besides these symbolic demonstrations, they enact prefigurative politics in their daily lives, implementing their alternative visions of urban generality, entrepreneurship and empowerment. What distinguishes their network from other organizations is their strong cooperative and creative commitment beyond the restraints of conventional association like NGOs or political parties.

By interpreting their framing of the 3/11 crisis in a larger context of social change, the struggle against precarity and new developments in (proto-)political activism, I will explain how Shirōto no Ran as a non-environmental group did respond so quickly to the disaster – despite their low level of organization and professionalization. The key issues to be explored will be how they 1) organize themselves 2) develop protest agendas 3) mobilize participants, all seen under the larger topical and temporal trajectory within this group. By uncovering the workings of such seemingly “invisible” activist networks who operate outside the established civic organizations, the understanding of current forms of social movements in Japan will be broadened, re-thinking the terms of civic participation.

OBINGER, JULIA* (University of Zurich, julia.obinger@uzh.ch)
Reclaiming Their Streets: Prefigurative Politics on Contested Urban Grounds in Tokyo

The social vicissitudes of post-bubble Japan left many young Japanese looking for escape-routes not only from the restrictions of Japan’s societal norms but also its highly privatized metropolitan layout. Addressing both issues, a few dozen activists of a countercultural scene in Tokyo have long experimented with alternative urban lifestyles, staging protests that oscillate between the symbolic and the prefigurative: struggling with the oppression in the use of public space, they introduced a counter-cultural infrastructure of small “autonomous zones” in some lesser-gentrified pockets of Tokyo, where they carve out free spaces for everyday living and flexible forms of political, social and cultural participation.

Moreover, long before “Occupy” even became a global catchphrase, they challenged the configuration of their urban surrounding (as well as local police) by staging disruptive yet playful events, like carnavalsque demonstrations, ad-hoc street picnics or the blockade of contested spaces. They tackle issues ranging from homeless rights to insecure employment, from state legislation to nuclear power; resistance to the 2020 Tokyo Olympics just emerged as their most recent urban battling ground.

In terms of movement studies, their relative successes are puzzling, considering their lack of a clear political agenda or single common cause. In addition, they form a radically unstructured and heterogeneous network that is characterized by a low level of professionalization and deliberate externality to the mainstream social movement. Tackling this research contradiction, this paper analyzes the unique characteristics of this network, and proposing ways to re-think categories of “social movements” in Japan on the basis of concepts like sub-politics, prefigurative politics, and DIY-politics.

OCENAR, CRISTINE* (Social Weather Stations, christine.ocenar@sws.org.ph)
SABIO, GIANNE SHEENA (Social Weather Stations)
Bridging the Gap Between Overseas Filipino Workers and Their Families through Social Media

The National Statistics Office (NSO) estimates 2.220 million overseas Filipino workers (OFWs) working abroad at anytime during the period of April to September 2012. The study aims to analyze how OFWs use social media in communicating among families with OFW members.

The birth of modern technology and its advancements, in this day and age, is deeply intertwined with the globalization of cultural industries. It may produce “cosmopolitanism” oftentimes used in relation to ethics, politics and migration. But it is seldom employed regarding common and ordinary situations, such as everyday consumption (Ciccilli and October, 2013). However, recent research reveals that in France and Quebec (Donnat, 2008; Octobre et al, 2010; Pronovost, 2013; Poirier, 2012), there is a growing proportion of foreign products and contents in cultural consumption, as well as in tastes, norms, references and representations, especially among young people. Without eluding the dynamics of local cultures, hybridization and mixing (Amselle, 1992), this “de facto” cosmopolitanism is deeply intertwined with the globalization of cultural industries. It may produce in individuals a feeling of cosmopolitanism regarding interests, attachments and imaginaries (Appadurai, 1996), or a feeling of belonging (Gallant, 2012).

This perspective enables a reformulation of the question of “distinction” (Daloz, 2013) in two ways which are central to both the sociology of culture and the sociology of social groups. First, it questions the “cultural distinction” and the cultural legitimacy it is based on, either in Bourdieu’s classical view (1979), or in modernized versions, such as omnivorism (Peterson, 1996), or individual plurality (Lahire, 2006). Second, it calls into question the “social distinction”, through the reconfrontation of secondary factors which mark new lines of fragmentation in young people’s cultural universes (October, 2010). This talk will address these questions through a comparison between France and Quebec, within a mixed-method (qualitative and quantitative) research program.

Japanese Brazilian Migrants’ Views on the Status of Ethnic and National Categories in Japan

Recent studies have tried to avoid the pitfalls of essentializing international migrants as homogenous ethnic “groups” or “communities” by focusing on the transnational spaces and the hybrid practices that connect migrants’ sending and receiving countries. However, by restricting its attention to a duality between the country of origin and the country of destination, these efforts frequently neglect other important relations that lie beyond this dualism. Some scholars have responded to this difficulty by adopting a new kind of transnational research that investigates migrants not based on ethnic or national categories, but on aspects that are more comprehensive and diverse, such as the religious practices of migrants. In this presentation, however, I examine the specific case of Japanese Brazilian migrants in Japan, and argue that one other possible strategy to deal with essentialism in research and analysis is the comparison between Brazil and Japan.

Section 5 introduces the case study of the Japanese Brazilian migrants in Japan, and argues that there is a need to adopt a different approach. The Influence of Population Growth on Land Tenure and Ethnic Conflicts in Benue State of Nigeria

The high growth rate in human population and the increasing scale of human activities on land have resulted in tremendous environmental degradation and climatic change which have grievous consequences on the security and live of people. Benue State today faces with ecological and demographic problems for which they are largely responsible. The most recent are the flood disaster resulting from the over flow of river Benue and incessant conflicts with Fulani herdsmen. Man’s activities with the environment have led to problems such as global warming, ozone layer depletion, loss of biodiversity, desertification, deforestation and climatic change. What these translate into is decreasing landmass that will be available for farming and grazing Benue State is an agrarian society with rapid population increase. The high poverty profile in the state has aggravated stress and appetite for natural resources such as plants, animals, water, minerals, air and land and so on. The aftermath of such activities is the disruption of the ecosystem. Benue State today is experiencing recurrent communal and ethnic conflicts as a result of competition over land. There is unequal access to land in the State. These problems have great effect on the health and security of the people. The paper examines how the increasing population growth, utilization of primitive technology, pressure on the natural resources etc. are affecting the land tenure system and social and food security in the state.

Forms of University Elite Sport in South Africa

The paper looks at the phenomenon of elite sport at a university in South Africa, for possible comparisons with other types and institutions, and how this has unfolded at such a university. It seeks to distinguish such sport in the context of three types of university elites, which indicates particular institutions. There is the enlightened context of sports practices, and there is the resistant context of sport for which they are largely responsible. The most recent are the flood disaster resulting from the over flow of river Benue and incessant conflicts with Fulani herdsmen. Man’s activities with the environment have led to problems such as global warming, ozone layer depletion, loss of biodiversity, desertification, deforestation and climatic change. Experiment Workplace Innovation in Elderly Care

By order of the Dutch national association for long term care, Actiz, the Utrecht University of Applied Science has carried out an Experiment of Workplace Innovation in Elderly Care to develop a new innovative organizational design that is intended to improve the quality of care, work efficiency and BrabantZorg, a large care provider in the South of the Netherlands, was the pilot organization for the experiment. The result is a general instrument that should enable other care providers to initiate a similar process in their own organization. The experiment was finished in the summer of 2013. The Experiment of Workplace Innovation is unique as the innovation is initiated and developed bottom up by the care professionals themselves together with the patients and/or their families. Managers, board and back-office are required to react on the change process started from the work floor and need to reflect upon their role and adapt it accordingly in order to facilitate the process. The project combines organizational design with change and implementation. The project consists of three pilots at three different nursing homes of BrabantZorg.

The Type to Train? Impacts of Psychological Functioning on Further Training Participation

Evidence is plentiful that especially level of formal schooling and occupational rank determine access to and participation in employment-related training. However, the individual personality characteristics that have been related to human capital acquisition during adulthood is not only stratified by classic markers of social inequality, but also by indicators of psychological functioning, namely personality characteristics. Research shows that personality traits drive attitudes and behaviors, and determine socio-economic life outcomes like educational attainment, labor market participation and income. Thus, I conceptualize participation in further training as stratified by intra-individual differences in the Big Five and Locus of Control beyond socio-economic markers; generally I ask what sorts of individual personality traits lead to successful psychological career-related functioning over time.

Transitioning through Recession? Labor Market Entry Patterns for Hard and Soft Fields of Studies before and during the Financial Crisis
Transitional from higher education into the labor market is a major life event for graduates and determines and stratifies paths of future career success. However, labor market entry patterns are different by field of study with those from hard study areas (science, technology, and engineering) following a smooth transition, whereas graduates from softer fields of study (humanities and social sciences) experience a longer, more winding road into employment where spells of marginal employment and unemployment are frequent.

This research looks at Germany, a country which is highly standardized and stratified, and compares these subject-specific school-to-work transition patterns before and during the economic crisis. In the rich literature on gender and migration, the paper focuses on the process of job-attainment which is a highly personalized process where the time and place of job-attainment are more diverse during times of economic paucity such as after the Great Recession; however, this should not be the case for all subject areas. Instead, hard fields of study are less impacted by economic downturn as they are more protected by their specialized knowledge, showing a clear and direct link between higher education and the labor market, whereas graduates from softer areas suffer from the crisis and show even more diverse and fragmented transition patterns.

Using data from the German Socio-Economic Panel and employing methods of sequence and cluster analysis, I look at differences and similarities within and across fields of study before and during the economic crisis within the first 24 months after graduation. I demonstrate that there are distinct labor market entry trajectories between hard and soft studies, which differ substantially for latter before and during the Recession. I explain the diversity of career transition patterns as produced by differences in human capital specificities which favors specialized over general education. Economic fluctuations have a larger impact on demands of general skills which translates into more fractured transition patterns.

Unequal Distribution of Surveillance: Data Processing of Nuclear Workers in Japan

Inequality has been a central question in surveillance studies because personal data have been sorted to categories and the data-subjects have been treated differently depending on the categories in which they are placed. The word of "social sorting" shed a bright light to those activities of dividing people behind the curtain, although data-collecting systems are usually established in the claim of everyone's benefit, either all customers or all citizens.

Surveillance does not serve everybody. Furthermore, surveillance society inevitably contains times and places that are intended to be outside of intensive scrutiny. In spite of its ubiquitous appearance, distribution of surveillance differs with the targets, more precisely, with the relations between watching power and the watched population. In turn, such times and places disclose whom the surveillance system serves.

In the Japanese context, such sites, particularly unveiled after the earthquakes on March 11, 2011, are nuclear power plants. Nuclear power plants are operated using numerous electronic monitoring systems. But the workers are not consistently surveilled. Their data of exposure to radiation have been often unrecorded, underestimated, or distorted. The government has tracked their data only for specific purposes, never using the data for the workers' own safety. The lack of reliable records allows electric companies to keep hiring the workers temporarily and contributes to reproducing labor power at the plants.

Based on the research of data processing on nuclear workers in Japan, this paper shows how the unequal distribution of surveillance plays a part of surveillance society. The workers at risk seem to be most in need of monitoring, but are excluded in the middle of highly-wired plant. The mass surveillance and interactive features of electronic technologies disguise equality and democracy. Yet, unmonitored or unrecorded sites highlight the unequal landscape of surveillance society before social sorting starts.

Employer Evaluation and Transition from School to Work: Reexamining the Impact of Institutional Linkages on the Japanese Labor Market

The purpose of this study is to investigate how employers evaluate high school graduates and determine the quality whereby they make hiring decisions. The process of job-attainment includes two components: one is the entry of job seeker into the labor queue and the other is the assessment made by employers. However, past studies that used a simple regression model typically assumed supply and demand sides were in equilibrium. Such a model may not be appropriate for the analysis of a highly-structured labor market like Japan. This study makes a distinction between job seekers' preference and employers hiring decisions by using partial observability probit model(Sakamoto and Powers 1995). This model assumes two underlying equations for one observable outcome and can make a behavioral process more explicitly. Using a nationally representative data, we analyze how high school graduates' attain their first jobs. Previous studies have shown the importance of long-term networks among schools and employers (Rosenbaum and Kariya 1989). We examine whether employers in fact highly appreciate such institutional linkages. Dependent variables are the attainment of regular employment, white-collar jobs, and large-firm jobs. The result observes institutional networks are important for employers' hiring decisions, rather than students' vocational skills or academic achievement. Moreover, the result doesn't confirm the impact has weakened after the economic crisis since 1990s. This suggests in Japan, where vocational signals are weak, employers exclusively rely on social relations that are embedded (Granovetter 1985) in the labor market.

Coping with the Ageing Society?: Migration of Care Workers to Japan and Taiwan

Challenged by the demographic change of low fertility rate and rapid population ageing, Japan and Taiwan are trying to cope with the crisis of care in a very different way regarding its policy to introduce migrant workers to undertake long-term care. Taiwan has started to invite migrant caregivers since early 1990s and approximately 200,000 migrants from Southeast Asia are currently working mainly in private homes. Japan started to introduce the migrants since 2008 under the bilateral agreements with governments in Southeast Asia under the condition that they have to pass the national exam on caregiving in Japanese within a certain period of time.

Unlike migrants in the highly skilled sector or productive sector, care work performed in the intimate space entails not only the political economy of care but a normative value underpinned by cultural notion of what care ought to be in each specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as care work in East Asia. From the perspective of gender and migration regime, the paper argues that despite Japan and Taiwan has different way regarding its policy to introduce migrant workers to undertake long-term care. Taiwan has started to invite migrant caregivers since early 1990s and the political economy of care but a normative value underpinned by cultural notion of what care ought to be in each specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as care work in East Asia. From the perspective of gender and migration regime, the paper argues that even though Japan and Taiwan receives migrants from the same sending countries in Southeast Asia namely Indonesia, Philippines and Vietnam and situate the globalization of care in East Asia within the nexus of care regime and migration regime. The paper argues that even though Japan and Taiwan has same sending countries in Southeast Asia namely Indonesia, Philippines and Vietnam and situate the globalization of care in East Asia within the nexus of care regime and migration regime. The paper argues that even though Japan and Taiwan receives migrants from the same sending countries, the ways in which the migrants are situated within the two regimes reveal different construction of care work as well as different entitlement of migrants. It aims to unpack the otherwise naturalized notion of care work and suggests to perceive migrants as a 'regional common good' in order to raise both the status of care work and the migrants at the same time to ensure the safety and security of the elderly and migrants alike.

OGIDO, ROSALINA* (Faculdade de Medicina PUC, rogido@pucsp.br)

The Working Mother and the Access to Childcare

In Brazil, the attendance in daycare and preschool are guaranteed by the Federal Constitution, as well as the Statute of Children and Adolescents, as a right of all children from birth to six years.

In a research with interviews of mothers who work in various capitals of Brazil (SOS Corpo, Data Popular, 2012), the main difficulty, reported by 34% was to get nursery vacancies, and this demand does not vary with social class.

Objective: To understand the trajectory of teenagers who became mothers during training period for insertion in the labor market at Campinas.

Methods: Eight mothers aged 19-23 years who were part of the 17 teenagers who became pregnant between 1992 and 2009 were interviewed. Qualitative methodology was used for analysis.

Results: Three mothers stopped studying and working. Of the other five, four finished high school and one was studying. Two were unemployed and three
were working. Of the two unemployed, one had no one with whom to leave her son and for the other, she received help from relatives. Of the three who were working, two have daycare for their children and one received aid from their parents.

Thus, it becomes apparent that the young mothers reported difficulty in getting aid for the care of their children during working period, is a difficulty common to working women and, unfortunately, it remain current.

Moreover, given the lack of childcare facilities, the mother who does not work and that only studies, situation of many teenage mothers, suffer a disadvantage when trying to place in daycare, further hindering the continuation of studies and future insertion in the labor market.

Postmodern View of Time in Sociology

In modernism, there are two perceptions of time. One is that of modern philosophy, in which history is seen as the process of the liberation of mankind. The second is the postmodern view, which moves away from that kind of post-past-future, straight-line perception of time. In the postmodern view, the past exists only as memories. The important thing here is that for modernity to exist, it requires not just the modernist historical view, which draws the schematics of human liberation, but also the postmodern perspective, which questions those plans. The postmodern perception of time does not, however, oppose the modern view of history. Modernity, after all, has both modern and postmodern aspects and would not exist without both of them. This theory applies in Japan as well but, as is described in the following section, those two aspects present themselves in different ways than in the West. It is possible to discern that modernism and postmodernism form two sides of the same coin in Japanese modernism, just as they do in the West. The difference, however, is that postmodern thinking remained in the shadow of the modern in the West until people started to question the validity of modern philosophy, whereas in Japan, modernization was spurred by a postmodern spirit. So, while in Japan this postmodern spirit constitutes the driving factor, in the West it plays simply a bit-part and, conversely, the modernism that stole the spotlight in the West remained in the shadows in Japan. Theoretical framework of Sociology is based on the postmodern view of time. This paper try to show the possibility of this perception of time in order to make a general theory at the time of globalization.

Women’s Decision-Making Autonomy and Exposure to Maternal Mortality Risks in Nigeria

The statistics on maternal mortality clearly show that Nigeria is lagging in the struggle to significantly improve maternal health. Annually, an estimated 50,000 to 59,000 Nigeria women of reproductive age die because of pregnancy and childbirth. One of the main reasons for this high rate has been the low level of involvement of women in decision-making process. Men generally view some of the modern and postmodern aspects and would not exist without both of them. This theory applies in Japan as well but, as is described in the following section, those two aspects present themselves in different ways than in the West. It is possible to discern that modernism and postmodernism form two sides of the same coin in Japanese modernism, just as they do in the West. The difference, however, is that postmodern thinking remained in the shadow of the modern in the West until people started to question the validity of modern philosophy, whereas in Japan, modernization was spurred by a postmodern spirit. OH, HAK-SOO* (Ins Labour Policy and Training, m1zuk1chon@yahoo.co.jp)

Change of Employment Structure and New Labour Movements in Japan

The aim of this study is to consider the new concept of vocational education in secondary education in connection with the labor market in Japan, by focusing on the vocational course of a general high school.

Previously, the importance of academic education was emphasized in Japan, and the significance of vocational education was downplayed in comparison with other countries. However, in recent years, a growing body of empirical research has positively reappraised vocational education, and the idea of retrieving the vocational significance of secondary education has gained ground.

There is a serious problem that must be addressed here. This is the dichotomy between academic education and vocational education. In Japan, academic education in general high schools has been viewed as education for entering college, while vocational education in vocational high schools has been regarded as education to prepare students for the labor market. Recently, an increasing number of students in vocational high schools aspire to enter college, but their academic performance is not sufficient to do so, due to focusing on the acquisition of specialist skills.

In this situation, it is necessary to consider the unification of academic and vocational education. But previous studies have lacked this perspective. This study attempts to fill this gap by focusing on the vocational course of a general high school.

In the vocational course of a general high school, it is difficult for students to acquire sufficient specialist skills, but because that can take more academic classes compared to students in a vocational high school, more of them are able to enter college or vocational technical schools. By revealing how the actual practice in this kind of school affects students' learning and career choices, this study aims to consider a new concept of vocational education that bridges the dichotomy described above.

Social Historical Context Of Health and Illnesses Attributes In West-African Countries: A Comparative Analysis

Undoubtedly, people of diverse cultural backgrounds often make different attributions of illness, health, disease, symptoms and treatment. Cultural differences in health attributions have major implications for medical professionals because of over-time; attributions play an essential role in the formation of beliefs concerning health and illness. Different cultural groups have diverse belief systems with regard to health and healing in comparison to the Western biomedical model of medicine. For instance, with regard to health beliefs in the United States, African Americans may likely to attribute illness externally to destiny or the will of God and believe in the healing power of prayer. But West African patients may be more likely to attribute illness to a spiritual or social causes rather than a physiological or scientific cause and thus expect health practitioners to provide an experimental and a spiritual reason why they have been afflicted with illness. With this worldview in mind, in order to effectively treat these illnesses, remedies must be based on cultural beliefs.

Healing Programs for School Bullies and Their Parents in South Korea

This study presents several social problems related to the South Korean government's attempt to decriminalize bullying at school to be one of the four major forms of violence (sexual abuse, domestic violence, school violence, and harmful foods), and addresses why only the bullies and their parents are faced with legal liabilities and social responsibility. In particular, this study addresses the problem of schools and the government shifting the responsibility for school bullying onto bullies' families. School counselors and policymakers hope for "deviant" families to transition into a "normal" condition through healing programs. Recently, healing programs are springing up for a wide variety of psychological problems. In this social context, school bullies and their parents are being required to participate in healing programs.

This study employs ethnography and in-depth interviews with participants in art healing programs. The interviews target healers, program staff, bullies and their parents. The bullies are 14- to 16-year-old middle school students. Findings report that staff and participants in the healing programs do not regard bullies as "deviant." In addition, participating students and parents believe that schools have great social responsibility for the bullying problem.

The importance of this study lies in its exposure of the fact that bullies and their parents receive recognition as "normal" in the healing program, but this is a context outside of school. Therefore, after they complete their course in the healing program, they are still treated as bullies and potential perpetrators of school violence. Consequently, they are confused about their social identity. Bullies and their parents are confronting the problem of liminality (i.e., the psychological threshold when transitioning from one stage to another) or social normality.

RC42-716.1

**OH, HELEN* (Sogang University, helenoh1@daum.net)

Is There a Path to Well-Being for School Bullies?

School bullies and their parents are stigmatized as perpetrators, separated and excluded from the school community. They are wounded by this situation and need socio-psychological stability. Therefore, they try to restore their well-being and life satisfaction through healing programs outside the context of school. Such programs help them reconstruct a new identity, and they experience the process of transitioning into their new identity, which implies a state of liminality (i.e., the psychological threshold when transitioning from one stage to another).

This study focuses on art healing programs targeting middle school bullies and their parents. By employing ethnography and in-depth interviews with participants in these programs, we find that these adolescents and their parents feel freed from depression and a sense of guilt. In fact, healing programs provide a hospitable atmosphere, and healers approach participants holistically. The problem is that although bullies experience the recovery of their identities through these programs, which act as passing-rituals, their success is not guaranteed within the school system. In healing programs, bullies win trust and show the potential to become good people; outside of the programs, however, they are still treated as potential criminals. Consequently, this study demonstrates the limit of healing programs in that wounded students and their parents have no choice but to drop out of the school system and find alternative education centers for the sake of their well-being and social integration.

What Determines the Parent-Child Relationship?: Filial Piety, Economic Dependency, or Intimacy

Family structure and culture have been rapidly changing in Korea. Whether to follow traditional values or individual autonomy seems to be the crucial issue of family problems in the modern world. Previous studies explored the significance of various factors such as filial piety, autonomy, communication, intimacy, etc. in a parent-child relationship. But, what factors can positively effect on the building-up of a harmonious parent-child relationship? Previous studies did not examine the significance of such factors that may contribute to and account for the harmonious parent-child relationship.

This research aims to answer the question what factor influences most positively on harmonious parent-child relationship during the process of child’s future decision making of selection of a spouse, which is still the greatest family issue in Korea. Therefore, we (research team) conducted an online survey of 262 college students in Seoul in 2013. The survey questionnaire includes parental economic support, psychological intimacy, communication, social network, filial piety as the traditional Confucian-family value, and other socio-demographics. Findings report that the communication, intimacy, social network are all positively related to harmonious parent-child relationship. However, the results report that the communication, intimacy, social network are all positively related to harmonious parent-child relationship for children on the side, of the child, does not appear significantly. This research, thus, implies that the communicative rationality and social intimacy based on reciprocity is far more important for building up a harmonious family than family duties stemming from traditional values or instrumental rationality which may force one to pursue only individual interest in a family culture.

Religion, Trust and Public Society in the United States

Social integration beyond constituents’ diversity becomes a pivotal theme in the public sphere of a democratic society (Charles Taylor); the major conundrum for a post-secular society (Jürgen Habermas). Although religions have played a crucial role for collective consciousness in a traditional society, their roles for social integration in a modern and pluralistic society have been put into question. I, therefore, focus on “trust in immigrants” as a particular socio-psychological phenomenon which could reflect a religious orientation and their public attitude toward social integration.

In this study, utilizing the Baylor Religion Survey (2005), examines empirically how trust in immigrants is related to various dimensions of religiosity and spirituality. Besides socio-demographic control variables, explanatory variables include (1) various forms of religious identities (including theists, spiritualists, and non-affiliation), (2) cognitive types of belief (including images of God, New Age interests), (3) ideas (religious pluralism, moral liberalism), (4) experiential types (traditionally religious experiences and spiritual/medic experiences), and (5) practices (religious service attendance, prayer, civic group participation).

The findings demonstrate all forms of religious identities other than affiliated theists (i.e., affiliated spiritualists, atheists/agnostics, and the unaffiliated) show significantly higher levels of trust in immigrants. The image of God as judge appears to be related to the lower levels of trust in immigrants whereas New Age interests do not have a significant relationship to trust in immigrants (p<.05). Neither religious pluralism nor moral liberalism appears significantly related to trust in immigrants. Religious experiences (images of God, New Age interests) are not significantly related to trust in immigrants whereas spiritual/medic experiences leads to higher levels of trust in immigrants. In terms of practice, both religious service attendance and civic group participation – not merely prayer alone – appear to be highly related to trust in immigrants.

Cross-Border Japanese Culture in the Changing Media Environment: Focusing on Japanese Popular Culture in Korea

When the animation Attack on Titan aired on Japanese television, it ranked No.1 on the Internet hit list in Korea and received much attention through CATV and Internet. Also, a number of parodies have made on television and the Internet. Japanese popular culture is being consumed and reproduced across national borders by various media devices. In the process of media-globalization, Japanese culture was banned over 30-years in Korea owing to the historically particular condition between two countries. This paper purposes to find out characteristics of Japanese popular culture in Korea in this changing media environment and effects of media.

In Korea, Japanese popular culture was officially opened in 1998–2004, meanwhile Internet has rapidly proliferated in 2000s, young users shared manga or animation on cyberspace. Namely, media convergence and diversification have enhanced cultural contacts across borders with dynamics of policy, media industry, it effects on the space and patterns of contacting Japanese culture. Particularly, this transition appears in line with pre-existing fandom and extends throughout the new-media as Attack on Titan can indicate. Moreover, this phenomenon has been observed on new-media such as translating contents, parodying, using as signifier. Japanese popular culture on the Internet also interacts with existing media, and shows connection among various media, for example, reproducing on television like Hanayori-dango.

Recently, Japanese popular culture can be seen through formal platform IPTV or Internet contents-store besides pirate copies. However, there is limitation on interface because of language, lack of content diversity, and people who cannot use new-media tends to be excluded. Considering impacts of new-media, it is important to analyze interface with new-diversified contents based on translation service to share culture and to create interactive cultural space. This paper represents how media environment impacts on Japanese popular culture and suggests possibility of cultural space in new-media.

Searching for the Global Standard Recruitment and Employment of Border-Crossing Nurses and Care Workers: Findings and Recommendations Based on Fieldwork in the Asia-Pacific and Europe

Most developed countries are faced with major demographic problems such as increasing aging populations and rapidly declining birth rates. Parallel to these same phenomena, governments have accelerated the introduction of nursing and care workers from abroad in order to fill the shortage of domestic nurses and elderly-caregiving workers. However, such cross-cultural and transnational care projects are not easy for each host country, and employers have to consider the challenges of hiring overseas-born workers who come from various educational backgrounds and care cultures, and speak other languages as mother tongues.

The author investigated the problems of transnational care in the case of the Japanese government's project to accept Southeast Asian nurses and caregiving workers under Economic Partnership Agreements (EPAs) concluded with the governments of Indonesia, the Philippines, and Vietnam. He explored some structural flaws and faults of the EPA project, and then explains how this led to a broader investigation into research alternative policies and programs adopted by some governments in the Asia-Pacific region and Europe.

This paper presents a critical evaluation of Japan's EPA project based on the research team's various surveys in Japanese hospitals and care facilities as well as Filipino/Indonesian nurses and care workers in Japan. Then, it examines the Asian and Western trend of governmental policies on migrant nurses and care workers, and makes some recommendations towards the establishment of a potentially sustainable Japanese model. It finally discusses the possibility for a global standard of recruitment and employment system for border-crossing nurses and care workers.

**Social Exclusion and Health Outcomes of Single-Mother Households in Japan**

Single-mothers and their children are one of the most economically-disadvantaged groups of people in industrialized countries. Japan stands out from other OECD countries with regard to its high incidence of poverty and the high employment rate of single-mother households. Previous studies in the Western countries have shown significant differences in physical and mental health between single-mothers and their married counterparts. They also have found that children of single-mother households are more likely to have health and behavioral problems. However, it is still unclear to what extent these differences are attributable to low-income or lack of social support. Employing a unique panel survey on women with children, this study investigates how poverty and lack of social capital affect health outcomes of mothers and children in single-mother households in Japan. Major contributions of this study are as follows. First, it employs multiple measures of poverty. In particular, it uses not only the poverty line but also the Minimum Cost of Living calculated by the Public Assistance system to define the poor. Second, subjective as well as objective measures of health outcomes are used. Third, the effect of past experiences that may affect health (such as childhood abuse and family dissolution in childhood) is examined to control for unobserved heterogeneity. Tentative results confirm significant health inequality between single-mothers and married mothers, and their children. Although poverty has had a direct negative effect on health of married mothers, it has no significant effect on health among single-mothers. In addition, even after controlling for age and other socio-economic factors, mental health of single-mothers significantly deteriorates as their children grow-up.

**Structure of Cultural Rejection**

What does it mean to dislike a piece of culture? This study explores the idea that culture is being used as the focus of coordination among individuals. The central topic is cultural rejection. The proposition is advanced that individuals re- ject cultural practices as the proxies of disfavored groups who are perceived to be associated with them. In turn, this will allow individuals to distance themselves from disfavored groups and maintain the identities separate from disfavored groups. This study argues that the pattern of cultural rejection can be seen as a reflection of individuals’ perception of differentiation within society. Using data on musical preferences from 1993 General Social Survey, it applies blockmodeling – the methodology originally developed in social network analysis – in a new way, to analyze the structure of cultural rejection within U.S. society. The results indicate that blockmodeling based on cultural rejection is effective in uncovering socio-logically meaningful positions among the respondents, while providing unique insights into the structure of cultural divisions within U.S. society. In addition, the identified groups correspond with individuals’ perception of the degree of unity (or lack thereof) among Americans, consistent with the theoretical assumption of this study. The results also show the important roles that popular culture occupies in U.S. society.

**The Relationship Between Financialization and Accounting Standards: A Japanese Perspective**

This study considers global financialization in terms of the dynamics of corporate accounting standards. Accounting standards play a crucial role in financialization by measuring corporate financial performance. Since the definition of “financialization” is ambiguous, this interdisciplinary study can benefit future research. Taking the perspective of Ryuji Takeda, a legendary Japanese accounting researcher with knowledge of sociology, this study focuses on the transition from production-oriented accounting to finance-oriented accounting. This transition is analyzed using Jean Baudrillard’s concepts of “simulacra” and “hyperreality.” This study also analyzes the recent changes in Japan’s accounting standards as a backlash against excessive finance-oriented accounting. Further, the backlash is reconsidered from Takeda’s “spiral development” perspective. Although this study is essentially conceptual, data are presented in support of its argument, and its interdisciplinary perspective can further financialization studies. This paper is structured as follows. The first section reviews studies on financialization and summarizes their essential points. The second section describes the relationship between the financialization process and accounting regulations (particularly accounting standard-setting) based on Takeda’s framework, which distinguishes between production-oriented and finance-oriented accounting. This framework introduces Baudrillard’s concepts of “simulacra” and “hyperreality” to explain the financialization mechanism by considering the transition from the former to the latter type of accounting. The third section focuses on the new dominance of finance-oriented accounting standards in Japan. Post-financial crisis Japan’s accounting regulations such as the development of accounting standards for small and medium-sized enterprises are reexamined using Takeda’s theoretical framework. Finally, this paper argues that new accounting regulations have emerged through a spiral development within the bipolarity between traditional material production-oriented accounting and finance-oriented accounting as a reaction to excessive financialization and finance-oriented accounting standards.

**A Comparative Study of Effort and Examinations in Japan and England**

This paper compares Japanese and English emphases on effort from two analytical perspectives: cultural and institutional. The cultural perspective examines the Japanese cultural belief that natural gifts are equally distributed in society, while the institutional perspective examines the competitive entrance examination selection system, colloquially known as “examination hell.” It is clear that an emphasis on effort has permeated Japanese society. However, recent rapid economic growth has made Japan more affluent, which in turn has undermined cultural emphasis on effort. On the other hand, English culture permeates the concept that natural gifts are unequally distributed, which also undermines cultural focus on effort. In this paper, I will discuss the similarities and differences in these two societies’ approaches to effort and examinations.

**OKBANI, NADIA** (Science Po Bordeaux, nadiaokbani@yahoo.fr)

Social security and its solidarity policies play a central role on poverty reduction. To analyze how does it work in practice and its limits to reach its aim, it is interesting to wonder how it is elaborated, implemented by organizations and actors, and how it is questioned by policy evaluations. Hence, examine the institutional work (Lawrence, Suddaby, Leca, 2009) is a good way to better understand the complex institutional configuration where different actors interact to conduct and question policy. Studying the case of institutional work in a French social security local organization commissioned on family and solidarity policies, this research is intended to analyze how organizational context, economic crisis and New Public Management affect social intervention and its targeted public. This paper is based on a three years ethnographic immersion in this organization with participant observation as a policy evaluator, a research on a minimum income scheme non-take-up, with some forty interviews and document analysis. Firstly, it explain how does the organization work, its missions, partners and professional cultures. Secondly it examines how in time of crisis, this social organization has not only to deal with an increasing demand to mitigate crisis negative effects on most disadvantaged people, but also with important budgetary restrictions and performance management optimization which impact the service delivery. Then, it analyze how do street level bureaucrats (Lipsky, 1980) react in front of these paradoxical injunctions and elaborate collective and individual performance strategies which are not always focusing on social right accessibility for vulnerable people. Finally, it study how policy evaluation question this situation, giving some practices for improvement without really put into question the institutional work influence on actors strategy. More broadly, this paper tries to understand how institutional configuration impacts policy implementation focusing on internal preoccupations more than in policy potential outcomes for beneficiaries.

**Australia’s Temporary Migrant Work Programs and Its Neighbouring Regions**

Temporary Foreign Worker Programs have boomed in Australia over the last two decades, with this group of migrants now comprising the largest category of migrant entrants. Overall, migration from Asia and the Pacific has likewise expanded over this time. TFWs are employed in Australia on a range of visa types; but – with a few exceptions – the visa categories open to migrants from Asia and the Pacific are a skilled worker program (the 457 visa), student visas with work rights, and a ‘migration and development’ styled program with some nations in the Pacific (the Seasonal Workers Program). TFWs are one aspect of the formation of regional and global divisions around work. The focus in this paper is on the
ways in which these programs of temporary work are an aspect of the shaping of relations between Australia and these neighbouring regions.

In Australia as elsewhere, temporary work carries inherent vulnerabilities. These are likely to be felt more keenly in the lower skilled sectors of the workforce. It is not insignificant that there are concentrations of temporary migrant workers in the lower-income states in Asia and the Pacific, working in low paid work, in casualised sectors of the economy. While not surprising, this is a way global and regional divisions of labor are constituted and that this migration is temporary, is one of the ways regional patterns can become embedded in the workforce. The argument is not that there is a singular economic logic to the formation of these patterns but rather a number of regional factors at play. These issues are explored in this paper drawing on an analysis of the different categories of temporary migration in Australia.

Transnational Engagements: Footscray, Transnational Migration and the Making of Place

Footscray is an ethnically diverse and rapidly transforming suburb in Melbourne's inner West, formed in part by overlapping waves of migrants. The Vietnamese Diaspora, and more recently migrants from African countries, influence the contemporary mix of people. Migrants' engagements with more than one society and in various forms of transnational networks are an evident in the way migrants make place in the suburb. The voting and electioneering of South Sudanese migrants in the referendum establishing their nation indicates involvement in transnational politics.

The inflections towards Asia allows for one set of strategies, while the politics of transnational lives and the meanings given to inclusion in more than one society shape the ways migrants engage in the suburb, and with each other. Local dynamics, too, shape the different strategies available to migrants in negotiating transnational lives and the meanings given to inclusion in more than one society. The inflections towards Asia allows for one set of strategies, while the politics of race in the suburb suggested another. These issues are explored in this paper drawing on interviews and documentary sources from Footscray.

ABSTRACT

This study assesses the perception of security operatives on the challenges they face as security operatives in the fight against corruption in Nigeria. The study adopted both primary and secondary sources of data collection. Primary sources are observations of security operatives at security checkpoints, questionnaires were distributed to 120 security operatives in Kaduna metropolis and 6 in-depth interviews were conducted with key informants. For secondary source, data was sourced from Security Operatives Disciplinary Records on corrupt practices emanating from complaints lodged against them by victims (members of the public) or caught by officers/colleagues while on visiting or visiting rounds to assess performance. Findings show that causes of corruption among security operatives includes over-centrality of authority within operatives structure, recruitment of unqualified personnel, corruption among colleagues, poor salary, embezzlement, and lack of good pension scheme. However, some of the challenges facing security operatives as found in the study is that the general public initiate corruption, bringing returns by junior officers, victimization by very important personalities (VIPs), issuing counter orders by superior officers and lack of adequate accomodation. Also, some of the consequences of the above includes lack of good governance, marginalization/frustration of public officers and diversion of public funds. Moreover, it is recommended that in order to win the war against corruption, there is need to reduce government involvement in all economic spheres as well as improving accountability and transparency in financial disclosure. This will eliminate opportunities for corrupt dealings.

What is Diagnosis? : Medicalization of the Children with Developmental Care Needs in Medical Checkups and Preschools in Japan

Background: A nationwide study reported that 6.3% of normal class students seemingly had developmental disorders. These students or children in Japan called as “kininaru-kodomo” or children with special care needs. However, there is no definite concept of children with special care needs. Therefore, its relationship with professional diagnosis is ambiguous according to the professionals’ viewpoints. This study explores its definition through the hybrid model of concept development.

Methods: The hybrid model is composed of a combination of literature review, fieldwork and analysis. The databases Japan Medical Abstracts Society (1983-2002) and Citation Information by NII (1991-2013) were systematically searched. Participant observation was conducted at multiple parent organizations. Moreover, narrative data was gathered through a key informant interview. These theoretical and fieldwork data were analyzed to hypothesize the relationship between the term’s concept and the presence of medical diagnosis.

Results: A literature review revealed that medical professionals used the term of “kininaru-kodomo” as the synonym of children with developmental disorders. On the other hand, teachers of preschools and primary schools regarded them as children with troubles in group actions regardless of the presence of diagnosis. Therefore, the diagnosis of medicalization had occurred in schools and a public health care nurse stated that preschool teachers asked municipalities to pick up the trouble-some preschoolers as a possible case of developmental disorders at an infirmary check-up. In a medical professional’s perception, “kininaru-kodomo” was considered a children who could not be diagnosed because of their normal intellectual ability. Moreover, the distinction between “kininaru-kodomo” and normal children was considered blur.

Conclusion: The hybrid concept analysis demonstrated the arbitrariness of the application of the diagnosis of developmental disorders to children with special care needs. Making a common definition of “kininaru-kodomo” is necessary to guide the doctors from over diagnosing a child with special care needs with or without developmental disorders.

Young People with Debt Problems: Uncertain Transition to Adulthood in Finland

Gaining financial independence is a part of becoming an adult in Finnish society and culture. In this paper, we discuss the debt problems faced by young people who struggle to gain agency in their early adulthood of age 18-25. The aim of this paper is to see what the transition to adulthood means in relation to debt problems. Official data on registered debt problems by young people will be analyzed in this paper. The data was gathered by using the official debt enforcement register of the Finnish Legal register center (on debt collection rulings, fines and other sanctions). The analysis of this register-based data concentrated on showing how debt problems young people are facing. Socio-demographic background is taken into consideration in the analysis. Our results show the debt problems of minors under 18 years of age result mostly from fines or other sanctions imposed upon them by public agencies, or because of their parents. Approximately at the age of 19 many debt problems increase dramatically and involve most importantly debts from consuming. Registered payment defaults by young people have been increasing in recent years in Finland. Instant loans with high interest are one major source eventual escalation of debt problems, and new concerns have arisen on unpaid instant loans. Finns and young people see the gain in unsecured economic independence, but at the same time they have to balance the financial risks they are taking. Since most of the young people and young adults study until their mid-twenties, youth in Finland are placed in a waiting period between youth and adulthood. The current economic crisis in Europe has intensified the risky outcomes of this age of transition.

Patriarchal and Medical Discourses Shaping HIV/AIDS-Related Stigma and Its Management in Turkey

The paper explores the discursive formation of HIV/AIDS-related stigma and its management by people living with HIV (PLHIV) in Turkey. Based on biographical narratives of 24 PLHIV, semi-structured interviews with 32 key informants, participant observation in PLHIV networks and documentary analysis, the paper focuses on the role of medical and patriarchal discourses in shaping HIV/AIDS-related stigma at the state and societal levels and highlights the implications of stigma on PLHIV’s agency in shaping the physical, emotional and social aspects of living with HIV in Turkey. The findings are overviewed in two sub-sections:

First, I identify the two conflicting discourses around HIV/AIDS in Turkey: ‘cultural immunity’ and ‘rights-based’ discourses, at the state and civil society levels, respectively. Here I investigate the role of medical profession and of patriarchy in the formation of these discourses in relation to the socio-political context of Turkey, particularly referring to the perceptions about sexuality, ‘modernisation’ and religious discourses.

Secondly, I focus on the ways in which PLHIV understand, reframe and challenge stigmatising practices. Participants’ reconstructions of HIV through narratives of ‘injustice’ and ‘neglect’ are shown, to address the links between the subjective understanding of and resistance to HIV/AIDS-related stigma and the overarching discourses shaping stigma.

The paper aims at contributing to further understandings of HIV-related stigma by focusing on the power relations in the formation of stigma from a discursive and interactional approach, by exploring the understandings of stigma from the perspective of the stigmatized, with a specific focus on the agency of PLHIV in negotiating and challenging stigma and by offering data from a cultural and geographical setting which remains under-researched.

Reconstructions of HIV and Its Stigma through Biographical Narratives of People Living with HIV in Turkey

The paper aims at exploring the subjective perception of living with HIV and its stigma through the biographical narratives of people living with HIV (PLHIV) in Turkey. For this purpose, 32 semi-structured interviews with PLHIV and a content analysis of their biographical narratives are conducted. The biographical narratives of PLHIV are analysed to understand the implications of the discursive structures around HIV/AIDS in Turkey for PLHIV’s construction of social identities. The analysis is guided by the literature on illness narratives for the identification of narrative forms and by an intersectional approach for the identification of power structures that combine with HIV-stigma.

PLHIV’s biographical narratives demonstrated the ways in which the meaning of HIV/AIDS and its stigma is being reconstructed through PLHIV’s interactions with healthcare professionals, with civil society workers in peer-counselling services and with the overarching concept of ‘the state’. The paper focuses on three types of narratives, with respect to these three milieus: Narratives of ‘uncertainties and distrust in medical profession’, the ‘positive reconstruction of being HIV-positive’ and the narratives of ‘injustice and neglect’ reflecting a politicised illness identity.

Finally, the implications of the above-mentioned narrative reconstructions of HIV on the social identities of HIV-positive individuals are pointed out: A reconstruction of illness detached from fear and self-blame is framed through support networks. However, the potential empowering effect of this perception of illness is hindered by the stigmatising practices faced in healthcare settings and by the perceived denial and inaction at the state level.

An International Comparative Study on Sport Development System in Communities for the Disabled Between Germany and Japan

Aims:

This study is to explore the community sports development systems for the disabled after the World War 2, between Germany and Japan.
eastern dialect speaking region of Japan and the latter in the western. My ongoing variationist analysis on the negation system in Japanese spoken in Mexico City reveals that both the Founder Principle (Mufwene 1996) and Dialects in Contact (Trudgill 1968) helped account for the negation system in this diaspora variety of Japanese.

**Edgewise Community: Real Estate and Asian Settlers in Tokyo**

After the latter half of the 1980's the number of Asian people has increased as “new comer” in the inner area of big cities. As more than 25 years have passed since then, a question appeared if there was an appropriate term which expressed the situation of the community. In this paper, two area in Tokyo: Ikebukuro and Shin Okubo, are examined as case studies, and they are called “edge-wised community.” Edge-wised community is a community which has plural cultural basis, in which there exists a system designed from the bottom, and in which there exists a circuit which makes the system function.

This paper consists of the research regarding the foreign residents’ motives in acquiring the housing and in having relationship with the network and other surroundings. Especially focusing on the function of housing land and building dealers in the ethnic community, the actual condition for foreign residents to purchase the housing is clarified.

Focusing on the above mentioned two themes, this paper aims at the structural understanding at the mezzo-level of the society. According to Hughes (1991): Chicago School third term, in his research of “Chicago real estate Board” housing land and building dealers are classified in five groups. In this report, combining both Hughe’s classification and the reporter’s classification of the number of renewal times of license of housing land and building dealers, characteristics of gatekeepers are clarified. There, the phenomenon of circuit-izing between “cooperative channel” and foreign customers is seen.

Then, what promoted foreign residents to acquire residence? In addition to “cooperative channel” centering housing land and building dealers in “edge-wised community,” improvement in the civility in foreign residents is thought to be a factor. In this regard, the actual condition is reported referring to the case studies of Ikebukuro and Okubo.

**The Medicalization of “Depression” Across the Globe**

Recent decades have witnessed an increased reliance on the American approach to mental illness as a global script. These definitions of and treatment responses for mental health problems have been transmitted despite classic and new concerns from consumers, professionals, and scientists about the categorical sameness. While data exist about whether and how individuals across societies, construct the set of symptoms that are used in formal psychiatric diagnoses of depression. Specifically, this question of global medicalization raises issues of how individuals label problems of living and what attributions they make up the cultural toolboxes of lay diagnosis across countries, 17 countries label and suggest what individuals should do, if anything, in response to an vignette describing an individual meeting a criteria for a depression diagnosis. The ability to examine social construction in a standardized survey results from the design of the instrument. The vignette was followed immediately by an open-ended question, without prompts or lists of possibilities, asking what actions should be taken. Using latent class analysis, we construct the patterns of suggested actions that make up the cultural toolboxes of lay diagnosis of depression across countries, examining their similarities and differences cross-nationally. Our results show that lay diagnosis is embedded in a broader context of national medical cultures and individual cultural beliefs about mental illness.

**Housing Well Being and Social Inequality in Europe: A Comparative Analysis**

Two phenomena characterize, in a seeming contradiction, housing conditions in Europe over the last three decades: on the one hand there has been an extension of home ownership and the spread of a high standard of living, on the other hand there is an increase in housing costs and in social inequality. Though around these two phenomena of Europe’s citizens own their homes, housing and maintaining a home have continued to rise and cannot only jeopardize housing security and quality, but can also stand in the way of life projects.

The paradox is that home ownership does not exclude housing deprivation. The hypothesis is that households’ social class plays a role in enabling owners to combine home ownership and well-being. On the basis of Eu-Silc (European Union Statistics on Income and Living Conditions) data a comparative analysis is carried out about housing conditions in European countries by focusing on social class. This perspective provides further insights about the divergence/convergence hypotheses stemming from the analysis of trends of living/housing conditions throughout Europe.

To support this claim, two main dimensions of housing inequality are identified: tenure and housing well-being. A micro level data analysis is performed, in order to take account of individual family costs and the maintenance of ownership in settings and in periods (such as the present day) of rising housing prices and income resources that decrease in terms of amount and stability. The aim is to demonstrate that, despite differences in well-being in Europe between owners and non-owners (on the average the firsts are better off), home owners could be regarded as a privileged category per se. Italy represents a paradigmatic case in this respect: a longitudinal analysis (2005-2012) will be provided to investigate the crisis effect on facing housing costs.

**Social Mix in Deprived Areas: A Solution to What?**

Social Mix in deprived areas: a solution to what?

The research study refers to the results of a housing mix policy in Turin (Italy) based on the conversion of the real estate complexes built at the time of the 2006 Winter Olympic Games into mixed housing and aimed at creating a housing mix capable of generating a social mix.

Social mix policies put together two main approaches to urban/housing policies: the people based (addressed to empowering and supporting people in their crucial life-housing transitions); area based (addressed to improving physical and social infrastructures of the neighborhood). The policymakers’ expectations about mixed districts can be listed in four points: 1) providing opportunities for housing career in district since it gives residents the possibility to move to better, more expensive and even owner-occupied dwelling; 2) improving social contacts and social cohesion, since mixed districts are supposed to foster contacts between different groups of people and through that enhancing social cohesion; 3) increasing social capital since mixed neighborhoods should developed bridging, reciprocity, norms and trust; 4) providing positive role models especially to lower strata, reducing crime, low education achievements, poor health and unemployment arising from those expected results. Hypotheses and outcomes of the specific attempt have been investigated. In the observed neighborhood social mix has not produced all the hoped-for effects. The greatest benefits have been

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
in limiting the negative effects. The effects as regards developing resources have been more disappointing, both at the neighborhood level and in terms of interaction. It is possible that these latter effects need more time to make themselves felt. Or, perhaps, social mix is at most effective to curb vicious circles, but not to be "automatically" a source of virtuous circle.

Representations of the Social in Digitalized [and Cyber] Domains of the Non-Dedicated

The paper is a part of the Author's project focused on creating new kinds of the natural by the social. The main thesis is that the social creates autonomy of the natural. Communication is abounding with symbolisations enough to force us out traditional perception of the natural as something external. Civilization and culture are abounding with symbolisations enough to construct the autonomous natural. Up-to-date culture is dominated by hermeneutics, re-creations, and re-productions of achievements. It is not only a testimony of civilizational crises shaped with up-to-date popular discourses but also it shows that the social is autonomous because it exists as something creating nothing new.

The Author analyses presages of constructing the natural as representations of the social. This is born an autonomous domain of the social because it does not create the dedicated. The dedicated has been a kind of exaggeration, exemplification, and preservation of meanings. Creating—the natural individual human beings are not referred to any non-verifiable external. Physical, digital, and cyber acts of creation of the natural are representations of the social and they are not participating in something given as unknown. In other words, acts of [self–]lunaturing are connected with acts of [self–]creation of social subjects.

The Author argues that there is a transitory/preparatory stage of the social being dominated/occupied by new digital skills and possibilities. The beginning of the next stage will be dictated by rejection of the dedicated and it will be directed towards creations and constructions of the natural. An individual human beings become autonomous—as non—dedicated subjects of the social. The up-to-date social accepts huge number of homogenous variants, the future social will expand its cyber heterogeneity as the natural. The consciousness introduces itself as the natural. New kinds of cognitive and non—dedicated absorption will re—define—but without reference to ethics—Socrates' cognitive valuation. The subject is the reason.

Handling Money in Close Relationships in Young Family Households in Poland

The paper discusses the monetary practices in close relationships in young family households in Poland and shows mutual influence of life and economic strategies made by young Poles who come under the "free market generation." Young adults (18—35) who were growing up in the socio-economic reality after the transformation of 1989, are now in crucial age for making a wide range of life and economic choices. This generation is interesting as undergoing the transformation of models of family life, the process of individualization, and a shift in family roles. They develop new habits regarding money and consumption, and are subjected to new kinds of risks and uncertainties.

In order to show the social context in which young family households' monetary practices are problematized and represented the paper uses the qualitative content analysis of the internet message boards. Discourse analysis is focused on reconstruction of underlying assumptions ("common knowledge" and "taken-for-granted" issues) about money in young family households and on identification of language patterns related to the issue.

The research has identified money and "monetary rules" as one of the most discussed problems in the household. Young people have serious doubts about money decision making and money in a relationship is a fodder for ongoing moral and economic reasoning. Examples of such problems are: Should childcare provided by a grandmother be rewarded financially by her daughter working and economic reasoning. Examples of such problems are: Should childcare provided by a grandmother be rewarded financially by her daughter working and education system. The pay-profit of the social mix is at most effective to curb vicious circles, but not to have a common practice of remitting convicted's considerable legal costs.

The challenges and the scope of organised crime and gang violence (including outlaw motorcycle gangs) in Denmark have increased during the last years. This critical development has led Denmark to toughen the anti-gang laws and caused a more interdisciplinary approach to police work (also called the Al Capone Method). The Al Capone Method employed by the police is named after, and draws inspiration from, the case against the infamous gangster-boss Al Capone in the 1930s. The federal prosecutors worked for years to build a case against Al Capone based on suspicions of murder, gambling, bootlegging rackets etc. but could only pin charges, and convict him, of tax evasion.

The (re)invention of the Al Capone Method combines monitoring and registration of high-risk-profile gang members. According to my research the method in general has an impact as desired by the Danish Government. However, research has not yet shed light on the unintended consequences associated with the method in a Danish context.

The Al Capone Method in the Danish Police

The research has identified money and "monetary rules" as one of the most discussed problems in the household. Young people have serious doubts about money decision making and money in a relationship is a fodder for ongoing moral and economic reasoning. Examples of such problems are: Should childcare provided by a grandmother be rewarded financially by her daughter working and education system. The pay-profit of the social mix is at most effective to curb vicious circles, but not to have a common practice of remitting convicted's considerable legal costs.

The challenges and the scope of organised crime and gang violence (including outlaw motorcycle gangs) in Denmark have increased during the last years. This critical development has led Denmark to toughen the anti-gang laws and caused a more interdisciplinary approach to police work (also called the Al Capone Method). The Al Capone Method employed by the police is named after, and draws inspiration from, the case against the infamous gangster-boss Al Capone in the 1930s. The federal prosecutors worked for years to build a case against Al Capone based on suspicions of murder, gambling, bootlegging rackets etc. but could only pin charges, and convict him, of tax evasion.

The (re)invention of the Al Capone Method combines monitoring and registration of high-risk-profile gang members. According to my research the method in general has an impact as desired by the Danish Government. However, research has not yet shed light on the unintended consequences associated with the method in a Danish context.

Taking the viewpoint of the gang members I will highlight and discuss these unintended consequences and examine their impact. My research is based on interviews and follow-up-interviews with 16 gang members, carried out in Denmark during a 2.5 year period. In-depth insights into the ex-prisoners' indebtedness and living conditions confirm that ex-prisoners share a passive attitude towards the labour market and the education system. The pay-profit of a job, compared to receiving government transfer income, does not have any (present) effect to the indebted ex-prisoners' financial flexibility or everyday life in general. So, the financial boundary between the welfare poor ex-prisoners and the workforce poor ex-prisoners is unclear.

Legal regulation based on indebtedness will serve as an argument, to consider debt as an indirect criminal risk factor, which makes the preventive factors less effective, and drives the indebted ex-prisoners' farther from the legitimated socio-economic advantaged affiliations because of their debt to the state.
same time.

circulates rapidly and where actors are increasingly networked, connected, and movement may be especially pertinent in a transnational context where information of action expressed. I also propose that this way of understanding social movement is not the actors involved, but rather the paper I argue that it was in fact a social movement. Accordingly, I contend that the Neda’s death. Was it a transnational social movement – or something else? In the al movements especially to the weaker member of society, since the health needs may grow in high-risk areas.

The situation is still ongoing, the timing and outcome is impossible to predict, but itself when policemen and staff members of the Tax Authority e.g. execute visitations and confiscations, tries to levy distress and conduct stop-and-search zones.

OLESEN, THOMAS* (Aarhus University, thoa@ps.au.dk)

Social Movements and Transnationality: A Conceptual Discussion

In June 2009 a short grainy video shocked people all over the world. The video, recorded by a bystander, showed a young Iranian woman, Neda Agha Soltan, dying from a gunshot inflicted by a regime related shooter during protests against the fraudulent Iranian presidential election. Neda almost instantly became a transnational injustice symbol representing the unjust nature of the Iranian regime. The case of Neda is interesting for social movement scholars for a variety of reasons, including the role of new media and the power of photography and citizen journalism (Olesen, forthcoming).

The present paper, however, employs the case to ask a range of conceptual as well as methodological questions about the transnationality of transnational movements. Because while Neda’s televised death, motivated various activist organizations and interest organizations to act and criticize the Iranian regime, the activities around the Neda injustice symbol was much broader. Apart from activists, three categories of actors in particular were vociferous and active: politicians/political parties, media, and networked citizens all expressed outrage and demand courses on the basis of the Neda injustice.

This propels us to ask how we can best conceptualize the activities surrounding Neda’s death. Was it a transnational social movement – or something else? In the paper I argue that it was in fact a social movement. Accordingly, I contend that the defining element of a movement is not the actors involved, but rather the kind of action expressed. I thus propose that this way of understanding social movements may be especially pertinent in a transnational context where information circulates rapidly and where actors are increasingly networked, connected, and visible and able to engage in numerous and often different political issues at the same time.

On Policy-Making and Legitimation of the Law in Contemporary Pluralistic Society

The paper’s aim is to discuss the substantive dimension, quality and content of current law-policy making and socio-legal legitimation of law in present-day highly mobile, complex, multiethnic society. A special focus will be devoted on the coupling of the epohal crisis of formal-official State-nation law and the rising differentiation of social and legal sub-systems. Most relevant problematic variables related to traditional value-oriented identity patterns and interests will be considered. The quest for new models of citizenship and representativeness related to the search for new participatory rituals and institutional cerimonial events and high-tech interactions will be analysed also in relation to their current reliability and accountability.

Economic Crisis and Health Inequalities in Italy

In recent years Italy has been hit by a severe crisis, not only economically, with worrying consequences on the health of its citizens. In fact, the current economic situation threatens to undermine all dimensions of well-being of a population. The situation is still ongoing, the timing and outcome is impossible to predict, but that poses huge questions for those who deal with health and health planning.

A preliminary analysis of the international literature (Anderson, 2012; Binkin et al., 2010; Cylus et al., 2012; Artazcoz et al., 2004) and data made it possible to substantiate the effects of unemployment and increasing poverty on health inequalities.

In this paper we will try to verify the consequences of the economic crisis on health in Italy, what is the state of health inequalities and what are the risk factors for proximal (material, psychosocial, occupational, environmental and behavioral), most affected by the economic situation.

Using data by “Health for All Italy” will rebuild the health status of the Italian population in the last 10 years to demonstrate the changes and estimate the consequences of the current crisis, and on the social inequalities.

In time of crisis it is even more necessary to ensure access to health services, especially to the weaker member of society, since the health needs may grow rapidly. Moreover, given the particular situation and configuration of Italy will place the focus on geographical differences between the north and south of the country.

The first results show that, indeed, in recent years are increasing cases of suicide and depression, and all diseases related to the area of mental health (Costa et al., 2012). Health outcomes that are affected by an economic crisis ranging from subjective health, physical health, mental health and may vary in relation to socioeconomic status and place of residence.

Generational Change and Persistence: Gender Equality in the Life Course of Low-Income Brazilian Women

Social, economic and political changes in the Brazilian society since redemocratization have strongly impacted relational and material conditions of low-class families. Acute transformations took place especially in the realms of motherhood and participation in the labor market, division of domestic labor and domestic violence throughout the last decades, as reflected in the life course of women. This paper presents results from qualitative research with two or three generations of women in urban, low-class families in Brazil. The interviews were conducted with several families as part of two research projects in recent years. The reconstruction of women’s life stories and biographical self-presentations will highlight the reproduction or transformation of social patterns against the backdrop of new socioeconomic configurations and social policies. This reconstruction will trace, on the one hand, the changes in the perception of women’s role within the family as it relates to gender equality. On the other hand, it will be discussed how women experience their embeddedness in family structures as influencing decisions on migration, access to labor market and to education.

For that, the life paths of two or three generations of women from large cities in Southeast-Brazil will be presented. The analysis of the narrative interviews, following the reflexive-reconstructive biographical method, focuses on how the interviewed women define their life course between opportunities and constraints. This is seen in close relation with the social developments taking place around the subjects, as postulated by the biographical policy analysis. The research results can also cast a light on different patterns of generational intercontingency found in the same social milieu.

The Experience of Disrespect and the Genesis of the Recognition Paradigm: Empirical Research and Normative Philosophy in Axel Honneth’s Critical Theory

Together with Charles Taylor, Axel Honneth is among the most important proponents of a theoretical paradigm for the social sciences centered on the idea of “recognition.” This notion has, of course, entirely different meanings in the various contexts in which it is called upon. In Honneth’s specific case, it is of decisive importance that the fact that his theorizations around the centrality of recognition relations for human self-realization are rooted precisely in the negative experiences of denial of recognition: disrespect or misrecognition. Despite the more than twenty years that separate us from the publication of Honneth’s Struggle for Recognition, however, it seems that the theoretical genesis of this important book has not yet been grasped in its full potential for understanding today’s modern societies and for a revitalization of the social sciences in general, and of Critical Theory in particular. This is due, as I see it, to the misreading of Honneth’s work as much as to the author’s insistence on making the philosophical work of Hegel the logical point of departure of his theory.

In this presentation, I intend to cast light on other motifs that animated the formulation of this recognition-theoretical critical model, aside from the Hegelian works from the period of Jena: namely, the sociological and historiographical studies that convinced Honneth of the undeniable moral character of social struggles, that is, the American and especially British Quilts, that the Wehrung Classen that flourished in the 1980s. This influence reveal a closer relation between Honneth’s work and empirical social research than is made visible in his books. I argue, finally, that this connection is a most fruitful one and that Honneth, however, partially abandons it in his recent works – despite its precise meta-theoretical formulation under the name of “normative reconstruction” in his latest book, Das Recht der Freiheit (2011).

Recently, this “immaterial” conception has been problematized by conceiving materiality as physical objects – “stuck” matter. Scholars have analyzed how technology affects and is embedded in institutionalization and institutional change. This ontology, however, fails to perceive the human influence on the environment. It belongs to the human exceptionalist paradigm, in which technology is seen to have any prominence that the “progress” might produce. I propose to integrate physical matter required to run social practices (e.g., food, energy, raw materials) and transformed within practices (e.g., to waste, pollution) to institutional theory. Without “loose” matter institutionalism cannot perceive the growing “rifts” that humanity is producing, most prominently embodied as climate change and the depletion of raw materials. The ontology of “loose” matter has direct implications on institutional change and indirect ones on inequality.

**Austerity amidst Affluence: Cross-National Contrasts**

**Austerity amidst Affluence: Cross-National Contrasts**

Poverty has long been one of the most pressing social problems across the nations of the wealthy, advanced capitalist world. The poverty in wealthy countries is not on the same order of magnitude as in many less developed parts of the world, where grinding impoverishment is ubiquitous, and its impact and death toll staggering. Yet poverty is not only a “Third World” concern. It is often suggested that many poor people in wealthy lands would be considered relatively well off if they were living in a poorer developing nation. But they are not, and the social and economic circumstances of the poor in rich nations often requires a much higher level of income, and access to many additional goods, amenities and services just to reach similar levels of capability and inclusion as those of many poorer people in developing countries.

This paper examines this issue in Canada, the UK and the US, where, despite their great prosperity, the rates, severity and consequences of poverty have intensified under neo-liberalism. It also provides cross-national contrasts examining poverty in the Nordic nations which, despite notable increases in inequality and social policy restructuring, still outperform their Anglo-American counterparts. This paper also critically examines dominant and popular theoretical perspectives and explanations that have been advanced to explain how poverty is generated and sustained and assesses the possibility for its eradication.

**Distributed Expertise and Professional Collaboration: Recognizing Relational Interdependence in Healthcare**

**Background**

Healthcare work in the context of the hospital is characterized by the need for collaboration. There are several reasons why this is the case; for example that the conditions involved in modern diagnostic and therapeutic practices require highly specialized services as well as health professionals with a multitude of expert knowledge. Bringing this knowledge together in every instance of patient care requires, amongst other things, that individual professionals acknowledge the mutual dependencies and collaborative needs that arise from the distributed nature of expertise in clinical settings. However, professional cultures, hierarchical relations and differences in communication practices may give rise to inequalities in the recognition of expertise and hamper the open exchange of knowledge in decision-making processes.

**Study and methods**

The paper is based on two separate studies of professional work in hospitals. The studies were carried out using a qualitative design. Data were collected by participant observations as well as by individual and focus group interviews with doctors and nurses. The professional groups were interviewed separately, and comparisons were made as to which roles that nursing and doctors have in the collaborative relationship between nurses and doctors.

**Outline of paper presentation**

The purpose of the presentation is to describe how different modes of expert knowledge give rise to relational interdependence between doctors and nurses, using the management of oxygen therapy and mechanical ventilation of preterm newborns as illustrative cases. Based on findings from the studies, questions to be discussed are: how is the collaborative relationship experienced and performed by the two professional groups and what determines the exchange of knowledge between nurses and doctors in concrete clinical situations? The discussion is informed by a theoretical framework that captures the relational aspects of professional work performance.

OMENMA, J. TOCHUKWU* (University of Nigeria,Nsukka, Nigeria, tochukwu.omenma@unn.edu.ng)
This paper is premised on the nomination of 17 council chairmen (not Chair-women) by Peoples Democratic Party (PDP) for November 2, 2013 local council election in Enugu State. The issue of underrepresentation of certain groups, particularly women, brings to fore the contradiction of the party’s policy of equitable representation of women in party organs by using affirmative action of at least 35% of women. The claim to be a democratic nation cannot be sustained when political parties are not inclusive, and the candidates they nominate for all the elections remain male dominated. Most worrisome, is the grave yard silence from the marginalized women group of the local communities. The paper will centre attention on the process of candidate nomination by PDP, highlighting the particular obstacles that women face in the process. The paper examines the likely relationship between the prevalent culture of political ‘godfather’ and women underrepresentation in municipal politics in Enugu state since 1999.

Patronage in Pre-Colonial and Colonial Ibadan, Nigeria
This paper conducts a comparative analysis of patronage in pre-colonial and colonial Ibadan, Nigeria. Starting up first as a camp of marauders and later a military settlement after the collapse of the Oyo Empire, Ibadan thereafter emerged a military entity. However, the concept of patronage existent during the era was not inclusive over a large spectrum of Yorubaland by the end of the 19th Century. Ibadan developed a unique patronage structure based on the babaogun clientelistic system. The babaogun system entailed a network of military warlords who had clients who provided military and civil services in exchange for protection. Indirect rule introduced by the British integrated the babaogun system into governance, equipping the chiefs with economic and coercive powers, which of course sustained a transformed clientelistic system that was only subverted by the educated elite by the 1950s in preparation for independence. Hence the foundations of contemporary patronage system in Ibadan in particular and Nigeria in general are built on the political economy of colonial patronage and succeeding neo-colonial system. Using archival and ethnographic methods, this paper provides the context of patronage in Ibadan in pre-colonial and colonial eras.

Interrogating Social Inclusion: Preliminary Notes on Micro-Credit Institutions and the Quality of Living in South Africa
The notion of social exclusion has featured prominently in poverty and social reproduction discourses. Perhaps there is a sense that its obverse, social inclusion could ameliorate the deprived conditions and improve the quality of living of the excluded. However, the notion of ‘unfavourable inclusion’ suggests that inclusion does not necessarily translate into an improved quality of living. Therefore, there seems to be a skewness of emphases on employment as important for inclusion and improving the quality of living of the included. This thinking has led to the neglect of other institutional structures that may be imperative for the quality of living of the excluded. In this paper, we will argue that identifying the social institutions that propagate deprivation of capabilities and functioning as the target of social policy transcend the limitations of social exclusion and inclusion debate.

Transformation of Framings of Seafood Sustainability Certification Schemes
International sustainability certification schemes have been widely accepted at industries and markets partially because of their common basic structure represented by transparency, science-based measurable standards, and third-party auditing. In result such certification schemes provide alternative regulatory mechanisms that have to be considered beyond borders depending on types of commodities targeted. Particularly certification schemes dealing with seafood, both wild and farmed, have been showing great expansion in the world. As they come to the fore, the number of research pointing out their shortcomings also increases.

While maintaining common basic principles of third-party certifications firmly for the purpose, the framings of each scheme shows gradual transformation corresponding to criticisms. Drawing on three different international seafood certification schemes namely Natureland’s organic seafood, Marine Stewardship Council and Aquaculture Stewardship Council, this paper analyzes the transformation of framing of seafood certification schemes in which each scheme integrates knowledge other than scientific ones into standards and structure of scheme. In other words, it is a new function in certification framing to achieve fine balance between credibility and critical mass.

Comparative Sociology of 11 to 18 Examinations in Thailand, England, and Japan
This paper proposes a comparison of 11 to 18 examinations and the changes they have undergone in Thailand, England, and Japan. This has valuable significance as a focus of Comparative Sociology; this series of examinations has had common and persistent importance in various societies, which makes them an appropriate frame of reference for comparison.

The first objective of this paper is to demonstrate, by using the socio-cultural network concept, that there are profound similarities and differences in the changes in 11 to 18 examinations in these areas. These results will reveal a process that have not been detected by previous single-case studies.

The second objective of this paper is to propose methodological innovations for Comparative Sociology. It combines qualitative and quantitative methods, not by simple mixture but by close connection. Through this innovation, the Comparative Sociology of 11 to 18 examinations will serve as a way to resolve the eternal tension that sociologists face between science and literature.

The Second Group of Keban Dam Studies in Upper Part of Fırat Basin
The first group of the Keban Dam studies were carried on rural and urban areas in many fields in relation to construction process of the dam, resettlement process and later on similar to many projects in the world. However, there are on going high dam projects in many countries on the neck of many rivers and river basins. Kariba, Aswan, James Bay-I-I, Three Georges, Hoover and Keban are known examples. The lower-upper parts of dams and themselves are still focuse of future development projects. Therefore second, third and many more studies can be named in relation to known dams.
Initial studies were focusing on the construction of dams. Their human and environmental issues such as power, equality, aging and right issues, recognition of upper-lower and dam areas; short, medium and long term impacts have become visible in time. However studies are not enough yet to see all or policies not powerful enough to encounter all findings from the fields (human and nature).
This study consisted on four sections. The first section will be revealing introductory knowledge on a necessity of an approach to merge lower, upper and dam areas inclusive of collaboration of all scientific areas without isolating local issues. The second section introduces methodological foundations of the study. The discussion will be the third section. This will be based on three pillars: Findings from the known high dam projects from the world; general evaluation of the Keban Dam Project And recent developments, rural-urban and environmental policies in the upper part of the Keban dam and upper part of the Fırat Basin. The findings will be discussed accordingly. A specific emphasis were given on rural and natural areas (by public-by law) and changes in them. The last section consisted of conclusion and recommendations.

The Competence of Midwives in Independent Practice: Their Supporting Mothers’ Autonomy in Childrearing
The objective of the present study is to clarify the competency of private midwives through examination of how midwives help mothers gain autonomy in childrearing. An empowerment approach was used as a conceptual framework. This research was conducted with midwives working at three facilities. Data were obtained by observing each encounter between mothers and midwives; that was realized from the 30th week of mothers pregnancy to 3 months after their delivery. In addition, the midwives and the mothers were interviewed. Data were analyzed by qualitative and inductive analysis. Recorded data were coded and categorized, and a total of 7 categories and 39 subcategories were extracted. The results showed that midwives build relationships of mutual trust with mothers, empowering mothers through psychological and educational support and helping them to be independent. The competency of midwives in independent practice could be classified into the following five types: 1) based on mutual trust, the midwife builds a relationship with each client to facilitate friendly interactions as a health-care provider; 2) the midwife evaluates situations and assesses the skill set of each client; 3) the midwife becomes close to each client and provides individual assistance; 4) the midwife provides reliable techniques in various situations; and 5) the midwife offers information beforehand to prepare each pregnant woman to become a mother and then supports the new family after birth.

Politics As Life-Sphere: Youth Activism and the Question of Multiple Transitions in Mubarak's Egypt

Vibrant debates have emerged on the role of young people in revolutionary movements since the so-called 'Arab revolutions' in 2011. Some attribute the young protagonistic role more agency than the latter would themselves consider having. Others point to a certain hype around youth in this context and argue that the role of complex and contradictory social, economic, and cultural processes should be acknowledged in the making of popular uprisings in Tunisia, Egypt, and beyond. Young activists are, however, depicted often as somewhat one-dimensional social actors.

This paper argues that locating young people's activism in the wider context of their everyday experiences helps to unravel the multiple and at times contradictory transitions the young have to negotiate when engaging in youthful dissent under authoritarian settings. Although it is important to recognize that political activism in late 2000s provided crucial formative experiences for many young Egyptians, it is useful to remember that periodic street protesting, online campaigns, awareness raising stunts, and other forms of public dissent occupied only one aspect of their everyday lives. During in-between moments, that is, most of the time, they engaged themselves in other spheres of life such as studying, leisure, work (or finding work) and family. Thus, multiple life-spheres and trajectories within them represent an everyday dynamic in which the young had to navigate in their transitions to adulthood. For instance those, whose parents were opposition politicians, who had secured a job in civil society organizations, and whose friends were supportive of their oppositional activities, benefited from crucial synergies between work, family, friends, and activism. But others were not so privileged, while sustained participation in pro-democracy movements was further structured according to gender, class, region, connectedness, etc. The paper bases on 12 months of ethnographic fieldwork in Cairo between 2007 and 2011.

Taming the Uncontrollable Situation?: Towards a Critical Re-Examination of Cosmopolitan Modernization from a Socio-Spatial Perspective

What are the significance and problems in Ulrich Beck's concept of cosmopolitan modernization? How do the particular characteristics of a society change in relation to the influx of 'outsiders' across the nation-state? This paper aims to develop a new theoretical approach to the concept of cosmopolitan modernization by integrating a socio-spatial perspective that moves beyond nationalism and the nation-state and incorporates important implications for conceptualizing the future of modern society by drawing attention to the ways that boundaries between insiders and outsiders are constantly being erased and redrawn. Ultimately, this model of cosmopolitan modernization aims to locate alternative forms of 'withness' (or being together with fellow citizens) and thus shares basic traits of nationalism. To this end, this presentation firstly examines Beck's concept of reflexive modernization by focusing on the changes in territorial formations, individual conceptions, and the linear growth model. Secondly, this paper critiques Beck's concept through a specific focus on critical discussions of social space developed by GSJ's policy advisor, Uma Narayanan. Building on these insights, this paper argues that sociospatial conceptions that represent 'outsiders' need to be re-examined in relational terms. Specifically, this paper proposes Harvey's idea of relational space as a way of taking into account the shifting and emergent boundaries of inside/outside and self/other that characterize the 'uncontrollable situation'. This research further suggests that integrating socio-spatial perspective for understanding the dynamic tensions within 'cosmopolitan modernization'.

How We Cope: The Study of the Gendered Dimensions of Conflict on Women in the Niger Delta Region

Recent conflict events in the Niger Delta region have seen the changing faces of the impacts of the conflicts on the women. There is an increasing use of violence and rape of women as a tool of warfare by both the militias and the State security forces, thereby exacerbating the rise in new HIV infections in the region. Also a number of women have become widows with enormous family responsibilities to cater for. Thus there is an increase in the number of female headed households (FHHs) in many parts of the Niger Delta region and Nigeria due to the death of a spouse in the conflict. A key argument advanced in this paper is that the women in the Niger Delta and Nigeria as a whole be the brunt of the conflict in the region due to their low socio-economic position in the patriarchial society. Their limitations and resulting conflicts affect them disproportionately. Women constitute the most vulnerable group since they have limited access to land and resources, which is a crucial determinant of their access profile. This places women in a vulnerable position in terms of adaptation and resilience to shocks and stresses associated with the conflict. Despite their limitations, the women are not impas- sible actors; their situation in the conflict, but are active actors in the quest for survival and peace. By studying the gendered dimensions of social conflict, armed violence and peacebuilding we will be able to understand the gendered relationship which goes on from the household level to the general society, and how these relations invariably affect women's vulnerability to conflict and conflict resolution.

Structurally Heightened Structurally Heightened Mobility of Population and Community: Case Studies from the Suburbs in an Indonesian Metropolitan City

Based on both qualitative and quantitative data of Indonesia, this paper is trying to accomplish two goals. First, the author grasps the current condition in the suburbs of Asian metropolitan cities whose mobility of population is structurally heightened. Second, the author examines the community in detail whose members are changing dramatically and whose old community it has replaced.

The rapid development process of Asian metropolitan cities is one of the most important issues in recent urban studies. Industrial products for global markets are produced in these areas. It turns out that the driving force of this development is deeply embedded in suburban areas which have newly developed towns and municipalities. Indicators of demographic institutional researches have shown that mobility of community members, and describes the community around Jakarta moving on a very short-term basis. Thus they are constantly forced to move to the new areas and new workplaces due to the effects of new practices governing the international division of labor.

Although previous community research has focused on community structure and participation rate, it has not grasped the fact that currently, community members are constantly changing. This paper explains the mechanism of heightened mobility of community members, and describes the community around Jakarta moving on a very short-term basis. Thus they are constantly forced to move to the new areas and new workplaces due to the effects of new practices governing the international division of labor.

The rapid development process of Asian metropolitan cities is one of the most important issues in recent urban studies. Industrial products for global markets are produced in these areas. It turns out that the driving force of this development is deeply embedded in suburban areas which have newly developed towns and municipalities. Indicators of demographic institutional researches have shown that mobility of community members, and describes the community around Jakarta moving on a very short-term basis. Thus they are constantly forced to move to the new areas and new workplaces due to the effects of new practices governing the international division of labor.

Although previous community research has focused on community structure and participation rate, it has not grasped the fact that currently, community members are constantly changing. Governing Sustainable Seafood

The worldwide consumption of seafood is increasing year over year leading to more pressure on the remaining fishstocks and to expansion of aquaculture. The environmental consequences are substantial and create growing pressures for more adequate environmental governance responses. Recently, market-based approaches to sustainability seafood governance have gained considerable traction in global seafood provision. Born in part out of perceived failures of the state, a range of private-led governance approaches using price signals and market access as incentives for changing production practices have emerged. This paper provides an overview of these approaches in fisheries and aquaculture, including but not limited to NGO-led initiatives such as the Marine and Aquaculture Stew-
ardship Councils (MSC and ASC), and industry-led initiatives such as GlobalG.A.P. and the Global Aquaculture Alliance (GAA). The paper then discusses how these arrangements have led to the inclusion of new categories of private actors in the regulation of sustainable seafood (e.g., auditors), and to a new round of contestation between NGOs and industry actors such as retailers, who are seeking to counter the regulatory risk through a series of benchmarking exercises. The paper concludes with a discussion of whether and how the investment made in these market approaches have supplemented (or even replaced) state governance arrangements in promoting sustainable seafood production and consumption in the context of globalisation.

ORELLANA, GERARDO* (Universidad Nacional Autónoma de México, gorelanamaster@gmail.com)
The Role of Social and Cultural Factors in the Involvement of Physical and Sports Activity in Mexico

Mexico is the greatest consumer of carbonated drinks and has the highest percentage of people who are considered overweight. Government actions have not adequately considered sports as a factor that drives social development. Part of this weakness in Mexico is a lack of specialized studies that identify the needs for physical activity, as well as the capacity of large corporations to exert influence on legislators through financial contributions thus limiting the national Government’s possibilities to foster social development. This paper presents results from a study that identifies some of the social factors that influence the possibility of a population’s involvement in practicing sports and physical activity, such as infrastructure, socialization experiences and different needs by gender, age, region, and cultural conditions. The study was carried out in the central-south region of Mexico, with students of upper high school of a semi-rural community. It is an exploratory study using a mixed methodology that was conducted between September and December 2012. The results show differentiated consumption of physical and sports activities among the student population. The important role that public institutions play in marginal communities with low economic resources regarding health care, and the promotion of physical and sports activities within this population is highlighted. The results also suggest the vulnerability of communities as well as the economic interests of corporations due to the lack of regulatory policies to mitigate health risks.

Canadian Police and Legitimization Of Conducted Energy Devices (CEDs)

This paper focuses on the increasing adoption and deployment of Conducted Energy Devices (CEDs), one of a range of ‘less-than-lethal’ force options, by Canadian police. The paper explicates the legitimization of CEDs as a function of the intrinsic values ascribed to them by the hegemonic social group that hold power over the criminal justice system. As such, CEDs are seen as legitimate and beneficial by police officers when compared to other forms of force. Furthermore, this legitimization process allows police to push through and legitimize new forms of non-lethal force, while also paving the way for the eventual deployment of lethal force. The paper concludes with a refutation of the symbolic institutional value of CEDs in the policing field in Canada.

Intermediaries, Facilitators, Agents, Guides: Steering International Medical Travel to Malaysia

Malaysian authorities’ desire for foreign patient-consumers from higher-income countries and the spectacular medical tourism infrastructure being developed to cater to them exists in contrast to the actual everyday flows of intra-regional lower-income patient-consumers who, comprising the bulk of medical travellers to Malaysia, have been fundamental in both constituting and sustaining the country’s medical travel destinations. This paper draws on interviews with medical travel companies in Malaysia and Indonesia that promote Malaysian private health care to prospective patient-consumers from both higher-income and lower-income countries. It compares and contrasts the functions of these companies, their relationships with patient-consumers and the ways in which they represent and negotiate the differences between health care in patients’ countries of origin and in Malaysia.

El Ocio Como Agenda Para Nuevas Políticas De Vida

Mi propuesta de ponencia para este panel aborda el tema del ocio en el siglo XXI, uno que merece mayor atención adscribiéndose así a una agenda de políticas de conciliación social de corte internacional. Lejos de pensar en las prácticas tradicionales de luchas políticas locales e internacionales, mi trabajo se concentra en una estrategia molecular, rizomática que pudiera desplazarse al campo nacional e internacional. En la medida que muchas de las sociedades contemporáneas confrontan serios problemas sociales en los que se observa una burocratización de la vida cotidiana, niveles de violencia altos, desempleo, multitempleo, precariedad socioeconómica y economías informales, como actividades que copan los tiempos y generan niveles significativos de ansiedad y salud. Ante este escenario, el ocio aparece como un resquicio cotidiano. En este sentido, propongo analizar aquellos factores socioeconómicos, políticos y culturales que deben reenfocarse para producir unas políticas de conciliación social donde el trabajo asalariado, no remunerado, informal, doméstico, la recreación, el consumo, la cultura y el ocio se recompensen con otra economía digna y sostenible de los tiempos e imaginarios sociales.

The Role of Leisure in the Reproduction of Inequalities: Puerto Rico Case Study

In the contemporary context of enduring economic crisis the concepts of poverty, inequality, inequity, and exclusion claim great discursive visibility and relevance in both, the academy and the media. The global reorganization of capital has intensified capitalism’s increasing trend of labor force exclusion and the possibility of a jobless future for younger generations and displaced workers. This is not the only phenomenon that threatens quality of life and social polarization in societies particularly hit by the economic crisis. Leisure practices and rituals have changed in this economic climate. After a brief analysis of the structures of inequality in Puerto Rico, relying on key socioeconomic indicators, recent government policies, enduring colonial-political arrangements, evidence of an increasing deterioration of the public arena and our participants’ testimonies on their consumer and leisure styles, we will like to argue that (1) the nature and meanings ascribed to leisure by Puerto Ricans have an impact on the reproduction of economic and social inequalities and (2) some of the activities that are identified as leisure constitute an important part of the strategies deployed by the disadvantage to lessen and neutralize the personal effects of social and economic inequality. Our conclusions will be supported by state of the art quantitative and qualitative research conducted by the Grupo de Estudios del Trabajo (GET) from the University of Puerto Rico during 2013. We will discuss our preliminary findings (a) on the time allocation for leisure, (b) the most common activities taken as such and (c) the meanings ascribed to them.

Fukushima Nuclear Disaster and Theories of Tort Law

The Fukushima Nuclear Disaster brought widespread and long-term damage, which forced traditional theories of tort law face with many difficult challenges. According to the case law, a wrongdoer should compensate any damage claimed by a victim. If the victim can prove that the wrongdoer’s act is a legally sufficient cause of such damage. However, certain types of damage from the Fukushima Nuclear Disaster are not fit into the traditional theories of damage. For instance, how to calculate non-pecuniary loss suffered by an evacuee followed by the governmental instruction? As of August 2013, 81,300 residents (28,800 households) were still restricted their access to their home in varying degree. Among them, 24,800 residents (9,200 households) have their houses in the areas where the annual integral dose of radiation is expected to be 20mSv or more within five years and the current integral dose of radiation per year is 50mSv or more. How to calculate their fear during the evacuation? How to calculate their concern over the radiation injury? How to calculate their uncomfortable life in their temporary housing? How to calculate their loss of hometown? In addition, statute of limitations put another hurdle for the victims. Moreover, the government liability is called into question. Some victims have filed lawsuits against the TEPCO and the government, even though the Dispute Settlement Center for Nuclear Disaster Compensation was established to assisting the victims. Thus, in my presentation, I will discuss the recent developments of tort law after the Fukushima Nuclear Disaster.

Moralistic Trust and Rationality: The Individualization of Trust

This study discusses the individualization of trust. In the literatures on trust, there are two conflicting views on the definition of trust. Hardin (1992) argues that trust is based on the prediction about the behavior of other people. In contrast, Uslaner (2002) and Mansbridge (1997) assert that trust is based on moral values or altruism beyond the prediction.

We can apply this argument to generalized trust, or trust in strangers as well. Previous studies show that consideration of social distance and voluntary association membership are the two main explanatory variables to determine generalized trust.

Institution-centered approach asserts that monitoring and sanctioning the law-breakers by order institutions facilitate trustworthiness of people's action. Therefore institutional confidence can enhance generalized trust. This approach assumes that generalized trust is based on the prediction about the behavior of strangers.

On the other hand, society-centered approach claims that voluntary association membership creates trust to member in belonging group, and it is generalized to strangers outside the group. This approach implicitly assumes that generalized trust cannot be explained by prediction, but it is based on moral values.

Thus, generalized trust has the predictive and moralistic aspects. We can call the shift from trust based on the prediction to trust based on the moral value as “individualization of trust.” Then, what is the condition of the individualization of trust?

This study focuses the post-materialism argued by Ronald Inglehart. We can expect that trusting based on the prediction is rational for materialists who emphasize the existential security. On the other hand, trusting based on the internalized moral values is the rational for post-materialists who emphasize the more autonomous choices.

To test the hypotheses above, this study will make the quantitative analyses based on the questionnaire survey data in Japan.

The Grimmest Spectre: The Famine Emergency of 1946

“Let them starve,” a Maine farmwoman angrily responded to a Successful Farmer pollster about the Famine Emergency of 1946 throughout Europe and Asia. A more thoughtful Idaho farmer explained, “Normal people, in a land of plenty, should not stand by and see any group of people starve.” Yet only 1% of six million American farmers believed aid should be sent to Europeans and Asians. By mid-1946 agricultural economists narrowed this complex issue of famine relief to a simple economic realism of thirty cents more per bushel of wheat. Would Americans respond in a generous, ethically-minded spirit or a miserly, profit-motivated manner?

When the Second World War finally ended, food mattered most. Rations and calories—mostly bread and potatoes—remained below subsistence level in many warring countries but now started plummeting after WWII to record starvation levels. After war’s end in Eastern Europe, the Soviet Union, China, and India, more people succumbed to starvation than during the violent conflict. As Winston Churchill proclaimed within his infamous “iron curtain speech, 1946 had become “this period when famine stalks the earth.” At the same time, President Truman considered this foreign aid as a “solemn obligation.”

To fulfill this obligation, Truman appointed former President Herbert Hoover, whose expertise saved millions of European lives following the Great War, to chair the Famine Emergency Relief Committee, and Hoover eagerly embraced the challenge, announcing via radio that half a billion people faced starvation worldwide. Hoover, his name synonymous with relief in Belgium and Poland, was to be visiting the children of the elderly for thirty years ago, but the death and destruction by 1946 had dramatically escalated. He visited thirty-five countries in less than two months, collecting famine information that would later contribute to the establishment of the Marshall Plan.
shaped immigrant women's professional and life experiences and contributed to their underrepresentation in the profession in Canada for the last 10 years, in an intersectional analysis of gender, race/ethnicity/birthplace, and class relations which considers changes or their absence over time.

"New Ways of Recruiting – an Evaluation of the SAF Efforts of Recruiting Ethnic Minorities"

The transition to an all-volunteer force in Sweden has meant that the Swedish armed forces (SAF) need to try different ways to recruit personnel. For countries that abandon conscription, there are almost always recruitment problems. The new direction for the SAF, going from an invasion based defense to a more operational defense force with international focus, puts demands on cultural awareness and language skills among soldiers and officers to another extent than before. In November 2012 the SAF, together with the Swedish Public Employment (SPES) Service, started a joint project called preparatory military training. The aim of this project was to attract 500 individuals with a cultural background from outside the European Union, and language skills in other languages than Swedish and English, to start a 10 weeks long preparatory military training. Preparatory military training aims at giving participants an insight into how a career in the armed forces would look like, as well as get the opportunity to develop academically. Out of these 500 individuals, the SAF aims at recruiting 300 individuals to start the basic military training in the SAF. All participants live at the military barracks and receive free meals and they are allowed paid travel home for holidays during the course and are paid activity support from the Swedish Public Employment Agency. Men and women live separately with separate facilities. The SAF and the SPES share 50% of the education and training at the barracks. Phase two of the project starts in the autumn of 2013 and aims at attracting 300 individuals to start the preparatory military training. The paper assesses the effectiveness of this new and original project.

Comparative Analysis of Regional Governance

This presentation illuminates regional variations of industrialization through comparative analysis of governance for resource management on porcelain industry in Japan. The presenter analyzed how specific arrangements were formulated that designated the ways of managing resources for porcelain production and distribution. With comparative analysis of arrangements of porcelain manufacturing in three regions, the presentation shows how the relationships of political authorities and those who were engaged in the industry shaped the distinctive ways of governing resources in each of these regions. Analysis illustrates regional variations of managing resources for porcelains conditioned by different ways and degrees of involvement by regional political authorities and those who were engaged in porcelain production and distribution. The pre-existing practices and relations shaped the ways of organizing resources for industrialization in each of the regions even after the regime change in the late 19th century. In the region where the regional authority had claimed a strong command over resources for porcelain production and distribution, producers and merchants relied on guidance and support from the political authority to receive funding and other support for a further development. In the region where the political authorities did not interfere the way of using resources, producers and merchants organized resources to enlarge their activities on their own without little public support. The ways and degrees of involvement by the regional political authorities and their relations with those who were engaged in production and distribution shaped the distinctive styles of managing resources for porcelain production in each region.

My presentation is based upon our empirical study on the quality of lawyers conducted in Yokohama District Court and Tokyo District Court. The number of lawyers in Japan has been rapidly increasing in the 21st century, e.g., 17126 in 2000 to 32088 in 2012. We have introduced the U.S. style graduate law school system on top of the traditional undergraduate law faculty system in 2004. The legal aid system has been drastically expanded with the completely new system called "Terasu. " These reforms was intended to enhance the public's access to justice and improve the quality of legal services, so that the Japanese legal profession is able to satisfy the increasing demands for quality legal services caused by the globalization. But these judicial reforms have been criticized by the bar associations and many lawyers. The rapid increase of lawyers is most severely criticized. One of the main reasons of criticism is that the increase yielded poorer quality of lawyers. We have been doing several empirical researches to test this and other claims. The study I will report at this session is modeled after Prof. Richard Moorhead's study on the quality of legal aid lawyers in U.K. One of the
striking results of our research is that the quality of legal services in civil litigation by younger lawyers is better than those of older lawyers.

The Participation of Women in Farm Management in the Development of Sustainable Food Safety: Case Studies in Switzerland and Austria

Family-managed farms form the heart of Asian and European agriculture and are essential for the stable supply of safe food. In Japan women are deeply connected with food safety and consumption activities (Nakamichi, 2010). In Switzerland and Austria, women’s participation in farm management is also related to food safety. This paper examines specialized education for Swiss and Austrian women that encourages participation in farm management, which is in turn related to food safety.

In alpine Switzerland and Austria, Direct Payments support helps to maintain small-scale family farm management, and in particular, organic farming receives higher supports. Austria has the highest percentage of organic farming (16.5%) among EU Member States, and in a semi-mountainous area of small-scale management, it is especially high. Direct Payments support is higher than the EU average, resulting from the Elevation Agriculture Policy (OPUL). In addition, women comprise 36% (2012) of farm managers, a high percentage within the EU. Organic farming is carried out especially in mountainous regions of Switzerland, and farm incomes receive a high degree of direct support. In a semi-mountainous area of small-scale management, organic farming holds the highest percentage. Over 11% (2011) of farm households in Switzerland are organic, and among women managers, the figure shows higher.

Examples from Switzerland and Austria indicate that women play a large role in the stable supply and safety of food, but both countries traditionally favor sons for farm succession. Women are rarely trained as successors and usually enter farming by marrying farm successors, however both countries have well-established systems of vocational training for female successors. Some women trained in home economics have achieved Meister status as farm managers. Reforms in vocational education are encouraging more women farm successors, and the number of young women receiving specialized agricultural qualifications is increasing.

Struggling Against Water Environmental Inequality through Dialogue and Cooperation: Micropolitics Under Suppressed Public Sphere

China has enjoyed rapid economic growth for decades, while not controlled environmental pollution effectively, even brought pollution accidents and conflicts frequently. Especially water environmental pollution has brought sever conflicts in rural area to challenge local governance in which government and industries maintain a rapid development to convert local natural resources into their own wealth on the one hand washing their wastes to downstream farmers on the other hand. Journalists, NGOs and scholars have been aware of this water environmental inequality in rural China as a “structure” to be changed by any institutional reform. However, more endeavor to find a fundamental approach to deepen the reform should be investigated in both theoretical and practical way. Referring to experiences in Japan where severe pollution hazard like Minamata and Itai-Itai disease caused by untreated industrial wastewater under rapid economic growth in 1950’s to 70’s, it reminds us a series of lawsuits by victims with their supporters were followed by institutional reform for pro-victims. However, such lawsuits succeeded in Japan not only due to growing of social movements but also due to growing of public sphere to allow broader people to join in. Although political reform has been discussed for many years in China, the public sphere is still suppressed by social control of communist party and the government. In this study, promoting “dialogue and cooperation” as an alternative approach to struggle against such a structure in China will be discussed through a field survey on NGO activities in one basin and participant observation on a pilot project of “community roundtable meetings” in another basin where water pollution has been serious. Toward mitigating an inequality under the suppressed public sphere, we could find a possibility of breakthrough by “micropolitics” among local stakeholders, while revaluing socio-ecological relations which residents/NGOs have woven through their own practices.

OVCHAROVA, OLGA* (Russian State Academy of Arts, ovcharovao@ya.ru)

Gender Pyramid Politics: Trends of Global Changes

Gender Pyramid Politics: Trends of Global Change

Nowadays in the contemporary world the gender pyramid of power is maintained. The low representation of women at the making-decision level is observed both in the public and private areas of employment. It is most evident in the political sphere - the sphere of traditional male domination. There is the opinion, that women can expect to realize their ambitions in this sphere in the last place. However, over the past decades, states have demonstrated not only the increasing number of women in the government, but also the obvious mental shifts in sharing of gender roles. In this case, it is typical that the culture of these countries have not been traditionally presented as gender-focused, the movement for women’s rights has not existed, and the women themselves do not consider their political advancement as “the social breakthrough.”

On the contrary, in the states where the issues of gender equality have been raising at the higher levels for many decades, significant neutralization of the principle of gender pyramid can’t be noticed.

In this regard, the following questions rise great interest:

What are the social, cultural and legal reasons caused this situation?

Does the economic aspect of the pyramid change with the political advancement of women? Or is the stay of women in the authority only the question of formality?

What are the prospects of gender equality / inequality in the epoch of globalization?

In conclusion that we will form some action points.

OWENS, ANN* (University of Southern California, annowens@usc.edu)

Subsidized Housing and the Concentration of Poverty in the U.S.

For several decades, federal housing policy in the U.S. has been used to address issues of segregation in American cities. Since the 1970s, assisted housing projects aimed to integrate low-income renters into lower-poverty neighborhoods. New programs including housing vouchers, the demolition and redevelopment of public housing, and the use of new project-based developments were adopted with the expectation that they might lead to a decline in poverty concentration in U.S. cities. However, little is known about whether assisted housing policy has successfully reduced poverty concentration. Using national data, I test whether the geographic deconcentration of assisted housing units, which occurred as the new policies were implemented, led to a deconcentration of poverty in metropolitan areas from 1980 to 2005-09. Results show no relationship from 1980 to 2000. After 2000, assisted housing deconcentration is positively associated with poverty deconcentration, suggesting that deconcentrating assisted units allowed low-income families to move to lower-poverty neighborhoods, tempering rises in poverty concentration that occurred since 2000. However, the magnitude of the relationship was quite small, suggesting that the broad shift in housing policy over the past several decades has contributed little to the deconcentration of poverty in U.S. cities, despite substantially reducing the geographic concentration of assisted units. Potential explanations for this weak relationship include the small proportion of poor residents living in subsidized housing and impacts of new subsidized housing on the mobility of non-poor residents.

SARC (Scientists/Artists Research Collaborations

This is the story of a pilot project that was aimed to enable creative collaboration between five internationally chosen artists and New Mexico scientists from Los Alamos National Laboratories and Sandia National Laboratories. The SARC (Scientists/Artists Research Collaborations) project was part of the well-established, international electronic festival called ISEA, which occurred throughout the state of New Mexico in Fall of 2012. The project was also given major support by the University of New Mexico campus in Albuquerque by SARC (the Center for Advanced Research Collaboration). The SARC Summer 2012 pilot initiative accomplished some intended objective outcomes, garnered partners that could serve as the impetus for the program’s next phase development. There is currently no policies tie into SARC’s current programming life and works, though. This is the White Paper, therefore, lays out SARC resources, structural considerations and intentions. At this point, SARC reality and creative potential is being dedicatedly developed, but uncertain. It is from the grounded reality of SARC development that we will form some action points.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
What lessons have been learned from this pilot program? Jack Ox will discuss the problems we encountered and what is necessary to move forward. These issues will be discussed in context with the art-sc world as it develops at break neck speed. What are the dangers art-sc collaborations will be likely to confront in the cycle of art world attention and what that means. What is the best mix of art and science? Should one domain dominate the other? A most important question is how do we judge the collaboration; are there collaborations between an artist and a scientist not art/science?

Accountability To Environmental Policy: Renewable Technologies and Sustainable Housing Development

Complying with policy requires of practitioners that their actions are held to account; that setting a context of sustainable development of the social housing sector and its use of renewable technologies. The building of ‘sustainable housing’ is integral to UK government initiatives to reduce energy consumption, fuel poverty, and carbon emissions, and to generate renewable energy. In this article, we examine how ‘accountability’ is promoted by both the UK government’s environmental policy and local councils in their planning criteria. We investigate how accountability is enacted in and, generative of, the practices of sustainable housing development by housing professionals. We identify a key process of accountability – a politics of making environmental sustainability visible through demonstrating the utilisation of renewable technologies. For housing developers, the choice to install such visible renewable technologies is part of their practices to strategically and creatively meet the policy criteria and the local council’s target for planning permission. These practices reveal much about the competition and politics that underpin how local planning authorities and housing professionals together shape environmental accountability in a bid to comply, win building contracts, and demonstrate their sustainability credentials. We demonstrate how these practices have implications for potential energy provision and consumption.

Transforming Energy Provision and Reducing Carbon Emissions

Our society is increasingly using more electricity. We have recently seen many changes in consumer and domestic electronics: mobile phones, tablets and Internet hubs are, for instance, now part of our everyday sceneries. It is also expected that radical changes in heat and transport services, such as domestic electric heat-pumps and vehicles, will happen in a near future. As a result of this change, it is anticipated that domestic and commercial electricity consumption will rise, which then will increase a level of carbon emissions. The problem is how our society can and will change. Various actors are engaged in initiatives seeking to tackle this problem. Engineers are developing a number of possible solutions by attempting to ‘re-engineer’ the ways in which electricity is provided to so-called end-users: for example, voltage reduction. Focusing on the proposed socio-technical aspects of these solutions, this paper discusses how engineers conceive of the problem of ever-increasing carbon emissions, investigating the framework and assumptions about socio-technological provision and usage. This includes, for example, an analysis of how transformation processes in energy systems are understood and configured. We will present our findings from interviews with engineers who are involved in a large-scale European research project that seeks to offer a solution.

Current Situation and Problems of Commercial Sex Workers (CSWs) in Japan

According to Japan’s National Police Agency, 30,133 businesses were reported to act in sex industry in Japan in 2012. The number of CSWs are estimated to amount to at least a few hundreds of thousands. Japanese Anti-prostitution law establishes the law prohibited paid sexual intercourse. As a result, many kinds of sex work which avoid this law have been created. Most of them offer a variety of sexual services except for sexual intercourse, such as “Fashion health” and “Image club”. But there also exists sex work which includes “unpaid” sexual intercourse, such as “Soap land”. In soap lands, CSWs have sexual intercourse with their customers of their own free wills, not as a part of service, though it is an unsigned agreement that sexual intercourse is included. We conducted semi-structured interviews with 17 CSWs who work for a soap land in Tokyo mainly in order to study the psychological tendencies and problems. We found that all of them had experienced other kinds of sex work not including sexual intercourse before they began working for the soap land and that they liked a soap land job best. Despite a lot of social and psychological disadvantages due to sex work, they gave more importance to advantages. It can be said that Soap land is legal, but this problem has been left vague for a long time in Japan. In 1990s, there was a heated discussion about “Should prostitution be made legal?” in Japan. But little attention was paid to the feelings and opinions of CSWs. Presently Soap land seems to coexist with society in harmony with Japanese original culture and law system. It is an important challenge for the future sex work in Japan how to keep this harmony unchanged.

Masculinity, Racist Experiences and Repudiation Of Homosexuality: How To Deal With Research Results In a Racist Public Discourse?

The results of our empirical studies about male youth in Germany show that young immigrants are often confronted with institutional and everyday racism, experienced as a form of stereotype threat. At the same time, they are actively stereotyping and discriminating others. As researchers, we are challenged to not only take seriously racist experiences, but also to deal with the young men’s discriminatory practices, in particular the rejection of homosexuality and homosexuals, closely connected with complex images of masculinity and doing masculinity in peer-groups. Additionally, the experience of homosexual immigrants who with discrimination must be taken into account. However, the publication of such results is problematic: In some European countries a tolerant and open attitude towards homosexuality has become a cornerstone of judging the potential ability of immigrants’ successful integration. In these discourses often two racialised images are constructed: the native ‘own people’ are contrasted by ‘Muslim immigrants’. While the former constitutes the ‘tolerant’ side, void of any negative attitudes towards gay and lesbian people, the latter is constructed as deeply homophobic. These discourses have polarizing effects and facilitate exclusionary attitudes towards immigrants. In this constellation the publication of research results about the intersectionality of masculinity, racist experiences and negative attitudes towards homosexuality becomes a walk on the ridge. We have noticed that the focus of attention is shifted to ‘their’ homophobia which is constructed as an effect of Muslim culture and its primitive and uncivilized patriarchal values, while the racism experiences of the young men are then usually pushed into the backgrounds.

In our paper we will present key findings of our studies and we will share our experiences with the publication of such results. Our aim is a discussion not only about ethical considerations and responsibilities but also about how to actively engage in altering the racist public discourse.

Sociality and Individuality of Language in Durkheim and Bergson

The purpose of this presentation is to discern the role of language which we use to recognize ourselves and objects, and the phase of the sociality and individuality which language has. With this intention, I’ll compare the category theory of Durkheim with Bergson’s language criticism. Human being differs from animal in that he uses language. The man synthesizes the special, the accidental and the individual by the reason, and he thinks by means of universal forms. He can understand the empiric things in the framework of abstract concept and, by exchanging this concepts, he can communicate with others who have their own experiences.

About this language, Durkheim emphasizes that it is given by society. A concept is, then, a concept. He thinks that the concept is essentially impersonal representation. The sign is a system preceding the individual’s birth and given by the society. Not until he thought abstractly by the sign did a man became a human being.

Bergson opposes two plans of the object recognition method, that is, the analysis that comes from the outside and the intuition that come from the inside. He doesn’t consider that the essence of the object can be perceived from the outside, express itself by symbols, being incommensurable with all something else. In opposition to it, he considers that what is gotten by the analysis of the outside

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Gezi Park protests were an expression of the "pluralist" anxieties and democratic hopes of the people. Gezi Park Resistance revealed at least two important things. First, they showed that the opposition in Turkey is not weak, but fragmented. Second, and more importantly, they showed that the popular opposition cannot adequately express itself through conventional political channels. The disconnectedness between the protests and the institutional/traditional politics makes the democratic role of the opposition more critical. There is need for discussing (new) methods and instruments to make fragmented popular opposition politically more effective on a pluralist democratic basis. The outcomes of these discussions may be helpful in analyzing the social movements of the 21st century.

In this presentation, a qualitative analysis of the texts which appeared during the Gezi Park events on pro-government and non-pro-government press will be used to discuss the structure and the aims of the popular opposition in Turkey, and to investigate the similarities and the differences of Gezi Park protests with other social movements of the 21st century, such as the Arab Spring, and Occupy Wall Street.

**Interlocking Directorates and Capitalist Class Formations in Turkey: A Study on the Listed Firms in Istanbul Stock Exchange and Istanbul Chamber of Industry (ISO 500)**

In recent years, corporate networks and board interlocks have drawn considerable attention in academic works and are the subject to growing research worldwide. This paper aims to contribute the existing literature with a modest exploration into the structure of the corporate governance network and interlocking directorates in Turkey on which systematic research are extremely limited. Unsurprisingly, a few number of existing studies merely focus on technical/practical issues such as problem of coordination and innovation, building the ways to decrease transaction costs, experience sharing and so on, in dealing with the corporate networks of Turkish companies. In this study we will, at first, develop a critique of those mainstream approaches to the corporate networks in Turkey on the basis of their shortcomings in explaining/discussing the political economic consequences of those ties. On the other hand, through an empirical study investigates the interlocking directorship and the capital relations among Turkish companies listed in Istanbul Stock Exchange and ISO 500 (Istanbul Chamber of Industry) respectively, this paper question whether those corporate-corporate connections have played significant roles in the process of capitalist class formation in Turkey.
Transnational Pentecostal Entrepreneurship: From Africa to Europe, the Challenge of a New Competitive Christianity

African Pentecostalism is not confined to Africa. As Africans move into Europe, many bring their new way to interpret Christianity. The empirical research in Nigeria, Ghana and Italy supports the idea that African Pentecostalism produced a socio-religious innovation in the religious world-wide. Two elements in particular emerge: the high mobility in the individual religious choices and the fluidity of the boundaries of religious affiliation. The migration processes have emphasized even more this second aspect. The most important result of this innovation is, on the one hand, the radical change that affects the church model and, on the other, the emergence of a charismatic religious leadership. The paper deals with the idea of the charisma as transnational company or religious enterprise. In this way, the new African churches (although this argument can also apply to those Latin American and South Korean or Chinese) that are transplanted in Europe contribute to weaken the traditional boundaries of Eurocentric Christianity and to loosen the link between national identity and belonging to a Christian denomination.

The new model of interpretation of Latter-days, introduced by the Global Pentecostalism, tends to destabilize the national-bourgeois European Christian- ity and promote exchanges between the new Pentecostalism coming from the former Third World and Charismatic movements present in many Christian de- nomination, in Africa and in Europe, including the Orthodox Church as is well demonstrated by the huge success of the Pentecostal Church of the Nigerian pas- tor Sunday Adelaja in Ukraine.

Emergency

Bitcoin: Network Based Currency and Its Self-Organizing Emergence

Bitcoin is a form of virtual or digital money, a peer-to-peer, electronic cash system. Bitcoins are based on an open-source cryptographic protocol that is independent of any central authority like a Central Reserve Bank or another administrative institution. Bitcoins are created and administered decentralized within a computer based network. They can be transferred through a computer or smartphone without an intermediate financial institution. The currency exists since 2009 and is in the meantime accepted as a legal instrument of payment in various countries but first of all for worldwide Internet transactions. In June 2011, Wikileaks and other organizations began to accept bitcoins for donations. That became very important after MasterCard, Visa, PayPal and other tried to close their service in countries with high risks of fraud or money laundering. Since then bitcoins are used for donations, for releasing and remitting money where the traditional financial system is not available, for發放、 rescuing and remitting money where the traditional financial system is not available, for funding digital currencies, for organizing digital money transactions, and many others. It is a peer-to-peer electronic cash system for the Internet. It is a cryptographic network, which allows the transfer of data, particularly messages and money, in a secure manner.

The transformative effect of ongoing consumer advocacy efforts is also reflected in the way that bitcoins are accepted as a legal instrument of payment in various countries, including Nigeria, where they are widely used for transactions. The paper reports on a project exploring the institutional design of a new national regulatory system. It draws on an analysis of government drivers for reform, including instances of regulatory failure that led to patient harm. It also incorporates an analysis of key practical texts including the regulatory impact statement and the consequential legislation to explore how the reforms were designed to affect relations between patients and professionals.

The introduction of the National Registration and Accreditation Scheme for Health Professionals in Australia in 2010 consolidated arrangements across fourteen professional groups who were previously registered separately across each of Australia’s eight jurisdictions. Each state and territory also had separate arrangements to assess the qualifications and experience of health professionals who qualified outside Australia. These new arrangements brought into place consistent requirements across continuing professional development, criminal history records, English language, insurance and recency of practice for over half a million practitioners.

Dialectic of Enlightenment's Critique of the Civilizing Process As Aufhebung of a Debate

During November and December 1941, the Institute of Social Research delivered a series of public lectures at Columbia University on the question of how National Socialism should be characterized. The positions within the debate could roughly be divided in two major groups: on the one hand stood the conclusion that capitalism must go through new transformations, leading to a new order, that of State Capitalism (Pollock); and, on the other hand, a depiction of the current capitalist system as a totalitarian-led monopoly economy (Neumann and the others). Dialectic of Enlightenment – written by Adorno and Horkheimer in 1944 in exile in the USA but first published in 1947 by the small and actively anti-Nazi Querido Publisher in Amsterdam – followed this debate and is, in a way, a response to the questions posed in 1941, developing however yet another interpretation. I would like to argue that the book does not make use of the State Capitalist thesis, as forwarded by most literature, but can rather be understood through two largely unexamined keys: the Jacobin theory and dialectical anthropology. As early as the 1940s, one can recognize a growing emphasis on a critique of the civilizing process in Horkheimer and Adorno’s texts. Dialectic of Enlightenment condenses these efforts and can be considered an Aufhebung (sublation) of the Columbia debate from 1941. This paper will go about reconstructing the 1941 debate, follow various texts written by Adorno and Horkheimer in the late 1930’s and early 1940’s, analyze letters between them and approach Dialectic of Enlightenment in order to analyze its political answer to the Columbia debate, which is itself based on a critique of the civilizing process founded on a theory of rackets and on dialectical anthropology.

Analyzing the Socially Transformative Capacity of Post-Disaster Reconstruction

Traditional theories of disaster management have neglected the role of community organizations in building urban resilience to natural hazards. They assume instead that the state, often in coordination with market forces, is the most important agent in dealing with disaster risk. My aim is to challenge this assumption. By studying the emblematic moment of post-disaster reconstruction, I intend to deal with the above-mentioned issues. My working hypothesis argues that local community struggle for permanent housing provision during the rehabilitation period contributes significantly to transforming multi-scalar disaster governance and building resilience to future hazards.

The paper will start with a zoomed-out investigation of the urban socio-environmental problematics in order to a) identify and untangle the inter-connected economic, political, social and ecological processes that together form uneven and unjust urban assemblages, b) trace and clarify the concepts of vulnerability and resilience and c) uncover their underpinning discourses. This “zoomed-out” identification of the socio-ecological urban problematic and vulnerabilities and the discourses behind them will be instrumental to “zooming-in” on possible entry points for new discourses for disaster resilience and institutional change in disaster intervention. Through the lens of the long-term reconstruction period, I will analyze the potential of the development and implementation of alternative housing policies in a) enhancing empowerment and social resilience, b) promoting integrated modes of urban development, and c) revealing new institutional perspectives in dealing with disaster governance.

The paper will end with a discussion on the potential of sustainable platforms of dialogue which necessitates a strong presence and proactive reproduction of social capital. What is the long-term potential of social mobilization in a) sustainably and collectively building-up of social memory for future resilience, and b) identifying and addressing possible weaknesses and challenges faced by the different bottom-up agents in their relations of cooperation, including with the state?

Systemic City Interdependencies In Advanced Producer Services: The European Space In Transition

The paper reports on an analysis of systemic city interdependencies generated by key agents in world economic transformations - global advanced producer services (APS) which use world/global cities as nodes for flows in their worldwide occupational networks. The analysis draws on and develops work undertaken in a major study funded by the European Spatial Observation Network (ESPOON) which set out to examine Europe’s position in the networked global economy and the implications for policy: TIGER - Territorial Impact of Globalization of Europe and its Regions. Europe provides a unique contemporary territorial frame through which to observe the success of policy transfer and upscaling relevant to sustainable cities in globalization. EU urban and regional cooperation programmes and funding has been a major strand of cohesion strategy for over a decade, moreover European geo-political rescaling in successive waves of enlargement has extended policy collaboration to an ambitious supra-state/regional level. The authors identify two intersecting spatial processes in European APS-generating city interdependencies: A process of intensifying city-network links and functional specialization at a macro-region scale; and a process of extending city links and scale specialization connecting urban Europe to distant economic macro-regions. The interaction between these two processes points to the complex nature of city interdependencies in economic globalization and a need to de-territorialize urban sustainability prescriptions.
les, con el objetivo de generar nuevo conocimiento y fortalecer las capacidades científicas y tecnológicas existentes.

La naturaleza de esta cooperación se basa en los principios de las relaciones internacionales y también en el desarrollo de particulares alianzas estratégicas, como es el caso de China.

No obstante, para el caso de los países de la región, la cooperación científica y tecnológica continúa ocurriendo de forma semejante a la década de los ochenta y noventa, una relación entre países dominada por la oferta-demanda de tecnología, que si bien tuvo en su momento un importante apoyo al desarrollo económico de estos países, hoy amenaza con acelerar el deterioro de las capacidades para la producción científica y tecnológica y en consecuencia el desarrollo social y productivo, pero también altera el escenario político.

Al mismo tiempo, el poder gubernamental posee una cultura caracterizada por el analfabetismo tecnológico que impide reconocer los efectos negativos de este tipo de unión, en consecuencia limita la actividad de formulación e implementación de políticas en ciencia y tecnología que conciban la transferencia tecnológica de un nuevo modo.

El siguiente trabajo, no sólo caracteriza la situación arriba planteada utilizando como referencia la experiencia actual de algunos países de la región, también permite evaluar la pertinencia o no del modelo de transferencia tecnológica hasta ahora desarrollado, lo somete a discusión y proporciona elementos de análisis para describir los aspectos negativos del mismo. Finalmente hace una propuesta hacia dónde debería apuntar la transferencia tecnológica en estos países.

**Technological and Political Illiteracy: Its Effect on Social Change in Latin America**

**Technological and Political Illiteracy: Its effect on social change in Latin America**

The political dilemma between capitalism-socialism or the political power struggle between the right and the left wing, in Latin America, has been accompanied by an anachronism related to problems of social inequality. The increase in these problems has had an effect of generating more conflict between rich and poor, and therefore has become a catalyst in the process of decision-making by the political power.

In some Latin American countries, where are trying to experiment with political processes that resemble with the left thinking, social inequality has generated within the political power the need to contract all areas in which acts the capital model, with regarding to the value and the role of science and technology in the transformations and social welfare.

As a result, it has been created a social symbolism within society, which influences negatively and pushes away the true role of science in social and economic transformations of these countries. At the same time, this symbolism influences and suffers an arrangement within the political power.

What happens is a combination of political and technological illiteracy. This combination is also a clash of ideas and political decision (political inequality) for those who in society own and generate scientific knowledge in reference to those who do not. Thus, it has distorted the development of coherent public policies.

This work attempts to make some comparisons of these practices in Latin America, analyzing more deeply the case of Venezuela.

**What Are the Opportunities for Social Investment in the Continental European Welfare States?**

With their passive, employment-based, status-preserving, social insurance and male-breadwinner oriented welfare states, continental European countries are the least likely cases for social investment policy innovation. Nevertheless, some continental welfare states have introduced social investment reforms. While both the Netherlands and France have a similar legacy of a typical continental European passive social insurance-based welfare state, they have changed in various ways. The Netherlands has made a strong social activation turn in social security, coupled to a more “flexicure” service-based labour market. In France, there has always been a strong policy legacy of pro-natalist child-care support. Recently, an important policy focus has been paced on the Youth in France. In both these countries, social investment policies have come under pressure after the 2008 financial crisis. Some policy areas (like work-life reconciliation policies) seem to have been hit harder than other areas (active labour market policies).

Moreover, there is also substantial variation across countries. How to account for this? By analyzing the reform trajectories with respect to social investment both before and after the 2008 financial crisis, the paper assesses the (variable) opportunities and related feedback effects for social investment in continental Europe.
out in last twenty years, which depict the miserable working conditions of India’s informal sector workers. While workers in the informal sector contribute a considerable amount of output to the country's GDP, the conditions under which they labour are usually deplorable. Although precise data is not available, we can safely say that nearly all workers in the informal sector lack any form of social security. India has a labor force of nearly 400 million persons, about 13 percent of the entire world's labor force. More than 70 percent of the nonagricultural labor force is in informal employment. If we include agriculture into this, it will be over 90 percent. Work in the informal sector is so common today that it is almost a norm.

Today, due to policies of globalization, facilitated by advances in technology, labour is losing its formal and organized character. Workers are divided into two groups, who are employed and who are in the reserve army of labour, willing to do anything to obtain employment. Large number of workers in India, who form this reserve army, miserably wander to and fro between cities, town and villages, living in different phases of employability in seasonal cycles.

This paper attempts to understand, based on available literature, trends of informalization in the fast changing employment scenario in Indian urban economy.

Examining the Manifest Function and the Latent Function of Japanese Class: Focused on a Example of Public Middle Schools in Osaka

This presentation examines, from the viewpoint of the manifest function and the latent function, extensive adaptive function that Japanese classes could potentially play and understand this issue, the author conducted an investigation at public middle schools in the Kansai area in Japan from 2009 to 2012. The investigation combined participant observation, semi-structured interviewing, and description-type questionnaires. M-GTA technique was used to analyze the field research data.

Results obtained from data collected via participant observation and interviews suggest the follows. Besides functioning as a supplementary lesson for Japanese language and other subjects, the Japanese class also provides a place for “feeling of security” as well as “maintenance of mother tongue and native culture”. We can say this is the manifest function of Japanese Class. Apart from such conventional role, Japanese class has demonstrated a crucial role in facilitating intercultural understanding and cultural exchange. Newcomer students, sharing the mutual identity of a minority in class, were observed helping one another to cope with problems and thus create a more comfortable learning environment in school. Then, Japanese class also offers a career role model which could potentially affect newcomers’ career choice in the future. And this is the latent function of Japanese Class that we cleareded.

In summary, the Japanese class offers a place for interaction with Japanese students and as opportunities to re-identify one’s own root; a place to obtain sense of self-realization and recognition; as well as a channel for resource procurement. Hence, it is not only the manifest function but also the latent function of the Japanese class has been observed in this study.

Cyberspace and Cross-Cultural Relationships Online

Previous studies claim that intermarriage dating sites are new digital technologies that have transformed the mail-order bride industry. It is generally assumed that, when women from developing countries turn to intermarriage dating sites, economic deprivation and opportunities are the main driving motivation. What is ignored in such accounts is the role of desire for love and intimacy. Does the presence of economic and social gain in cross-cultural relationships exclude the fact that women are seeking intimacy in online contexts?

This research seeks to understand why women in Thailand turn to intermarriage dating sites to pursue relationships online and why intermarriage dating sites appear to be displacing other ways of meeting foreign partners. It draws on in-depth online and offline interviews with 24 Thai women who have experienced online dating on an international level. This study shows that the development of ICTs and increased accessibility of the Internet in the context of globalization and transnational networks allows women to consider a wider set of possible lives and partners than they ever have before. Although some women might be confronted with dilemmas or stereotypes of seeking cross-cultural relationships online, almost all of the women interviewed perceived intermarriage websites as an important channel leading them to meet and fall in love with Western men in the Internet era.

Delivery Of Quality Education In Global Era

However, education and skills have also played key roles. Education has generally supported rapid economic growth through encouraging foreign investment, enabling technology transfer, promoting productivity and progressively upgrading the skills base as required for each successive economic shift to high-value-added manufacturing and service industry. Education has also played generally positive role in promoting relatively cohesive national identities. Our key tasks in relation to each of our target countries were four-fold. The first was to identify the points in recent world history at which each country made a deliberate choice to forge a stronger integration between respective domestic societies and the global order, and the ways in which they shaped each country's progress towards the three goals of successful engagement; i.e. export-led economic growth, income equality and peace. The third was to provide an assessment of the contributions made by education and education policies to each of these goals. The fourth was to analyse past policies for their impact on these goals and current and proposed policies for their likely impact in the future.

While many of our most important challenges have their roots in our history, there are important new opportunities and challenges emerging in the new century. However, to underestimate the new, opportunities and challenges, or to locate ourselves as ‘victims’, would be an historic mistake. While some commentators despair at the complexity of the current global environment, particularly with reference to the welfare of developing nations, we take a slightly different view. While cognizant of supra-national developments, we cannot stand by and watch the erosion of our efforts to build a democratic society.

Voting Behaviour Among the Youth in Malaysia

Malaysia’s 13th General Election held on 5 May 2013 was one of the most exciting General Election in Malaysia’s political history. The result showed that the ruling party (National Front) and the opposition coalition (People’s Alliance) contested closely in the 222 Parliamentary seats. Although the results showed a rather status quo in favour of the ruling party, the opposition coalition managed to increase their seats to 89 compared to 82 from the 2008 12th General Election while the seats obtained by the ruling party reduced to 133 from 140 seats. This paper examines the young voters’ voting patterns to determine the significance of this bloc of voters as both coalition parties were trying to get this inscrutable voters, comprised 40% of the electorate. 12,912,590 registered as voters and the 40% belong to the 21 to 39 years old age group. Before the election, almost 65% of them were labelled as ‘fence sitters’ who were mostly non-partisan and were seen as the deciding. National Youth Survey by The Asia Foundation indicated that the political thinking of the youths in Malaysia are not static but have changed accordingly. This new shift allows this paper to discuss the position of the youth in Malaysia’s 13th General Election which party benefit from their role and whether youth were the deciding factor or kingmakers in Malaysian politics as reflected before the General Election.

PANG, IRENE* (Brown University, irene.pang@brown.edu)

The Right to Exams: Examining China’s Citizenship Transformation through a Petition Campaign in Beijing

Market reforms in China beginning in the late 1970s have initiated the transformation of China’s citizenship regime by restructuring the triadic configuration of relations between the state, the market, and an emerging civil society. The gradual erosion of that institution which defined and structured China’s bifurcated citizenship system—by market forces is increasingly shifting the responsibility of distributing resources from the state to the market. Yet insofar as the dissolution of the hukou system is incomplete, the access to certain resources, such as higher education, remains legally restricted by the hukou system. Using the petition campaign of a group of internal migrants in Beijing seeking the rights of their children to sit university entrance examinations locally as a site of active practice and contestation of citizenship, I examine the nature of the emergent citizenship regime in China and its implications for Chinese society. I argue that although the claims of the migrant parents in Beijing are substantively similar to claims that have historically been made by other internal migrants in China under the socialist era, the logic behind such claims and the ways they are being negotiated have changed. I argue that China is transitioning from a collective-based system to a market-oriented and global economy. The second was to provide an assessment of the contributions made by education and education policies to each of these goals. The fourth was to analyse past policies for their impact on these goals and current and proposed policies for their likely impact in the future.
forms are leading China from one unequal citizenship regime to another unequal citizenship regime.

'Supply Chain Solutions' at All Costs: The Case of Linfox and the Transport Workers Union in Thailand

Linfox is Australia's largest privately-owned logistics and supply chain company which provides transport and delivery services across the Asia Pacific region for the world's biggest consumer goods companies and retailers. In Thailand, Linfox provides services for four distribution centers of Tesco Lotus (a joint venture between Thailand's Champion and Tesco PLC, the world's second-largest retailer after Walmart). Work conditions have steadily deteriorated over the past ten years (serious injuries including deaths caused by stress, exhaustion and falling asleep at the wheel) and reached a breaking point in January 2013 - the same time as a nationwide minimum wage policy was put into effect on January 1 2013 - a counter-versial policy that prompted many companies to increase working hours, re-duce benefits, lay off workers and/or close down their factories. The Linfox truck drivers had no choice but to go on strike but their action only resulted in the dismissal of fifty-six union members and refusal from management to further nego-tiate with the workers. This paper examines the 2013 dispute between management and 430 members of the Transport Workers Union who work as truck drivers for Linfox - a multinational transport company which first started its operations in Thailand in 1992. Based on interviews conducted in the field, this paper will pro-vide an analysis of the strategies employed by the company to confront the workers (through forms such as contract clauses requiring workers to sign away their rights) and the challenges posed to worker solidarity. Since these are not new challenges, are there really opportunities then for new forms of resistance?

PANTUMSINCHAI, PENN* (University of Hawaii at Manoa, ppantum@hawaii.edu)

The Future with Powerful Consumers: A Case Study of Kickstarter

In our technologically advanced modern age, the power of production has shifted from the producers to the people. Everyday consumers are taking on a more proactive role in the way they buy, use, and mold products to their needs and purposes. These new-age consumers are changing the way corporations produce products and are forcing corporations to acknowledge the wisdom, knowledge, and creativity that consumers have to offer. As part of this developing phenomenon, crowdsourcing has become a new practice of corporations and small-time producers. Crowdsourcing is the idea of soliciting contributions (be it money, ideas, or labor) from a large group of people (such as a virtual community). Kickstarter is an American-based, private-for-profit company founded in 2009. Dubbed “the world's largest fundraising platform for creative projects” (http://www.kickstarter.com). A platform in which producers of any kind (films, games, music, art, technology) can ask for donations for creative projects, Kickstarter puts the power in the consumers’ hands. People have the option to donate as much money as they want to the over 100,000 projects open for funding. The design seems to strike a responsive chord with controversy. Kickstarter does not provide any regulation in terms of completing the projects and delivering to the consumers. Unsurprisingly, there have been numerous projects that have been funded but not finished and delivered to the backers’ (i.e. funders). By analyzing the Kickstarter community through Consumer Culture Theory, particularly focusing on over funded projects that have not been completed, the sociological expectations and desires of the backers are understood. As new-age consumers supporting local businesses or individual creators, they have a desire to have creative and funding control over the production process. Conversely, the goals of the producers are also analyzed to provide a larger picture on the effectiveness of a possible future of consumer-sponsored production.

Participation in Voluntary Organizations and Civic Integration of Immigrants in Crisis-Stricken Greece

During the last two decades Southern European countries, which were in the past a labour reserve for Western Europe and North America, experienced migration transition to host societies. A number of factors explain this transformation; their geopolitical position, the improved socioeconomic situation and the fact that they are part of the European Union. The recent economic crisis seems to have affected the size of immigration flows in Europe while it raised new issues related to the integration of immigrants in southern European host countries and the challenges faced by the latter for maintaining social cohesion.

Migration research in Southern Europe focuses on the immigrant characteristics and the integration opportunities of immigrants. The recent emergence of immigrant associations and voluntary organizations has not been accompanied by an extensive study of the relationships between immigrant associations and voluntary associations and civic integration in Southern Europe and more particularly in Greece. Moreover, the ongoing economic recession has had an immense impact on the participation and civic engagement of immigrants in host countries.

The paper aims at unveiling the factors which are related to the participation of immigrants in voluntary associations and the implications of immigrant participation for their social and civil integration in host countries. Firstly, the paper will review the relevant literature in Southern European countries and then the situation of immigrant participation and civic engagement in Greece will be presented. The paper will be solely based on a comparative analysis of research findings emanating from two consecutive research projects aiming at the study of immigrant participation in voluntary associations at the start (2009-2010) and in the midst of crisis (2013) in Greece. Both quantitative and qualitative data will be used to reflect on the deficits and the challenges of the EU and Greek migration policy towards immigrant participation and civic integration.

The Creation of Peaceful Neighbors and Calm Swedes

A discreet aspect of everyday life in Scandinavia is the relative absence of feuds between neighbors and the peaceful atmosphere that prevails in neighborhoods. It is rather difficult to find shouting Swedes and in criminal statistics there are rather few incidents of killings between neighbors. Another aspect of Swedish everyday life is that that, when asked, two of three Swedes state that they trust other people.

In this short historical expose the author connects the absence of feuds between neighbors in everyday life and the high degree of trust prevailing in everyday life in Swedish society. It is argued that the regulation of “neighbors war against neighbors”, in essence the regulation of the inter-human space between neighbors, early in Swedish history pacified the relations between neighbors and created a fertile ground for the generalization of trust from few people to many people, and for the creation of a climate of trust. It is argued that this was the spread of topography and cartography through agricultural reforms before industrialization that created objective representations of property and thus eliminated boundary feuds between neighbors. By examining topographic maps before and after the reforms the author discusses how the regulations and objective representations of the physical space regulated the inter-human space.

PAPASTEFANOU, GEORGIOS* (Leibniz Institute for Social Sciences, georgios.papastefanou@gesis.org)

The Day after: The Effect of Diary Timing on Time Data Analysis

As proved in psychological research, human memory is deceiving and we tend to forget certain events (see e.g. Kahneman, 2004), especially if they were of little importance – such as daily chores or random household-related tasks. However, these minor episodes are important in time data analysis, as they can tell much about the differences in time-use patterns or time allocation across the society. This fact has important implications for the time-data validity. If filling in of the time-use diary is postponed by the respondent until, for instance, the day after the activities took place, the record is already subject to substantial distortions. Some episodes are simply being forgotten. It results in diminished sequence variability, and extended episodes of the typical activities - at the expense of the less usual ones. What is more, it has an effect on the differences in time allocation as shown in cross-sectional analysis. The day when the diary was filled in can thus have a significant impact on the results as well as conclusions drawn from time-use research. Using the German Time Use Data 2001/2002 and Polish Time Use Data 2003/2004 (both surveys conducted within the Harmonized European Time Use Survey framework) we show how gender differences in time allocation differ depending on when the diary was filled in by the respondent. By the means of multivariate analysis we also show how sequence specificity (such as number of episodes and their duration) differs depending on whether the diary was filled in on the same day as the recorded one - or the day after.

From the Global South to the Globe: Pathways to Participatory Budgeting

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In 1989, the city of Porto Alegre in southern Brazil implemented the world’s first experiment in participatory budgeting (PB). Twenty years later, an Alderman in Chicago established the United States’ (US) first experiment in PB in the city’s 49th ward in 2009. Over that time, PB has spread to over 1500 municipalities in countries across Latin America, Asia, Europe and North America (Baiocchi and Ganuza, forthcoming). To identify factors driving the diffusion of PB, I conceptualise the factors that influence the differential spread and success of PB, particularly in relation to current experiments in the US. I argue that the study of the diffusion mechanisms for PB provide important insights for activists and civil society actors seeking to promote transformative change.

In this paper I consider the diffusion pathways for PB, in terms of both the information networks that spread the idea, and the support environment that makes its implementation possible in a given location. Drawing on social movement diffusion literature, I conceptualise the factors that influence the differential spread and success of PB, particularly in relation to current experiments in the US. I argue that the study of the diffusion mechanisms for PB provide important insights for activists and civil society actors seeking to promote transformative change.

In this paper I consider the interplay between state and civil society and their impact upon participation, since both sets of actors shape PB outcomes (Wampler, 2008). I explore the case of Chicago, comparing the experiences of the four administrative districts that implemented PB in 2013. Using data collected from participants across these sites, and an analysis of outreach efforts, I examine the correlation between who participates and the engagement of civil society and the state. The aim is to identify the actors that drive the implementation of PB in the US, as well as their impact upon its success as an inclusive practice.

The USSR

In the US, as well as their impact upon its success as an inclusive practice.

Participatory Budgeting in the US: The Role of Key Actors in Shaping Turnout

Participatory budgeting (PB) has largely been studied in the context of the Global South, with particular attention given to the case of Porto Alegre. Only in recent years has PB begun to gain traction in the United States (US), beginning with Chicago’s 49th ward in 2009. While the PB projects in the US resemble in some respects and familiar structure of Porto Alegre, the many unique contextual factors suggest that the American experience of PB is likely to be quite different.

A central claim of democratic theorists is that PB provides opportunities for participation to citizens who are marginalized by or excluded from typical democratic processes (Fung and Wright, 2003). In the Porto Alegre case, high participation amongst poorer citizens led to a more egalitarian allocation of resources as well as the expansion of associations in civil society. As PB moves north from the Global South, how is it being adapted, and how do outcomes vary?

In this paper I consider the interplay between state and civil society and their impact upon participation, since both sets of actors shape PB outcomes (Wampler, 2008). I explore the case of Chicago, comparing the experiences of the four administrative districts that implemented PB in 2013. Using data collected from participants across these sites, and an analysis of outreach efforts, I examine the correlation between who participates and the engagement of civil society and the state. The aim is to identify the actors that drive the implementation of PB in the US, as well as their impact upon its success as an inclusive practice.

The Fluidity of Texts and Structures: Exploring Institutional Ethnography of the Child Protection System in Dominican Republic

This presentation discusses the challenges experienced in using Institutional Ethnography (IE) in a context other than Global North. I discuss the challenges in attempting to translate both linguistically and culturally some of the important concepts of IE into Spanish and the culturally different institutional structures of Child Protection System in the Dominican Republic (DR).

Based on a five year international collaborative project (Canada-DR) this presentation discusses some of difficulties in a national study of the child protection system, when institutional structures were not clearly identified, and when institutional texts were not clearly defined outside the legal discourse –Child welfare Act. The team of researchers used different IE means of data collection: 1) Mapped out the “fluid” structures of the different child protection structures (Ryerson University, hparada@ryerson.ca) working toward the protection of children and youth; 2) completed textual analysis of the rules and regulations –or lack of; 3) completed six months of direct observations and finally interviews of different actors within the system. What characterize the child welfare system in different provinces in Canada is a highly regulated and clearly structured system with standards of practices. What characterized the child welfare in the DR is relations of ruling in constant flux where practices were not based on any written forms of protocols of practices, but in personal experience and political influence of those engaged in the protection children and youth.

Since the team of researchers are now engaged in new project both in the Dominican Republic and working toward future projects in other countries of the Caribbean and Central America, the questions of applicability and universality of IE outside the Global North becomes very important.
The Managerialization of International Collaboration: The Silencing of Social Justice Solidarity

There is an extensive literature on the process of "overmanagerialization of academic work" (Todd, et al 2013). Academics' programs that continue to engage on pressing issues such as social justice or global solidarity face difficulties in negotiating the disjunction of the entrepreneurial university and solidarity of international collaboration. "Internationalization" of programs has become a buzz idea that most universities in North America are pursuing, but the question remains "What kind of internationalization? And who is benefiting from this process?"

Using Institutional Ethnography, this presentation discusses the negotiation process with which the author has become involved with in the development and implementation of an "international Youth Right project" during the past two years. The author discusses the steps taken to "textually transform the local realities" of the everyday experience of youth advocating for the protection of their rights into textual instruments of control-financial, managerial as relations of rulings that reflect the managerial realities of the Northern institutions (the entrepreneurial university and its funders). Through mapping out the different "project management processes" required to develop and implement international projects within the entrepreneurial university context, this presentation will discuss the disjunction of local realities of those who are supposed to benefit from this kind of project -children and youth and the institutions that are supposed to manage them.

The following questions are discussed: What challenges children and Youth face in achieving their rights? What are the consequences of extremely legalistic discourses of rights on the everyday lives of youth in the Global South? How is the managerialization of international collaboration within university context affecting the everyday practices of solidarity?

PARK, HAENAM* (Seoul National University, checkitupnow@gmail.com)

The 1988 Seoul Olympic Games and Habituating Developmentalism in Korean Society

This paper examines social impact of the 1988 Seoul Olympic Games on South Korean society. It attempts to explain the event not as a facilitator to the democratization, but as a means of justifying developmentalism derived from dictatorship government in Korea. The 1988 Seoul Olympics have been regarded as an event that not only displayed the state of the rapid economic growth, but also carried out a positive role in the peaceful process of democratization.

However, the current political situation in Korea raises a question whether the democratization is really successful or not because authoritarian style developmentalism is continuously supported by Koreans, even after the transformation into democracy. Some people claim that a certain level of the authoritarian rule are restored and legitimizes. This study argues that the hosting gave the former dictators hegemony, a persuasive power which works in peoples' everyday life.

First, huge amount of urban regeneration promoted Korean Chaebol(conglomerates) to build skyscrapers in the center of Seoul. Some of the buildings functioned as popular attractions and showed the most citizens the fruits of the economic development by the Chaebol and the dictatorship government.

Second, a huge number of apartment buildings were constructed by Chaebol's construction companies and 'Apart' became a typical dwelling form of middle class in Korea. The middle class people dwelling in the 'Olympic village' invented their own consumer culture and lifestyle. That is, 'distinction' in Bourdieu's term began among the citizens.

The middle class's everyday life depends on the products by the Chaebol and the narratives on the growth of their households identify with the narrative of economic growth of Korea. This serves as a principal of supporting successor of the dictatorship in Korea, even beyond the democratization.

PARK, JI-AE* (Jeonbuk National University, ysshs7@gmail.com)

A Sequence Analysis of Career Pathway of College(University) Graduates Youth in South Korea - Focus on Variation Across School Locations -

This study intends to analyze career pathway of youth who graduated college/university in South Korea. The aim of this paper is to show dissimilarity in transition pattern in labour market within youth by the variation across school locations. In order to analyze it, Korean Labor and Income Panel Study data collected in 1998-2009 is used. The dataset is divided by school location (Seoul & Gyeonggi, Incheon & Non-Metropolitan areas). I examine sequences of labour market statuses using explorative methods of sequence analysis and optimal matching algorithm. The main results of this study are as follows. Pattern of youth's work careers is different by firm-size and occupation. For example, youth who graduated from provincial college/university get job in smaller firm than any other groups. And, labour market entry time is also different. For instance, youth who graduated from Gyeonggi, Incheon college/university prefer entering the labour market to applying for a job although it is unstable job. In contrast, youth who graduated from Seoul college/university prefer applying for a job to entering second labour market. In addition, level of exposure of employment instability is different. Youth who graduated from provincial college/university have difficulties finding stable job. They face high risks of job termination. Also they expose to repeat of (re-)entry and exit labour market. Especially, it is distinct between Seoul and non-metropolitan areas. As results of this study show, we need to consider gap of career pathways within youth. And institutional support should be provided by group characteristic.

PARK, JINYOUNG* (Cornell University, jn989@cornell.edu)

Solidarity and Empowerment of Women Workers in Asia

Solidarity has been stressed as one of the most important tools for powerless and marginalized groups of people let alone labor movements. Pressures from globalization create additional demands for workers and activists to extend their solidarity across the borders. This is not only because globalization has created problems that connect people's lives across national boundaries, but also because it has produced many situations and cases in which workers, and activists face similar problems and circumstances, making sharing and learning from each other useful. Based on my experience working at the Working Women Academy

Poverty and Inequality of Korean Elderly People: Life Long Effects of Labor and Welfare Systems on Old Age Income Support

Very low fertility is regarded as a serious social concern in South Korea. Korean
government has contrived diverse policy approaches to provide various incentives
for reproductive behaviors. More or less, the public response to low fertility tends
to be base on the individualistic framework of rational choice and assumes that
reducing the constraint and cost for reproduction would increase fertility rate.
In this regard, the new government of president Park Keun-Hye pledged to provide
financial support for child birth and education more extensive than ever before.
Setting aside the question whether the promise could be fulfilled given the limited
budget, this study aims to discover characteristics of family changes and
in social transition. The long-term changes in the international trades explained
in the world-system.

The growing demand for primary energy consumption in many Latin Ameri-
can countries is carbonized raising a challenge to move towards low-carbon econ-
world. Where the population of registered foreign residents remains less

how the nation states were structured and also fluctuated by their structural po-
in the world-system.

Life History and Family Changes in Korea and Japan

This study examines important characteristics of family changes and moder-
nies embedded in the life history of Korean and Japanese elders born in the
1920s and 1940s. The elderly born between the periods of the 1920s and 1940s
underwent very compressed social changes, such as the imperialism, political tur-
mol after liberation and ferocious national building, wars, diaspora, and the high
economic development. Modern families have been developed and transformed in
this vortex of social changes. Reconstructing the memory of the elderly people's own
life history, this study aims to discover characteristics of family changes and modernities in Korea and Japan.

Surveys and interviews were conducted in Seoul, Korea and Nagoya, Japan from
2009 to 2011. Questionnaire covered detailed information about family in origin, education, experiences of adolescence, marriage and their own family, work, and later life. 100 cases in Korea and Japan respectively were collected considering age, gender and economic status of the elderly. In-depth interviews were then followed for the cases with importance in the study and elders' willingness to interview.

Several important concepts of modern and family changes are interpreted by
comparing life histories of Korean and Japanese elders. Modern construction of
patrilineal family and its change are compared. In regard to the period of child-
hood and the youth, the mixture of kinship and modern rearing, gendered edu-
cation, and influences of imperial war and Korean war, diaspora and repatriation were interrelated. In the interplay between the individual adulthood and the social period of high economic growth, mixed relation with extended and nuclear family and ideas of gender role division were compared. Finally, attitudes in inheritance, after-death, and family support in later life and social changes were compared.

Making“Koreans” in Japan: Policy, Category and Negotiation

Japan is known as one of the most ethnically homogeneous countries in the
world, where the population of registered foreign residents remains less
than two percent. Having their origin in Japan's colonial rule in early 20th cen-
tury, Koreans have been a typical ethnic minority in the society. Regarding
ethnicity as fixed components of society, sociological inquiries on ethnic mi-
norities in Japan have treated Koreans as one of the explanatory variables in
social exclusion, racial discrimination, and immigration policy in Japan. This paper examines how ethnic/racial category of “Koreans” in Ja-
pan was re-defined through postwar immigration policies formed by the Japanese Government and Occupational Forces just after the Sec-
ond World War. In dealing with migration from Korea, Japanese govern-
ment developed immigration control and alien registration system. From documents made from Occupational Forces and the Japanese Government, the following can be pointed out; migration control and the borderlines between peoples were closely connected in both legal and social terms. Alien registration aimed at controlling “illegal” immigration into Japan formed an immi-
gation policy of the “homogeneous” society. Alien registration card, which was a
ID card for foreign residents after the issue of the ordinance, inherited the
registration system that controlled migration during Japan Empire period.
Under the interview of former “illegal” migrants from Korea, the following can be
pointed out; they made the best use of the knowledge and “common sense” which
enabled them to obtain their legal identity, alien registration card, which defined
them as “Korean” also and “foreigners”. In fact, most of the “illegal” immigrants
had lived in Mainland Japan for years before the liberation of Korea, and such
migration history and knowledge of Japanese society enabled them to negotiation
with Japanese as well as their representation of self in everyday life as “Korean”.

Social Patterns of Energy Consumption and Lifestyles: Towards a Low Carbon Society? a Study in Chilean Society

The transformation of energy landscapes toward more sustainable alternatives is often fraught with challenges, not the least of which is public opposition. The purpose is to read the historical sources with this particular blend of theory, showing the contradictory impulses within which actual power is exercised. The resistance of the subject; the practices which actualize activity in a particular historical moment; the structure of concepts which is traded in discursive exchanges; the role of gender and the cost of patriarchy to both women and men are examined through interviews with 32 men. A partnership project was then funded to explore men’s experiences after Black Saturday, with a focus on men’s harmful behaviours to themselves and to those around them. The role of gender and the cost of patriarchy to both women and men are examined through interviews with 32 men.
PARRA, CONSTANZA* (University of Groningen, c.p.parra.novoa@rug.nl)

Nature Grabbing or Successful Practices for Nature Conservation? Blurred Boundaries in Chilean Protected Areas

Literature on protected areas (PAs) constantly reanimates an ancient debate that opposes conservationist scholars, considering the world history of PAs, as a testimony of human progress, to critical voices counting this history as a record of failure (Brockington et al. 2008; Stolton, Dudley 2010). For, as several social scientists have emphasized, conservation regulation has in many cases been part of coercive colonial strategies and disempowerment of indigenous groups. More recently, contributions on “nature grabbing” have joined the debate, revealing processes through which property rights and control over natural resources are transferred from ‘poor’ to powerful hands (Fairhead et al. 2012).

Based on case-study research in two Chilean regions, the Atacama Desert and Green Patagonia, this paper examines the shades of grey between what may be acknowledged either as a success or a failure in the contemporary governance of PAs. This paper argues that there is a need for examining PAs and their governance by using more sophisticated analytical frameworks that help to capture the social complexities in which these areas for nature conservation are embedded and reproduced. This paper is structured in five parts. Part one combines literature on socio-ecological systems, environmental sociology and political ecology to discuss critical social sustainability issues in the contemporary governance of PAs. Elaborating on these theories, part two offers an analytical framework drawing attention to the social construction of PAs, including politics and power dynamics, economic forces, institutional transformations, as well as culture, discourses, values and justice in local histories. Section three discusses conservation policies and land uses in a neoliberal context that has allowed a wide proliferation of private PAs. Section four zooms into two Chilean regions and the remaking of their PAs histories. The paper concludes with reflections on the blurred boundaries between successful conservation and nature grabbing leading to injustice.

PARRACHO SANT’ANNA, SABRINA* (Universidade Federal do Rio de Janeiro, sagarrachogo@gmail.com)

Rio Museum of Art in Times of Trouble

Given the growing diagnoses of musealization processes, of the spreading of cultural centers and of the new status assigned to curators, this research investigates the emergence of exhibitory institutions as instruments for intervention in the urban space, in times of social change. I shall here analyze the foundation of the Museu de Arte do Rio, in March 2013, at the Rio de Janeiro harbor district. The aim of the research is discussing the possibility of building an art institution, taking on account the formation of social networks and the negotiations for the emergence of a shared project. To think about these issues, I have been investigating the productive conflicts and controversies and to build consensus around the concepts of modern, contemporary, and a global (and / or creative) city. Built through a decade of disputes, the Museu de Arte do Rio seems to be revealing both of the place destined for museums in contemporary times, and of the negotiations between organized groups and institutions in Rio. Proposed in times of optimism and prosperity in expectation for megaevents such as the World Cup in 2014 and Olympic Games in 2016, the museum was conceived as a new icon for the city’s image. Nevertheless, just when it was founded in March, 2013, the museum was, however, the target of demonstrations that anticipated the massive protests that spread in the country since mid-2013, taking to the streets of the city more than a hundred thousand of people in June 17, 2013. This paper seeks to understand how the institution has been the target of new disputes in the city and has been incorporating new categories to face the demands for change.

PASCALE, CELINE-MARIE* (American University, pascale@american.edu)

Fukushima, Tsunamis and Earthquakes: The Meanings of Risk in the 21st Century

The most significant nuclear disaster since Chernobyl in 1986, struck in Japan on March 11, 2011 as the Fukushima Daichi nuclear reactor failed in the face of the devastating tsunami and subsequent earthquake. The event witnessed a combination of natural disaster and human error that resulted in local devastation, national trauma, and global consequence. In a global landscape, the representational practices through which the events of Fukushima have gained meaning are central, both within and across national boundaries.

The representational practices of major media outlets gain even greater hegemonic significance when travel to such catastrophes is restricted or complicated by the catastrophe itself. Representational practices not only produce specific forms of knowledge, they also construct what comes to be understood as legitimate forms of inquiry.

In the United States, the presence and meaning of “risk” in relation to Fukushima reproduced very specific relations of power/knowledge. This paper examines over 2100 articles about the catastrophes at Fukushima published in 4 major U.S. media outlets between March 2011 and March 2013. The analysis includes articles from two newspapers, the Washington Post and The New York Times and two nationally prominent blogs, Politico and The Huffington Post.

The representational practices that construct “risk” cannot be fully understood without asking “risk for whom?” and “risk to what?” Using a close textual reading approach, this paper deconstructs the representational practices that construct “risk” for plant workers, the general population of Japan, economies, ecosystems and energy resources.

Among the many consequences of the increasing globalization of “risk,” is the reality that the presence and meaning of “risk” will continue to be highly mediated. This paper contributes to the discipline through nuanced discussion of representational practices and the increasing globalization of risk. It suggests implications for social theory and social research more broadly.

PASQUETTI, SILVIA* (University of Cambridge, sp638@cam.ac.uk)

Affective, Symbolic, and Family Ties Among Palestinians in the West Bank and Israel: A Multi-Sited Ethnography and a Transnational Research Agenda

Melding insights from recent works on the affective, embodied, and symbolic dimensions of transnationalism with multi-sited fieldwork in Palestinian localities across the Green Line between the West Bank and Israel, this paper aims to develop a transnational research agenda on Israeli and West Bank Palestinians. It argues that a focus on emotional ties, symbolic practices, and subjective views can help overcome the scholarly tendency to use the spatial and legal divisions imposed on differently situated Palestinians as boundaries for research and to assume that these imposed divisions are the most salient factors in the everyday lives. It also sketches a transnational research agenda on these two segments of Palestinians, discussing how a focus on everyday life and a multi-sited research design can help explore their various transnational engagements from the expression of feelings of solidarity and the pursuit of cross-border family practices to the quandaries of border-crossed social and political identities. Second, beyond the case of Palestinians under Israeli rule, this paper problematizes the privileged focus on mobility in transnational studies and calls for more attention to the role of transnational histories and forms of belonging in the lives of people experiencing forced spatial immobility and legal exclusion.

**Colonial Legacies, Low and Discourses of Inequalities. An Analysis of Poverty Alleviation**

The paper uses the example of a revolutionary poverty alleviation programme (which now is given legitimacy as a law) to understand and assess the discourses that structure inequalities in India. The focus is on a law called National Rural Employment Guarantee Act which provides as a right, employment to one member of a poor household for 100 days of a year.

On the basis of case studies, this paper argues this discourse does not have a logical basis to comprehend the existence of these relations and cultural forms and processes that organize inequalities in India at three levels. First, the attention of this Act is on objective quantifiable attributes of inequalities and wealth disparities such as poverty line, income and food consumption, an understanding which it inherits from 19th century colonial liberal discourses. It thus cannot recognize the fact that the poor work and labour in economies that combine and exchange low value labour goods and services which are rarely quantifiable in terms of the rational economic language created by contemporary capitalist discourse. Second, this colonial legacy has further frozen a range of differentiated cultural practices of domination and subordination that organise inequalities into a few standard Orientalist categories. We argue that not only are these practices varied but they remain invisible, discrimination, intolerance, prejudice and hatred. These may manifest as individual discrimination but many are rooted in group based representations of domination which are reconstituted from colonial classificatory systems. The Act has little comprehensions of these differentiated and cultural practices as these remain invisible and thus unquantifiable. Third, these representations are unevenly organised across localities and regions defining the nation state creating a complex pattern of exclusionary intersections that manifest differentially in varied economic and social contexts of the territory. These cases help to rethink and understand the theory of inequalities.

**The Global South and Postcolonial Perspectives in International Sociology**

A powerful current development in our discipline is the emergence of postcolonial and global-south sociologies. This is not a new specialization, but a change in perspectives that will affect all fields of sociology. New possibilities are currently being explored in sociological theory, sociologies of disability, education, gender, modernization, the history of sociology, and more. This session is planned as an interactive event in which leading colleagues in this movement of thought will debate issues raised by the participating units and by other ISA members. In the later part of the session, comments and questions from the floor will open a dialogue with members of the panel. Among the themes for the session are questions of centrality and marginality, changing methodologies, changing agendas for research, new audiences, and changing curricula for teaching sociology.

Gender Inequality and Women’s Health: Indian Perspective

Gender Inequality and Women’s Health: Indian Perspective

Indian women face most of the health problems due to discrimination. The high risk groups in their lives are early childhood and reproductive years. Inadequate and poor nutrition, non-access to primary health care, poor reproductive health and discrimination against girls are four major causes for higher female mortality between ages one and five and high maternal mortality rates.

The practice of sex determination tests and subsequent induced abortion, small family size are added to decrease sex ratio. Sex-selective abortions are indicative of the low value to girls. Gender disparity in nutrition starts from infancy to adulthood. Girls are breastfed less in infancy. Malnutrition is an underlying cause of death among girls below age five. Nutritional deprivation amongst girls leads to improper growth and anaemia. Anaemia is more prevalent amongst girls, pregnant and lactating women. This not only complicate childbirth and result in maternal and infant deaths, maternal depletion and low birth weight infants, but also severely affect women’s productivity and quality of life. Infertility poses a serious social and emotional threat to women.

Women also face reproductive tract infections and related infertility. The reasons for maternal deaths include sepsis, abortion, haemorrhage, and anaemia, etc. Sexually transmitted diseases, HIV, have serious implications for women. Women tend to seek medical help only if an illness is advanced, thereby reducing their chances of surviving. Many deliveries take place at homes, with untrained assistants in proportion of moderately skilled workers by automatic systems and low status, women are not involved in decision making including use of contraceptive, family size, etc.

The objective of the paper is to analyse current health status of women and give recommendations to policy makers, health workers to take steps to improve women’s health status. The paper is based on secondary data.

Globalisation, Technological Transfer and Growing Inequalities in India

Globalisation and transfer of technology in the recent past have brought about significant changes in the process of production of goods and services providing services to the ever-growing size and variety of clients which is looked upon as a positive development. But the fact that needs to be looked into is, what implications it has for the workers in terms of wage inequalities which is an equally important issue. Increasingly advanced technology applied to various sectors in service and manufacturing is assumed to call for new skills and tasks, normally of higher sophistication and complexity which may result in increased real wages of highly skilled sections of workforce. Another outcome of this development is steady decrease in proportion of moderately skilled workers by automatic systems, of task performance, which again could have wage implications for the remaining workforce resulting in greater inequalities. This assumption was tested in eight large capital goods and consumer durables industries in India which had taken up technology up gradation in their plants in the recent past, employing organisational survey schedule. The findings show that technology up gradation leads to greater workforce polarization through skill bias and has positive implications for highly skilled sections of the workforce. At the same time the study reveals that bulk of moderately skilled workers could face the threat of being obsolete and lay off. Further, disproportionate increase of wages of highly skilled workers has increased workplace inequality with unskilled portion of the workforce looked upon as disposable.

Municipal Solid Waste Management In Kolhapur, India: Need For Decentralized Composting

The management of municipal solid waste is emerging as an environmental issue in India. Under Municipal Solid Waste Management and Handling Rules, 2000 and directives of Hon’ble Supreme Court, all the citizens are to segregate the garbage at source.

The waste generated in Kolhapur city per day is 150-165MT. The contract was done by Kolhapur Municipal Corporation (KMC) with Zoom Bio fertilizer Pvt. Ltd. in 2000 and since 2003-04 it used to segregate biodegradable solid waste and for making bio fertilizers. But as the company went into liquidation, this project was closed in July 2011. KMC had given a contract of collection and transportation of solid waste to Ramkey Group Pvt. Ltd. from 20th Nov. 2007 to 15th August 2013. But the contract was ended by the KMC in June 2011 as the company was not lifting all the waste from the city.

Along with the increasing population more land is required for the disposal of solid waste and today there is no reserved piece of land for the treatment plant in the city. The place at outskirts of the city, Top quarry is under dispute. There is resistance from people of that area and there is a stay order from Hon’ble High Court not to use that place for dumping waste. A land at Halsawade is allotted for sanitary land filling but it is under dispute and stay order has been given by Hon’ble High Court.

The centralized collection and processing has been failure and created environmental issues. There is a need to adopt decentralized composting at homes, apartments, colony, garden, institutes etc.

The paper reviews the Municipal Solid Waste Management in Kolhapur and also shows the attempts made by citizens for decentralized composting.

Causes and Social Implications of Educational Inequities in Indonesia

Educational inequities in Indonesia has been existed for many years. Two major challenges with respect to educational inequities are access to and quality of education. Access to primary education is almost universal, while access to quality of education for junior and senior secondary are still far from the government target. Let alone the tertiary education. The quality of education occurs at all levels of schooling. The twin problem of educational inequities is a major concern of the Government of Indonesia (GoI). Over the past decade GoI has allocated 20 percent of its national budget towards education sector. GoI has made numerous attempts to overcome the inequity issue through, such as regulating the functional assignment between central and subnational governments in providing primary and secondary education, and issuing the minimum service standard for its implementation. Apparently these regulations were not prepared in a systemic and integrated fashion. This...
The Transmission of the Chineseness to Chinese Descendants in Thai Society through the Understanding the Meaning and Religious Symbols

The research entitled “The transmission of the Chineseness to Chinese descendants in Thai society through the understanding the meaning and religious symbols” aims to investigate the existence of Chineseness in Thai society focusing on their cultural patterns and how Chineseness being transferred to the young Chinese generation born in Thailand, which include the transfer of knowledge and understanding of the meaning of important Chinese festivals and traditions, problems related to the transmission of Chineseness, and the factors supporting the success of the transmission of Chineseness. This study is an applied research integrating both quantitative and qualitative data which collected by questionnaire and an in-depth interview. The findings are that a majority of the research participants still have their beliefs and faith in gods and sacred or holy items. Most of them still pay their respect to gods on Chinese Sabbath Days as well as to their ancestors. Chinese New Year and Chinese Autumn Festival are the most important festivals which the young Chinese generation agreed that these festivals should be handed over to the next generation. Most of participants have knowledge and understanding of the meaning of Chinese New Year, Chinese Autumn Festival, Vegetarian Festival, and God’s Thanks Giving Day. The transmission patterns of Chinese festivals and traditions are either direct or indirect. The problems regarding the transmission to the young generation related to social, cultural, and economic factors. The factors supporting the success of the transmission of Chineseness are accurate information given by the old to the young generation, a refining process in a family, encouragement of the sense of Chineseness to the young generation.

In Anglo-Saxon academic discussions risk-based governance (RBG) has been identified as a method for rationalizing corporate and public governance processes top-down, i.e. offering a central management vision that can then ‘colonise’ other domains and organisations in regulatory processes. As such, risk seems to entail a universally applicable promise for central governments to remedy blame for failure all while managing tight budgets. But does this hold true in distinct institutional settings?

Starting from the empirical observation of occupational health & safety policies (OHS) in an international research project (HowSAFE), we find that, in Germany, risk approaches largely emerge in arenas outside the central state, with normative justifications, governance forms and organisational logics that seriously contravene Anglo-Saxon state-centric RBG notions. Moreover, regulation of workplace risks in German policies is characterised less by a coherent risk strategy than by institutional settings?

A Generalisable Promise of Risk? Risk-Based Self-Regulation and the Inherent Limits of State Intervention in German Occupational Health and Safety Governance

In the investigation, the social integration of migrant children is analyzed through semi-structured interviews with migrant children aged 8 to 15, as well as by participant observation in state Offices of Rights Protection. It is taken to be the exercise of its rights and the development of transnational practices and how social intervention hinders and/or provides that integration.

Finally, the investigation concludes that migratory trajectories and diverse social factors (such as gender, age, language, place of birth, nationality, social position among others) have an impact on the accommodation and social integration of the new immigrant generations living in Chile.

The Struggle Against Injustice: Towards an Alternative Theory of Normative Power

The concept of “Normative Power Europe” is one of the most actively debated among international relations scholars. It is usually presented as an alternative way to conceptualize the role of the European Union as a new type of international actor. According to Manners (2002), the distinctive feature of normative power is its “ability to shape the conceptions of ‘normal’”, and thus provide classify certain actions as legitimate or illegitimate. Achieving the status of a normative power is considered by most scholars and politicians as the greatest success of European integration, which has opened new perspectives for the EU as an actor on the global political arena.

The concept of normative power has been developed to account for the EU’s distinction as a foreign policy actor, but this paper is based on the premise that its applicability is much wider, and seeks to explore the conditions for the emergence and functioning of normative power in non-European countries by comparing discourses and political practice in the EU and Latin America. Using qualitative discourse analysis (Hansen 2006, Hofp 2002, Laclau 1991, Torfin 1999, 2005) and taking the EU as the model case, it then looks at the normative aspects of foreign policy discourse and practice in Latin America. This paper focuses on the pan-regional discourse, later to be complemented by individual country cases. The hypothesis is that a strong and independent counter-hegemonic discourse, based on the struggle against world neoliberal injustice, exists in Latin America, which contributes to the emergence of normative power.

In Search for Collective Identity. The Production of Estonianess By Means of Choral Singing in Contemporary Estonia

This presentation explores the role singing and performance of national song plays on the (re-) production of Estonian national identity (Estonianess). Starting from the revitalization of the ethnic-civic debate (Brubaker 1996) in Eastern Europe, most scholars have observed Estonian nation-building as being prevalently ethnic (Latin 1998, Mole 2012). In particular, choral singing tradition that has long relied on a vocabulary of historicism is interpreted through the prism of nationalism (Bohman 2011). This paper initiates a critique to the above approach by introducing three new dimensions: globalization, Europeanization, and multiculturalism. Infomed from a structuralist constructivism (Bourdieu 1989) it combines analysis of social structures and institutions with perceptions of individual social actors. The main focus is on power relations incorporated into singing as a tool for identity production. In particular, it will be explored how the singing tradition responds to identity tensions between ‘ethnic Estonians’ and ‘non-Estonians’, namely Russian speakers who constitute 26% of the population (census 2013). Considering singing tradition (1) in a network of social spaces–national and supranational, as well as (2) from the joint perspective of individual experiences and objective structures such as the state, allowing us to examine collective identity building mechanisms in post-socialist context in a nuanced and less deterministic way.

The Immigrant Childhood in Chile

This paper presents part of the results of a FONDECYT investigation, conducted by the author who has been financed with public funds, and whose objective is to analyze the integration of the immigrant children and adolescents, addressing the public policy and social interventions carried out by the State and ONG with migrant communities.

The study is based on the Sociology of Childhood that covers the childhood as a three dimension concept. The first one, as a social construction, which is distant from the essential idea of the childish being, and expressed in different ways across the history in every sociopolitical context.

The second one, as a permanent sociological category of the social structure, although his members are constantly renewed, and the third dimension, which comprises children as “social actors with an agency capacity”, that opens new perspectives and possibilities for the social construction of the social structure, although its members are constantly renewed. The three dimensional concept comprises children as “social actors with an agency capacity” that open new perspectives and possibilities for the social construction of the social structure, although its members are constantly renewed.

The second dimension defines childhood as a permanent sociological category of the social structure, although his members are constantly renewed, and the third dimension, which comprises children as “social actors with an agency capacity”, that open new perspectives and possibilities for the social construction of the social structure, although its members are constantly renewed. The three dimensional concept comprises children as “social actors with an agency capacity” that open new perspectives and possibilities for the social construction of the social structure, although its members are constantly renewed.

Finally it is completed that migratory trajectories and diverse social factors (such as gender, age, language, place of birth, nationality, social position among others) have an impact on the accommodation and social integration of the new immigrants generations, living in Chile.

Doing Social Sciences on the Military Field: A Special Operation?

The purpose of this paper is to analyze the production process of scientific knowledge on the military and to reveal the complex and diverse relations - and their effects - between:

- the researcher and the military staff he or she is studying (depending on the social background, the age, the gender, the academic level and the military socialization of the former)
the researcher and the military institution (understanding of the functioning of the hierarchical organization and its values)
the researcher’s academic environment (university or think-tanks affiliations) and the armed forces

The present paper aims at giving a thorough understanding of the complexity of the researcher's social position during his/her social sciences investigations in the army. It is based on a personal experience as a Ph.D Student working on the French Land Forces. Being at the same time a female Ph.D Student in political sciences working on the French Army, a junior academic and a reservist who enrolled as a private and evolves now in a high level headquarters, generates a very particular inquiry context and can be used as an asset if and only if the researcher is fully aware of the consequences of its presence on the military field.

This paper will also debate the importance of a personal and physical commitment from a methodological viewpoint and will discuss the opportunity of developing a comprehensive approach based on the simultaneous use of qualitative (sociological interviews, ethnographic observation), quantitative (questionnaire inquiry) and comparative methodologies. The usual case-selection problematic will be treated by focusing on a specific population: the French reservists. Lastly, the “specificity” of the army as a special social field that requires specific scientific tools (to gain access, to evolve in the institution) will be pondered.

Ecological Modernization as Discourse: A Media Analysis of Irish Newspaper

Ireland has had a very mixed response to the challenges arising from the fact that climate change is perhaps the greatest threat to this planet and to our current way of life. This research investigates how Ireland’s most important newspapers have raised awareness and disseminated information about the issues related to the challenges we face. An analysis of the trend in the coverage of climate change between 1997 and 2011 was undertaken in order to map the peaks and troughs in the media coverage of the issue, and to see if there was a correlation between the peaks in newspaper coverage and significant climate change events. A second stage of the analysis sought to uncover how the issue was framed by the newspapers. Two newspapers were included in the analysis, the Irish Times and the Irish Independent in 2007 and 2008 in order to generate the affiliation network database. This database was used to create four separate discourse clusters, each of which represents a different sub-discourse network within the overall climate change discourse network. Within these clusters actors are tied to each other through their shared positions on related issues. An analysis of the clusters and the complete discourse network found that the climate change debate was dominated by key economic and political actors, and that the discourse of ecological modernization was used to reconstruct the issue of climate change as a technological and economic challenge rather than an environmental one.

PEACOCK, DAVID* (University of Queensland, david.peacock@uqconnect.edu.au)

Institutional Ethnography and The Uses Of Critical Discourse Analysis

For Dorothy Smith, IE is both a social ontology and social scientific procedure that seeks to empirically investigate discourse as social relations that are organized by the activities of people. Such an approach creatively connects ethnographic methodological commitments to the local accomplishment of the social with a Marxist insight into people’s active participation in extended social relations that can ‘overpower’ and implicate them in wider ‘ruling’ relations and injustices. Critical discourse analysis has often been used by Institutional Ethnographers as a means to examine certain texts as they are embedded within a field established through sequences of institutional actions. Yet the discourse analysis performed in much Institutional Ethnography to date has not paid close linguistic attention to the way specific local actors utilise texts and discourses in an active appropriation of the ruling relations established by official discourses. Using data from an Institutional Ethnography of student-equity practices in Australian higher education, this paper illustrates how a Fairclough-inspired Critical Discourse Analysis of the hybridity of a sample of institutional texts and interview transcriptions is able to provide greater analytical purchase on how texts are actively appropriated within an institutional field of action. Retaining Smith’s focus upon texts and discourses within ongoing and daily interactions, I seek to extend within this analysis how genres, discourses and styles (Fairclough) are assembled within a text within a given (higher education equity) social practice. This paper demonstrates how this kind of linguistic focus, when joined with an analysis of the functions that texts play in organising and sequencing a field of institutional action, offers possible benefits for more nuanced accounts of individual and collective social agency in the process of semiotic and social change.

Dependency Denied; Health Inequalities in the Neoliberal Era

It is now well established that unequal societies have higher rates of health and social problems than more equal ones. Those adopting a psychosocial perspective see shame and invidious social comparison as one means by which inequality impacts the body, and the social body (Wilkinson & Pickett 2009). Whilst social epidemiology has often focused on the material ‘thingness’ and marginalising of agency. For example, people are not passive recipients of inequality, they resist and endeavour to protect themselves, and there are debates about the place of political discourses such as neoliberalism in this process.

In this paper, findings are presented from a study of women in northern England which used Free Association Narrative Interviews (FANI) to explore the experience of life in an unequal, neoliberal society. Shame and social comparison were present in their accounts, but not in the ways anticipated. Women in the study did not ‘know their place’ in a hierarchy, and detailed knowledge of the exact ‘thinginess’ was sparse. Women reported various shame avoidance strategies focused on protecting children from the stigmatising impacts of living with a lack of appropriate goods, and shame and shame avoidance were also seen in relation to the women’s bodies and homes. Most striking was a discourse of no legitimate dependency - an often painful discourse, where all aspects of dependency were disavowed and self-revelation valorised, leading to considerable strain and distress.

We argue that this discourse represents a partial internalisation of neoliberalism; often expressed colloquially, using the language of therapy. It is manifest in the holding of the self to impossible standards of non-dependence, and through the ‘othering’ of those considered insufficiently responsible. This is an unstable and unhappy discourse, but one which seemed unavoidable for participants, in the absence of available, alternative explanations for inequalities.

PEARCE, TOLA* (University of Missouri, Columbia, pearce@missouri.edu)

Backbreaking Work: Female Food Vendors, Globalization and The Legacies Of Indigenous Systems In Southwestern Nigeria

In Africa, the interest in the wellbeing of women has increased, as concern about how indigenous practices, rights, and responsibilities interacted with imported western structures and policies during the colonial period and after (Pearce 1989, 2000, 2005). Then as now, there have been unintended consequences for segments of the population. This paper focuses on the impact of neoliberal globalization on the lives of working mothers: low income female food vendors. The paper uses data collected in 2007/2008 in Ibadan, Nigeria to explore how capabilities developed in an earlier era have been folded into the expanding requirements of economic globalization. The data come from a larger, multi-sample study begun in 1984 that has investigated many aspects of the vendors’ lives. I take my lead from Sassen’s (2006) use of the term ‘capabilities’ and her suggestion that we pay attention to systems as well as individuals: How do emerging systems depend on capabilities created within the old order? Much of the economic and social welfare of the pre-colonial order rested on household production in which female economic and reproductive roles were central. With colonization, women continued to work, but with less public assistance than men. Independence brought the promise of increased services: health, education, electricity, etc. However, the quality of life declined and development policies have enabled both the state and spouses to capture women’s roles as providers. The paper assesses work environments and the women’s position within the economy.

Globalization is, for example, destabilizing former negotiations on responsibilities for children (eg. school fees). Under mounting stress women appear to look to individualized solutions to problems. A major focus for them has been religion.

The Emerging of Trust in Clinics of Alternative Medicine

The demand for the services from practitioners of alternative medicine has increased within the last decades in those nations in which western scientific evidence has gained a higher level of credibility as a result of the expanding knowledge in this field. The impetus for this paper to examine how trust between practitioners and users emerges in clinics of alternative medicine where practitioners are self-regulated and the users pay out of their own pockets for attending non-authorised treatments with very limited scientific evidence of effects. Trust is a key concept for healthcare outcomes and is more widespread in research of health. However, most studies focus on formalised institutional settings and only few sociological studies of trust have contributed knowledge into how alternative practitioners win their clients’ trust. Drawing on three qualitative studies (in sum 124 in-depth interviews and 3 focus groups) of different forms of alternative medicine, conducted in Denmark from 2005 to 2009, we explore how uncertainties are managed and trust emerges in the treatment encounter. By informing the empirical findings with a concept of intersubjective trust (i.e. Barbalet 2009), experiences among clients and practitioners are in focus to contributing new empirical insights on how trust is performed, since the basis for trust is not evident. The analysis demonstrates that trust in the alternative encounter comprises relational, bodily as well as material aspects.

PEDERSEN, INGE KRYGER* (University of Copenhagen, ikp@soc.ku.dk)
The Lifestyle & Health Jurisdiction: A Danish Case about Reducing the Development of Lifestyle Related Chronic Diseases

The objective of this paper is to contribute new insights on the intra- and inter-professional responses to, and dynamics within, an emerging jurisdiction of health problems related to lifestyles. It is examined how health professionals and hospital organisations are mobilised to reduce the risk of developing the most common and deadly lifestyle related chronic diseases. How are socially contested issues such as dieting, smoking, alcohol intake and physical activity (in Danish the so-called KRAM factors) defined and managed in terms of medical problems? A Danish case to illustrate the issues of disease prevention as they emerge in clinical practice in Danish publicly owned hospitals is: “KRAM screening & intervention”, that is registration and detection of patients’ so-called risk factors to strengthening the efforts on disease prevention. This intervention program followed up by disease prevention counseling is a free service provided by publicly owned hospitals all over the country. One key jurisdictional dynamic to be analysed in this paper is: jurisdictional disputes and professional settlements (Abbott 1998, 2005): What is the division of labour between medical doctors and other professional groups within the interventions programs, and how is this division of labour maintained in professional practice and organization? Empirical materials include documents (standard procedures, registration forms a.o.), qualitative interviews with patients and counselors about goals and practices, and observations of counseling situations. It is discussed how medico ideas feed into the policy process and how governance networks are linked to explain why lifestyle problems are turned into the medical area, nationally as well as in international spheres, i.e. WHO.

PEDERSSON, ANDERS* (University of Gothenburg, anders.pedersson@lir.gu.se)
Old Ways and New Ways: The Relation Between Criminology and Sociology in Post-War Sweden

The trajectory of criminology in 20th century Sweden can be described as that of a discipline under the influence of medicine in the first half of the century, and of sociology in the second. The change from one scientific perspective on crime to another took place in the decades following the Second World War. This shift has been explained by factors such as the decline of medical explanations of society and human behavior following the atrocities committed by Nazism, and the growing influence of American sociology on Swedish academia during the post-war decades. The validity of these explanations is still to be proven. And even if there is truth to them, the question of how the shift came about is still to be answered. In my investigation of the relation between criminology and sociology in post-war Sweden, I will argue that changes can be discerned at three levels in the process by which sociology came to dominate the field of criminology: in the theoretical content of Swedish criminology, in the infrastructure for the production of scientific knowledge, and in the political discussion on crime. These levels are not separated, neither from each other nor from the society surrounding them, but nevertheless theoretically and empirically distinguishable. An analysis of each of these separate levels will contribute to a better understanding of the relation between them, and of the issue of the relation between criminology and sociology.

On a more general level my investigation will address questions of disciplinarity and interdisciplinarity. It problematizes the relation between sociology and other disciplines of social science. Finally, it illustrates the complex character of the interdisciplinary relations needed to produce a fundamental change in the scientific perspective on a social problem.

Urban Restructuring and the Educational Politics of Race and Place in the Global Niche City

While Detroit is not a center of global finance and has declined as a global production center for the automobile industry, the changing relationship among cities, nation-states, and the global economy is manifested in struggles over urban development strategies in Detroit as its leadership attempts to position the metropolitan area as a global niche city. In the process of reimagining the city, the region’s largely neoliberal corporate and political leadership deploys particular urban development strategies in the areas of education, housing, public infra-structure, and governance. While such deployments are framed as both inevi-table and in the best interest of everyone, they are also deeply implicated in the restructuring of social and educational exclusion, particularly among the cities overwhelmingly impoverished Black and immigrant residents.

My paper analyzes Detroit’s neoliberal policy complex in relation to education, urban development, and governance, drawing on documentary analysis pertaining to the crafting of policy. Recognizing the devastating impact of massive home foreclosures, urban flight, rampant segregation and poverty, and the closing of many public schools, I also reference ethnographic work I am beginning in public schools in the northern suburbs of Detroit to demonstrate the ways in which nostalg-ia for the city among suburban whites, rituals of place-making, and their inter-section with the racial imaginary and issues of territoriality play out in broader struggles over the city and the metropolitan region’s resources, cultural represen-tations, and power.

Lifecourses, Pensions and Poverty Among Elderly Women in Belgium: Interactions Between Family History, Work History and Pension Regulations

The precarious financial situation of many elderly women in developed coun-tries is well-established. Nevertheless, in-depth insight into the persistent vulnerabil-ity of this group remains largely absent. In this article, we demonstrate how a specific focus on the interaction between work history, family history and pension regulations can provide greater insight into the mechanisms that produce poverty among elderly women in Belgium. To that end, we make use of register data on some 9,000 women aged 65 to 71. Data on the poverty risk of these women is linked to career and family data, spanning over 45 years. We find that pension policy can indeed account for the higher poverty risk of some groups of elderly women (e.g. divorcees) as compared to others (e.g. widows). Similarly, pension policy can, to a large extent, directly or indirectly explain how previous lifestyle events, such as marital dissolution or childbirth, affect old age poverty risk. How-ever, our study also reveals some unexpected findings. Most notably, pension regulations fail to account for the beneficial situation of married women. Indeed, our analyses suggest that capital (income) may prove more decisive than pension rights to explain the low poverty risk of married women when compared to other marital groups. Drawing from our findings, we conclude with some suggestions as to where pension policy should go from here.

Conflicts within Finance Capital and Implications for the Climate Crisis

Particularly in the era of financialisation, the logic of financial capital is to focus on (short-term) profits, often at the expense of environmental concerns in general, and climate in particular. Indeed if this were not so then there would likely be no climate crisis. Yet in recent times many groups, including elements of finance capital, have called for greater emphasis on long-term considerations including on climate. What is it that makes some parts of finance capital focus on (short-term) profits, often at the expense of environmental concerns in general, and climate in particular. Indeed if this were not so then there would likely be no climate crisis.

**Performance Consumptions, Sleep Management and Risk Perceptions**

This paper aims to discuss the management of sleep as a focus for performance investments among youth, through the consumption of pharmaceuticals or other therapeutic products, such as natural medicines or supplements. In this context, sleep plays a particular role as a depharmaceuticalized resource to achieve a certain level of (cognitive and/or physical) performance. While being an object of normative discourses about "healthy lifestyles", sleep is simultaneously presented as a feature that can be artificially optimized through performance consumptions that place it at the frontier between treatment and enhancement. The investment of such consumptions patterns directed at sleep management not only reveal particular risk gradations attributed to therapeutic resources for those purposes, but they also express forms of management whose instrumentality organizes differentiated consumption practices, which are context-dependent.

Our analysis is supported by the results of an ongoing research about therapeutic consumptions to enhance physical, intellectual and social performance, among young people in Portugal (aged between 18 and 29). A mixed-method approach was used, including a nation-wide survey (n=1500), followed by semi-structured interviews (about 50 individuals, selected from the questionnaire respondents). On the one hand, the survey originated a set of quantitative indicators about youth sleep patterns, consumptions and predispositions to consume sleep management products, as well as perceptions of risks associated with them and ways of dealing with those risks. It also revealed how these indicators were socially distributed (in terms of gender, education level, occupation and scientific area of study). On the other hand, the interviews enabled the qualitative exploration of the specific purposes that lead to the consumption of products to help one sleep or stay awake, and provided information about the manner in which young people weight between risk gradations attributed to therapeutic resources for those purposes, but they also express forms of management whose instrumentality organizes differentiated consumption practices, which are context-dependent.

The investments that shape consumption patterns directed at sleep management not only reveal particular risk gradations attributed to therapeutic resources for those purposes, but they also express forms of management whose instrumentality organizes differentiated consumption practices, which are context-dependent.

**Crossroads - Bolivian Urban Folk Music and Andean Diaspora Communities on the Internet**

This proposed paper focuses on the relationship between representations of Bolivian urban folk music and Andean diaspora communities on the Internet. What transnational experiences may signify for a music culture, which travels between our potentiality – what we can do – but over our impotentiality – what we can not do. Following this insight the paper interrogates the recent turn in cutting-edge social theory from cultural constructionism to new forms of materialism and naturalism. On one side the emancipatory import of deconstructing traditional accounts of knowledge, reality and subjectivity is questioned for its eventual ineffectiveness against domination and inequality. On the other, cultural constructionism is deemed incapable to account for the materialities emerging from technoscience advancements. Traditional ‘negative’ modes of critique are replaced by ‘affirmative’ orientations which celebrate the dynamic, vital, agential, ever-changing character of the organic and inorganic world, and thus evade dead-end points and tasks for reflection. Are we in front of a much-needed renovation of social theory vis-à-vis rapid sociotechnical and environmental change, or are we rather in front of a ruling imaginary which simultaneously supports and obfuscates a major socio-political, perhaps even an anthropological, transformation?

market. We have also seen increasing number of ethical organic food suppliers, those managed by non-governmental organizations or private owned businesses.

This paper uses two contrasting cases of organic rice farming from two provinces in Cambodia to illustrate how this organic rice is produced differently and how social status, household incomes, and community development programs influence and shape the decision of producing and consuming organic rice.

Securing Food While Caring for the Field: A Case of Rice Farmers in Kampong Speu, Cambodia

Since the adoption of Rice Export Policy, Cambodian rice export market has emerged and the country recently joined the top ten rice exporters. While nationally it produces surplus, many poor rice farmers cannot produce enough for home consumption. Small farmland, unfortified soil, unsecured land ownership, limited access to irrigated water and unpredictable precipitation are some major causes of their low productivity.

Furthermore, around 43% of rural population depends on purchased foods. The increase of export volume potentially puts more pressure on these consumers, especially the poor, because it is uplifting local prices to as close as the international prices.

Facing food insecurity and having to cope with agricultural production challenges, some smallholders still continue their conventional approach of sustainable land use. Instead of trying to increase productivity through using chemical inputs, these rice farmers choose to preserve and improve their soil quality using organic fertilizers. This is particular for poor smallholders interviewed in Kampong Speu province.

Because rice farming alone is not enough and with limited supports from Government, alternative coping mechanisms that these farmers have adopted include diversified agriculture activities i.e. vegetable home garden, crops farming, livestock raising; seasonal agricultural and non-agricultural works within the village, in nearby villages, or in neighbouring countries; and work related migration to industrial towns.

Using data from a fieldwork conducted in Cambodia early 2013, this presentation will examine these above approaches undertaken by farmers in a district in Kampong Speu province. All interviewees, except two, are part of livelihood programme supported by a local organization, Action for Research and Development, which recruits these beneficiaries based on their economic and social status; families without or with small farm land; families with many children; families that are heavily indebted; poor families with disabled members; or elderly people without support from their children.

Reshaping and Reframing Gender, Care and Migration: With Focus on Asia-Pacific

In the recent decades, changes in economic structures and women's shift into paid labour have strained the family's capacity to perform care, while worldwide population ageing has led to increased demand for paid care workers. The resulting “care deficits” represent a challenge for individuals seeking to reconcile work and family as well as for national policymakers who must balance demands for care with those for equal opportunity for women, and for the full development and utilization of human capital. The need for care has also reinforced “global care chains” that draw women from poorer nations into employment as care workers and family as well as for national policymakers who must balance demands for care with those for equal opportunity for women, and for the full development and utilization of human capital. The need for care is also reinforced “global care chains” that draw women from poorer nations into employment as care workers in wealthier ones, creating not only care deficits but also a “care drain” in sending countries. This highlights the changing global context for care and migration, the new forms of gender and global inequalities, and critical roles that policies can play in reducing inequalities while providing essential care to those in need.

The paper examines political, institutional and cultural factors that have shaped, and are reshaping, ideas and norms of care, focusing on Asia-Pacific context. Definitions of care determine what care is and should be, and who will provide care – family members, communities, and/or paid workers; native-born people or migrants – and the extent to which care may become commodified. How do the definitions shift and adapt as conditions change? How do migration regimes (the laws, regulations and practices surrounding immigration) shift in response to changing demands for care workers?

The “New” Social Investment Policies in Japan and South Korea: Social Inclusion through Social Care Expansion?

China's internal labor migration has attracted worldwide attention during the last three decades. While studies on rural-urban migration and its implications for China's development proliferated, the reverse flow of these migrant workers and their lives in rural villages or townships upon their return have been largely ignored. In China, many women migrant workers have chosen to return to their rural villages upon their marriage and pregnancy. This paper explores the meaning of city working experience for migrant women and the role of women play both in decision-making of return migration and in establishing their new lives in the changed rural context after staying in cities for an extended period of years. It challenges the stereotypical images of Chinese migrant women who are always depicted as passive recipients of the structural constraints such as the patriarchy system, capitalist market and state policies. Rather than severing their connections with rurality and upholding the modernity they gained from urban experiences, many of them are actively trying in their own ways to reconcile their liminal identity by working on “ruralizing” some “modern” values while others are “modernizing” the “rural” values. Either way they are reconstructing a collective identity for themselves with meanings only they themselves would understand and appreciate. Besides, through critically employing Bourdieu's theory of practice, it puts forward a multi-field perspective in understanding these returned women's identity reconstruction and daily practices and highlights the importance of localization of western theory in Chinese context.

Living in Transition: How Returned Women Migrant Workers Re-Incorporate Themselves into Rural Origins in China

In China, recent relocation policies have seen millions of people moved from their homes in efforts to reduce poverty, address environmental and disaster-related concerns, and make way for major construction projects. Many of those who are being relocated are older adults, moving for the first time in their lives away from their rural ancestral homes and villages. Yet, little is known about the implications of relocation for older adults, including its implications for access to social support and care. However, this is an important outcome in the Chinese context where, for centuries, older individuals have relied on family members for support. This study addresses these issues using data drawn from the 2011 Ankang Study of Health and Well-Being (ASHW) conducted with a representative sample of 613 rural residents aged 60+ living in the Ankang region of China. Over the last 10 years, the provincial government has implemented policies designed to relocate 2.4 million residents or 80% of the total population in the region.

Multivariate regression analyses show that construction-related relocation has had no impact on perceived support. However, poverty-reduction and disaster-related relocation are associated with a reduced level of perceived support available from others with the exception of social interaction in the case of disaster-related relocation. Ecological relocation also had a negative impact on emotional support.

These findings support the view that relocation reduces older adults' perceived access to social support. This is particularly evident with regard to poverty-reduction and disaster-related relocation. Possible explanations for these differences are discussed as are the potentially important implications of these findings for future health care policy in rural China.
The material convergence that occurs in disaster-affected areas is well documented, as are the associated complications that arise. Among these challenges, research has documented the arrival of donations in excess of the need, of material donations instead of monetary contributions, and the donation of items inappropriate in the time, place, or cultural context (Holguin-Veras et al. 2007; Neal 1993; Neal 1994; Rodriguez et al. 2006). Despite the discrepancy between what is needed and what is donated, people continue to make these kinds of contributions. This paper examines the subjective meanings and understandings people who participate in disaster relief give to donations and need. Using Entman's (1993) definition of framing, this research examines how donors frame post-disaster needs, including their problem definitions, causal explanations, moral evaluations, and treatment recommendations, as well as what information and sources inform those frames. Preliminary analysis suggests that participants frequently construct involvement in disaster relief as a moral obligation, though the source of that moral obligation can vary in form, including religious motivation, the mission of the organization to which they are a member, or a personal connection to the area. The donation is not only the treatment recommendation to meet a subjective construction of need developed by internal rationale and information attributed to other sources. Some view the donation of material goods specifically as a treatment for the perceived problem of recipient misuse of monetary donations (be they a disaster relief organization or the individual goods specifically as a treatment for the perceived problem of recipient misuse of monetary donations (be they a disaster relief organization or the individual identifying as a disaster victim). Though not always explicitly stated, participants see the cause of the need as external to those affected by the disaster. Donations are determined accordingly based on these frames. Thus, how these frames are constructed has implications for disaster response.

Abstracts are organized by first presenting author's last name.

PEPEL, FERNANDO FRANCO* (Centro de Estudios Avanzados, Universidad Nacional de Córdoba / CONICET, fernandopepo@fibertel.com.ar)

A Brief Historical Overview of Gender Studies in Our Region: The Cases of Argentina and Brazil

In recent years, the term “gender” has gained visibility in social discourse. That is why expressions such as “gender violence”, “gender identity”, “gender equality” or “gender others” appear everyday in mass media. Such discursive proliferation can not be properly understood without taking into account the discussions held within feminism as a social movement and an academic stream.

The area of knowledge we now call “gender studies” was first consolidated at the universities of the central regions (United States and Western European countries). Our Latin American region has not been left out of this epistemological, theoretical and methodological renewal. Therefore, in this paper I am looking forward to: 1) exploring the origins of the category “gender” as a tool for analysis in contemporary social sciences and humanities and 2) focusing on the historical configuration of this interdisciplinary field in two national cases, Argentina and Brazil (and also highlighting some similarities and differences between them).

Who Setstles For Less At Work? Subjective Dispositions, Job Characteristics, and Job Satisfaction

In recent years there has been growing interest in individuals’ self-perceptions of their wellbeing on the grounds that these complement well-established objective indicators of welfare. Wellbeing in relation to work, captured for instance by measures of job satisfaction, has not been an exception. The discourse on work in post-industrial societies has shifted from perceiving labour as a means for subsistence to conceptualising it as an important aspect of individuals’ identity and self-realisation. Consequently, the utility people gain from their work has become an important feature of modern working life and subject to increasing academic attention. However, individuals’ assessments of this utility depend on the objective circumstances they experience at their jobs and workplaces and their subjective, idiosyncratic dispositions, such as their aspirations, expectations, or personal evaluation criteria. We add to the literature by formulating and testing a modelling strategy that uncovers how the latter subjective dispositions differ across population groups. We do this by estimating a within-job fixed-effects model which, by controlling for all objective characteristics of the job and workplace, enables us to explore how subjective judgements concerning job satisfaction and other work arrangements are made by different types of workers. To achieve this, we use data from a large-scale matched employer-employee dataset obtained from the UK - the 2011 Workplace Employment Relations Survey (WERS). Following reference group and relative deprivation theories, we expect to find significant differences in the way in which individuals with different socio-demographic characteristics rate the same objective working conditions. More specifically, we expect female, young, elderly, and migrant workers to be more satisfied with their job arrangements.

Emotional Control in the Financial Marketing

In the scope of a major research program about emotional normatization in the contemporary capitalism, I would like to focus on the emotional normatiza-
tion of the financial investor. By analyzing Behavioral Economics texts about the
emotions of the economic man in the financial market, I pretend to show how this
bibliography: 1) explains economic crises as consequences of emotional based
decision taking, a irrational behavior of the economic subjects responsible for
breaking the market equilibrium; 2) normatizes emotions of the investors and
offers self control techniques; 3) teaches how to predict and to use the emotional
conduct of others investors to obtain economic profits. This bibliography, rec-
ognizing the investor as a emotional being, converts emotions in a professional
competence that requires previous training to develop human capital. In this way,
emotions are regulated and subordinated to a economic logic.

The Potential of Telecare/Aal Technologies for Enabling ‘Ageing in Place’ in Rural Areas in Poland and Germany

The vast majority of older people wants to continue living independently in
their own homes for as long as possible. This preference poses a particular chal-
lenge in rural areas where family members are often not available for support
since they moved to the economic hubs in the big cities for earning a living and
care providers have to travel long distances. Telecare and other ambient assisted
living (AAL) technologies can provide an alternative if linked to emergency care
services. This paper will explore the potential of these technologies for enabling
older people in rural areas to ‘ageing in place’ in two regions in Poland and Ger-
many with a particularly high share of older people – the Małopolska region sur-
rounding the city of Cracow and Upper Lusatia (“Oberlausitz”) to the east of the
city of Dresden. Both areas are characterized by outmigration of the younger gen-
erations, declining fertility and growing shares of older people.

This research analyzes the potential of telecare/AAL technologies for impro
ving older people’s quality of life based on two explorative pilot studies focusing on
the provision of telemedical services to senior citizens. Thereby, the analysis
considers opportunities as well as risks of telecare/AAL application in older
people’s homes. In the Małopolska region, a group of older people was provided with
telecare/telehealth equipment monitoring bodily functions, such as ECG or blood
pressure, which are monitored by telemedical/telecare systems enabling remote ex-
namination, consultation, and diagnosis. The German study takes a slightly differ-
ent approach in focusing on matching older people with an interest in AAL/ te-
telecare technologies with providers of the latter. The process will be evaluated in
a longitudinal user survey measuring their experiences before, during and after
using the technology, which in turn will be compared with findings from an inde-
pendent sample.

Auntie Does Not Know What Sociologists Do. Do Not Blame Her: A History of Professionalisation of Sociology in Argentina (1960-2010)

The main goal of this paper is to describe the professionalization process of so-
ciologists in Argentina during the last five decades. First, it examines both the role
of sociologists in Argentina during different historical stages and the situation of
the teaching of sociology, trying to identify different traditions and tendencies. Sec-
ond, the paper additionally describes diverse organisational frameworks in which
local sociologists have tried to set their professional and academic issues. Third,
it presents some data from a research that focuses on the working conditions
of sociology graduates in Argentina from three different cohorts. One, a group
graduated from 1961 to 1974. It had an early and successful professional inser-
tion, linked with teaching and state planning. Two, another group which received
their degrees from 1984 to 1992 had more problems in searching for jobs, but
new opportunities in public opinion polls and consultancy were expanding. Third,
a young cohort of graduates since 2002 who found an institutional scenario of
new social demands and requests for sociological knowledge at academia, state
and private sectors. The paper looks for an answer to what were their jobs and
how they started and followed a professional career in sociology, trying to identify
the socialization process of their actions and the political and social networks to
which they were affiliated. Methodology combines the use of previous data, the
job situation of sociologists in Argentina at different historical stages with a sur-
vey, trajectories reconstruction and in-depth interviews. Finally, this paper reflects
upon the multiple challenges that sociology in that country faces at the present:
institutional expansion, funding opportunities and social recognition combines
with institutional fragmentation and lack of consensus on sociologists as workers
and professionals.

Revisiting La Cooperacion Desde La Transferencia Tecnologica

La transferencia tecnológica no es solo hoy día aceptada como un elemen-
to dinámico en el crecimiento de las capacidades materiales de los países de
“menor desarrollo relativo”, sino además como un proceso fundamental asocia-
da a cambios en la cultura y la historia. Ha adquirido relevancia en las agendas
de los distintos foros de negociación – multilateral y regional, en una vinculación
positiva a las necesidades de desarrollo de los países menos desarrollados.
Recientemente se ha tomado conciencia sobre la diversidad de problemas que
se generan por la exigencia de factores concretos de asimilación, aprendizaje,
apropiación y adecuación, a contextos culturales, regionales, locales, específi-
co. Se profiere un esfuerzo por la contribución de estudios sobre las avances en la cooperación inter-
nacional venezolana con países de la Región y como contribuye a la mejora de las
circunstancias que rodean la construcción, aplicación, operatividad y consecuen-
cias asociadas a la transferencia tecnológica. Esta investigación, descriptiva, sigue
dos vías de análisis, por un lado, desde el planteamiento de “soberanía tecnológi-
ca”, donde la decisión sobre el país o tecnología fuente se reconoce en el ámbito
de lo público, tiene una dimensión política y una nueva agenda de negociación
defensiva en fuerte controversia sobre la liberación de los servicios de educación
y salud por afectar la protección de bienes sociales que son derechos humanos.
Por otro lado, desde las prácticas e instituciones presentes en la complejidad
industrial y tecnológica nacional. Ambas vías desafían la comprensión multidis-
tidimensional del papel de la cooperación internacional en los procesos de trans-
ferencia para reconvertirla estratégicamente hacia capacidades tecnológicas
propias. Finalmente, se determina la ausencia de “infraestructuras de interface”
que faciliten la interacción y la participación, que ha contribuido a que haya
necesidad de facilitar formalmente los aprendizajes, establecer las relaciones de
complementariedad necesarias y concretar los resultados convenidos.

A European Mining Boomtown Case Study. Toward a Sociological
Theory of Boomtowns in a Global World?

By mean a case study, this paper aims to test some of the William Frieden-
burg's theories on boomtown phenomenon. Apart from his contributions to the
understanding of the social impact during and the following years after the con-
struction of the large scale project, Freudenburg's theories on boomtown phe-
omenon, have also dealt with the economic consequences of the natural re-
source depletion. This study, by looking at the case of a large scale mining
project in Argentina, pretends to contribute to the analysis of the long term
social consequences of the so-called boomtowns, judging by the results, the
apparently boom experienced might not be such in many cases. It might be simply
a rapid urban growth in the vicinity of the large scale project, but in contrast,
the region as a whole, i.e. including municipalities around, might suffer not only
after the natural resource exhaustion, but also during the mining of the
activity, from shrinking. Secondly, results confirm Friedenburg's theory on the
addictive character of the natural resources dependent economies. Judging
by the in-depth interviews conducted among social actors, the concept of devel-
opment is truly limited to the hope of a new boom as those lived in the past.
This hope is nurture by political institutions and trade unions who despite the
closure of the mine and the fewer chance to repeat such boom, still struggle for
attracting large scale industrial projects. The forms know about the electoral benefits and

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
the latters would have more difficult its action in a more dispersed labor market. In other words, addition might not be limited to new mining boom only, such as Freudenburg suggests, but to merely “large companies”, like nuclear or celluloses. Additionally, evidence suggests that the boom might give way to a very particular community culture that overestimates the importance of the grandiosity for any kind of companies. These are some of the conclusion that will allow to build (upon Freudenburg’s legacy) a more consistent and global sociological theory on the boomtown phenomenon.

Work Social Representation Among Young People and the Ambiguity of the Development Policy in Poland

This paper aims to examine the perception of the meaning of a “good job” among young generations in Poland. The economic policies implemented in recent years have emphasized the importance of entrepreneurship among new generations. The immobility of generations raised during the communist period is usually seen as an inconvenient that stop a major development. This is very clear judging by the number of public advertisement that encourage students to start up their own business, the invitations to take part on competition for the “best business plan” or the highlighting of entrepreneurship related subjects in the universities’ curriculum and the emergency of certain entrepreneurship icons within the political spectrum. By mean the conduction of focus groups, in-depth interviews and participant observation, the current research inquiries on the idea of a “good job” among young people, with a special stress on how entrepreneurship is seen. Despite the pessimistic and dominant discourse about the low wages, working in some of the many foreign corporations that has invested in the country in recent years is seen as the top of the mind job. This accounts for the importance given to the symbolic meaning of belonging to an “international” organization, the social status provided by it and the need of constructing a “modern” identity of themselves. All these things, despite the usual low wages and lack of career opportunities provided. Asked directly about the possibility of becoming entrepreneur, it is seen as a step subjected to first success in a corporation. Entrepreneurship incentive policies might not have the expected results. The fault might be, among other reasons, the contradictory of the public discourse between, on one hand, the importance given to entrepreneurship and, on the other hand, the persistence for attracting globally-driven investment by established corporations and elites via tax break and low salaries policies.

Mobilization and Performance in the Public Space in 2011: A Comparative Approach

From the Tunisian Revolution onwards the increase in social mobilizations around the world shows not only a significant shift in the political sphere but also some heavy evidences in social change. Young people who have been at the center of those mobilizations, are especially susceptible to provide evidence of change when cultural, moral or attitudinal issues are involved. Furthermore, such mobilizations possess significant symbolic and cultural dimensions, and constitute fusion experiences in which a great charismatic power, able to trigger off such mobilizations possess significant symbolic and cultural dimensions, and constitute fusion experiences in which a great charismatic power, able to trigger off social and cultural change, is generated. These experiences may or may not have a ritual nature. According to J. Alexander, in the less complex and differentiated societies, social cohesion is generated by rituals, understood as periodical repetition of symbolic interaction in which participants fuse in the whole. However, in more complex and differentiated contemporary societies, the ritual is unable to keep fusion by itself, thus allowing for social performance to achieve the re-fusion of those social elements no longer cohesive.

The main goal of this paper is to approach some of these mobilizations in which youth occupied the streets as social performances, and to explore its consequences for social change. The four 2011 cases to be analysed are: the Egyptian Revolution, the Spanish Revolution (15-m), the London riots and the Youth World Day in Madrid (MYW). They are analyzed following the basic elements that shape social performances: actors, audience, collective representations, means of symbolic production, mise-en-scène and power.

The Values Of Scientific Ethics: A Way To Face Inequality

Scientific work is one of the most socially valued activities, as it is a complex task that requires specialized professionals and very specific knowledge and skills. Science characterizes itself because its permanent growth and its self-regulation. It means that any proper or formal research has to be necessarily subjected to scrutiny, refutation and peer approval. Scientific work can be profitable and advantageous. In fact, nowadays, science and technology are usually considered strategic areas to the economic growth, innovation, productivity and competitive-ness.

However, impacts of scientific research cannot remain only in the economic field; on the contrary, it must also help the social, communal and personal development. In this paper, we talk about the social responsibility of science and how their results can contribute to improve the living conditions of individuals and to reduce inequality. At first, we analyze the values that support scientific ethics and then we discuss about the ethics of commitment and social responsibility.

We focus mainly on three principles: 1) the observance of the integrity and the respect of the human rights, 2) the social commitment of research and 3) the sensitivity to the individual, communal and national and countries where the research is carried out. Then, we present the results obtained from a study developed with a group of professors-researches from the Juarez Autonomous University of Tabasco. The objective was to identify the values that distinguish their work as researchers.

The results showed us that, regarding scientific ethics, some values such as objectivity, self-regulation, confidentiality, professional collaboration and the pursuit of knowledge are deeply seated in the researchers’ practices; however, social commitment and responsibility seem to be less important to the researchers’ work, especially when they have to compete for funding or when complying with the deadline and amount of production.
This paper presents a methodology for investigating teachers’ everyday practice that draws on Institutional Ethnography, Critical Discourse Analysis and Ontological Inquiry as a means for uncovering, not only the being of social relations in everyday practice but also how that relation can be understood ontologically. It addresses, in particular, how the mediation of teachers’ work relates to the influence of various interests by tracing the constitution of social relations disclosed in relations that emerge between teachers’ perceptions of practice and their enactments. In doing so, the being of the social comes into view.

IE’s recognition of being in practice is acknowledged. To better understand the impacts of this ontological dimension on practice, analysis of data, extends IE by drawing on Heidegger’s (2005) conception of ontological inquiry. This has been chosen for its dual focus in explaining the significance of Being, itself, and to reveal explicitly the Being of people and equipment in teachers’ work.

Analysis of research data offered by practising teachers, confirmed textual mediation in everyday practice, and revealed, too, teachers who practiced circumplexly. In doing so, the ontological significance of who we are to how and why we enter into social relations was exposed.

*Women’s Schooling behind Infant Survival. Modeling Demographic Dynamics in Non-Affluent Countries*

This paper examines the critical relationship between women’s education and infant mortality. This relationship is a key to the demographic transformation of the global South. This quantitative study examines the relationship between female education and infant survival in 80 developing countries. It is found that the relationship between women’s schooling and infant survival is shaped by a set of social and health-related variables. These variables have been rarely studied simultaneously. Evidence in the paper is drawn from datasets some of which have only recently become available from agencies including UNICEF, UNDP and UNESCO. The data is controlled by income level, population size, as well as by the extreme epidemic or political instabilities. Missing data is replaced by regional averages. The path-models on infant survival provide new estimates showing the extent to which women’s education influences infant survival in the global South. The study also shows evidence that the most powerful societal covariates determining the relationship between infant mortality and women’s schooling, are income poverty, child health services and breastfeeding. Women’s education explains 30-40% of the cross-country variation of infant survival. A key finding is that influences outside the health sphere improve health practices and performance.

This global update is in line with what smaller N country-studies and survey based community studies have shown. The results stress that the universal social policies including women’s education, poverty alleviation and multiple health policies intersect in fundamental ways for better infant survival. And that universal social policies are fundamental in explaining the pattern of demographic transition in the global South.

*The Making Of Obedience To Authority: From Binet To Asch To Milgram*

The design of Milgram’s Obedience to Authority can be traced back through Asch’s classic experiment on conformity to Binet’s experiments on memory and suggestion. Binet and Milgram used what is now termed exploratory experiment which is not guided by theory or hypotheses but consists of carrying out systematic variations to formulate empirical rules. Binet conducted two experiments. Binet and Henri (1894) wondered what would happen if school children were given a suggestion so slight that they did not notice its existence? Children were shown a model line on one board and then had to identify the model line on a second board that contained a set of lines including the model line. When the student picked a line on the second board, the experimenter would quietly ask, “Are you really sure? Is it not the next line?” In a second experiment Binet (1900) showed a group of three pupils six objects on a poster board for a few minutes and then asked them a series of questions about what they remembered about the objects recently seen. The students performed this task jointly and the student’s competed with each other to be the first to give an answer. Years later Asch (1951) would combine Binet’s two experiments in his classic study of conformity to groups.

The group viewed a model line and then the naive subject would find himself disagreeing with the others on matching the model line. Milgram knew of Asch’s experiment but wanted to generate sufficient social pressure on an individual in a one-on-one situation. The Binet and Henri experiment with its questioning of the choice of line provided the bridge between Asch’s group conformity and Milgram’s (1974) researcher/experimenter prodding the teacher/learner “to please continue” and “the experiment requires you to continue.”

*Transnational Solidarity Of Trade Unions In Europe: Two Cases Of Institutional Work Against The Background Of The Euro-Crisis*

Trade unions and labour movements have emphasized solidarity as a universal principle across common interests of all workers, regardless of borders and boundaries. Despite this rhetoric they have primarily organised national or sub-national collectivities and contributed to establish common identities and moral norms in these contexts. Modern notions of solidarity are thus firmly established at the national level, while at the European level liberal market principles and social indifference predominate. This prevailing social indifference has been challenged by at least two developments: (1) the introduction of a common currency, and (2) European economic governance in response to the Euro-crisis. Both developments have led trade unions to transnationalize their strategies: (1) As monetary integration abandoned the option to devaluate currencies as a strategy to improve international competitiveness, wage setting institutions have come under pressure. This in turn induced trade unions in some sectors to coordinate their wage bargaining policies across borders. (2) Far reaching austerity measures in EU countries had a big impact on labour market and social policies - trade unions responded to these by organizing and mobilising resistance at transnational level, e.g. the European Action Days.

Our empirical research in both fields (wage bargaining and protest movements) is guided by the following question: What constrains and opportunities have trade unions in Europe encountered in their strategic attempts to create and maintain solidarity enhancing institutions at transnational level?

Our central argument rests on two assumptions proposed by the classic sociologist G. Simmel (1908): He states that conflict is an important step from mutual ignorance to social integration. However, the integrative impact of conflict is dependent on legitimized institutions and practices of conflict resolution (Vobruba 2013), which themselves are contested. To explain union strategies in multi-level fields we use sociological institutionalism (Scott 2008; Lawrence/Suddaby 2009) and power resource theory.

**PERO, DAVIDE** (University of Nottingham, davide.pero@nottingham.ac.uk)

**ALBERTI, GABRIELLA** (Leeds University Business School)

This paper discusses collective practices of migrant workers in Britain who organise to improve their disadvantaged work and life conditions. It will draw on ethnographic data and cultural productions about labour organising initiatives in the cleaning sector such as ‘The 3 Cosas Campaign’ and ‘Justice for Cleaners’ whereby migrant workers have been struggling for more dignified and equitable working conditions with the support of their communities, within and without formal and recognised trade unions. This discussion will critically consider the complex relationships that developed between these workers (many of whom are from Latin America) and local labour and community organizations, focusing on the tension between the class-based and so called ‘ethnic’ identities of the diaspora groups under study.

The paper aims to contribute to the theoretical debate on how to apply the framework of intersectionality (Yuval-Davis 2011) to the study of migration and labour movements. Inspired by recent critiques of the resilience of methodological nationalism (Glick Schiller and Caglar 2006; Glick Schiller and Caglar 2008), our examination will question prevalent theorizations of collective action and migrants’ forms of political engagement persisting in social movements and migration studies. It will also question the ethnocentric and institutionalist focus of traditional industrial relations literature highlighting the benefits of an interdisciplinary approach to the study of migrants’ politics across the literature on migration and labor relations.

PEROTTINO, MICHEL* (Charles University, perrottino@fsv.cuni.cz)

Members Vs. Experts in Czech Political Parties. Reflections on a New Dimension of the Party Membership

Our main research theme is the Policy-related Expertise in Czech political parties, this theme allows us to focus on such topics as the place of experts in the parties, especially in terms of concurrence between "old" members and experts proposing other resources and legitimacy.

The capacity of expertise is now generally considered as a common and obligatory need and good for every party which try to get into the government, based on the idea of a less political and more technical problems to solve on the national or local level.

For this paper we will focus on some aspects but we will discuss mainly the thesis of a practical mix of intra-party legitimacy in the sense of the response to the need of new members seen as specialists or experts. For instance a problem can occur at the time when party came to the power and it gives to members some places or functions (retributions).

Our hypothesis, facing the question of intraparty democracy, are first that there should be a conflict between two diverse legitimacies but over all that such a need for experts contribute highly to undermine the importance of intraparty socialisation and, at the end, weaknesses the party organisation: the members have not to be active for the party as itself, but they have to be experts immediately useable without being "real" members. Secondly this concurrence of intra-party legitimacy can be understand practically also as a better and quickest application of experts in the state or local management to the detriment of classical members. Thirdly the other face of this phenomenon is that the less party socialized experts are less disciplined or that they are more prone to defections or change of party affiliation during their mandate.

Internet Chess and Chat As Interaction Order

Abstract. While playing Internet chess and at the same time using a rudimentary chat function with fixed lines, I have also been observing the chess and chat as a rudimentary interaction order. In this paper i will analyze this interaction order, on the one hand on the basis of observations made while playing Internet chess, on the other hand by using the perspective on the interaction order developed by Erving Goffman. My point of departure is that individuals interact with each other whenever they meet, but under different circumstances and those circumstances condition the interaction. The paper aims at answering the following research question: How can the interaction order that is developed on an Internet chess site be understood given that the social interaction between the chess players is restricted to the game itself and to a rudimentary chat function? The paper contains a detailed description of the chess play and the chat function at an Internet chess site. What possible interpretations can, for example, be made of one player’s offer to end the chess game with a draw? And, how can one understand the expression “Oooops!” in the chat given the different contexts that present themselves in a chess game? And, finally, how can one use Goffman’s division between expressions given and given off to understand the two mentioned and other interaction situations in Internet chess?

Socio-Geographic Effects On Higher Educational Choices

The main object, in this presentation, is to explore the relationship between socio-geographic background and higher educational choice. Social space can’t be isolated or ignored when it comes to understand human action. The individual socio-geographic setting permeates the way individuals understand and act in the social world. It contributes to social possibilities and constrains, often understood as habits. This presentation put a socio-geographic focus on a special group of students in a special municipality in the south of Sweden. The municipality is characterized by low progression rate to higher education and a high, but diminishing, rate of blue-collar jobs. The educational level is below national average. Despite these traditions a minor group of pupils do attend theoretical education and receive high grades from upper secondary school. Most of these students progress to higher education. An observation made is that in this group most of the students are applying and attending low prestige higher educational programme at local private universities deprived of higher educational possibilities. This goes for students with middle-class backgrounds as for students from working class. One suspicion is the existence of a socio-geographic effect on higher educational choices that makes it possible to talk about a socio-geographic habitus, collective in the same way as class-habitus but also unique in relation to other geographic areas. In this paper this is discussed in relation to in-depth interviews with students representative to the above described group.

The Ontology Of The Global City-Regions

The ontology of global cities-regions.

The global world is made of hundreds of city-regions interlinked and networked. Yet the ontology of the global city-region is still to be defined. It includes a different substance than the XX° century metropolis, or the generic and endless city of today. It is a web of contracts much wider and global than in the National epoch. In the past the contract was Principal-Agent: the Principal being the State, the Agent being the City. Whose main role was to provide streets and social housing, schools and welfare. Today the agglomerating substance of global city-regions is relational contracting among actors which are global in many cases: enterprises, services, networks. Their places have a variable geometry and geography, functionally defined and no longer territorially bounded. Relational contracting is a partnership contract where asymmetries arise. The main asymmetry is about information access, which is selective among and within cities in the digital era. A second asymmetry is about mobility which is still more selective: those who can move (financial markets, multinational enterprises, big buyers, world experts), those who simply cannot (sub-contractors, client enterprises, contingent labour). Within global city-region governance mechanisms should include new constitutional orderings by bridging social capital and linking divided actors and fields.

Migratory Experiences of Portuguese People in Macao during and after the Portuguese Administration of the Territory

Migratory experiences of Portuguese people in Macao during and after the Portuguese administration of the territory.

The transference of Macao's administrative power from Portugal to China, in December 1999, has represented for Portuguese people who lived there until the 80's and 90's of the XXth century the end of a migratory experience in a very specific context, frequently characterized as being almost 'colonial'. Following the hand over, while many Portuguese migrants have returned to Portugal, some choose to stay in that Chinese territory; others have later decided to go back again; and a few others, who have never lived there, elected Macao as their host society. How was the integration process of those Portuguese migrants
who settled in Macao in the beginning of the XXth century? Did they keep the same benefits - concerning leaving conditions and life styles - that Portuguese people used to have during the Administrative period? What kind of relationships have they developed with the local people (mainly Macanese and Chinese) in this ‘new’ political, social and cultural living context? Were they more prone to assimilate local references than their counterparts who lived in Macao in the ‘colonial’ period?

Basing our study on a qualitative research supported by interviews to two groups of Portuguese migrants - those who lived in Macao during the Portuguese administration and those who moved to the territory after that period - our purpose is to analyse and compare their migration experience (in social-economic, cultural-symbolic and identity terms) highlighting the continuities and changes observed.

**Portuguese Youngsters on the Move after the Macao’s Migratory Experience**

Macao has been for the last two decades of the XX century the host society of young Portuguese people, whose parents, mainly high qualified workers, have preformed professional functions in the public or private sectors of the territory. Once this migratory cycle came to an end, and after their return to Portugal, a large number of these young Portuguese has migrated again, some to Southeast Asia, others to different places, this time as protagonists of their own flow. Basing our study on life stories, our purpose is to analyse to what extent the migration experience of these individuals in Macao has contributed to the formation of their cosmopolitan identities, as well as to create a predisposition to re-migrate.

**PETERS, VERA** (Institute for Climate Impact Research, vera.peters@pik-potsdam.de)

**The Carbon Footprint of German, Scottish and Czech Households and Its Determinants – the Influence of Infrastructure, Lifestyles and Socioeconomic Conditions**

Climate change is on its way, and individual consumption decisions contribute substantially to it. About 40% of all GHG emissions come directly from private household energy consumption, and the figure is even larger if indirect effects of private consumption are included.

In order to further explore the conditions that lead to smaller GHG emissions, we present results from a quantitative household survey (n=1,532) in three European countries (Germany, Scotland, Czech Republic), which was conducted within the framework of an EU FP 7 project (GILDED) in 2011 and 2010.

A CO2-calculator and its items on self reported behavior were used to estimate households’ carbon emissions in the field of residence, mobility and nutrition. Beside site specific conditions such as infrastructure and socioeconomic factors, major individual and social motives for sustainable behavior are explored by applying psychological and sociological concepts such as the “Schwartz value inventory”, people’s perception of climate change and a lifestyle segmentation.

We focus especially on the explanatory power of the lifestyle approach for predicting carbon footprints. Lifestyle or “milieu” segmentations represent popular analysis tools especially in German sociology that aim at a modernized concept of social inequality encompassing the ‘subjective’ dimension (attitudes, values and preferences) as relevant aspects for social differentiation. We applied this concept by connecting values and preferences with the households’ income, thus trying to identify different “social milieus”, i.e. like-minded social groups that are characterized by distinct mental frames and economic status. Previous lifestyle research suggests significant group differences on factors influencing energy use, e.g. the amount and kind of electronic appliances used or leisure mobility patterns. However, it has yet to be shown if different energy patterns result in different levels of overall consumption and emissions between the groups.

**PETRÉSSON, FRIDA** (University of Gothenburg, frida.pettersson@socwork.gu.se)

**The Stigmatizing Semantics of Methadone Maintenance Treatment**

People who use heroin are often described as one of western society’s most stigmatized and marginalized groups. In public discourse, people associated with heroin use are construed as unruly, lacking self-control and generally bad persons. Negative representations of the heroin addict are also reflected in the regulatory framework surrounding Swedish methadone maintenance treatment (MMT) – the most common treatment practice for heroin addicts – which is based on a basic idea that the treatment not only could, but also should lead to a normalization of the clients’ lives.

In this paper, the everyday semantics of Swedish MMT is put under scrutiny. The analysis based on a local, qualitative study exposes that the professional power is not as objective, neutral and fair as portrayed by national guidelines, policy documents and the professionals’ talk. Methods developed in critical discourse analysis and discourse psychology are used in order to analyse a number of key concepts used in everyday clinic practice. For example, at the clinics, “drug-free” and “drug-abuse” are two frequently occurring concepts that are difficult to define because they are not related to the drugs themselves, but to the question of when and how the narcotic substances have been used, as well as who has decided that they should be used. Analysis shows, that according to the professionals’ talk, it is possible to live a “drug-free”, “normal” life with methadone, as long as it is distributed by the clinics and ingested according to the staff’s recommendations, while taking the same amount of drugs obtained from a source other than the clinic is defined as “drug abuse”, legitimizing sanctions of more disciplinary kinds. However, the effects of the disciplinary exercise of power are counteracted by the clients’ modes of resistance, such as subversive interpretations of staffs’ arguments or “narratives of resistance”.

**How and When Belongings and Living Conditions Is Made (in) Visible in School**

This paper explores how and when principles of categorizing groups related to residential area and living conditions, are present and are of importance in educational and social relationships in school practice. The background to the study is that on the one hand, there is openness and a welcoming of immigrants in Swedish society and in schools, for example, through policy and political objectives. On the other hand, there are clear structural differences and segregation in schools related to the area affiliation and ethnic origin. Interest in gaining an understanding of and explanations for the ambiguity that emerges between policy and what happens in the school’s daily life have contributed to the study’s aim. The aim of this study is to investigate and analyze whether, and if so, how and when students in a secondary school in a medium-sized town in southern Sweden, are identified and categorized in relation to the belonging residential area and living conditions within education and social relationships, as well as its relevance for pupils in school practice. The focus is on how the changing demands and social relations are managed, organized and perceived by different actors, when school is becoming a common arena for students from different areas and with different living conditions. The analysis is based on an ethnographic study based on observations, interviews and informal conversations in school practice. The study’s result show that pupils belonging and living conditions is made visible and contributes to categorization in certain contexts in school practice, while it is made invisible to categorization in other contexts, where other factors connects pupils to a group or network. It is also found that the different categorizations overlap each other.

**Does Social Economy Really Constitue a Solution Against Poverty and Social Exclusion?**

This paper examines the correlation between poverty, social exclusion and social economy at the local level. Particularly, it attempts to discuss the appropriate conceptual and theoretical models of social economy at the local level and to establish multidimensional poverty and social exclusion indices under a relative perspective. The research question is: “Do social economy initiatives contribute to the fight against poverty and social exclusion at the local level and what is their impact?”

The analysis is based upon the results of both qualitative and quantitative research of selected areas in the broader area of Athens. More precisely, statistical data and the results of the focus group interviews with key informants, stakeholders and vulnerable people will be discussed with a view to focusing on the appropriate design of social policy and social protection at the local level.

**Mass Media Representations Of Multifarious Violence During The Greek ‘crisis’ In 2013: A Qualitative Approach**

The multifold violence observed during the Greek ‘crisis’ corresponds to the many-faced character of the recession and to its intensity, as the country continues to reel under the shock of cultural, societal and political rifts. The following
presentation focuses on internal forms of violence and specifically on behaviours of suicidal or quasi-suicidal character. Our primary aim will be to outline the many different ways this type of violence is presented by the Greek media. The study has been conducted with a qualitative methodology utilizing content analysis, through the prism of which we examine the way internalized violence is represented by two of the mainstays of the Greek media, namely the press and internet. Specifically, we will introduce a number of popular blogs and sites with a high traffic volume of traffic and some well-known newspapers with a large readership. Secondly, through the method of qualitative content analysis we will focus on the connection between violence and social inequality and the diverse ways in which these social phenomena have been approached by the news information media. Thirdly, we will classify these representations on the basis of content analysis of representative excerpts from articles and reports on the particular self-destructive form of behaviour that has come to be associated with the ‘crisis’. Finally, we will analyse the ways in which the electronic and print media target the social status and ethnic background of victims.

PETROV, VLADIMIR V.* (Novosibirsk State University, v.v.p@ngs.ru)

High Quality Education: Globalization and Problems of National Educational Systems

Requirements of the Information Society and Knowledge Society determine the need for significant improvements, structural changes, shifting priorities in the social system. Such a trajectory of development is already represented not only in the developed nations in North America, Western Europe, countries of the Confucian and Buddhist cultures but also in the Eastern Europe and Russia. While comparing educational systems of Russia and the United States primarily from the aspect of high quality education development there we can see deep differences between these systems that are connected with different historical traditions, regional and local education programs is necessary. Particularly sensitive should be the attitude of the state towards high quality educational institutions: it is necessary to take into account their specificity, to seek additional resources including financial in the form of various additional scholarships for the talented students, and grants to effectively developing educational institutions etc. and at the same time maintaining their maximum autonomy.

Cross Country and Intergenerational Comparison of Income and Wealth using Luxembourg Income Study (LIS)

**Abstract**
The aim of this paper is to analyse the income and wealth among the elderly (65-75 years old) and people in their prime age (35-45 years old) in a cross-country comparison. Which group is more likely to be at risk of poverty? The novelty of this paper is that includes not only the disposable income (defined as the sum of total revenues from earnings, capital income, private transfers, public transfers net of taxes, social security contributions and other obligations such as alimony) but also a proxy for the net wealth including the net value of the dwelling in the analysis. Within each age group, we will identify the subgroup most at risk of poverty (based on gender, citizenship status, education level). We selected the countries that have information on wealth from the last wave of LIS, centered around the year 2010: Colombia, Ireland, Israel, Italy, Luxembourg, South Africa and Japan (with available data from 2008). The paper will contribute to the existing literature through a cross-countries comparative analysis of income and wealth from an intergenerational perspective.

PETSCHICK, GRIT* (TU Berlin, grit.petschick@tu-berlin.de)

Factors Influencing the Careers of Young Scientists during the Period of Their PhD. En Ethnographic Case Study

The underrepresentation of women in science and the question of reasons for their relatively frequent resignation compared to their male counterparts is a much-studied topic of increasing relevance. In this area there are – nevertheless - very few ethnographic studies comparing various disciplines. This paper intends to show the potential of such a discipline-comparative, ethnographic study of doctoral students: With a focus on everyday practices the study researches embedded practices of gender differences and their gender codes, as well as differences in specialized cultures. Thus, a contribution should be made both to explain the proportionally higher exclusion of female scientists from academia compared to their male counterparts as well as for research about the professional culture.

In two ethnographic case studies, the production of gender disparity shall be captured at the level of everyday operation of scientific practices and in habitual actions. The participatory observation is supplemented by interviews. The focus of this investigation are the everyday practices of researchers, since we assume that a number of gendered and gendering practices and their incorporated implicit attributions, are not made consciously by the actors, but happen interactive.

The research examines scientific working groups, whose research is part of an excellence cluster. In particular PhD students in the subjects of physics and chemistry are accompanied through their academic life. Several factors have an impact on daily work and facilitate or hinder coping with the demands during the period of promotion. The studied situations were therefore divided into four categories: time, space, material resources, and social interactions. In all these areas, gender differences can be identified in both disciplines. Furthermore, differences are visible in the methods of scientific working of the two disciplines.

Seeking a Voice: Muslim Organisations in Australia and Germany and Their Struggle for Civic Recognition

Post-war Germany and Australia have, like many other Western societies, seen the emergence of fragmented and heterogeneous Muslim communities. In both countries these ethno-religious minority groups have established a diverse landscape of community organisations, which used to be occupied primarily with the maintenance of their religious identity and internal community ties. This inward-looking nature of Muslim communities in Australia and Germany has begun to change, more fundamentally, since the early years of the 21st century, triggered by partly similar, partly country-specific developments. An unprecedented number of community groups in both countries have sought to become recognised civil society actors, eager to contribute to the society at large, to engage with non-Muslim groups, media, governments and other opinion leaders and to offer a more accurate public representation of Islam.

This paper explores the motives, strategies and achievements of Muslim community organisations in Australia and Germany, based on extensive desk research and a series of in-depth interviews with Muslim community figures in both countries, conducted between 2011 and 2013. It argues that, while Muslims in Australia and Germany have shared (and continue to do so) similar experiences of social marginalisation, public questioning of their willingness to belong and increasing political scrutiny, their collective struggle for civic recognition has unfolded in different ways. The research findings suggest that Australian Muslim community groups have been much more successful than their German counterparts in utilising and expanding their collaboration and lines of communication with policy-makers and civil society opinion leaders and in establishing themselves as an important voice in the public and political debate. The paper concludes with a discussion of the reasons for these country-specific differences, identifying a combination of historical, political and social factors, including the divergent political opportunity structures and the different socio-economic resources of Muslims.

PFADENHAUER, MICHAELA* (Karlsruhe Institute of Technology, pfadenhauer@kit.edu)

Tool, Toy or Therapist? the Relevance of Emotion Stimulating Robots in Elderly Health Care

Our main interest is the professional use of “social assistive robots” (Kolling et al. 2013). We call them “emotion simulating & stimulating robots” as they are designed to fulfill “experiential aspects of belonging” (Klein et al. 2013). Our empirical subject is Social Robots Factory, a robot manufacturer in industrial automation pioneer. Whereas this as interactive robot with highest therapeutic effect’ praised machine is getting usual in Japanese private households, in Germany it slowly finds its way into Elderly Health Care Institutions. According to that we are interested how the robot becomes embedded in the carer-resident-relationship.

To which aim use carer the robot in their caring activities and routines? Which meaning is transferred with this special usage? Not only the singular performance but also the object with which the action is carried out is a carrier of meaning. However, not only the subjective sense but also the objective meaning of people places, actions and material things recurs to interpretation (and interpreters). In terms of sociology of knowledge we are interested in the process of objectivation and institutionalisation of technical artefacts which is embedded in the communicative processes of the distribution of knowledge. The robot as an in fact impresive technical artefact neither is a social actor or a “sociofact” but an integral and powerful part of social action with the potential to change culture (i.e. of caring). According to that and in regard to the zoomorphic design of Paro which looks like a pet toy we are especially interested in the haptic use of Paro. As touch and institutionalization of anti-aging medicine in Germany shows in an exemplary way.

From Users to Adherents – Anti-Aging As a Way of Life. Qualitative Interviews and Biographical Perspectives

At least since the founding of the A4M (American Academy of Anti-Aging Medicine) in 1993, anti-aging medicine has formed a discrete discipline, implementing scientific findings for purposes of prevention, early diagnosis, reversal or treatment of age-related changes and loss of body functions. In recent years, anti-aging has also been established in Europe, as the institutionalization of anti-aging medicine in Germany shows in an exemplary way.

Despite the growing significance of anti-aging, its impact on the users’ everyday life has hitherto been under-explored. This presentation focusses on users of anti-aging products and services in Germany and is based on 15 narrative interviews conducted in the context of the research project “Biomedical life plans for aging”.

The interviews show the profound impact of anti-aging on the individuals’ biographies: Although users cannot observe the effectiveness of their practices, they are invested with biographical meaning. Therefore, it is supposed that the persistence and attractiveness of anti-aging practices goes far beyond their scientific persuasiveness. Within the reconstruction of the significance of anti-aging for the interviewees’ biographies, the symbiotic and emotional potential of the practices are to be examined: Anti-aging turns out to be an ideal staging ground for presenting oneself as a rational actor and a self-caring subject. Anti-aging can thus be described as a form of lifestyle that is committed to an ideal of scientific rationality and the moral values of individuality and responsibility.

PFUAFFFINGER, BIRGIT* (University of Hamburg, pfau-effinger@wiso.uni-hamburg.de)

Diversity of Gender Arrangements and the Work-Family Relationship of Women with Small Children in Europe

The central question of the paper is: Which are the main patterns of the ways in which women with children 0-2 years combine employment and childcare in European societies? And how is it possible to explain cross-national differences? The paper introduces the theoretical approach of the “gender arrangement” of the author as an explanatory framework for cross-national differences. This approach emphasizes the mutual, and in part contradictory, interrelations and dynamics between culture, institutions, social structures, economic structures and actor constellations and action, which form the societal context for the structures of care work in a society. The paper applies this approach for the explanation of the differences in the work-family relationship of women with children below age three in eight European countries. The comparative analysis finds that the countries of the study cluster into four different patterns of the combination of women’s employment and care for children under three. It is shown how the differences in the cultural, social and economic context and in welfare state policies in different European societies, and the ways in which they interact, make a particular contribution to explaining cross-national differences in the patterns of mother’s employment and childcare. This analysis demonstrates that family policies alone cannot explain cross-national patterns for organizing child care, and that considering cultural models, family policies and socio-economic differences together leads to a more satisfactory explanation of the societal relationship between women’s employment and child care.

PFUAFFFINGER, BIRGIT* (University of Hamburg, pfau-effinger@wiso.uni-hamburg.de)

Erosion of the Boundaries Between Public and Private – New Forms of Care Work in European Welfare States

The paper discusses the ways in which changes in the structures of care work in European welfare states can be analysed and explained. So far, concepts of dual terms predominate with regard to the concept of care, in terms of the comparison between public and private and between paid formal care and unpaid informal care. According to such thinking, care work takes either place in the private sector where it is informal and unpaid, or it takes place in the public sector where it is formal and paid. It is argued here that the clear embedding of care work into one of the two spheres can easily become a conceptual cul-de-sac and tends to hinder the recognition of changes concerning the informal care work itself.

Welfare states have established new, paid forms of semi-formal and formal care work within the family household. This change has led to an erosion of the boundaries between the two spheres. These new forms are also connected with a new type of social rights. It is argued that in order to capture this change appropriately, changes of care work can no longer be viewed as a change within a dualistic model; as a shift from private to public care, or as a formalisation of care. Instead it must be understood as a multidimensional change.

In the paper, a conceptual approach for analyses will be introduced. Moreover, it will analyse the development of the new forms of paid semi-formal and formal care work in childcare and care for senior citizens in Europe in a cross-national comparative perspective. Finally also it will explain the development with social change and cultural change.
Over the past decades social inequality has grown in France, as in many other countries. Paradoxically, however, during that same period the dominant discourse, both in the social sciences and politics, has tended to conceal this growing social polarization and to eliminate any reference to class. Indeed, since the beginning of the 1980s, sociologists and politicians have vied with one another to invent clever words and expressions to describe the structure of French society. However, these substitute discourses were soon gaisaid by the growing social disparities prevalent within French society, and which existed in spite of the rhetoric which obstinately denied the reality of class. Indeed, in France, the notion of ‘class’ had, at best, changed and become more complex, but remained as present as ever.

This paper will, first, explain the background to this increasing social polarization of French society. This polarization is not unique to France, and can be found in varying degrees in most capitalist countries in Western Europe. The widening wage gap has had far-reaching consequences for all significant aspects of people’s lives, and a number of indicators converge which allow us to expose this tendency, and demonstrate the existence of a system of inequality characterized by segmentation, hierarchization and conflict. After this presentation, some thoughts will be put forward on the words and categories that are used in certain sociological theoretical frameworks. This alternative sociological discourse was pervasive between 1980 and 2000 and continues to be used today, even though it has long since been largely refuted by the facts. We will focus on the discrepancy between the rhetoric of these theories, which deny the existence of ‘social class’ and the undeniable reality of a growing polarization within French society.

Women's Empowerment As a Determinant of Fertility Change in Southeast Asia

The fertility levels of Southeast Asian countries have been dropping dramatically since the 1950s. The case of Southeast Asia challenges classical theories on demographic transition, which suggest that economic development is the key to demographic changes, whereas, in Southeast Asia, even low- and middle-income countries also experienced rapid fertility declines long before the socio-economic development. This paper suggests a relationship between the empowerment of women and fertility decline. Despite decades of standing in the literature as one of the key indicators of social development, the concept and measurement of women’s empowerment has not reached a consensus. Women’s empowerment is a multi-dimensional concept, which includes measurements at both country and individual levels. At country level, measurements of women’s empowerment includes the percentage of women’s education in relation to men, percentage of female labor force participation, proportion of female in parliaments, and percentage of women’s holding manager’s positions. At individual level, women’s empowerment can be measured by women’s educational attainment, their involvement in household decision-making process (including fertility choices), contraception use, and employment status. Cultural factors such as son preference and preference for high fertility should also be taken into account while measuring women’s empowerment. Most studies have been looking at women’s empowerment in either at country level or individual level but not at a comparative regional level. In this paper, the key debates in the concept and measurement of women’s empowerment and the framework of relationship between women’s empowerment and fertility changes will be reviewed. Furthermore, the current situation of women’s empowerment and the amazing fertility decline in Southeast Asia will be examined. A closer examination of fertility change and women’s empowerment indicators in Cambodia, Indonesia, Philippines and Vietnam suggests that women’s empowerment plays a role in the region’s demographic change.

PHILLIP, CAROLIN* (University of Kassel, carolina.philipp@gmail.com)

Violent and Non-Violent Logics in Contemporary Greek Protests

The research is focussed on crisis ridden Athens as radicalisation becomes accentuated during economic and political turmoil. I will analyse radical views of political activists based on 19 ethnographic interviews conducted with the creators of alternative urban spaces: migrants, anti-nationalists, anarchists, neighbourhood activists, and radical leftists. From the data discursive strands will be extracted about perceptions of state, society and the extreme right, constructions of oppositions, and reflections on violence performed by themselves and others.

In the case of Athens the consequences of increasing cleavages and precarisation by the ‘Euro-Crisis’ are drastic: intensified unemployment, bankruptcy, and impoverishment. At the same time, the metropolis has developed into a hub for migrants and refugees from Eastern European, African, and Asian countries. These two phenomena have turned Athens into a space in-between the Global North and South.

Athenos senses a militarised zone (Kurtovik 2013). The government is perceived as EU-dependent by most citizens, and chooses to demonstrate its strength by demarcating different groups as ‘deviants’ (Dalakoglou 2013: 30). Radical left and anarchists, as well as migrants and refugees, are constructed by the ruling parties as threats (Zenakos 2013); for public security (Philipp 2013), or as dangerous ‘hygienic bombs’ national health (Parsanoglou 2012). Newly-deployed and heavily-armed police forces are ordered to fight the ‘undesired’ objects. The increased establishment of far right discourses and neo-Nazi-activism support this development (Philipp 2012).

The atmosphere of austerity and oppression has deeply influenced alternative activism of this two groups: methods of protest become more extreme, constellations of alliances alter, and clashes between different forces intensify.

With its extensive ethnographic material, my research contributes to fill the desideratum (Andronikidou & Kouvaras 2012) of empirical in-depth analysis of contemporary contention in Europe.
Our preliminary results suggest that developed countries with the smallest achievement gaps are likely to have higher performing low-SES students, and high performing high-SES students. Preliminary results also suggest a relationship between income inequality, social safety nets, and gaps in student achievement. Because our work identifies social and economic contexts that contribute to achievement gaps, our study demonstrates both barriers and possibilities that influence academic mobility.

PHILLIPSON, CHRISTOPHER* (The University of Manchester, christopher.phillipson@manchester.ac.uk)

Ageing and Class in a Globalised World

Discussions about the role of social class in the lives of older people have often occupied a marginal position in social research into ageing. Despite the importance of themes linked with inequality and latterly social exclusion, the tendency has been to examine these only loosely through the lens of social class, with researchers often preferring to emphasise individual characteristics or life histories, other statuses (e.g. gender and ethnicity), or more general features associated with the social organisation of age. In consequence, social class has had limited influence on many of the concepts deployed to understand the lives of older people. This paper explores the implications of these developments for theoretical work in the weakening of the idea of generations as a meaningful unit of analysis; the core social relationships in old age. The consequences arising from this include: first, the ongoing processes of economic change; second, evidence for the re-emergence of class analysis; third, the importance of situating class analysis within the context of globalisation and economic change; fourth, the paper concludes with an assessment of possible developments in the application of class analysis to the study of ageing.

The New Political Economy of Generations: Social Class and Social Divisions in Old Age

Increased inequalities within nation states have influenced social structures in a variety of ways. For older people, one consequence has been greater differentiation within generations driven by contrasting experiences of economic recession and life course events. Generations, in western society from the mid-20th Century, were underpinned by near full employment, orderly transitions into and out of work, intergenerational mobility, and declining levels of inequality. These processes ground most of the social relations in which the role of class has been minimised in studies of ageing; second, evidence for the re-emergence of class analysis; third, the importance of situating class analysis within the context of globalisation and economic change; fourth, the paper concludes with an assessment of possible developments in the application of class analysis to the study of ageing.

CAMPBELL, HUGH (University of Otago)
ROSIN, CHRISTOPHER (University of Otago)

Beyond Alternative/Conventional: Māori Worlds of Food

Within popular understandings of the food crisis, the global food system is often presented as a clear differentiation between ‘alternative’ and ‘conventional’. These two constructs generally distinguish between means of provisioning and consuming food according to narrow and readily measured economic, social and ecological criteria. This categorisation results in a strict dichotomy represented by antipodal views and explicit characterisations of value – what in terms of conventional theory would be organised within orders of worth. In fact, the reframing of popular understandings of the food crisis require a more open engagement with food (its production and consumption) that recognises the diverse sites of action at which change can be enacted and realised. Such an approach sees continuity from mainstream activities to the small individual, independent and value-oriented ones.

This paper uses the theoretical framework of regimes of justification from convention theory (Boltanski and Thévenot 1986, 2006) to elaborate a Māori world of worth in order to demonstrate the potential for marginal economies (Gibson-Graham 1996, 2006) to reframe popular understandings of food and society. Within the New Zealand context, there has been some ferment around Māori groups – a minority whose culture is based on the concept of sustainability as a cornerstone-who recently implemented economic activities around a western-values frame in terms of economic organization. Using two case studies, both expressions of the Māori community but with two different approaches in terms of strategies, a reflection is presented on community organisation, food systems innovation and the role of market in food relations.

Austerity and The University In Britain

Austerity and the University in Britain

Over the past decade, young people in the United Kingdom have been facing a variety of factors which have impinged on their opportunities to enter higher education and their chances of finding a job once they have graduated. Whilst this paper focuses on a sustained governmental policy to increase the participation of 18-to 30-year-olds in higher education (initiated by the Labour Government and continued by the Conservative-Liberal Democrat Coalition Government), the 2008 financial and the ongoing economic crisis resulted in the introduction of austerity measures following the 2010 general election. Notably, the Conservative-Liberal Democrat Coalition Government enacted a sizeable cut to public spending on higher education and it raised substantially the cost of annual university tuition fees starting in 2012-2013. At the same time, the rate of unemployment among graduates has been rising and getting a degree is no longer an automatic boost to one’s life chances. For many it results merely in unpaid internships and/or employment schemes.

This talk will examine British “youth in austerity” regarding prospects for studying in higher education and subsequently entering the labour market over the past decade. It will include young people’s responses to the recent decrease in higher education funding and increase in university tuition fees.

PICKARD, SARAH* (Université Sorbonne Nouvelle - Paris 3, sarah.pickard@univ-paris3.fr)

Divided and Ruined: The Failed Student Protests In Great Britain

The current decade has been marked by both the global economic crisis and a growth in social movements around the world spearheaded by young people. In particular, we have witnessed collective action – demonstrations, direct action and civil disobedience – regarding higher education. In Britain, there was a series of demonstrations and sit-ins in the winter of 2010-2011 about the Conservative-Liberal Democrat Coalition Government’s plan to cut dramatically public spending on higher education and to raise considerably university tuition fees. In fact, both of the policies were enacted and the ceiling on annual fees went up to £9,000 (approximately 1,500,000 JPY) in 2012-2013. Just after their introduction, a demonstration took place organized by the National Union of Students (NUS).
Strikingly, this #DEMO2012 had three themes: ‘Educate, Employ, Empower,’ rather than only higher education and it was attended by far fewer demonstrators. This talk will analyze the social movements organized by young people against higher education reform since 2010 in Britain. It will focus especially on the 2012 demonstration, in order to ascertain to what extent it can be gauged to have been a failure. Drawing on interviews I made with protestors, as well as photographs I took of the demonstration, the talk will reveal that the different types of participants were very polarized about the best course of collective action to take. For example, the extreme-left wing radicals and anarchists accused the NUS of cooperating with the Government, whilst the NUS claimed the extremists were not focusing on the issues at stake. This lead to highly confrontational scenes during and after the demonstrations which detracted from criticisms of the Conservative-Liberal Democrat Government and its youth policy. Instead of uniting and fighting, the protestors were divided and ruled by Government cuts in an era of austerity and lack of social change.

This paper considers the meanings young members of the ‘new far right’ English Defence League (EDL) attach to their activism. Based on an ethnographic study (2012-13) including interviews with over 30 grassroots activists, it argues that the movement’s trademark slogan ‘Not racist, not violent, just no longer silent’ denotes more than a cynical PR strategy. In contrast to a ‘politics’ they reject (understood as ‘debating’, ‘listening’ and ‘reading the Sunday Times’), participants in EDL actions provide young people with a way of ‘getting your point across’, ‘speaking out’ and ‘standing strong’. This, it is argued, is indicative of the experience of the political sphere by some young people as characterised by a ‘politics of disaffection’, in which they struggle to reconcile the social distance between ‘politicians’ and ‘people like us’ and the legal and cultural circumscriptions on ‘acceptable’ issues for discussion. Drawing on Mouffe’s (2005: 6) argument that right wing populism has made inroads in those places where traditional democratic parties have lost their appeal to an electorate no longer able to distinguish between them in the ‘stifling consensus’ that has captured the political system, the paper traces the resonance of these tropes in the narratives of ‘the political’ among a broader sample of (non-activist) young people in the UK (based on representative survey and interview data gathered for the FP7 MYPLACE project of which the EDL ethnography is also a part). The paper asks whether the desire to engage in politics in a ‘loud and proud’ way might confirm Mouffe’s argument that a democracy that ‘works’ for ‘the people’ may not be one based on ‘a universal rational consensus’ managed through institutions that ‘recognise all conflicting interests and values’ but rather one in which there is a vibrant public sphere of political contestation (ibid. p.3)?

From Being Excluded to Becoming a Triumpher: Higher Education Massification Policies in Venezuela and Their Biographical Meaning

In 2003 the Venezuelan government started to implement a variety of social programs known as “Bolivarian Missions”. These Missions addressed a variety of social problems that the traditional systems of education, health and social services had failed to overcome. The creation of these programs rapidly became one of the most distinctive symbols of the new revolutionary government and the promise of a better life for the poor and excluded groups. In the education sector, different “Bolivarian Missions” offered literacy programs, basic education, high school and higher education for all. Over the years, these educational programs have been strongly linked to the political legitimation and support of the government by those who have perceived the missions as a benefit. Official reports claim to have solved a historical debt with some marginalized groups of the country, which has shaped the lives of those who have been recently included to both the education system and the Venezuelan society as a whole. This article seeks to explore how this process of inclusion has been experienced by those who have been educated, which represents an important gap in the literature that deals with the Venezu-
nel case. Moreover, I will show how the official discourse has transcended into the memories of those who once felt excluded and now feel like triumphers, consistent with the public discourse around the existence of the so-called “Mission Sucre”. This work is based on two case reconstructions of the life stories of two higher education students who are currently enrolled at two of the many “Aléides Universitarias” that operate throughout the country’s regions. This work is based on biographical-narrative interviews (following Rosenthal) and ethnographic observations that I conducted for my ongoing doctoral thesis.

Subaltern Tactics and Spaces for Decommodification: Non-Institutionalized Political Practices in a Tokyo Working-Class Neighborhood

This paper draws upon a 2-year ethnography (2012-2014) in a Tokyo working-class neighborhood, with a focus on subaltern political practices. Building upon the distinction between the two meanings of the “political” (Claude Lefort, Esquisse d’un politologue; Manuel Castells, La Question urbaine) – one related to the institutionalized sphere of the ruling, the other to the social system of power relations and its transformation –, subaltern political practices can be defined as practices that allow their actors, collectively or individually, to free themselves from such-and-such subordinate positions in the net of power relations. Through this theoretical lens, one can observe an array of collective or individual political practices that contest, bypass or elude unfavorable power relations.

With the ever-increasing commodification of society, quite blatant in large cities like Tokyo, domination often make oneself felt as economic domination. In the post-modernist political context, political practices take notably peculiar forms of tactics (Michel de Certeau) aiming at getting loose from economic dependencies through the building of small and frequently temporary autonomous spaces.

Since these dependencies are experienced more strongly as we go down the social ladder, this paper focuses on practices devised by homeless people living in the area I’m engaged in, before showing that practices that are most easily discernible in this radical life-situation can also be noted among working-class neighborhood inhabitants. Urban agricultural practices found among homeless groups and individuals as well as in working-class neighborhoods are an especially interesting case. Growing their own food allows the persons involved to build a small autonomous space, both real – one get a fair amount of “free” food – and symbolic, as they constitute de-commodified spaces in which other types of relations and non-monetary practices can take place (exchange of seedlings between homeless groups, fruits and vegetables’ gifts to visitors or neighbors...).

Relax and start things anew. This last point invites to take also into account, with Carlo Pinotti, the ritual dimension of lootings. Contrary to previous studies that focused mainly on the historical context, this paper tends to scrutinize these two days of lootings while confronting them to the memories of those who once felt excluded and now feel like triumphers, concentrating on the ritual dimension of lootings. Drawing on both primary (media and testimony) and secondary sources, it intends to scrutinize these two days of lootings while confronting them to the memories of those who once felt excluded and now feel like triumphers.

Tu Casa Es Mi Casa: Squatting in Eastern Europe

Cities have been the arena for social movements actions for long time, however with the recent changes in urban development (privatization of public spaces, reduction of public services, gentrification, etc.) recently there are more movements that focus on the city as the focal point of their activism. In Central and Eastern Europe, which is the ground of intensive introduction of neoliberalism the transformative processes are more intensive than in other parts of the world with intensive re-privatization, increasing gentrification, rapid changes in social composition or the emergence of gated communities. Various social mobilizations and social movements are trying to oppose these tendencies and the squatting is the most radical amongst them. It is particularly interesting as it usually tries to combine down-to-earth problem solution (i.e. campaign to save a park or against privatization of a public space) with radical ideological critique of property (through squatting abandoned buildings), consumerist way of life (through D.I.Y. lifestyle) is particularly problematic in the region where cap-
italism is new and was desired and such movements are not deeply rooted and emerged in the last 25-30 years. This paper is based on ethnographic fieldwork conducted mostly in Poland, also in the Czech Republic and Hungary where I collected numerous in-depth interviews with squatting activists, made several participant observations and analyzed media coverage (both mainstream and activist / independent media). In the paper I want to focus on the intersections between the radical squatting movement and moderate movements such as tenants movement to show the transformative power of the squatting movement on other actors. I will be basing primarily on two case studies from Poznan and Warsaw implementing them with examples from other countries from Central and Eastern Europe and the results - in my opinion - can be addressed to other developing societies.

JS-85.4
PIOTROWSKI, GRZEGORZ* (Södertörn University, grzegorz.piotrowski@sh.se)
Youth Social Movements and Democratization

In mid-1980s Central and Eastern Europe have witnessed an interesting aggre-
gation of anti-communist struggles. Parallel to the pro-democratic dissidents new
movements populated by young people and connected to youth subcultures have
emerged, in particular the anarchist and environmental protection movement. These
new movements were not only inspired by groups from Western Europe and the US but were also an expression of critique of the dissident movement slowly shifting to (neo)liberal positions and loosing the touch with the workers base as well as the young people whose demands (i.e. regarding compulsory mili-
tary service) were largely ignored. These newly emerged movements were capa-
bile of bridging structures and agency in an unique way. The popularity of these youth movements partially lays in attractiveness of the subcultures that were the vehicles of the new ideas and not in the topics they were bringing. Moreover, this subcultural-political connection seems to have an impact on today’s radical movements making them mostly a young people’s domain and activity. This has far-reaching consequences and recent mobilizations in the region (anti-ACTA protests in winter 2011/2012, many protests in Bulgaria in 2012 or the earlier alterglobalist mobilizations) prove the point that coalition-making possibilities and support from other actors are limited.

The paper is based on long-time research and fieldwork among social activists
(alterglobalists, anarchists, environmentalists, squatters) and former dissidents that took an active role in the 1989 transformations for various research projects. Empirical data were collected from in-depth interviews, participant observations and from movements’ publications (printed and online) collected over the years.

PIRK, REELIKA* (Tallinn University, reelika.pirk@gmail.com)
The Role of Social Movements in Youth Political Participation

In the debate of youth political engagement social movements have a crucial role to play. In many contemporary democratic societies political culture is facing a crisis of legitimacy. Scholars around the world have stated that the level of tra-
ditional political participation is decreasing, especially among young people. On
the other hand, there are opposite views, claiming that instead of being politically disengaged, young people are looking for (new) forms for participating in society, as they simply address social issues differently. Thus, new social movements (as well as Internet and single-issue activism etc.) are considered to be new platforms for young peoples’ political activism. This paper is based on case study of ethical-moral values promoting animal rights movement in Estonia. A youth group that consists of politically minded young people who actively participate in and address different issues of the soci-
etic life (e.g. This paper explores the importance of social movement activism in sphere of political participation. Especially, it first analyzes how young people conceive their participation and role in society. Secondly, how young activists address political issues through social movements. And thirdly, what challenges they face when participating in socio-political sphere through social movements. The empirical data set includes open-ended interviews and informal conversations as well as participant observations and secondary data sources.

BEIGEL, FERNANDA* (CONICET-Universidad Nacional de Cuyo, mjbeigel@menendez-conicet.gob.ar)
Potential, Strength and Weakness of Argentinian Social Sciences to Analyze Contemporary Society

This paper attempts to describe the current state of the Argentinian social sciences in terms of institutionalization, research capabilities and agenda. It is framed within a research program called PISAC, implemented by the National Council of Social Sciences and co-financed by the Ministry of Science and the Sec-
retary of University Policies. PISAC has three main objectives, each one linked to a specific research project: a) a critical assessment of the Argentinian social science system (institutions, agenda, researchers’ profiles, publications, etc.); b) a review and systematization of the research findings produced in the last decade with regards to key issues addressed by the Argentinian social sciences; c) a structural study of current social, political and cultural trends in the country. In this paper, in particular, we present some preliminary findings and discus-
sions related to the first research project (a). In this sense, we maintain that Ar-
etinian’s scientific field is currently featured by a dynamic, predominantly public and professionalized system that has witnessed a geometrical growth in the last decade. Both the public universities and the National Scientific Council (CONICET) have benefited from this growth. Accordingly, social sciences have experienced an expansive phase visible in the consolidation of postgraduate studies, interna-
tional publishing and collaborative research. However, some important problems still persist: 1) In terms of institutionalization, professionalization and full-time research positions the social sciences are still well behind the natural sciences; 2) the structural heterogeneity of Argentina's scientific field, featured by the split between CONICET and the public university system 3) the national and regional circuit of the social sciences is still weak, both in terms of domestic and international circulation of knowledge produced locally. 4) There are significant differences in the levels of institutionalization, profes-
sionalization and internationalization that the academic activities related to the social sciences bear in different regions of the country.

Domestic Workers As Agents for Development? the Migration-
Development Nexus Debate Revisited Though the Decent Work Agenda

At the global and regional level, the current policy discussion of international migration is dominated by a revived interest in the linkages between migration and development. To date, this debate has left out certain forms of migration and alternative understandings of development, and remained especially unfavour-
able to particular forms of migration that women undergo. Despite the evidence that domestic workers are numerous and that domestic work is increasingly an important source of waged employment for women; domestic work is often spe-
cifically excluded from national labour instruments such as the labour standards or the minimum wages mechanisms in many countries in Asia. Moreover, many migration regimes purposely exclude domestic workers from accessing rights that other labour or skilled migrants in the country are entitled to. With growing interest in return migration and its relationship to development, there have been efforts to place domestic workers ‘back’ on the trajectories of the ‘productive’ economy, especially in the form of entrepreneurial programs and the teaching of return migrant women to use their remittances money productively by becoming petty entrepreneurs. Common failures of such programs requires us to question the fundamental bias in creating such programs and the placing of emphasis on productive labour, instead of re-examining the importance of reproductive labour in development. This paper will provide a systematic deliberation on the meaning of decent work for non-industrial, reproductive work, focusing on fair wages, working con-
ditions and industrial relations. Its overall objective is to trace discursive and re-
search frameworks around gender and labour migration from a development perspective to test the place of domestic work within it and to prompt greater attention needing to be paid by development studies to the realm of reproductive work. We will base this on the specific experience of domestic worker migration in Southeast Asia.

Orthodox Online Communities in Social Russian Nets As an Object of Social Research

Social nets is new social communication environment and the majority of peo-
ple are involved in them all over the world. The leader among existing social nets in Russia and Russian-speaking area is Vkontakte. In the social net of Vkontakte there is an orthodoxy audience which consists of approximately 10% on the part of active audience of this social net. The most active and numerous representatives of the orthodoxy audience are three age groups which expose relevant portraits of the orthodoxy audience in Vkontakte: under 18, 18-24, 25-34 years age.

Communities in the social net is main communicative core around which users’ interests are formed. For our purpose all orthodox communities in Vkontakte can
be divided into four groups: communities of general orthodox theme, communi-
ties where the main content is presented by the quotations of revered fathers
and modern members of clergy, and also parables and cautionary tales, issue-re-
lated communities (question to priests, for youth, family, devoted to beneficence,
etc.), and at last territorially united communities (the communities of bishops, 
youth orthodoxy discussed church). Each orthodox group in VKontakte and its only unique target audience on 
the basis of which the group administration chooses content: by format (articles, 
news, fillers, quotations), by form (text, photo, audio, video), by the functionality of 
VKontakte social network (discussions, meetings).

In orthodox communities VKontakte the model of social interaction ‘online-of-
line’ is actively developed. Within the framework of this model the participants 
of communities are informed about offline events running (rapidly erected tem-
ples buildings, benefitence, meetings with interesting people, etc.) via VKontakte 
functionalities (messages, meetings). Due to communities participants high degree 
of loyalty the information about future events is spread by ‘virus’ method by the 
means of likes and repost system.

PITASI, ANDREA* (Gabriele D’Annunzio University, profpitasi@gmail.com)

The Fourth Paradigm

The paradigm shifts which featured the systemic thinking from the 1980s to 
the end of the last century and the very beginning of the 21st lead to some radical 
epistemological changes at the crossroads between communication sciences 
and sociology. This paper on one side reconstructs the key paradigm shifts in 
theory from the whole /part one (P1) to the system environment one (P2) and 
then to the autopoietic paradigm shift (P3). Kuhnian normality was rather 
unlikley in systems theory and still the key global economical, technological, 
social challenges of our times required revolutionary shifts. The other side of this 
paper is essentially focused on theorizing a fourth paradigm shift which selects 
the fragments of the late XX century epistemological debate turning them in 
a systematic (in the Mertonian meaning of the term) redesign of the concept of 
system itself revealing that design and evolution are two faces of the same coin.

“In any event, we have changed our own evolution but not ended it”.

(Barash 2008: 25)

"Some increase in plasticity is to be expected [...]. It represents the extrapolation 
of a trend toward variability already apparent in the baboons, chimpanzees and other 
cercopithecoids what is really surprising however is the extreme to which it has been 
carried. Why are human societies this flexible?"

(Wilson, 2000: 548)

PITASI, ANDREA* (Gabriele D’Annunzio University, profpitasi@gmail.com)

“Hypercitizenship” and the Evolution of a Global Identity

The idea of the citizenship moves from the consideration of autonomous agents 
and global flows eventually converging by means of autoopoietic systems. 
This work reframes the topic of the reconfiguration in the evolving social sce-
narios within Pitasi’s concept of HYPERCITIZENSHIP, sketched out by designing a 
multidimensional and multipolar convergence among different kinds of citizenship.
With its four conceptual dimensions, Hypercitizenship, features the strategic 
attitude of those areas in which capitalism is turning into turbogenetic capitalism.
Its main features are the following: Cosmopolitan, scientific, societarian and en-
trepreneurial.
The Hypercitizenship concept is focused on the fact that communication about 
key challenges of our times is increasingly meaning communication and public 
understanding of science and technology for governance and policymaking on a 
global, national and local scale.

From this point of view, law becomes one of the à la carte products to be 
bought by browsing a global “catalogue” (Mundus) surfing on a technological 
global platform (Globus) of which the internet is the best metaphor and which 
can be seen as the most important platform for convergence developments and 
as a driver of several, key, changes. This new media platform is cosmopolitan and 
glocal while the mass media often still fall into the methodological nationalism 
trap. Indeed, the emerging scenarios are more and more shaped by supranation-
(UN, EU, NAFTA) or multinational (Standard & Poor’s, Moody’s...) entities and by 
new localisms which cannot survive outside a global network.
Thus, the emerging glocality is witnessing that the “national state” citizenship is 
too big -bureaucratically speaking-, but too small -in competitive terms- to be 
strategic in the merging scenarios.

Hence, the importance of a new conception of citizenship in the glocal age is 
rising, which we refer to as “Hypercitizenship”.

How to Tether an Investment Banker: Observing Innovation and 
Control in Islamic Finance

Scholars of alternative economies have noted that financial markets are par-
ticularly resistant to social experimentation due to the absence of institutional-
ized dialogue between finance industry insiders and outside critics. A noteworthy 
exception is the recent development of Islamic investment banking in Malaysia, 
where (external) Islamic scholars are in an institutionalized dialogue with (insider) 
investment bankers.
This dialogue has created an ongoing experiment to create “sukuk,” a novel fi-
nancial instrument designed as a moral replacement for sovereign and corporate 
bonds. “Conventional” bonds are understood by many Islamic scholars as immoral 
because they are untrusted from “real” economic activity and produce revenue 
streams based on “interest.” In contrast, sukuk are alternative asset-backed 
securities (ABSs) putatively tethered to the real economy and generating moral 
revenue streams without recourse to interest. This intervention is ambitious and 
global: in 2012, $137 billion sukuk were created (issued) world-wide in a number of 
currencies.
To theorize the social mechanisms and governance structures that enable such 
dialogue, this paper investigates two questions centered on how theologians un-
derstand and control investment bankers. How do Islamic scholars and financial 
engineers speak with one another with sufficient expertise so as to co-construct 
new asset-backed securities that conform both to theologians’ interpretations of 
Islam as well as to bankers’ perceptions of marketability and profitability? More-
over, how can religious scholars control financiers sufficiently to enforce mini-
mum standards of moral compliance?
To investigate these two questions, this paper draws on 48 focused, ethno-
graphic interviews conducted in 2012 and 2013 in investment banks with financial 
engineers and Islamic experts who co-produce sukuk. The paper and presenta-
tion summarizes the case, theorizes social mechanisms and governance struc-
tures, and hypothesizes implications of the case for other morally-committed fi-
nancial reform projects seeking to dialogue with and control investment bankers, 
such as Occupy Wall Street.

Contemporary Adults: Understanding Youth through 
Intergenerational Comparison

Although sociology has already deeply analysed the profound changes oc-
curred to youth and paths of transition to adulthood in the last decades, it is 
often possible to notice two glaring deficiencies in many sociological works: 
firstly, young people are frequently conceived as a category of its own, a spe-
cific social group that is somewhat isolated and studied separately, making it 
a most a comparison with the previous young generations; secondly little 
attention has been paid to adulthood, the final destination of youth. 
Adults should be a model for young people's transitions, but within the contempo-
rary context this stage of life's standard model is threatened by contemporary trans-
formations and late-modern processes (individualisation, flexibilisation, globali-
sation, juvenilisation) and it's become more and more complex to define what is 
'young' and what is 'adult', where youth finishes and where adulthood starts, which 
functions characterise these two ages and which are their reciprocal connections.
All that has huge consequences on the (individual and social) identity both of young 
people and adults, on their intergenerational research and on youth transitions. 
The intent of the proposed contribute is to think youth in a generational way by studying young people in relation and in comparison to the co-pres-
ent adult generation, lighting up the contemporary features of adulthood.
The proposed contribute - based on an empirical research which involved 30 
Italian young people aged between 18 and 24yo and their significant adults 
through semi-structured interviews- aims at contrasting the specific inter-
pretations of adult identity emerging from the representations and practic-
es of adulthood of two generations: the baby boom and the millennial one. 
Through this comparison the presented research highlights the processes be-
neath contemporary intergenerational dynamics inside and outside the family, 
allowing a deeper knowledge and understanding of contemporary youth.

The Embodied Mind and Epistemic Difference: Lessons from 
Disability Studies

Embodied mind theories in neurocognitive science and philosophy of mind 
are increasingly cited as a conceptual bridge between neuroscientific and social
scientific epistemologies. Theories such as enactivism, embodied realism, and extended cognition share a preoccupation with grounding mind and consciousness in the lived, active body, with situating these in environment, and with challenging the abstract, disembodied Cartesian subject. In this sense, they echo sociological and feminist views on the epistemic significance of the body. Yet sociologists and feminists argue that an embodied view of mind and body involves the recognition of differences between knowers, while neurocognitive theories assume a generic or universal body and pay little attention to epistemic multiplicity. In this paper I argue for the importance of epistemic multiplicity in forging interdisciplinary theories of embodied mind. I also put difference in more literal terms by addressing corporeal variation. How neuroscientific embodied mind theories come out on the epistemic significance of phenomenal variation can be gleaned from the debate over multiple realisability, or the idea that the same mental state can be achieved through multiple physiological processes. This debate focuses on difference only to reinstate epistemic sameness. For more considered reflection, I look to disability studies, particularly the work of Jackie Leach Scully, Tobin Siebers, and Rosemarie Garland-Thompson, to consider what phenomenal variation teaches us about the embodied mind. Disability scholarship shows us that all bodies are variant in some way; this work puts pressure on assumptions of biological universality. The example of disability also shows not only how problematic it is to assume a generic body, but also a generic fit between body and world. I argue that embodied mind theories can best grasp epistemic difference by resisting an *a priori* body-subject whose relevant properties are fixed in advance.

Central Bank ‘Independence’

The global financial sector still has very little regulation over its capacity to manufacture money (or to refrain from doing so), even though the credit crash occurred nearly seven years ago. Many hopes are placed on central banks but surely they have been forced to play an ‘unfair game’, as Hyman Minsky said years ago. This paper investigates ‘independence’, not only as a sociological misnomer, or a form of central bank ‘dependence’ on what financial markets think (as Fed members say) but also the effects of central bank quantitative easing since the crisis. The Fed’s QE has enormous impact on most other economies. The ECB is (or was) a test case for hopes of international agreements over the control of money creation. Although the field shifts rapidly, it appears to be dominated still by bond vigilantes behind which lie coalitions of interests that defend the status quo ante. So far few effective oppositions have risen to urge a firmer path for the Fed, such as that taken by the Swiss National Bank. In 2012 it called the bond trading firms’ bluff; in contrast the Bank of Japan is under some ‘control’ by Treasury. I report on my current interview material in Europe with central bankers and treasury officials.

Barrier and Risk Free Environments for Older People. a Survey Applied to State Provided Units in Chile, the Need of a New Policy Approach

Increasing ageing and urbanization are two tendencies which together characterize the 21st century as an unprecedented demographic revolution. In this context a large proportion of older people, particularly in Latin America, will live in vulnerable social, economic and cultural conditions in inadequate habitats which should be addressed by public policies. The effects of the built environment has been the less attended in Chile, despite its relevant impact in both the physical and perceptual dimensions of life affecting its quality reflected in inclusion, social participation, autonomy and independence of this age group. Adequate habitability of housing and urban space should be provided allowing ageing in place as long as possible. Up to date senior policies in Chile have focused in providing housing for those unsheltered through the provision of new units which have not considered the needs of older persons. Considering than more than 80% of seniors in Chile own their homes(SENASA-INTA 2010); the addition of public policies focusing in improvement of existing housing is relevant. Considering the high accident and mobility figures related predominantly to falls due to aspects of the built environment and the high personal and economic costs for families and the medical assistance system, design issues become relevant issues.

This paper presents findings related to the design and use of an evaluation instrument developed for the detection of risks and barriers in a sample of housing provided by the State of Chile, using objective and subjective techniques. (Direct observation of performance of Basic Activities of Daily Living, (BADL), focus groups regarding findings and dimensional evaluation both of users and spatial conditions), Findings reflected barriers and risks mainly associated with Mobility, in around 30% of BADL operations, due to inadequate object and architectural design mostly related with height, presence of uneveness or lack of elements.

Femmes aînées Immigrantes à Montréal

Dans le cadre d’une étude en cours sur les « femmes aînées immigrantes et leur manière de vieillissement » menée à Montréal, les expériences du vieillissement dans le rapport à soi et à son corps sont notamment interrogées. Les données présentées dans cette communication sont issues de 15 focus groupes, soit 90 femmes d’origines et de communautés culturelles différentes et ayant des parcours migratoires variés. A partir de ces données, le quotidien de ces femmes immigrées est présenté à travers une pratique commune: la marche. Les analyses comparatives des verbatimis en particulier permis de saisir l’importance accordée au mouvement. La marche en particulier atteste d’une volonté unanime dont elles font preuve, celle de rester autonomes et indépendantes. Il s’agit là d’un résultat de recherche que l’on retrouve dans tous les focus-groupes. En effet, quel que soit l’âge de la personne, son autonomie, son origine culturelle, ses pratiques religieuses, son parcours migratoire ou son statut familial, la marche est une façon de pratiquer et de vivre son environnement – son espace vécu. Au-delà d’une vision qui pense le vieillissement en termes de limites et d’incapacités, nous mobilisons le prisme des limites physiques et représentent des obstacles dans les déplacements de tous les jours, cela ne les remet pour autant pas en question de façon définitive. Par ailleurs, nous montrerons que cette attitude de la marche dit de la personne qui la pratique. Les déplacements et les mouvements au quotidien permettent par exemple d’activer les relations sociales.

In order to unravel similarities and differences in care policies development in Croatia and the Czech Republic

Care for dependent family members has become an important policy area which requires substantial reforms in many European countries. Care policies are increasingly restructured, where the trend towards new forms of care governance can be recognised, with a sustainability of care system becoming an important driver of reforms. Still, the policy answers countries opt for and their modes of implementation fairly differ. These are reflection of country specific institutionnal, political, socio-economic and cultural circumstances, and transnational ideas. Therefore care policies are an important area for further comparative research.

This paper addresses the main reform trends in care policies in Croatia and the Czech Republic. In socialism both countries predominantly relied on state provision of elderlycare and childcare, however, due to the lack of care facilities, the informal/family provision of care was quite widespread. With economic, social and political changes during the transition period new ideas and principles become present at the political level such as growing tendency towards increased pluralisation of care providers and enhanced family’s responsibility in care. Nevertheless, they varied between the policy areas and countries, and were not fully realised in policy reforms, what resulted in different consequences for both, persons in care need and care providers.

In order to unravel similarities and differences in care policies development in Croatia and the Czech Republic, the structural, organisational, quality and financial aspects of childcare and elderlycare are discussed as well as the main discourse and principles behind the reforms. They are additionally placed in the context of accessibility and affordability of services. The paper aims to explain what circumstances led to the reforms and under what logic were the childcare and elderlycare systems redesigned and reorganised since the 1990, and what were the reform consequences regarding the access and delivery of care services.

How Can We Characterise National Sociologies?
National sociologies are often referred to, either directly or implicitly, but the methodological basis for doing this is normally taken for granted rather than discussed, and relevant data are not evaluated critically. The commonest formulation is probably in terms of the thought of those identified (in ways not specified) as leading national social thinkers, though there are also some cases where the concepts used in national journals (identified as such in ways not specified) are treated as sufficiently representative to be used. There are also problems about what to define as the nation. What if the state and its sociology are divided in important ways, for example by having different language communities? What if the sociological work done within state boundaries is closely integrated with sociological work done elsewhere, or significantly influenced by the work of recent immigrants? Such questions raise issues about what could be defined as a national sociology. This paper explores the practical possibilities of empirical work on the characteristics of national sociologies as variously defined, giving special attention to some sources which have not commonly been used in this context.

**Public Trust in Health Information Sharing and Health Systems in the United States: A National Survey**

**Background:** The U.S. Institute of Medicine's Report, Digital Infrastructure for the Learning Health System, calls for "weaving a strong trust fabric" among stakeholders, including the general public, to facilitate broad data linkage and sharing. The texture and quality of this "fabric" is understudied, particularly with respect to attitudes and beliefs about information sharing held by non-experts. This presentation adds to a growing body of trust research by measuring trust at the individual, institutional, and system level. It examines four key dimensions of trust – fidelity, competency, integrity, and global trust – and key determinants such as awareness, beliefs, and previous experience.

**Methods:** To understand the dynamics of public trust in broad data sharing as a common practice in the context of the U.S. health system, we are administering a 232-item questionnaire (n=1000) using probability-based web panel designed to be representative of the United States and administered by the GfK Group (formerly Knowledge Networks).

**Findings:** Preliminary results from a pilot survey (n=500) indicate that 60% have a somewhat or generally favorable view of information sharing among health information providers, hospitals, public health, and insurance companies. 62% feel that it is fairly or very likely that the quality of health care will be improved with increased data sharing, while 49% see health information sharing as likely to benefit personal health care. Most feel that the health system is inadequately regulated (54%) and that the system would be improved by monitoring by independent oversight (63%).

**Discussion:** The public's trust of technological change that promotes information sharing in the U.S. health system is not a foregone conclusion. Understanding the nature of the public's skepticism and uncertainty about the risks and benefits to themselves and their communities of interest can inform future development of information governance and data brokerage.

**PLEYERS, GEOFFREY*** (Université de Louvain(UCL), Geoffrey.Pleys@uclouvain.be)

**Concepts and Practices of (Counter-)Democracy in the 2010s: Movements**

This paper proposes a cross-analysis of democracy as demand and practices as defined and implemented by young activists in recent social movements. It draws on first hand empirical material from three qualitative research: democratization movements in Mexico (12 interviews, 2012-2013), Moscow (23 interviews, 2013) and Rio de Janeiro (32 interviews, 2013); progressive activists in Europe (7 countries, 37 interviews and a focus group, 2012); and ecological transition activists in Brooklyn (22 interviews, 2010-11) and Belgium (34 interviews and 2 sociological interventions, 2012-13), as well as 7 interviews with Occupy Wall Street activists.

Text analysis (NVivo) and consolidated methods of discourse analysis suggest that four dimensions of democracy can be isolated in young activists' discourses: direct democracy, responsible democracy, argumentative democracy and protest democracy. Direct democracy at the local level is notably connected to experimentation in horizontal and participatory deliberation processes as well as memocracy leading to stress citizens' responsibility, whether in their consumption practices (the local transition movements) or in monitoring elected representative and civil servants (often mentioned in Russia and in Brazil). Argumentative democracy is mobilized by committed experts, who trust in the impact of rational and well-developed arguments and popular education. Finally, many activists insist on protests, popular movements and mass demonstrations able to influence policies.

The paper will briefly analyze each of these forms of (counter-)democracy, the cultures of activism it refers to, their subjective dimensions and their relation to institutional/representative democracy. It will underline the heuristic potential of the four main forms of counter-democracy and representative democracy. Taken together, they offer concrete ways forward for a multi-dimensional approach to deal with structural limits of representative democracy and to explore paths towards more democratic societies.

**PLOWS, VICKY*** (Victoria University, vicky.plows@vu.edu.au)

**Reducing or Reproducing Inequalities? Ethics and the Researcher’s Role in Negotiating Power Relations Between Young People**

A key concern of youth research is the ethical issues that arise through the inherently unequal power relations between adult researchers and young research participants (Brooks 2013, Matthews 2001). However, less attention has been given to the ethical dilemmas that arise for youth researchers when confronted with negotiating their own role in witnessing and responding to unequal power relations and oppressive behaviours between young people during the research process. We know little, for example, about how youth researchers respond to racist, sexist or homophobic behaviour (Curtis et al 2004) or negotiate the exclusionary practices of young people towards each other (Morris-Roberts 2001).

For youth researchers concerned with and committed to challenging issues of injustice and exclusion and/or to adopting a non-authoritarian role with participants this can be particularly troubling (Morris-Roberts 2001). Ethical dilemmas involve the choice between two or more alternative actions all of which may test an ethical belief or cause some potential harm (Banks 2010). Reflecting on some of my own experiences of ethical dilemmas, as a participant observer in a Scottish youth club over a 12 month period, I analyse the basis of my reactions, actions and inactions to potentially harmful, exclusionary and oppressive behaviours between young people and how this connects with broader theorisations of young people’s agency and conceptualisations of challenging interactions.

Like others, I advocate for ongoing reflexive engagement with ethical issues as we emerge in the research journey (Simé 2008) and for openness about the everyday ‘messiness’ and ‘sense of failure’ that commonly occurs with qualitative research practice (Horton 2008). I show how engaging with these processes aided my research development and analysis of the project data, as well as the implications of these ethical dilemmas for a social justice research agenda.

**PLUSS, CAROLINE*** (Nanyang Technological University, pluss@ntu.edu.sg)

**Cosmopolitan and Essentialized Socialities in Transnational Spaces**

This presentation forwards the new analytical concepts of cosmopolitan and culturally hybrid, and culturally essentialized, socialities. This is to account for the access to professional, family, and/or friendships/lifestyles resources of 25 Chinese-Singaporean transnational migrants—who lived in Hong Kong—in their respective transnational spaces, which they formed by subsequently living in several countries. These two forms of sociality are ‘cosmopolitan’ and ‘essentialized’. The former involves the cross-cultural characteristics of access and non-access to the resources of different contexts-of-interaction in different places and societies because they merge both, the two basic forms of culture contact (adaptation or differentiation), and social relations of reciprocity, trust, collaboration, and exchange. This presentation will show that the Chinese Singaporeans’ explanations of their practices (or lack of practices) of these two forms of accounts for how they perceived of changes in their own characteristics, in the dominant cultural characteristics of their transnational spaces, and of the cultural characteristics of processes of globalization that the Chinese Singaporeans were carriers of. Emphases are on the role of the cosmopolitan cultural characteristics the Chinese Singaporeans acquired through bilingual education in Singapore to establish cosmopolitan socialities in their contexts of work and friendships in Hong Kong with English-speaking people who were form the West, and Asians who had lived in the West; and ‘cosmopolitan’ work socialities with colleagues in mainland China (the PRC). However, the Chinese Singaporeans mostly maintained essentialized socialities in their families, and they were largely excluded from the (differently) essentialized socialities of local Hong Kong people, compelling them—paradoxically, to more highly values cosmopolitan socialities with other non-locals in their contexts of work and friendships.

Shifting Spaces of Hope and Power: Facing Increasing Inequality and Crisis in Asia

For the past two decades, the Asian region has experienced rapid economic growth. While some countries like China, India and Thailand have reported double digit growth rates in their economies, the region has experienced increasing poverty and inequality. Complicating this contradiction is the region's high score in the Global Risk of Hotspots for Disasters (2013 Global Risk Index). This paper will discuss the region's challenges and responses to this multi-dimensional crisis, highlighting the varying contexts of inequality among countries in the region and their social innovations.

RC26-454.1

POKROVSKY, NIKITA* (Higher School of Economics, nikita1951@yahoo.com)

Cellular Globalization and the Environmental Awareness in Rural Communities

A multidisciplinary team of social scientists (sociologists, economists, social geographers and demographers from main Moscow universities under the auspices of the Society of Professional Sociologists) works in the Russian region of Kostroma. The region, similar in size to West Virginia and has a population of 800,000, 70 percent of its territory is virgin forest. The Soviet era industrial plants in Kostroma have gone out of business, leaving Kostroma's environment as the region's main asset. Despite the region's seeming isolation from the flow of globalization, a process of "cellular globalization" (Pokrovsky, 2008) is subtly but inexorably changing the character of the region. This process is changing traditional rural "solidarity in despair and poverty" towards recognizing wealth as a value. Against this social background one can indicate the growth of rural communities made up of the migrant residents from big cities who decided to move out from megapoles in order establish a new environmental Utopia based on the value of ecological balance and downshifting. In the countryside 'new re-settlers' combine their basic professional work through Internet and telecommunications, they make use of all modern commodities of life, they travel much on business—they are on the move or in the condition of 'liquid mobility'. Those new 'infocommunication settlers' (ICS) exemplify a much higher degree of social solidarity and vitality as contrasted to the deteriorating solidarity of the traditional population of the region. Is this an early evidence of the forthcoming general turn to infocommunication rurality? In the spiral trajectory of social change?

WG03-912.2

POKROVSKY, NIKITA* (Higher School of Economics, nikita1951@yahoo.com)

The Tale of Two Projects: The New Trends of Post/Counter Consumption in Russia – Visual Case Study of Yuri Voicevsky-Katchalov Estate Project in the Vologda Region and the Ugory Environmental Project in the Kostroma Region

The modern Russian history provides examples and trends in the evolution of consumption among the upper and middle class. Trend, tentatively called the "Abramovich's case" is still showing examples of Byzantine luxury. A new trend is characterized by the removal of (a) the demonstrative signs of wealth, (b) the desire to transform it into humanitarian programs. The paper analyses the visual indicators of the "Manor Khvalyevskoe" - restored by the famous financier Yuri Voicevsky-Katchalov ("Standard bank"), the family estate of the 19th century in the Vologda Region in northern Russia. The visual analysis demonstrates social implications of the concept laid in the foundation of this project and its manifest/latent consequences including those of architectural design preferences of the 19th century and today. The second case, the Ugory Project in the Kostroma Region, demonstrates an evidence of cellular globalization which refers to the emergence of internalized changes within the individual attributable to the effects of globalization including the preservation of the old architectural style of log houses. This process is slowly changing traditional rural attitudes towards wealth—more rural residents are placing greater importance on wealth than in the past. But the most advanced villagers already "invent" their own social life and political.
Informality and Policy Making: Evidence from Post-Socialist Spaces

Informality, in a political context that some have described as state terrorism, is the practice of informal economic activities, such as drug trafficking or informal labor, which are not recognized by the formal state. This can include practices like trafficking, prostitution, and other informal activities that are not regulated by the state. The methodology that we have developed for this research involves participant observation, informal interviews, and a large-scale survey. We believe that these informal practices can be seen as a response to the lack of strict control by the state, which allows citizens to engage in informal practices to provide for their basic needs.

By doing this, we can provide a better understanding of informal practices and their impact on policy making in the post-socialist region. Case studies drawn from Lithuania, Poland, Russia, Ukraine, and Uzbekistan illustrate the potential for informal practices to create a welfare system without necessarily passing through the state. In this context, it is important to note that informal practices can be seen as either rejection or acceptance of formal policies.

In this paper, we will focus on the inability of a state to act as a welfare distributor, as informal channels (voting) or consolidated tools (contentious politics) may be able to informally renegotiate policies that they are unable or unwilling to comply with. We propose an analysis that inverts the look to ordinary people who participate in these experiences in order to understand their deepest and least visible dynamics.

The methodology that we have developed for this research involves participant observation, informal interviews, and a large-scale survey. We believe that these informal practices can be seen as a response to the lack of strict control by the state, which allows citizens to engage in informal practices to provide for their basic needs.

Using this convergence, we will analyse the role of emotions in crucial moments of protest and the transformations of consciousness and behaviour. The study is funded by the European FP7 Marie Curie Training Network "Changing Employment". Website: http://www.changingemployment.eu
developed throughout our research is based on depth interviews, life story telling, focus groups and narrative analysis of the biographical material.

All in all, we want to prove that the emotional dimension is vital to understand and analyse the change of worldview that ordinary people experience when participating in protest and resistance; as well, it leads to a change in the perspective where protests are seen.

Local Resistances and Social Change. How Local Environmental Protests Lead To Citizens’ Empowerment and Democratization

Currently, thousands of communities and collective groups all over the world are struggling to defend their territories from devastation which leads to the construction of railway, energy and hydraulic infrastructures, only to mention a few.

Both in Europe and Latin America, the complicity of the institutional left wing, engaged in the construction of infrastructures and in the limits of the transnational social movements focused on following the agenda of power rather than the problems of the local communities, has led to the emergence of thousands of autonomous experiences of struggle that arise from below.

In our article we will show that these experiences are social and political laboratories where self-organized citizens are experimenting new political practices and are also proposing new discourses, turning these resistances to defend their territory into experiences of democratization, political participation and empowerment.

Focusing on the subjective dimension of protest, we will show the role of emotions, such as place attachment, motivation to action, participation and radicalization of discourses and practices, in order to describe how the experience of resistance produces a transformation of consciousness and behavior.

We will base our analysis on an item of empirical research carried out during experiences of resistance in Spain (the struggle to defend the Rioal valley and the Grande river) and Mexico (the struggle against the reservoir of San Nicolas) all of them analyzed with techniques of qualitative research. The approach selected has been from below, in other words, centered on the experience of participants and activists of local communities.

Finally, what we intend to highlight is that these resistances are struggles for a significant democratization of territory and resource management, and eventually, of society.

Images des latino américains dans la direction de la composante militaire de la MINUSTAH (Mission des Nations Unies pour la Stabilisation en Haïti)

The United Nations Security Council, through Resolution 1540, adopted in 2004, decided to send a multinational force in an effort to reestablish civil stability in Haiti after the political crisis of the Jean Bertrand Aristide government and the military coup which erupted on February 29, 2004. More than eight years since the implementation of the United peacekeeping force, the opinions presented here are of two national sectors of Haitian civil society, namely, educators and farmers, and are investigated in relation to the perceptions each group holds about the presence of military force in Haiti through the United Nations Mission for the Stabilization of Haiti (MINUSTAH).

The opinions of the two organized civil society sectors researched, the perception that MINUSTAH could be interpreted as a military occupation characterized by neo-colonialism, a humanitarian mission or a mission to support and reinforce institutions in the country. In confronting these different thoughts with the historical trajectory of the Haitian people, represented in the time after the foundation of the Nation-State, in 1804, by the antagonism and divergence of viewpoints between the elites and the masses, it is possible to note that the image that the two researched groups have of MINUSTAH result, in the first place, in the way in which each group constructs the idea of the Haitian nation or of the “imagined Haitian nation.”

Gender Roles In Television Commercials In Asia

Television advertisements are a rich source of data for social scientists to investigate because they can be seen as a reflection of prevailing cultural values. Gender value is also one of the critical factors in developing marketing strategies via advertising messages.

Advertising gender role stereotyping has been a prominent topic in literatures since the 1970s. Over the past decade gender stereotyping in television commercials has received particular attention. Most studies reveal that advertisements reflect the construction of gender roles in society. However, research of gender roles in advertisements is plentiful in the United States. There has never been any comparative research concerning the gender roles in television commercials between Asian countries. Therefore, this paper compares the gender roles in Japan, Korea, China, Taiwan, Thailand, and Singapore.

This comparative content analysis of 2,205 sampling advertisements, collected randomly during August and October in 2012, suggests that the image of gender roles in television commercial does not correspond with the construction of gender roles in reality. In contrast, advertisements create the attractive image of gender roles in society. However, the most findings of this research are similar to the previous result of literature in term of gender of main character, voice over, age, and roles of male and female character in television commercial.

Equidad Étnica Y De Género EN LOS Estudios De Posgrado. Casos EN Las Universidades AUTónomas De Chiapas Y Yucatán

Lo que aquí se expone forma parte de una investigación más amplia realizada en México bajo el título “Ética profesional y posgrado. Valores presentes en las prácticas de generación y transmisión de conocimientos que llevan a cabo cuerpos académicos y grupos de investigación educativa”, buscando comparar experiencias de formación ética profesional en programas de posgrado que ofrecen instituciones de educación superior en distintas entidades federativas.

Chiapas y Yucatán son dos estados de la República Mexicana con diversos grados de desarrollo socioeconómico en los que habitan pobladores pertenecientes a diversos grupos étnicos. A lo largo de los años, las inequidades sociales que caracterizan a las sociedades poscoloniales por motivo de la etnia y el género han mostrado algunos cambios en ambos estados, sin embargo persisten rezagos en materia educativa que se hacen más evidentes en los niveles de educación superior. En esta comunicación se realiza un análisis comparativo que muestra cambios ocurridos del año 2000 al 2013 en la composición de la matrícula que estudia en programas de posgrado en las universidades públicas más importantes de la región sureste de México, las cuales se ubican en estos estados: la Universidad Autónoma de Yucatán (UADY) y la Universidad Autónoma de Chiapas (UNACH).

Young College Students and Their Values: A Comparative Study Between Brazil and China

Young college students and their values: a comparative study between Brazil and China

Marilena Nakano Marília Pontes Sposito

This is a quantitative sampling research held within the scope of the Brazil-China Agreement. It compares the Brazilian college youth with the Chinese, in the 17 to 24 year-old age bracket. The data was obtained in 2012, by means of a same questionnaire in both countries.

The paper will privilege the data related to values and visions about the best and the worst aspects of being a youngster. It will analyze the differences between young men and women. In spite of similarities, what attracts most attention is the configuration of the two distinct modes of being young: a Brazilian and a Chinese.

There will also be some reflections about the research conduction process and the interactions between the researchers and the different cultures and countries are also to be considered.

With regard to the results, the peculiarities of each group are being identified. Thus, for example, for Brazilian college students, the best thing about being young is to have “dreams and objectives” and the worst part is to “not be able to be self-supporting”. On the other hand, for the Chinese youngsters that were interviewed, the best thing is “to be healthy and fit” and the worst is “to be insecure regarding the future”. It is interesting to note that they fear they can be “easily influenced”, whereas this fear is not strongly representative among Brazilians.

Notwithstanding the singularities observed between the youths of each society, it can be observed that there are some transversal points of contact that allow us to go ahead in drawing up the contemporary juvenile condition, incorporating the differences of genders as a fundamental aspect.

An "Area Studies" Program in France: Scientific, Institutional and Geopolitical Rationales

Institutionalizing and developing "area studies" programs are commonly associated with the Cold War context, while the strengthening of knowledge about foreign areas and became a goal of public research and educational policy. These developments came within scientific, academic and geopolitical rationales. Their importance could vary according to the strength of the national intellectual traditions in studying specific foreign areas, the connections between disciplines, and the need for expertise due to the position of a particular State in the international relations. In the case of the US, these evolutions were less explored for the Western European countries, and that would allow probing their particularities. The paper focuses on the set up from the mid-1950's of the Area Studies, and particularly of the Russian and East European Studies, by a specific actor of the French academic field: the 6th Division of the Ecole Pratique des Hautes Etudes. Outlining the national and international conditions determining such a process, it also points out the particularities of the local (academic, scientific, political) context and of its main initiators' background. Thus, it questions the specific path taken by the implementation in France of this new scholarly infrastructure. Furthermore, the paper takes into account the social, professional, political characteristics of the team initially recruited for working on a "sensitive" geopolitical area and its productions, while it explicates the scientific content of research, documentation and teaching programs. They are meant to implement interdisciplinary approaches relying all the same on various disciplines, which were differently connected to the State and political power. Finally, the paper questions how the knowledge elaborated in this framework was placed in relation to approaches implemented by pro-communist committed social scientists and to what extent it could be itself of use not only in the academic milieu but also in political and economic circles.

Generation and Reproductive Health in Newfoundland

This paper presents a linking piece between a comparative study of the Reproductive health of women in the three countries (Canada, Pakistan and Indonesia) and the proposed study on how gender is negotiated between generations in transnational families. In this paper I look at the particular experience of negotiating ideas about sex and reproductive health between the three generations of families in the province of Newfoundland in Canada. The oldest grandmother participant was born in 1910 and the youngest granddaughter in the mid-1980, which provides a broad historical perspective to their experiences. More interesting is how the grandmothers, mothers, daughters and granddaughters negotiated their changing needs and opportunities and how they balanced tradition, duty, affection and innovation.

From Technical Innovation to Inclusive Education for Students with Disabilities

Since 2006, public policy in France has strongly been encouraging young people with disabilities inclusion within the regular school system. This has found a direct application through technical innovation, intended to help students being more independent within their learning activities. The purpose of this presentation is to underline the manner in which using assistive information and communication technologies may improve the inclusive education for people with disabilities. Moreover, we will base our work on the distinction between technical invention and technical innovation. If technical invention is generally responding to a need at some precise moment, and is sometimes identifying itself with an unique user and use (Simondon, 1968), the technical innovation has a more collective and social dimension (Mulkay, 1972). Hence, we analyse the use of a software and hardware assistive kit intended for students with disabilities who have visual and hearing impairments, as well as learning disabilities.

An Epistemological Look at the Concept of Transnational Families

The study of transnational families is a recent one, and although many contributions have been produced in the last decade, it is still necessary to look at the theoretical and epistemological characteristics of the concept. Transnational families are not only an outcome of family member's strategies, but they are also part of broader transnational dynamics particular to global capitalism where a hierarchical mobility rights exist, depending on skills and talents. As stated in recent literature, the constitution of transnational families is part of contemporary mobility trends. But the use of the concept presents some difficulties that in my point of view need to be addressed. First, it's hard to find a unique definition general enough to take into account the diversity of families (different migratory conditions have to be considered beyond the concept of migrancy, and the way they are involved in the transnational family practices). Second, the predominance of the network's approach (informal connections, remittances, individual strategies)
overlooks other important structural elements, such as the role played by public policies. Third, the evident prevalence of a posteriori perspective in the study of transnational family ties makes it difficult to deeply understand their sociological production; in particular the institutional framework that produces, or at least encourages, the separation of family members. Hence, I strongly consider that we must enrich the knowledge about transnational families by adding a solid background from the field of sociology of the family, instead of only the background from migration studies. Despite their local and culturally determined roots, some contributions related to kinship, parenthood, maternity and paternity are essential. Also, we must include the contribution of gender studies in order to better understand individual and collective experiences of participants, men and women. This epistemological view will thus increase the heuristic value of the concept of transnational families.

PORTILLA, HILDA JOYCE* (University of Ottawa, hiportilla@hotmail.com)

“Transnational Families” Analysed through the Intersectional Prism

This communication stands at the crossroads of the sociology of migration, the sociology of family, and the sociology of gender relationships. It focuses on Latin American women and men who migrate unaccompanied to Canada for a given period of time, as part of specific government-sponsored temporary work programs for “unskilled” workers. The participants work in Canada, usually for many years, as either live-in caregivers (mostly women) or as agricultural seasonal workers (mostly men). As a result of a significant increase of temporary immigration in Canada and a more restrictive and selective law for permanent immigration, we have observed the creation of a permanent-temporary labor migration dichotomy. Thus, the migrant experience and the relevant life-challenges that both groups face are not the same. Literature review, forums and other related migrants’ activities show that one of the most important challenges faced by temporary workers is the configuration of transnational families, particularly because they are not allowed to bring their families to Canada, as permanent immigrants do. In fact, in addition to a global hierarchy of mobility rights related to their professional skills, many other factors determine the transnational families’ lives: differences in legal status; their access to resources, mobility and lifestyles; their origin or ethnicity; their age; their gender, etc. The intersectional approach will allow us to include the diversity, complexity and analytical challenges of this particular contemporary phenomenon.

The i-sation of society and post secularism: towards new inequalities?

In Jameson’s classic work, the end of the 20th century was claimed to face the third phase of capitalism, that of late capitalism, the world space of multinational capital. Around the same time, Ritser wrote about the McDonaldisation of Society which refers to the permeability of (what Weber made reference to) rational bureaucracy into our everyday life. This paper will argue that we are now in a fourth stage of capitalism, the cyber space of ‘denotionalised’ capitalism, and that with the help of new i-technologies, this penetration of rational bureaucracy has filtered further from everyday life to our personal biographies. Linking these two theories, this paper will present the argument that we are going through a process of i-sation of society (1) in which capitalism is not only dominating our outer life (e.g. global capitalism) but our inner life as well through its expansion on the Internet facilitated by various i-technological applications and (2) in which the McDonaldisation process has now been normalised and religion has been standardised. This paper will address the new inequalities at hand in this i-society, its impact on Habermas’ project of post-secularism, and will project the role that various religions will have in supporting and/or counteracting this process.

Public Religions and Same Sex Marriage

It is widely recognized that marriage, and more generally family life, has changed profoundly in the last half century. The causes of change are very diverse
but one important issue has been legal change. The introduction of no-fault di-
 vorce in the post-war years contributed to the rapid increase in divorce, and more recently the idea that same-sex marriage will be sanctioned by law has stirred up significant public controversy.

Debates around the legal recognition of same-sex marriage and other related matters show how religious forces in the public domain – over creationist teaching in schools, welfare in public, circumcisions, gay marriage, and Shari’a law – illustrates the ideas of ‘public religions’ (Casanova, 1994) and appears to confirm recent commentaries on post-secu-
larism. The argument presented by Habermas (2008) of post-secularity will be used as a framework to examine the impact of religion as a cultural resource in debate and decision-making in the public sphere. The proposed paper seeks to examine whether the inclusion of religious and spiritual arguments in the public debate on same sex marriage positively influences, as Habermas claims, the democrac-
tic quality of deliberative outcomes and contribute to the enhancement of social cohesion or whether on the contrary public religions play a divisive role in dem-
ocratic debate.

Our paper draws on an Austrian research grant to study the same-sex mari-
riage debate in Australia and New Zealand, and on a second grant proposal to undertake a comparative study of legal change in relation to marriage in Australia, France and the United States.

Political Decisions in the Area of Public Security and the Action of Death Squads: The Case of the Violence Crisis in 2012 in São Paulo, Brazil

The purpose of this communication is to present our findings of an original research that is being conducted at the Center for the Study of Violence of the University of São Paulo, regarding the cycle of violence that took place in the Met-
ropolitan Area of São Paulo, which among other incidents, led to a crisis in the public security sector in the State, in the year of 2012.

Since there is no official data on the matter, our data were mainly collected from the media. According to it, during the second semester of that year 30 state agents, (specially Military Police officers) and 274 civilians were killed and 200 in-
jured in similar situations – hooded men, shooting their victims from a motorcycle or a car in movement. This suggests that death squads or equivalent group strat-
egies of execution were used. The novelty here seems to be, amongst others, the organization of groups oriented to killing out of duty police officers.

The research aims at identifying the trigger(s) of these sequences of actions, around which a dynamics of action-reaction seemed to be installed. For now, our main hypothesis is that previous political decisions, taken in the realm of public security policies, worked as the main trigger to initiate a process of mutual killings between members of the State of São Paulo Military Police and members of the PCC (First Capital’s Command) organized crime group.

Truth and Politics: The Case of the Truth Commissions in Brazil

This presentation will seek to clarify the underlying principles as well as the routines and different sources of tensions surrounding the politics of truth com-
missions that are currently convened in Brazil by systematically cataloging them and presenting reports from their public sessions and interviews with commis-
sion members and deponents. Unlike similar initiatives convened in other coun-
tries that have transitioned from authoritarian regimes, the truth commissions in Brazil did not occur at the onset of the emerging democratic regime. Instead, they are just as the emergent phenomenon, appearing in the context of an already mature democracy, and acquiring a multiplicity of forms, as they are established at dif-
ferent levels of governments, legislatures, universities and many other forms of organization of civil society. Established by Brazilian president Dilma Rousseff in May of 2012, the National Truth Commission (NTC) forms the main axis of a large net of independent commissions. Through the NTC, the Brazilian State takes upon itself the responsibility of investigating the human rights violations that were per-
petrated by its own agents during past military governments (1946 to 1988), but does so without revoking the Amnesty Law of 1979, which explicitly prevents any criminal investigation or punishment of any transgressions of human rights that may have occurred during this period. Therefore, the NTC holds the clarification of the historical human rights record as a value in itself, and not as a means of informing judicial action. However, this paradigm is not uncritically accepted by all the auxiliar commissions, which, despite operating under the same legal frame-
work as the NTC, often question the general amnesty principle. The value of his-
torical truth as either a goal in itself or as a potential instrument to legal reform and judicial action remains the topic of much controversy, and forms the main analytical thread of this presentation.

Ranking Regimes, “World Class” Universities, and the Impoverishment of Intellectual Life

This paper considers the pressure felt by scholars publish in journals that are highly ranked according to their “impact factor.” A world-wide movement has pushed scholars to publish in English-language journals, to the detriment, we ar-
gue, for intellectual life at the national level. We first document evidence for this pressure, then discuss the consequences of funding mechanisms and research assessment for higher education. Then we review several factors in this move-
ment: 1) the rationalization of expertise as a feature of Weberian bureaucratic authority; 2) the politics of higher education regulation and control, as manifest in the new managerialism and standards-driven exercises; 3) the priorities and finance of commercial scholarly publishing, which take advantage of the preceding developments by charging high prices to maximize profits; 4) de-
cisions by editors and their journals to play by the new rules even when they are personally opposed to them and when they value journals for a different purpose. We draw on national case studies from Japan, Taiwan, Argentina, Singapore, the UK, and South Africa.

The Overseas Chinese Population in Circa-2011

In circa-2011, there were over 40 million Chinese people living outside China (broadly defined). We discuss the data on the overseas Chinese; we show their distribution among the world’s countries and regions. We discuss their patterns of change in past decades. We present recent data on the larger of the non-Chinese diaspora to enable us to better evaluate the significance and importance of the Chinese diaspora. We discuss the major patterns of previous Chinese emigra-
tions. Then we present our data on and analyses of the overseas Chinese around 2011. The overseas Chinese population in the world in 2011 is larger than the population of Poland and Canada, and almost as large as Argentina. The Chinese diaspora is the third largest in the world, behind Ireland and Germany. The overseas Chinese continue to have important and significant influences in many host countries and are certainly not an inconsequential population.

The Residential Segregation of Homosexual Households from Heterosexual Households in Metropolitan Areas of the United States, 2010

Residential segregation is a major area of research in demography and sociol-
ygy. Most of the research has focused on the segregation of racial/ethnic minori-
ties from the majority race/ethnic group in cities of the United States and several other countries. Few if any analyses have dealt with the spatial segregation of sexual minorities from the majority. In our paper we analyze homosexual-to-het-
erosexual household segregation. There is a void in the literature about the ex-
tent to which gay men and lesbians are residentially segregated from heterosex-
ual households. There are some studies of “gay spaces” and enclaves, but most are case studies of single cities (e.g., San Francisco) or analyses of gay enclaves and political force and activism. There are no systematic empirical studies of met-
ropolitan areas in the U.S. (or elsewhere) of the degree to which gay male and lesbian households are residentially segregated from heterosexual households.

Our paper addresses this void. We use two dissimilarity measures of residential...
segregation with the same-sex partnering data from the 2010 U.S. census to calculate segregation scores for the 100 metropolitan with the largest homosexual populations. We show that there is a sizable amount of residential segregation between these two groups. We also show that the level of segregation varies positively across the metropolitan areas with the size of the gay male and lesbian population. Our research contributes to the general literature on residential segregation by focusing on a non-racial minority that has heretofore received very little attention.

Towards Better Education and Less Inequality? Trends in Geographical, Generational and Gender Inequality in Education

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality along gender, generation and geography. Magnitude and recent trends in inequality vary across regions and countries. Educational differences by generation indicate the speed of change in human capital formation over time and we identify different patterns of educational transitions that are closely connected to societal, educational and individual contexts. Educational transitions from female disadvantage to gender equality and new forms of inequality. The closing of gender gaps is typical mostly of developing countries, where recent gains in education are often more pronounced for women compared to men, but are not always sufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education emerges in developed countries of the North, as well as countries in Latin America, East and South-East Asia. It must be emphasised that gender inequalities are an important aspect of “over-education”. For the future of potentially “over-educated” societies, evidence on gender differentials is important for education policies.

We base our analyses on a unique global dataset on educational attainment – encompassing the reconstruction and projection of educational attainment from 1970 to 2060 for 171 countries by age and sex – developed at the Wittgenstein Centre for Demography and Global Human Capital.

POWELL, BRADLEY* (Case Western Reserve University, bradley.powell@case.edu)
HIV, Dating and Matting: An Analysis Of Stigma In Self-Presentation

While the Universal Declaration of Human Rights counts among its fundamental rights the right to marry and found a family (Article 16), it is often informed by informal discrimination that inhibits this right (UN 1948). Gay men living with HIV/AIDS deal with the stigma of their status from both external to and from within the gay community. Often they are legally required to disclose their stigma prior to sexual activity, in essence moving them directly to what Goffman (1963) calls discrédíted. Despite overwhelming evidence that sero-discordant couples can effectively manage HIV transmission risk through safer sex practices, positive men may negotiate their status in a dating landscape often characterized by stigmatization language that polarizes gay men in to “clean” or “dirty” states, the latter referring to men who are HIV positive; in effect making their sexual history their calling card. This paper begins with a critique of Goffman that offers an alternative for those who are perceived to be inherently and irreparably discredited, and then presents an analysis of a comparative sample of three hundred personal advertisements across three differently populated American cities: large metropolitan, medium urban, and rural. Extracted from the free and open website craigslist.org, the advertisements are qualitatively analyzed for stigmatizing language such as “clean only,” “drug and disease free (DDF),” and other text used to communicate sero-status. The paper concludes with a discussion of implications and suggestions for researchers interested in studying inherently stigmatized groups.

Persistent School Segregation or Change Toward Inclusive Education? the Convention on the Rights of People with Disabilities and Reform Mechanisms in Germany

The United Nations Convention on the Rights of People with Disabilities (UNCRPD) was ratified in Germany in 2009. Article 24 requires that nation-states implement an inclusive education system. This ambitious goal poses great challenges for the institutionalization of special education systems can facilitate—or hinder—inclusive education. Germany is one of the countries worldwide that, to achieve the UNCRPD’s goals, must transform its highly segregated education system. In fact, for decades Germany has maintained one of the most differentiated and segregated education systems in Europe. Inclusive education contradicts not only contemporary special education structures, but the entire highly-stratified general education system, addressing a core conflict in German education policy. The consequences of segregation, such as social assistance receipts over the life course, are dramatic even if they have not often been calculated. Thus, this neo-institutional analysis examines both the barriers and the reform mechanisms that impact the implementation of the UNCRPD in a decentralized national context. German federalism guarantees the sixteen Bundesländer authority over educational matters; however, ratified human rights conventions demand fundamental reforms regardless of regional policymaking preferences and priorities. Based on historical process-tracing and expert interviews (with policymakers, administrators, scholars, and advocacy groups), we contrast “leader” Schleswig Holstein with “laggard” Bavaria. In the northern state, inclusive education has diffused broadly since the 1970s. In the southern state of Bavaria, implementation is just beginning; indeed, the law’s intents are being subverted by government actors, exhibiting considerable backlash.

Comparing these cases enables an investigation of specific mechanisms of institutional persistence and change: power-based, legitimacy-based, utilitarian, and functional. This analysis contributes to the theoretical literature on institutional change and path dependence, to studies on the human rights revolution in education (UNCRPD in particular), and to research on inclusive and special education, long marginalized in the sociology of education.

Becoming Worldly: Developing Global Cosmopolitan Perspectives On Diasporic Homeland Tours

Diasporic tourism—structured group tours to natal, symbolic and ancestral homelands—is a growing industry where globalization, migration, leisure and the symbolic economy converge. Using ethnographic material from three diasporic tourist populations, this article examines the process of narrating a collective self-hood through diasporic homeland tourism. While tourists travel through space to homelands in order to travel through time and discover ancestry, they also move in scale by claiming membership in a global community. Framed within the theoretical intersection of tourism and diaspora, this comparative project reveals the utility of cosmopolitanism—as a category of practice—for domestic displays of identity and community.

No One “Likes” Sandy: Facebook and Post-Hurricane Recovery In Long Beach, NY

Technologies, like social media sites, have made it easier to communicate and can capture the “ephemeral” cultural artifacts found during periods of upheaval and change (Stallings 2006). However, due to its relative newness, social media’s role in recovery efforts after natural disasters has not yet been thoroughly explored. This report adds to existing literature and demonstrates how social media technologies supported and facilitated localized recovery efforts and memorializations from below in Long Beach, New York. The Long Beach Hurricane Information Facebook page, created by two transplants to keep out-of-towners informed has since morphed into a virtual bulletin board that provides support and information for local residents. Residents both near and far see this site as a place to share information, organize local responses, and importantly remember. Referencing their personal memories of Long Beach, posters refer to local symbols and sayings to perform solidarity and community in this virtual space. This site bears witness to the resiliency, frustration, and strength as well as the shortcomings and failures of institutional recovery efforts. While they struggle to rebuild, they work together; defined and connected by the “Long Beach sand in their shoes.”

Crisis and (re-)Informalisation Processes: The Cases of Barcelona and Berlin

With the economic crisis and the retreat of welfare services, European cities are witnessing the reemergence of informal practices creating reciprocity mechanisms and informal markets as well as non-formal, reciprocity-based forms of provision of housing, healthcare and other services. Nevertheless, the strength and the emergence of these practices takes place unevenly across these cities, depending on the impact of the crisis, the nature of the state and its multi-level governance and the institutional culture on the provision of policies. This paper explores through historical and qualitative analysis, the role of informal practices in the provision of resources in two European cities in crisis: Barcelona and Berlin. As in many other southern European cities, the emergence of informal practices in Barcelona is key to understand the capacity of its inhabitants to overcome the perverse effects of the crisis. Historical analysis will show how, through a scenario of informal practices until the eighties and that part of these practices are reappearing now. In Berlin, which fell into a deep economic and financial crisis with the reunification of the city in 1990, informal practices have been an element explaining the redevelopment of the city. Local administrations have tried to formalise informal activities negotiating and tolerating certain practices.

Both case studies show that processes of informalisation taking place in the current crisis are rooted in previous practices and the historical development of cities, that never saw a complete disappearance of these practices. Besides, the analysis show how these practices have been selectively allowed by local administrations to ensure certain form of social cohesion.

Socially Innovative Forms of Renewable Energy Provision: Towards a ‘Commons’ Approach to Sustainability in Barcelona and Catalonia

With the financial crisis, responses to environmental problems in European cities are increasingly based on privatisation of water and energy companies, and the promotion of technological approaches to increase efficiency and reduce pollution and energy consumption under the policy concept of ‘smart city’. This paradigm promotes energy efficiency without discussing the systems of production and supply. Nevertheless, there also exist alternative approaches from civil society fostering new models of energy production, distribution and consumption.

This paper focuses on these proposals and their institutionalisation possibilities through the analysis of a cooperative initiative (Som Energia) spreading in Barcelona and other Catalan cities. Following the experience of initiatives in northern Europe, this cooperative proposes new relations with green energy through the redistribution of both decision-making and energy power. This brings an increase and diversity of actors in the field of renewable energy, moving from traditional large private corporations and public companies to common citizens, who act both individually in the private-domestic sphere and collectively through socially innovative experiences.

The paper analyses: a) how the cooperative emerged in its institutional and governance context, strongly dominated by an oligopoly of large private electricity companies and a complex and inefficient regulation that entails economic, social and environmental deficits, and b) the potential of this approach to create a greener and more democratic model of production and supply of energy. Results show that the co-op must tackle barriers and obstacles adapting itself continuously to changing frameworks. Despite this apparent unfavourable scenario, it developed different strategies for ensure its activity paving the way for the strengthening of informal practices.

The role of informal practices in the provision of resources in two European cities is key to understand the capacity of its inhabitants to overcome the perverse effects of the crisis. Historical analysis will show how, through a scenario of informal practices until the eighties and that part of these practices are reappearing now. In Berlin, which fell into a deep economic and financial crisis with the reunification of the city in 1990, informal practices have been an element explaining the redevelopment of the city. Local administrations have tried to formalise informal activities negotiating and tolerating certain practices.

Both case studies show that processes of informalisation taking place in the current crisis are rooted in previous practices and the historical development of cities, that never saw a complete disappearance of these practices. Besides, the analysis show how these practices have been selectively allowed by local administrations to ensure certain form of social cohesion.

The recent economic crisis affecting Southern European countries has been singular in both its intensity and complexity, and as such, it has had a profound impact on the economic, political, social, and institutional realms. I compare how the Spanish and Portuguese governments, women’s state agencies, parliamentarians, members, and activists in both countries have inserted issues of gender equality and women’s empowerment into narratives about the economic crisis and the austerity measures intended to mitigate it. The fiscal consolidation in Spain and Portugal has had a more severe impact on female employment rates, working conditions, wages, and welfare provisions than in the rest of Europe. In this comparative research I address the following questions: What policies have the Spanish and Portuguese governments pursued to mitigate the effects of the economic crisis on women’s position in the labour market and in the domestic arena? How have these governments framed the various problems and the solutions directed at increasing gender equality and empowering women? Which political groups or social movement organizations have inserted issues of gender equality and the austerity measures intended to mitigate it. The fiscal consolidation in Spain and Portugal has had a more severe impact on female employment rates, working conditions, wages, and welfare provisions than in the rest of Europe. In this comparative research I address the following questions: What policies have the Spanish and Portuguese governments pursued to mitigate the effects of the economic crisis on women’s position in the labour market and in the domestic arena? How have these governments framed the various problems and the solutions directed at increasing gender equality and empowering women? Which political groups or social movement organizations have inserted questions on these issues and what strategies have they devised to deal with those challenges? Which problems affecting women are these groups framing as a priority (e.g., employment, poverty, violence) or even as ‘a problem’ at all? And finally, how are these groups framing potential solutions? Findings show that it is mostly women’s state agencies (not parliamentary members) that highlight how the economic crisis has impacted women disproportionately. The agencies’ focus seems to be more the increase in domestic violence, and less on issues of women’s unemployment or the gender pay-gap. The print media does not highlight how the recession is affecting women, although some articles mentioned the strains families have had to deal with since the crisis and the strategies they adopted in response.

Building a National Idea of an International Future – How National Press Try to Project Futures after International Events

Individuals and communities live in a globalized world, defined by supranational institutions, companies and civil societies, while global travel and information streams expand. Yet they are part of specific nations that have experienced very specific events, which became part of very specific cultural figurations that are shaping strategies of nationhood.

These narrative structures are figured and refrigured to continue to be included in the on-going struggles and challenges – e.g. economic or political crisis and developments – that are experienced in the context of a nation state. And the national media – in all their formats and distribution channels – are a primary channel where those processes can be observed. Yet when discussed in the media those figures are often used as tools to discuss contemporary issues and anticipate further societal developments. But how are those ideas included when further events happen that may or may not match those anticipations?

The proposed presentation will discuss how the Austrian quality press (“Die Presse” and “Der Standard”) did discuss potential futures in relation to international tension from 2001 to 2011 and how those futures were continuously embedded into national narratives of a country which never took an active role in the international war on terror. How do those predictions brought forward from strictly national media differ from the forecasts found in the New York Times, an internationally recognized information leader? How do the Austrian journalists build those international futures and how do they think about them later on? Do these reference those figures built within the national context again?

Those questions will be discussed, using 25 narrative interviews with Austrian journalists and a qualitative comparison of 1377 Austrian newspaper articles with 1983 from the NYT, published in 5 two week sampling windows from 2001 to 2011.

Southern European Women and the Economic Crisis –

The recent economic crisis affecting Southern European countries has been singular in both its intensity and complexity, and as such, it has had a profound impact on the economic, political, social, and institutional realms. I compare how the Spanish and Portuguese governments, women’s state agencies, parliamentarians, members, and activists in both countries have inserted issues of gender equality and women’s empowerment into narratives about the economic crisis and the austerity measures intended to mitigate it. The fiscal consolidation in Spain and Portugal has had a more severe impact on female employment rates, working conditions, wages, and welfare provisions than in the rest of Europe. In this comparative research I address the following questions: What policies have the Spanish and Portuguese governments pursued to mitigate the effects of the economic crisis on women’s position in the labour market and in the domestic arena? How have these governments framed the various problems and the solutions directed at increasing gender equality and empowering women? Which political groups or social movement organizations have inserted issues on these issues and what strategies have they devised to deal with those challenges? Residents’ Responses to the May 1-4 2010 Boston Water Contamination Incident

This study used the Protective Action Decision Model to examine local residents’ warning sources, warning receipt times, message content, warning confirmation, risk perception, and consumption of untreated tap water, boiled water, bottled water, and bottled water in personally chlorinated water during the May 1-4 2010 Boston water contamination incident. Most residents received warnings from news media and peers and these warnings mentioned 2.3 of five recommended elements of a warning message—most commonly the threat and the recommended protective action. Consumption of untreated tap water declined, consumption of personally chlorinated water remained negligible, and consumption of boiled water and bottled water increased. First warning source was significantly related to protective response but message content was not. Unexpectedly, risk perception was more strongly related to water consumption before the incident than after the incident. This study finds general agreement with the protective action decision model, and increased risk perception can increase protective action, successful implementation of protective actions can decrease risk perception.

Families Apart: Long-term Implications of Canada’s Live-in Caregiver Program for Filipino Migrant Workers and their Families

Canada’s Live-in Caregiver Program (LCP) is one of Canada’s largest and oldest temporary foreign worker programs. Throughout the first decade of the new millennium, the program grew four-fold, in line with a more general national and global expansion of temporary foreign worker programs. Of those coming through the LCP are Filipino women, part of a vast labour diaspora of over nine million Filipinos working in roughly 200 countries. An unusual feature of the LCP is the opportunity it affords to migrate permanently to Canada if the worker completes 24 months of live-in caregiving work within a 48-month period. In 2010 the Philippines displaced China and India to become Canada’s top immigration source country; by 2009 40 percent of Filipinos migrating to Canada came through the LCP. I report on research carried out in collaboration with the Philippine Women Centre of BC that documents the long-term effects of this program on Filipino families settling permanently in Canada, with a special focus on the challenges faced by Filipino youths reuniting with the mothers in Vancouver.

Testimonial Theatre, Transnational Debate and Filipino Labour Migration to Canada

I have for many years worked with the Philippine Women Centre of BC to document the experiences of Filipino migrant domestic workers and their families in Canada. Our latest project, a collaboration with Caleb Johnston and theatre artist, Alex Ferguson, involved creating a testimonial play based almost entirely on verbatim transcripts of interviews conducted with migrant Filipino domestic workers, their children, Canadian employers of domestic workers and nanny agents. In the first instance, we turned to theatre to put disparate experiences of care and need into dialogue and to stimulate wider public debate within Canada. But for domestic workers involved, the theatre project also solidified their desire to narrate their stories of life in Canada differently to their families in the Philippines. In November 2013 we presented the play at PETA Theatre in Manila in an effort to "deal with since the crisis and the strategies they adopted in response."

PRENTOULIS, MARINA* (University of East Anglia, M.Prenatoulis@uea.ac.uk)

Emotions and Values: From the Greek Riots of 2008 to the Movements of 2011

It is not uncommon for theories of collective action to differentiate between ‘conventional’ and ‘unconventional’ protests. This paper argues, however, that although riots are ‘unconventional’ protests, they are an important element in the process of collective identity construction. They signal a crisis in representation and the need for improved or renewed democratic politics, as practiced in social movements. Riots, although lacking the clear demands, degree of organisation and duration of social movements, offer an insight into the network of emotions and values that subsequently crystallize into more coherent forms of collective action. In this respect they should be thought of within the theoretical framework of social movements. The intense and expansive notion of Greece in November 2008 was one of these instances which although not purposeful in the traditional sense, provide an insight into the networks of values and emotions leading to the movement of the ‘Aganaktismenoi’ (Indignants) responding to the economic crisis in Greece in 2011.

PRENTOULIS, MARINA* (University of East Anglia, M.Prenatoulis@uea.ac.uk)

Responding to the Greek Crisis: Social Media, Horizontal Organization and Networks, then and Now

The use of social media during the first wave of protests responding to the crisis and the resulting agreements in Greece, enabled the emergence of a new political discourse. The main website of the Greek ‘Aganaktismenoi’ (Indignants) was anchored around the concepts of horizontality, autonomy and leaderless (www.real-democracy.gr). The analysis of the website reveals an attempt to divide the political field in pro and anti memorandum forces and expresses the widely felt hostility and suspicion towards the existing forms of democratic representation (Prenouli and Thomassen, 2013). Although the lack of coherence and permanency of this movement points towards processes of identification (Prentoulis and Thomassen, 2013). Although the lack of coherence and permanency of this movement points towards processes of identification (Prentoulis and Thomassen, 2013). Workplace Innovation and Consequences for Employees and Organisational Performance in the Netherlands

Based on ‘Netherlands Employer Work Survey’(NEWS) data this paper investigates the consequences of workplace innovation for employee and organisational performance in The Netherlands. The NEWS is a unique, two-yearly held survey among 5,000 establishments of public and private organisations on policies and practices of Dutch employers, concerning work related issues, such as working conditions, employment relations, HR and innovation management.

Workplace innovation is defined by Pot (2011) as “the implementation of new and/or combined interventions in the fields of work organisation, HRM and supporting technologies. Workplace innovation is considered to be complementary to technological innovation”. Taking this definition, which is rooted in the ‘theory of modern sociotechnology’ (De Sitter) and ‘the job demands - control model’ (Karasek), as a point of departure, we constructed a Workplace Innovation Index that consists of the following characteristics: ‘active jobs’ (flexible but tailor-made employment relations), ‘employee voice’ (dialogue and autonomy), ‘flat organisation’ (limited hierarchical levels and teamwork), and ‘innovation orientation’ (openness to renewal and seeking new knowledge externally).

The relationship between this WPI-index and several performance output measures, such as labour productivity, performance (turnover, profit), sickness absence, work stress, and perceived employee commitment will be examined.

Control variables are sector (industrial branches) and organisational size (number of employees). To date, research investigating the relationship between workplace innovation and organisational performance has been scarce. Our analyses will be executed in the end of 2013 and will be fully reported in the paper. Implications for theory and practice will be discussed.

What Drives National Differences in Intensive Grandparental Childcare in Europe?

Grandparents play an important role in looking after grandchildren. The provision of intensive grandparental childcare varies considerably across Europe, with figures ranging from less than 4% in Sweden and Denmark, to almost one quarter in Southern European countries where there is little formal childcare.
